MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. The project would have a less than significant impact on cultural resources.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space The project would have a less than significant impact on cultural resources.
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. The project would have a less than significant impact on cultural resources.

Project ID	Project Name	Environmental Document Summary
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. The project would have a less than significant impact on cultural resources.
MV-56	Tract Map 33810	No environmental documentation was available for review. However, there is a planning commission resolution that states that the project is exempt from the requirements of CEQA guidelines.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots. The project would have a less than significant impact on cultural resources.
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The project would have a less than significant impact on cultural resources.
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. The project would have a less than significant impact on cultural resources.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. The project would have a less than significant impact on cultural resources.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 square feet of new retail/commercial uses on the approximately 22.28-acre site. The project would have a less than significant impact on cultural resources.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. The project would have a less than significant impact on cultural resources with mitigation.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. The project would have a less than significant impact on cultural resources.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. The project would have a less than significant impact on cultural resources.

Project ID	Project Name	Environmental Document Summary
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. The project would have a less than significant impact on cultural resources.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. The project would have a less than significant impact on cultural resources.
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. The project would have a less than significant impact on cultural resources.
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. The project would have a less than significant impact on cultural resources.
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley's 2008 ND, the project would build a 522,772 square foot industrial warehouse building on 25.96 acres of land. The project would have a less than significant impact on cultural resources.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. The project would have a less than significant impact on cultural resources.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. The project would have a less than significant impact on cultural resources.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. The project would have a less than significant impact on cultural resources.
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. The project would have a less than significant impact on cultural resources.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2010 ND, the project subdivides 16.9 acres into 6 pads for commercial retail use. The project would have a less than significant impact on cultural resources.

Project ID	Project Name	Environmental Document Summary
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. The project would have a less than significant impact on cultural resources.
MV-88	TR33771 / Creative Design Associates	No environmental documentation was available for review. However, there is a planning commission resolution for a 12 unit condominium complex on approximately 0.9 acres.
MV-89	TR35663 / Kha	No environmental documentation was available for review. However, there is a notice of exemption for a mixed use development on approximately 2.2 acres, which states that there is no evidence of potential for significant environmental impacts.
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. The project would have a less than significant impact on cultural resources.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. The project would have a less than significant impact on cultural resources.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. The project would have a less than significant impact on cultural resources.
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. The project would have a less than significant impact on cultural resources with mitigation.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. The project would have no impact on cultural resources.

Project ID	Project Name	Environmental Document Summary
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. The project would have a less than significant impact on cultural resources.
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. The project would have a less than significant impact on cultural resources.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. The project would have a less than significant impact on cultural resources.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. The project would have a less than significant impact on cultural resources.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. The project would have a less than significant impact on cultural resources.
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. Project was exempt from environmental review.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. The project would have a less than significant impact on cultural resources.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. Project was exempt from environmental review.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres. Project was exempt from environmental review.

Project ID	Project Name	Environmental Document Summary
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. The project would have a less than significant impact on cultural resources.
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. The project would have a less than significant impact on cultural resources.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. The project would have a less than significant impact on cultural resources.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. The project would have a less than significant impact on cultural resources.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. The project would have a less than significant impact on cultural resources.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. The project would have a less than significant impact on cultural resources.
P-2	TR34716	Per the City of Perris’ 2013 FEIR, the project involves the construction and operation of up to 600,000 gross square feet (gsf) of light industrial/warehouse uses. The project would have a less than significant impact on cultural resources with mitigation incorporated.
P-4	Bookend	Per the City of Perris' 2015 MND, the project proposed to subdivide an existing vacant parcel into five new industrial parcels with a total building area of 165,000 sf. The project would have a less than significant impact on cultural resources.
P-5	Markham East	Per the City of Perris's June 2007 Notice of Determination, the project would develop 462,692 square feet of light industrial warehouse/distribution uses in a single building with associated roadway and utility infrastructure and landscape improvements on 22.25 acres. The project would have a less than significant impact on cultural resources.

Project ID	Project Name	Environmental Document Summary
P-7	Duke Warehouse	Per the City of Perris's Facts, Findings and Statement of Overriding Considerations, the project would redesign ate a large portion of the northern part of the City with broad categories of compatible commercial and industrial uses on 34.57 acres. Uses would include a 668,681 square foot industrial/warehouse building that includes 19,200 square feet of office space. The project would have a less than significant impact on cultural resources with mitigation.
P-8	First Perry Logistics Project	Per the City of Perris's November 2017 Notice of Determination, the project would develop a 236,961 square foot industrial building on 11.06 acres. The project would have a less than significant impact on cultural resources with mitigation.
P-10	IDS	Per City of Perris 2005 Final EIR would result in the Perris Warehouse/Distribution Facility Project. The project would have a less than significant impact on cultural resources with mitigation.
P-11	Ridge II	Per the City of Perris 2007 NOC and Environmental Doc Transmittal, project proposes a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures. The project would have a less than significant impact on cultural resources with mitigation.
P-12	Starcrest, P011-0005; 08-11-0006	Per the City of Perris Final EIR, the proposed project is the expansion of an existing internet/mailorder fulfillment facility to an adjacent property. The existing Starcrest building is approximately 232,215 square feet in size. The expansion would include a 454,008 sf building north of and adjacent to Starcrest's existing facility. The project would have a less than significant impact on cultural resources.
P-14	Rados Distribution Center	Per the City of Perris 2010 Final EIR, proposed project is an approximately 1,191,080 sq ft distribution center on approximately 61.63 gross acres. The project would have a less than significant impact on cultural resources with mitigation.
P-15	Duke Perris Logistics Center I	Per the City of Perris 2017 Final EIR, the project would result in the Duke Warehouse at Indian Avenue and Markham Street. No information in provided document on impact significance after mitigation incorporated.
P-16	Perris Ridge Commerce Center I	Per the City of Perris' 2007 excerpt of an EIR, the project proposes the establishment of a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures on 91 acres. The project would have a less than significant impact on cultural resources.

Project ID	Project Name	Environmental Document Summary
P-18	P07-07-0029	Per the City of Perris' 2009 EIR, the project proposed to construct a 1,608,322 sf industrial complex comprised of five buildings on 92.3 acres. The project would have a less than significant impact on cultural resources with mitigation.
P-19	P05-0192	Per the City of Perris' 2006 EIR, the project proposed development of an approximately 700,000 square foot industrial building on a 40-acre. The project would have a less than significant impact on cultural resources.
P-20	P05-0113	Per the City of Perris' 2009 EIR, the project proposed subdividing the site into five legal parcels, four of which would be developed with industrial/warehouse buildings for a total of 1,750,000 sf. The project has mitigation measures in place for cultural resource impacts, no information on if impacts are significant after mitigation implemented.
P-21	P07-09-0018	Per the City of Perris' 2008 IS, the project proposed the development of a 173,000 sf industrial building on 8.7 acres. The project would have a less than significant impact on cultural resources with mitigation.
P-22	NICOL	Per the City of Perris' 2016 IS/MND, the project proposed a 380,000 sf warehouse building on 21.63 acres. The project would have a less than significant impact on cultural resources.
P-23	Westcoast Textiles	Per the City of Perris' 2016 IS, the project proposed construction of a 187,850 sf industrial/manufacturing building on 9 acres. The project would have a less than significant impact on cultural resources.
P-24	Optimus Logistics Center 1	Per the City of Perris' 2016 EIR, the project proposed to construct a high-cube warehouse consisting of two buildings totaling 1,455,781 sf on 68.99 acres. The project would have a less than significant impact on cultural resources with mitigation.
P-25	Optimus Logistics Center 2	Per the City of Perris' 2015 EIR, the project proposed construction of warehouse development site encompassing 1,037,811 square feet in two buildings on 48.4 acres. The project would have a less than significant impact on cultural resources with mitigation.
P-26	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 811,620 square feet (sf) of industrial high-cube, non-refrigerated warehouse/distribution uses on the approximate 37.3-acre site. The project would have a potentially significant impact on cultural resources.

Project ID	Project Name	Environmental Document Summary
P-27	Perris DC (Industrial Property Trust)/Integra	Per the City of Perris' 2014 EIR, the project proposed construction and operation of up to 864,000 square feet (sf) of industrial warehouse/distribution uses on the approximate 43.2-acre site. The project would have a less than significant impact on cultural resources with mitigation.
P-28	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 1,189,860 square feet (sf) of high-cube warehouse/distribution uses on the approximate 55-acre Project site. The project would have a less than significant impact on cultural resources with mitigation.
P-30	Avelina	Per the City of Perris' 2003 IS, the project proposed to increase residential density on a 158.2 acre property to 475 dwelling units. The project would have a less than significant impact on cultural resources.
P-31	Perris Family Apartments	Per the City of Perris' 2013 IS, the project proposed to construct a 75-unit multi-family apartment complex on 7 vacant acres. The project would have a less than significant impact on cultural resources.
P-32	Lewis Retail Center	Per the City of Perris' 2009 IS, the project proposed to construct 643,000 sf of commercial shopping center on 68 acres. The project would have a potentially significant impact on cultural resources.
P-35	Verano Apartments	Per the City of Perris' 2013 IS, the project proposed increasing the number of residential units from 19 to 40 and reducing the commercial component from 17,000 sq. ft. to 1,000 sq. ft. for retail and to allow a 2,000 sq. ft. day care facility. The project would have a less than significant impact on cultural resources with mitigation.
P-37	Cabrillo	Per the City of Perris’ Initial Study, the project proposed to amend the General Plan (GP) and Zoning designation of approximately 36.21 acres of land from R-6,000 to MFR-14 Residential, along with a Text Amendment to narrow the lot frontage from 50-feet to 45-feet for lots greater than 4,500 square feet to facilitate the entitlement of Tentative Tract Map (TTM) 36343, a 184 lot residential subdivision. The project would have a less than significant impact on cultural resources with mitigation.
P-58	Jordan Distribution	Per the City of Perris's June 2008 Notice of Determination, the project would develop a 378,521 square foot tilt-up industrial building for warehouse distribution uses on 17.1 acres. The project would have a less than significant impact on cultural resources with mitigation.

Project ID	Project Name	Environmental Document Summary
R-1	Sycamore Canyon Business Park - Bldgs 1&2	Per the City of Riverside's January 2017 Final EIR, the project would develop approximately 1.43 million square feet of business park uses on approximately 920 acres. The project would have a less than significant impact on cultural resources with mitigation.
R-2	Alessandro Business Center (Western Realco)	Per the City of Riverside's February 2015 Addendum to the Final EIR, the project would develop 662,018 square feet of industrial warehouse uses on 36.7 acres. The project would have a less than significant impact on cultural resources with mitigation.
R-4	Quail Run	Per the City of Riverside's January 2016 Initial Study, the project would develop a 13-building apartment complex on approximately 16 acres of a 30.9 acre site that also would include parking structures and spaces, and open space. The project would have a less than significant impact on cultural resources with mitigation.
R-5	Canyon Springs Healthcare Campus Specific Plan	Per the City of Riverside's July 2017 Draft EIR, the project would develop a healthcare campus on 50.85 acres, including an approximately 234-unit senior housing facility; approximately 310,200-square-foot (267-unit, 290-bed) independent living/memory care, assisted living, and skilled nursing facility; an approximately 324,000-square-foot (180-bed) hospital; approximately 22,000 square-foot central energy plant; approximately 70,000-square-foot medical office building; an additional 300,000-square feet of medical office building uses with retail; multiple multi-level parking structures; and an approximately 180,000-square-foot (100-bed) hospital addition. A helipad/helistop also is proposed. The project would have a less than significant impact on cultural resources with mitigation.
RC-5	Villages of Lakeview -Residential/Commercial Development	Per Riverside County’s August 2016 Draft EIR, the Villages of Lakeview project proposes a master-planned community comprised of approximately 2,800 acres in the Lakeview/Nuevo area of Riverside County. Proposed land uses within the Specific Plan include a wide range of residential products, mixed-uses, retail, schools with joint-use parks, public and private amenities, an array of parks, trails, open space, roads, and other infrastructure. Existing infrastructure such as water, sewer, storm drain, and roadways will also be expanded as part of the Villages of Lakeview project. The project would have significant, cumulative impacts on cultural resources.

Project ID	Project Name	Environmental Document Summary
RC-9	Oleander Business Park, PP20699	Per what appear to be public meeting slides presenting information about Riverside County's May 2008 Final EIR for this project, the project would subdivide approximately 68.8 acres to develop approximately 1,206,710 square feet of industrial buildings. The project would have less than significant impacts on cultural resources.
RC-10	Majestic Freeway Business Center, SP 341 / PP21552	Per Riverside County's December 2006 Initial Study, the project would develop 947,000 square feet of light industrial warehouse and distribution uses and a 1.62 acre detention basin on 47.25 acres. The project would have less than significant impacts on cultural resources.
RC-11	Alessandro Commerce Center	Per Riverside County's April 2009 screencheck draft EIR, the project would develop 409,000 square feet of warehouse, 42,000 square feet of light industrial, 10,000 square feet of retail/restaurant, and 258,000 square feet of office uses, associated parking, and three detention basins on 54.4 acres. The project has mitigation measures in place for cultural resource impacts, no information on if impacts are significant after mitigation implemented.
RC-12	Cores Industrial Partners	Per Riverside County's October 2010 ND, the project proposes to bring the Zoning Code into compliance with SB 1627 and to strengthen the development standards for wireless telecommunications facilities in order to ensure high-quality design and compatibility with surrounding uses. The project would have less than significant impacts on cultural resources.
RC-13	Sunny-Cal Specific Plan (#40)	Per the City of Beaumont's June 2007 Response to Late Comments on the EIR, the project would develop a 907-unit housing project on up to 323.3 acres. The project would have no impact on cultural resources.
RC-34	Emerald Acres SP (SP00381)	Per Riverside County's January 2016 Initial Study, the project would develop the approximately 332.6-acre site as a residential community consisting of a maximum of 355 single family dwelling units on 76.3 acres; 179 multi-family dwelling units on 16.7 acres; 4.88 acres of commercial uses; a community park on 6.8 acres; 209.7 acres of open space; a 0.9-acre sewer lift station; and roadway improvements. The project would have a potentially significant impact on cultural resources.

Project ID	Project Name	Environmental Document Summary
RC-35	TR34677, TR31100, TR32391, TR33448, TR31101, TR31009, TR32282	Per Riverside County's February 2004 environmental assessment form/initial study, the project would subdivide 6.7 acres of a 71 acre parcel into 8 single-family residential lots, a detention basin, and 2.2 acres of open space. The project would have a less than significant impact on cultural resources with mitigation.
RC-37	TR36504	Per Riverside County's IS, the project proposes a Schedule 'A' subdivision of 162.05 acre gross area into 527 single-family residential lots. In addition to 527 residential lots, the subdivision also includes an 8.54 acre lot for a park, a 4.7 acre lot for a detention/debris basin, and an approximately 18 acre open space lot. The project would have a less than significant impact on cultural resources.
RC-38	San Gorgonio Crossings	Per Riverside County's May 2017 Recirculated Draft EIR, the project would develop two house high-cube warehouse buildings on an approximately 229 acre site, of which approximately 16 acres are located within the City of Calimesa. Approximately 140.23 acres of the site would be included within the developed portion of the project; 84.8 acres would remain natural open space. The project would have a less than significant impact on cultural resources.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife's 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. The project would have a less than significant impact on cultural resources with mitigation.

6.5.3.2 Archaeological Resources

Impact:	*The project contribution to potential cumulative effects on known or previously undetected subsurface archaeological resources would be cumulatively considerable.*
Threshold:	Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Cumulative Impact Analysis

Cumulative projects within Western Riverside County such as RC-5, MV-2, MV-4 and M-8 would involve ground disturbance that could result in a significant impact to archaeological resources. Some of the cumulative projects have incorporated project design features to avoid potential effects to known archaeological resources; however, potential significant cumulative impacts could occur to unknown archaeological resources. Although no known resources are located within the project area, ground disturbing activities could result in a significant impact to unknown archaeological resources. Therefore, the project's contribution to potential significant cumulative impacts would be cumulatively considerable.

Typical mitigation measures implemented by the cumulative projects (such as RC-5, M-2, MV-4 and M-8) to reduce potential impacts to unknown archaeological resources include archeological monitoring, Native American tribal representation during monitoring, and protocols for treatment of discovered resources. These measures typically reduce potential impacts to unknown archaeological resources to less than significant.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Implementation of Mitigation Measures 4.5.6.1A through 4.5.6.1E would be required.

Significance Level After Mitigation: Less than significant impact. With the implementation of the recommended mitigation measures, potential impacts to archaeological resources would be reduced. Mitigation Measures 4.5.6.1A and 4.5.6.1B includes Phase 1 cultural resources assessments of parcels that have not been assessed, significance evaluation of any resources encountered, and development of appropriate treatment or mitigation. Mitigation measures 4.5.6.1C and 4.5.6.1D include the retention of an archaeological monitor to observe all grading activities, with invitation of a Native American tribal representative to participate in monitoring. Mitigation measure 4.5.6.1E includes protocols to be followed should resources be discovered, including resource evaluation and appropriate treatment for significant resources. Through the implementation of the above mitigation measures, the project's incremental contribution to potential significant cumulative impacts would be less than cumulatively considerable.

6.5.3.3 Historic Resources

Impact:	*The project contribution to potential cumulative direct and indirect effects on local historical resources would be cumulatively considerable.*

Threshold:	Would the project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5 of the State CEQA Guidelines?

Cumulative Impact Analysis

Cumulative related projects within Western Riverside County (such as RC-5, M-2 and M-8) would involve ground disturbance that could impact above-ground structures that are of historic-age and meet the criteria of historic resources. Ground disturbance could also result in impacts to unknown historic resources that are located below ground. The construction activities associated with cumulative development could result in a potential significant cumulative impact.

The implementation of the project would contribute to potential cumulative impacts to historic resources. Because the project includes the removal of seven rural residential structures and associated out-buildings that may be of historic-age, impacts on these structures, features or resources could be significant. In addition, the project also includes effects on other structures of historic-age such as two previously identified historic sites containing farm buildings and related out-buildings as well as Alessandro Boulevard which was constructed across the site in the 1890s. The project's incremental contribution to cumulative historic impacts would be cumulatively considerable.

Typical mitigation measures implemented by projects in the cumulative scenario to reduce potential impacts to historical resources include proper curation and recordation of the recovered historic resources. These measures typically reduce potential impacts to historical resources to less than significant.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Implementation of Mitigation Measures 4.5.6.2A through 4.5.6.2C would be required.

Significance Level After Mitigation: Less than significant impact. With the implementation of the recommended mitigation measures, the project's contribution to historic cumulative impacts would be reduced. The implementation of Mitigation Measure 4.5.6.2A would include the proper curation of recovered historic resources. The implementation of Mitigation Measure 4.5.6.2B would include the installation of a historical marker along a historic trail. Mitigation Measure 4.5.6.2C include an alignment of an onsite road along the historical alignment of Alessandro Boulevard. With the implementation of these mitigation measures, the project's contribution to potentially significant cumulative historic impacts would be less than cumulatively considerable.

6.5.3.4 Paleontological Resources

Impact:	*The project's contribution to potential significant cumulative effects on previously undetected subsurface paleontological resources would be cumulatively considerable.*
Threshold:	Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Cumulative Impact Analysis

Cumulative projects within Western Riverside County (such as RC-5, M-2 and RC-34) would involve ground disturbance that could cause adverse impacts to paleontological resources. Potential impacts from projects in the cumulative scenario that could impact the same fossil-bearing geologic units as the project would be considered significant. These units include older Pleistocene alluvium and the San Timoteo formation, both of which have been assigned a moderate paleontological sensitivity because they have yielded paleontological resources in the past. Potential impacts from the implementation of projects in the cumulative scenario (such as RC-5, M-2 and RC-34) could result in significant cumulative impacts.

Because the project would result in ground disturbance that could affect paleontological resources within the Pleistocene alluvium and the San Timoteo formation, the project's contribution to cumulative paleontological resources impacts would be cumulatively considerable.

The typical mitigation measures implemented by the cumulative related projects such as RC-5, M-2 and RC-34 to reduce potential impacts to paleontological resources are paleontological monitoring and properly curating resources that are found. These measures typically reduce potential impacts to paleontological resources to less than significant.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Implementation of Mitigation Measures 4.5.6.3A and 4.5.6.3B would be required.

Significance Level After Mitigation: Less than significant impact. The implementation of the above mitigation measures would reduce the project's contribution to potential cumulative impacts to paleontological resources. The implementation of Mitigation Measure 4.5.6.3A includes the presence of a City-approved paleontologist to monitor excavation activities and salvage/collect fossils. Mitigation Measure 4.5.6.3B provides for the paleontological assessment of off-site improvements area and the implementation of monitoring protocols, where appropriate (MM 4.5.6.3B). Through the implementation of these mitigation measures, the project's contribution to potential significant cumulative impacts to paleontological resources would not be cumulatively considerable.

6.6 Geology and Soils

Cumulative effects to geology and soils are described in this section. A summary of the project's incremental contribution to potential cumulative impacts to geology and soils is provided in Section 6.6.1. The geographic and temporal scopes for cumulative impacts to geology and soils are provided in Section 6.6.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the geology and soil issues are discussed in Section 6.6.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.6.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the City will fully build out by 2040, the cumulative impact analysis assumes a more intense level of cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.6-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if their impacts would cause or contribute to a significant cumulative impact to geology and soils. These potentially significant cumulative impacts are documented in the following section.

6.6.1 Project Impact Findings

The project's effects to geology and soils are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project's impacts (see Section 4.6 of the Revised Sections of the FEIR) is provided as well as a reference to the specific section and impact number if the impact determination is significant.

Could the project:

- Expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides? **Less than Significant, Section 4.6.5.1.**
- Result in substantial soil erosion or the loss of topsoil; **Less than Significant, Section 4.6.5.2.**
- Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater. **No Impact, Section 4.6.5.3.**
- Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure. **Less than Significant, Section 4.6.5.4.**
- Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zone Maps issued by the State Geologist for the area or based on other

substantial evidence of a known fault; **Less than Significant with Mitigation, Section 4.6.6.1, Impact 4.6.6.1.**

- Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking. **Less than Significant with Mitigation, Section 4.6.6.2, Impact 4.6.6.2.**
- Be located on expansive soil, creating substantial risks to life or property. **Less than Significant with Mitigation, Section 4.6.6.3, Impact 4.6.6.3.**

Pursuant to CEQA Guidelines §15130, “a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR.” Because the project would result in no impact related to the capability of soils to adequately support the use of septic tanks or alternative wastewater disposal systems, it could not cause or contribute to any potential cumulative impact in this respect.

In all remaining respects, the project’s impacts would be less than significant or less than significant with mitigation and are evaluated in the cumulative effects analysis below. .

6.6.2 Geographic and Temporal Scope

The geographic area to evaluate potential cumulative impacts to geology and soils is the City of Moreno Valley because the City has adopted specific regulations within their grading regulations and building codes (e.g., City adopted the California Building Code) to reduce potential geology and soils impacts. People and structures within the City are subject to geotechnical and soils issues including faults, seismic ground shaking, liquefaction, landslides, and unstable soils. The geographic area for cumulative geology and soils impacts is shown on Figure 6.6-1. The projects located within the cumulative geology and soil impact area are listed in Table 6.6-1.

Table 6.6-1: Geology and Soils Cumulative Projects Summary

Project ID	Project Name	Environmental Document Summary
MV-3	ProLogis	Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres. There is no impact on the geology and soils in the area.
MV-4	Westridge Commerce Center	The Project's development of a 937,260 square foot warehouse distribution facility would contribute to cumulative impacts from fault rupture, ground shaking, ground failure, soil erosion, expansive soils and landslides.
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley's 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf. There is no impact on the geology and soils in the area.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres. There is no impact on the geology and soils in the area.
MV-9	TR32459 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project is for a single family residential tract with 11 lots on 13 acres and is zoned R1. The lots range from 41,021 sq ft to 59,627 sq ft in size. There is no impact on the geology and soils in the area.
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots. There is no impact on the geology and soils in the area.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres. There is no impact on the geology and soils in the area.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes. There is no impact on the geology and soils in the area.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space. There is no impact on the geology and soils in the area.
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres. There is no impact on the geology and soils in the area.
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes. There is no impact on the geology and soils in the area.

Project ID	Project Name	Environmental Document Summary
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres. There is no impact on the geology and soils in the area.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres. There is no impact on the geology and soils in the area.
MV-20	Moreno Marketplace	The Project's development of 95,905 square foot retail center would contribute to cumulative impacts from, ground shaking, ground failure, soil erosion, expansive soils and landslides.
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres. There is a less than significant impact on the geology and soils in the area.
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots. There is a less than significant impact on the geology and soils in the area.
MV-24	TM 36436 (PA12-0005)	The Project's subdivision of 43.52 acres into 159 single family residential lots would contribute to cumulative impacts from ground shaking, ground failure, soil erosion, and landslides.
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres. There is no impact on the geology and soils in the area.
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres. There is no impact on the geology and soils in the area.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acres. There is no impact on the geology and soils in the area.
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres. There is no impact on the geology and soils in the area.

Project ID	Project Name	Environmental Document Summary
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots. There is no impact on eh geology and soils in the area.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres. There is no impact on the geology and soils in the area.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots. There is no impact on the geology and soils in the area.
MV-34	TR34397 / Winchester Associates	The Project's subdivision of 19 acres into 50 single family residential lots would contribute to cumulative impacts from fault rupture, ground shaking, ground failure, and soil erosion,
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins. There is no impact on the geology and soils in the area.
MV-36	TM 31618 (PA03-0106)	The Project's subdivision of 18.99 acres into 56 single family residential lots would contribute to cumulative impacts from ground shaking, ground failure, and soil erosion.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is a less than significant impact on the geology and soils in the area with mitigation measures.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is a less than significant impact on the geology and soils in the area with mitigation measures.
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site. There is no impact on the geology and soils in the area.

Project ID	Project Name	Environmental Document Summary
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a hat will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land. There is no impact on the geology and soils in the area.
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays. There is a less than significant impact on the geology and soils in the area with mitigation measures.
MV-45	Iris Plaza	Per the City of Moreno Valley’s IS, the project would construct a 109,289 sq. ft. shopping center on approximately 12.4 acres of land within the Community Commercial (CC) land use district. There is no impact on the geology and soils in the area.
MV-47	PA07-0129 TR 35606 SFR	No environmental documentation was available for review. However, there is a planning commission resolution, which states that the project is not likely to cause substantial environmental impact. The resolution does not specifically mention an impact on the geology and sols in the area.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	The Project’s subdivision of a 75.05-acre property into four parcels with business center land uses could contribute to cumulative impacts from fault rupture, ground shaking, ground failure, soil erosion, expansive soils and landslides.
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped. There is a less than significant impact on the geology and soils in the area.
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site. There is no impact on the geology ad soils in the area.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. There is no impact on the geology and soils in the area.

Project ID	Project Name	Environmental Document Summary
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space. There is a less than significant impact on the geology and soils in the area.
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. There is no impact on the geology and soils in the area.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. There is no impact on the geology and soils in the area.
MV-56	Tract Map 33810	No environmental documentation was available for review. However, there is a planning commission resolution that states that the project is exempt from the requirements of CEQA guidelines. There is no mention on the impact on geology and soils in the area.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots. There is no impact on the geology and soils in the area,
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The resolution states that there is no impact on the environment. It does mention an impact on the geology and soils in the area.
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. There is no impact on the geology and soils in the area.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. There is no impact on the geology and soils in the area.
MV-61	Walmart & Gas Station	The Project's development of a 193,000 square-feet of retail/commercial uses on a 22.28-acre site would contribute to cumulative impacts from fault rupture, ground shaking, ground failure, soil erosion, expansive soils and landslides.

Project ID	Project Name	Environmental Document Summary
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. There is a less than significant impact on the geology and soils in the area.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. There is no impact on the geology and soils in the area.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. There is no impact on the geology and soils in the area.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. There is no impact on the geology and soils in the area.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the geology and soils in the area,
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the geology and soils in the area.
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. There is no impact on the geology and soils in the area.
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley’s 2008 ND, the project would build a 522,772 square foot industrial warehouse building on 25.96 acres of land. There is no impact on the geology and soils in the area.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. There is a less than significant impact on the geology and soils in the area.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. There is a less than significant impact on the geology and soils in the area.

Project ID	Project Name	Environmental Document Summary
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. There is no impact on the geology and soils in the area.
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. There is no impact on the geology and soils in the area.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2010 ND, the project subdivides 16.9 acres into 6 pads for commercial retail use. There is no impact on the geology and soils in the area.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. There is no impact on the geology and soils in the area.
MV-88	TR33771 / Creative Design Associates	No environmental documentation was available for review. However, there is a planning commission resolution for a 12 unit condominium complex on approximately 0.9 acres. The resiolution did state that there was no impact on the environment in the area. It did not specifically mention the impact on the geology and soils.
MV-89	TR35663 / Kha	No environmental documentation was available for review. However, there is a notice of exemption for a mixed use development on approximately 2.2 acres, which states that there is no evidence of potential for significant environmental impacts. It does not specifically mention an impact on the geology and soils in the area.
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. There is no impact on the geology and soils in the area.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. There is no impact on the geology and soils in the area.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. There is no impact on the geology and soils in the area.

Project ID	Project Name	Environmental Document Summary
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. There is a less than significant impact on the geology and soils in the area.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. There is a less than significant impact on the geology and soils in the area.
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. There is no impact on the geology and soils in the area.
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. There is no impact on the geology and soils in the area.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. There is no impact on the geology and soils in the area.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. There is no impact on the geology and soils in the area.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. There is a less than significant impact on the geology and soils in the area.

Project ID	Project Name	Environmental Document Summary
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. The resolution stated that there is no impact on the environment in the area. It does not specifically mention whether or not there is an impact on the geology and soils in the area.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. There is no impact on the geology and soils in the area.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact on the geology and soils in the area.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres. The resolution makes no statements regarding the environment, including the geology and soils, in the area.
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. There is a less than significant impact on the geology and soils in the area with mitigation measures.
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. There is no impact on the geology and soils in the area.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. There is no impact on the geology and soils in the area.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. There is no impact on the geology and soils in the area.

Project ID	Project Name	Environmental Document Summary
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. There is a less than significant impact on the geology and soils in the area.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. There is no impact on the geology and soils in the area.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife's 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. There is a potentially significant impact on the geology and soils in the area.

6.6.3 Cumulative Impact Evaluation

6.6.3.1 Landslides and Rockfalls

Impact: *The project would contribute incrementally to a less than significant cumulative impact relating to the exposure of persons or structures to potential substantial adverse landslide or rockfall effects.*

Threshold: Would the project expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

Cumulative Impact Analysis

Based on a review of the available environmental documentation for projects in the cumulative scenario (such as MV 4, MV 24 and MV 126), none of the potentially cumulative projects has the potential to cause exposure to landslide or rockfall effects particularly adjacent to foothills and steep slopes. Therefore, there would be no significant cumulative landslides or rockfall effects that could adversely affect people or structures with the implementation of the cumulative scenario.

The project site includes one area that encompasses the lower slopes of Mount Russell. The project designates these slope areas as Open Space, which would reduce the potential for landslide or rockfalls that could adversely affect people or structures. With the application of the Open Space designation to this area, the project would reduce this potential effect to less than significant. Because projects in the cumulative scenario would not expose people or structures to landslides or rockfall impacts, the project's incremental less-than-significant contribution to potential cumulative effects would not alone cause or create a significant cumulative effect relating to the exposure of people and structures to landslide or rockfall impacts. A less than significant cumulative effect would result.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

6.6.3.2 Soil Erosion or Loss of Topsoil

Impact:	*The project would contribute incrementally to a less than significant cumulative impact relating to soil erosion or the loss of topsoil.*
Threshold:	Would the project result in substantial soil erosion or the loss of topsoil?

Cumulative Impact Analysis

Projects in the cumulative scenario have the potential to result in short-term erosion of surface soils; however, as appropriate, the cumulative projects include the implementation of erosion control features that comply with National Pollutant Discharge Elimination System (NPDES) requirements and would reduce erosion to less than significant. In addition, those projects include improvements that would not increase long-term erosion of on-site soils and therefore, would result in less than significant impacts. Following is a further discussion of the potential erosion associated with the cumulative projects.

Prior to moving soils during construction activities, the project proponent of each of the cumulative projects would be required to submit detailed grading plans to obtain grading permits. The approval of the permits would require compliance with applicable standards of the City's Grading Ordinance. Projects that would result in the disturbance of more than one acre of land would be required to obtain a NPDES permit and to comply with SCAQMD Rule 403 (fugitive dust). A Storm Water Pollution Prevention Plan (SWPPP) would also be required to reduce potential erosion and surface water discharge impacts. Based on a review of the environmental documentation prepared for each of the cumulative related projects, the SWPPP would include specific erosion control features to reduce potential soil erosion to less than significant. Therefore, the cumulative related projects would result in less than significant impacts associated with soil erosion or the loss of topsoil. The implementation of the proposed project includes specific components to reduce potential impacts of soil erosion or loss of topsoil during construction activities. These components are identified in Section 4.6.5.2 of the FEIR. With the implementation of these construction measures/components, the project would result in a less than significant soil erosion or loss of topsoil impact. In assessing the cumulative projects in conjunction with the project, the implementation of erosion control features that would be required to obtain grading permits would reduce the cumulative soil erosion or loss of topsoil impact to less than significant. Further, the project's incremental less-than-significant contribution to potential cumulative impacts associated with soil erosion or the loss of topsoil alone would not cause one. Thus, cumulative erosion and topsoil impacts would be less than significant during construction.

Long-term operations of projects in the cumulative scenario have the potential to cause soil erosion or loss of topsoil if soil stabilization measures are not incorporated into ongoing operations. However, based on review of the environmental documentation for the cumulative related projects, each project identifies that the implementation of the urban uses on the project site would result in less than significant soil erosion impacts or each project would incorporate soil stabilization measures to reduce soil erosion impacts to less than significant. In assessing the cumulative related projects in conjunction with the project, the implementation of soil stabilization measures for those projects that require those measures such as the project, the potential cumulative long-term soil erosion impact would be less than significant. Because the project includes various detention/retention, treatment and soil stabilization measures to reduce potential long-term soil erosion or the loss of topsoil with the measures identified in Section 4.6.5.2 of the FEIR, the project would not cause a significant cumulative impact. Thus, cumulative erosion and topsoil impacts would be less than significant during operation.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

6.6.3.3 Seismic-Related Ground Failure

Impact: *The project would contribute incrementally to a less than significant cumulative impact relating to the considerable exposure of people or structures to potential adverse seismic ground failure effects.*

Threshold:	Would the project expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic ground failure?

Cumulative Impact Analysis

Persons or structures associated with projects in the cumulative scenario could be exposed to geologic conditions that cause ground failure during seismic events (including all “MV” cumulative projects). These potential geologic conditions include landslides, settlement, subsidence, or liquefaction, and potential ground failure that could expose people or structures to these effects. The exposure to these impacts could result in significant impacts; however, each of the cumulative projects would be subject to the City of Moreno Valley’s grading requirements and building codes. Compliance with these requirements would reduce potential effects to less than significant.

The project site is located in an area of the City that is not subject to settlement, subsidence or liquefaction. In addition, the majority of the project site lies on relatively flat terrain. There is one portion of the site that includes steep topographic features that could be subject to landslides; however, the project designates this area for Open Space (Planning Area 30). In considering the implementation of the project in combination with the cumulative related projects, no significant cumulative effect of exposing persons and structures to potential seismic ground failure would result.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significant Level After Mitigation: Less than significant impact.

6.6.3.5 Fault Rupture

Impact: *The project would cause a cumulatively considerable contribution to a significant cumulative effect relating to the exposure of people or structures to potential adverse fault rupture effects.*

Threshold:	Would the project expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zone Maps issued by the State Geologist for the area or based on other substantial evidence of a known fault.

Cumulative Impact Analysis

The San Jacinto Fault Zone and its associated fault segments are located within the eastern portion of the City of Moreno Valley. According to the City of Moreno Valley General Plan EIR, no other active fault zone is located within the City. Based on a review of projects in the cumulative scenario, San Jacinto Wildlife Area Land Management Plan is the only related project that is located in the immediate vicinity of the San Jacinto Fault Zone. A portion of the Land Management Plan encompasses the area immediately south of the project site and is located within the City of Moreno Valley. This portion of the Land Management Plan includes a potential for a water storage project that would involve construction of enclosed berms to hold water and an onsite pipeline. However, based on information from the San Jacinto Wildlife Area Land Management Plan EIR, the water storage project would not be located on any of the mapped earthquake fault zones and would thus be unlikely subject to fault rupture. Therefore, no significant cumulative effect would result relating to surface rupture impacts exposing persons and structures to significant effects.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Implementation of Mitigation Measures 4.6.6.1A through 4.6.6.1C is required.

Significance Level After Mitigation: Less than significant impact. The implementation of Mitigation Measures 4.6.6.1A through 4.6.6.1C will require subsurface evaluations to determine the implementation of structural setbacks, remedial earthwork and/or foundation recommendations if site-specific geotechnical investigations confirm the locations of the fault alignments in the areas of proposed land uses. The implementation of these mitigation measures would reduce the project's potential fault rupture impacts to less than cumulatively considerable.

6.6.3.6 Ground Shaking

Impact: *The project would result in a cumulatively considerable exposure of people or structures to potential strong seismic ground shaking.*

Threshold:	Would the project expose persons or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong ground shaking?

Cumulative Impact Analysis

Projects in the cumulative scenario could be subject to ground shaking resulting from seismic activity on regional and local faults (including all "MV" cumulative projects). The level of potential ground motion from faults is considered moderate to high in the City of Moreno Valley. Based on a review of the environmental documents prepared for the cumulative projects (such as MV-34, MV-36, MV-41 and MV-48), the structures proposed by each project would be required to be designed in accordance with the California Building Code and the City of Moreno Valley Building Code to preclude adverse effects to the structures and persons associated with strong seismic ground-shaking. The amount of ground shaking would be dependent on the earthquake size, location and distance. Ground shaking would be greater with larger and closer earthquakes. Cumulative projects could expose persons and structures to significant cumulative seismic ground shaking impacts.

The implementation of the project could also subject persons and structures to ground shaking from seismic activity on regional and local faults. Section 4.6 identifies that the exposure of the proposed structures and persons to seismic activity would be significant. Therefore, the combination of impacts of the project and other projects in the cumulative scenario would result in a cumulative significant impact. Given the size of the project and the number of people and scope of structures it would include, the project's contribution to the significant cumulative impact associated with exposing persons and structures to strong seismic ground shaking impacts would be cumulatively considerable.

Significance Level Before Mitigation: Potential significant impact.

Mitigation Measures: Implementation of Mitigation Measure 4.6.6.2A would be required.

Significance Level After Mitigation: Less than significant impact. With the implementation of Mitigation Measure 4.6.6.2A, structural design parameters for the proposed improvements in accordance with the California Building Code, including applicable City amendments, would be implemented based on site-specific geotechnical investigations. The implementation of this measure would reduce the project's contribution to the potential significant cumulative exposure of persons and structures to seismic ground shaking impacts to less than cumulatively considerable.

6.6.3.7 Unstable Soils

Impact: *The project would result in a cumulatively considerable expansive soil impact that could create substantial risks to life or property.*

Threshold:	Would the project be located on expansive soil, creating substantial risks to life or property?

Cumulative Impact Analysis

Projects in the cumulative scenario (such as MV-20, MV-41, and MV-61) would include structural development on soils that have a low to moderate shrink/swell potential that could result in unstable soils. Areas where soils have a moderate shrink/swell potential could result in expansive soil impacts that would be significant. However, based on a review of the cumulative projects such as MV-20, MV-41 and MV-61, the implementation of special construction techniques and compliance with the California Building Code would reduce expansive soil impacts to less than significant.

The implementation of the project could include structures on soils with moderate shrink/swell and cause potential significant impacts to persons and structures Therefore, the combination of the project's incremental impacts together with the impacts of other projects in the cumulative scenario would result in a cumulative significant expansive soil impact. Given the size of the project and the number of people it would include, the project's contribution to exposing persons and structures to expansive soil impacts would be cumulatively considerable.

Significance Level Before Mitigation: Potential significant impact.

Mitigation Measures: Implementation of Mitigation Measures 4.6.6.3A through 4.6.6.3C would be required.

Significance Level After Mitigation: Less than significant impact. With the implementation of Mitigation Measures 4.6.6.3A through 4.6.6.3C, structural design parameters for the proposed improvements in accordance with the California Building Code, including applicable City amendments, would be implemented based on site-specific geotechnical investigations. The implementation of these measures would reduce the project's contribution to the potential significant cumulative exposure of persons and structures to expansive soil impacts to less than cumulatively considerable.

6.7 Greenhouse Gas Emissions, Climate Change and Sustainability

Cumulative effects to greenhouse gas (GHG) emissions, climate change and sustainability are described in this section. A summary of the project's potential impacts related to GHG emissions and consistency with plans, policies, and regulations adopted for the purpose of reducing the emissions of GHGs is provided in Section 6.7.1. The cumulative impact geographic area for GHG emissions, climate change, and sustainability issues is provided in Section 6.7.2. The potential cumulative impacts and the project's contribution to cumulative impacts related to GHG emissions and consistency with plans, policies, and regulations adopted for the purpose of reducing the emissions of GHGs are discussed in Section 6.7.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.7.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the city will fully build out by 2040, the cumulative impact analysis assumes worse case cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.7-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if they would contribute to a cumulatively considerable impact to greenhouse gas emissions, climate change and sustainability. These potentially cumulative impacts are documented in the following section.

6.7.1 Project Impact Findings

The project's effects on greenhouse gas emissions, climate change, and sustainability are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project impacts (see Section 4.7 of the Revised Sections of the FEIR) is provided as well as a reference to the specific section and impact number if the impact determination is significant.

Could the project:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment (i.e., exceeds the SCAQMD's 10,000 mt CO_2e emissions screening threshold of significance); **Less than Significant with Mitigation, Section 4.7.6.1.**
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases. **Less than Significant with Mitigation, Section 4.7.6.2.**

As shown, there are no unmitigated project-specific significant and unavoidable impacts to greenhouse gas emissions identified in the revised FEIR.

6.7.2 Geographic and Temporal Scope

CEQA requires that lead agencies consider the cumulative impacts of GHG emissions from even relatively small (on a global basis) increases in GHG emissions. Small contributions to this cumulative impact (from which significant effects are occurring and are expected to worsen over time) may be potentially considerable and therefore significant. In the case of global climate change, the proximity of the project to other GHG emission generating activities is not directly relevant to the determination of a cumulative impact because climate change is a global condition. GHG emission impacts are, by their very nature cumulative, as both the California Natural Resources Agency and CAPCOA have recognized.

For purposes of this analysis, the cumulative impact geographic area for GHG emissions is based on the limits set forth in the cumulative traffic analysis conducted by the project. This area includes the entire City of Moreno Valley and portions of the Cities of Riverside, Redlands, Beaumont, Perris, San Jacinto, Hemet and Calimesa, as well as portions of unincorporated Riverside and San Bernardino County, and the March JPA. The primary sources of GHG emissions from this project would be related to energy consumption in buildings and related uses (lighting for streets and parking lots, etc.) and in the transport of goods by future tenants. Regulations applicable to the GHG-intensity of power and petroleum production in California are promulgated at the state level. Regulations, policies, and plans to reduce GHGs potentially applicable to the project are adopted by the State of California, regional governmental agencies (such as SCAG and SCAQMD), and local governments, in support of State laws AB32 and SB32.

As part of the GHG cumulative analysis a review of available environmental documents for projects within the Project vicinity was conducted. Approximately 360 projects have been identified and out of those 360 projects, approximately 162 environmental documents were available. All 162 were reviewed to identify project specific GHG analyses. Out of the 162 environmental documents that were reviewed, 84 were completed in 2008 or earlier, prior to the requirements of AB32 and the mandatory reporting rules for significant sources of GHG emissions. Therefore, those 84 documents did not provide GHG analyses. Out of the 78 documents that were completed after the year 2008, 24 environmental documents provided a GHG analysis. Despite not having a GHG analysis from all 360 cumulative projects, a determination on the project's cumulative impact could still be determined based on the AQMD's strategies in assessing a cumulatively considerable impact, where projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable.[1]

The projects located within the cumulative GHG emissions, climate change and sustainability impact area are shown in Figure 6.7-1 and listed in Table 6.7-1.

Table 6.7-1: Greenhouse Gas Emissions, Climate Change and Sustainability Cumulative Projects Summary

Project ID	Project Name	Environmental Document Summary
B-3	Heartland	Per the City of Beaumont Planning Department's 1994 EIR, the Heartland Specific Plan would develop low and medium density housing, and supporting land uses on 417.2 acres. The project would have a significant impact on GHG emissions.
B-4	Hidden Canyon	Per the City of Beaumont Planning Department's 2004 EIR, the Hidden Canyon EIR Addendum to the Beaumont Gateway Specific Plan would result in the development of 426 residential units, commercial space and open space on 196.5 acres. The project would have a significant impact on GHG emissions.
B-5	ProLogis/Rolling Hills Ranch Industrial	Per the City of Beaumont Planning Department's 2004 EIR, the Second Amendment to the Rolling Hills Ranch Specific Plan would change the 152,9 acre property's General Plan land use designation from low density residential to Business Park. The project would have no significant impacts on GHG emissions.
B-7	Kirkwood Ranch (#14)	Per the City of Beaumont Planning Department's 1990 EIR, the Kirkwood Ranch Specific Plan would develop 470 single family detached units and 60 multi-family units on a 128 acre site. The project would have a significant impact on GHG emissions.
B-9	Sundance (#17)	Per the City of Beaumont Planning Department's 2004 EIR, the Sundance Specific Plan Amendment to the Deutsch Specific Plan would result in the development of 1,968 single-family units, 2,208 homes, and 540 condo units, commercial space, and supporting land uses on 1,195 acres. The project would have a less than significant impact on GHG emissions.
B-10	Tract No. 32850 (#39)	Per the City of Beaumont Planning Department's 2005 ND, the Tract Map 32850 would divide a 29.09 acre parcel into 103 single-family residential lots. The project would have a less than significant impact on GHG emissions.
B-11	San Gorgonio Village, Phase 2 (#45)	Per the City of Beaumont Planning Department's 2007 MND, the San Gregorio Village Specific Plan would provide for the development of approximately 225,000 square feet of commercial and restaurant uses on approximately 23 acres. The project would have a less than significant impact on GHG emissions.

Project ID	Project Name	Environmental Document Summary
B-12	Beaumont Commercial Center	Per the City of Beaumont Planning Department's 2016 IS, the Beaumont Commercial Center would provide for the development of five commercial buildings with 58,603 square feet of retails, service, and restaurant uses. The project would have a less than significant impact on GHG emissions.
B-14	Potrero Creek Estates (#26)	Per the City of Beaumont Planning Department's 1988 EIR, the Potrero Creek Estates Specific Plan would result in the residential development of 1,028 single family lots on 737 acres. The project would have no impact on GHG emissions.
H-3	Tres Cerritos Specific Plan	Per the City of Hemet's NOC, the project proposes to develop 178 single-family homes on 51.2 acres. The project would have a less than significant impact on GHG emissions.
H-4	Sanderson Square	Per the City of Hemet's 2006 IS, the Sanderson Square Specific Plan would result in the development off commercial and industrial uses on approximately 45 acres. The project would have a potentially significant impact on air quality.
H-5	McSweeny Farms Specific Plan	Per the City of Hemet's 2003 excerpt of an EIR, the McSweeny Farms Properties Specific Plan would result in the construction of 2,482 residential units within 442 acres. The EIR provides no information on GHG.
H-6	Ramona Creek Specific Plan	Per the City of Hemet's 2014 EIR, the Ramona Creek Specific Plan and General Plan Amendment would result in the development of a multiple-use commercial and residential community. The project would have a less than significant impact on GHG emissions with mitigation incorporated.
H-7	Peppertree Specific Plan	Per the City of Hemet's 2003 ISMND, the Peppertree Specific Plan would result in the development of 456 residences, and recreational spaces of 79.2 acres. The project would have a less than significant impact on GHG emissions.
H-9	Pulte Del Web (TTM 31807 and 31808)	Per the City of Hemet's 2005 SEIR, the Tentative Tract Map 31807, Tentative Tract Map 31808, and Specific Plan Amendment SPA 04-1 would result in the amendment of a land use plan for a 10 acre site from commercial to high medium density residential and the division of 154.77 acres into 611 residential lots, an adult community center, and open space. The project would have a less than significant impact on GHG emissions.

Project ID	Project Name	Environmental Document Summary
H-10	Downtown Hemet Specific Plan	Per the City of Hemet's 2017 ISMND, the proposed Downtown Hemet Specific Plan is a comprehensive plan that features a land use plan, circulation plan, urban design framework, utility infrastructure plan, development standards, design guidelines, and sustainability plan for future development within a 360-acre area in downtown Hemet. The project would have a less than significant impact on GHG emissions.
M-2	Meridian Business Park Phases I and II	Per the March Joint Powers Authority's 2017 EIR, the project would result in the development of a 130 acre business park. The project would have significant impacts on GHG emissions associated with consistency with the SCAG RTP/SCS and SB 375.
M-8	March LifeCare Campus Specific Plan	Per the March Joint Powers Authority's 2009 EIR, the project would result in the development of a medical campus on approximately 236 acres. The project would have a less than significant impact on GHG emissions.
M-9	TM 34748	Per the March Joint Powers Authority's 2010 ND, the project proposes to build a 135 single-family residential lot subdivision on 40 acres. The project would have a less than significant impact on GHG emissions.
M-11	PA 06-0014 (Pierce Hardy Limited Partnership)	Per the March Joint Power's Authority's draft ND, the project would construct a Retail/Storage Lumber Yard Complex (approximately 67,800 square feet of total building space) on 11.0 acres. The project would have a less than significant impact on GHG emissions.
MV-3	ProLogis	E Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres. There is a less than significant impact on the GHG in the area with mitigation measures.
MV-4	Westridge Commerce Center	Per the City of Moreno Valley's April 2011 Final EIR, the project would develop approximately 937,260 square feet of light industrial warehouse/ distribution uses and related infrastructure on 55 acres. There is a less than significant impact on the GHG in the area.
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley's 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf. There is no impact on the GHG in the area.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres. There is no impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-9	TR32459 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project is for a single family residential tract with 11 lots on 13 acres and is zoned R1. The lots range from 41,021 sq ft to 59,627 sq ft in size. There is no impact on the GHG in the area.
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots. There is no impact on the GHG in the area.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres. There is no impact on the GHG in the area.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes. There is no impact on the GHG in the area.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space. There is no impact on the GHG in the area.
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres. There is no impact on the GHG in the area.
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes. There is no impact on the GHG in the area.
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres. There is no impact on the GHG in the area.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres. There is a less than significant impact on the GHG in the area.
MV-20	Moreno Marketplace	Per the City of Moreno Valley's June 2006 Negative Declaration, this project would develop a 95,905 square foot retail center on 10.46 acres. There is no impact on the GHG in the area.
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres. There is a less than significant impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots. There is a less than significant impact on the GHG in the area.
MV-24	TM 36436 (PA12-0005)	Per the City of Moreno Valley's December 2012 MND, this project would subdivide 43.52 acres for 159 single family residential lots. There is a less than significant impact on the GHG in the area.
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres. There is no impact on the GHG in the area.
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres. There is no impact on the GHG in the area.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acres. There is no impact on the GHG in the area.
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres. There is no impact on the GHG in the area.
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots. There is no impact on the GHG in the area.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres. There is a less than significant impact on the GHG in the area.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots. There is no impact on the GHG in the area.
MV-34	TR34397 / Winchester Associates	Per the City of Moreno Valley's April 2007 initial study/environmental checklist form, the project would subdivide 19 acres for 50 single-family residential lots. There is no impact on the GHG in the area.
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins. There is no impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-36	TM 31618 (PA03-0106)	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 18.99 acres for 56 single-family residential lots. There is no impact on the GHG in the area.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is a less than significant impact on the GHG in the area with mitigation measures.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is a less than significant impact on the GHG in the area with mitigation measures.
MV-41	First Nandina Logistics Center	Based on the City of Moreno Valley's October 2014 Facts, Findings, and Statement of Overriding Considerations, the project would develop approximately1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of mezzanine space on 72.9 acres. There is a significant and unavoidable impact on the GHG in the area.
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site. There is a significant and unavoidable impact on the GHG in the area.
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a hat will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land. There is a less than significant impact on the GHG in the area.
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays. There is a significant and unavoidable impact on the GHG in the area.
MV-45	Iris Plaza	Per the City of Moreno Valley’s IS, the project would construct a 109,289 sq. ft. shopping center on approximately 12.4 acres of land within the Community Commercial (CC) land use district. There is no impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-47	PA07-0129 TR 35606 SFR	No environmental documentation was available for review. However, there is a planning commission resolution, which states that the project is not likely to cause substantial environmental impact. The resolution does not specifically mention an impact on the GHG in the area.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	Per the City of Moreno Valley's Environmental Checklist, the project would prepare an EIR to subdivide 75.05-acre property into four parcels with business center land uses. There is a less than significant impact on the GHG in the area with mitigation measures.
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped. There is no impact on the GHG in the area.
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site. There is no impact on the GHG in the area.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. There is no impact on the GHG in the area.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space. There is no impact on the GHG in the area.
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. There is a less than significant impact on the GHG in the area.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. There is significant and unavoidable impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-56	Tract Map 33810	No environmental documentation was available for review. However, there is a planning commission resolution that states that the project is exempt from the requirements of CEQA guidelines. It does not specifically mention an impact on the GHG in the area.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots. There is no impact on the GHG in the area.
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The resolution states that there will be no impact on the environment in the area. It does not specifically mention an impact on the GHG in the area.
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. There is no impact on the GHG in the area.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. There is no impact on the GHG in the area.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 square feet of new retail/commercial uses on the approximately 22.28-acre site. There is a less than significant impact on the GHG in the area with mitigation measures.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. There is a less than significant impact on the GHG in the area.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. There is no impact on the GHG in the area.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. There is no impact on the GHG in the area.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. There is no impact on the GHG in the area.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the GHG in the area.
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. There is a less than significant impact on the GHG in the area.
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley’s 2008 ND, the project would build a 522,772 square foot industrial warehouse building on 25.96 acres of land. There is no impact on the GHG in the area.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. There is a less than significant impact on the GHG in the area.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. There is a less than significant impact on the GHG in the area.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. There is no impact on the GHG in the area.
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. There is no impact on the GHG in the area.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2010 ND, the project subdivides 16.9 acres into 6 pads for commercial retail use. There is no impact on the GHG in the area.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. There is no impact on the GHG in the area.
MV-88	TR33771 / Creative Design Associates	No environmental documentation was available for review. However, there is a planning commission resolution for a 12 unit condominium complex on approximately 0.9 acres The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-89	TR35663 / Kha	No environmental documentation was available for review. However, there is a notice of exemption for a mixed use development on approximately 2.2 acres, which states that there is no evidence of potential for significant environmental impacts. It does not specifically mention an impact on the GHG in the area.
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. There is no impact on the GHG in the area.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. There is no impact on the GHG in the area.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. There is a less than significant impact on the GHG in the area.
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. There is a less than significant impact on the GHG in the area.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. There is no impact on the GHG in the area.
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. There is no impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. There is no impact on the GHG in the area.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. There is no impact on the GHG in the area.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. There is no impact on the GHG in the area.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. There is no impact on the GHG in the area.
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. The resolution states that the project would be exempt from CEQA guidelines. It does not mention specifically anything about an impact on the GHG in the area.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. There is no impact on the GHG in the area.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact on the GHG in the area.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres. The resolution states that the project is exempt from CEQA guidelines. It does not specifically mention an impact on the GHG in the area.
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. There is a less than significant impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. There is no impact on the GHG in the area.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. There is no impact on the GHG in the area.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. There is no impact on the GHG in the area.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. There is no impact on the GHG in the area.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. There is no impact on the GHG in the area.
P-2	TR34716	Per the City of Perris’ 2013 FEIR, the project involves the construction and operation of up to 600,000 gross square feet (gsf) of light industrial/warehouse uses. The project would have a less than significant impact on GHG emissions.
P-4	Bookend	Per the City of Perris' 2015 MND, the project proposed to subdivide an existing vacant parcel into five new industrial parcels with a total building area of 165,000 sf. The project would have less than significant impacts on GHG emissions.
P-5	Markham East	Per the City of Perris's June 2007 Notice of Determination, the project would develop 462,692 square feet of light industrial warehouse/distribution uses in a single building with associated roadway and utility infrastructure and landscape improvements on 22.25 acres. The project would have less than significant impacts on GHG emissions.
P-7	Duke Warehouse	Per the City of Perris's Facts, Findings and Statement of Overriding Considerations, the project would redesign ate a large portion of the northern part of the City with broad categories of compatible commercial and industrial uses on 34.57 acres. Uses would include a 668,681 square foot industrial/warehouse building that includes 19,200 square feet of office space. The project would have less than significant impacts on GHG emissions with mitigation.

Project ID	Project Name	Environmental Document Summary
P-8	First Perry Logistics Project	Per the City of Perris's November 2017 Notice of Determination, the project would develop a 236,961 square foot industrial building on 11.06 acres. The project would have less than significant impacts on GHG emissions.
P-10	IDS	Per City of Perris 2005 Final EIR would result in the Perris Warehouse/Distribution Facility Project. The project would have a potentially significant impact on air quality.
P-11	Ridge II	Per the City of Perris 2007 NOC and Environmental Doc Transmittal, project proposes a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures. The project would have a significant impact on GHG emissions.
P-12	Starcrest, P011-0005; 08-11-0006	Per the City of Perris Final EIR, the proposed project is the expansion of an existing internet/mailorder fulfillment facility to an adjacent property. The existing Starcrest building is approximately 232,215 square feet in size. The expansion would include a 454,008 sf building north of and adjacent to Starcrest's existing facility. The project would have a less than significant impact on GHG emissions.
P-14	Rados Distribution Center	Per the City of Perris 2010 Final EIR, proposed project is an approximately 1,191,080 sq ft distribution center on approximately 61.63 gross acres. The project would have cumulatively significant impacts to GHG emissions.
P-15	Duke Perris Logistics Center I	Per the City of Perris 2017 Final EIR, the project would result in the Duke Warehouse at Indian Avenue and Markham Street. The project would have a significant impact on GHG emissions.
P-16	Perris Ridge Commerce Center I	Per the City of Perris' 2007 excerpt of an EIR, the project proposes the establishment of a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures on 91 acres. The project would have a potentially significant impact on GHG emissions.
P-18	P07-07-0029	Per the City of Perris' 2009 EIR, the project proposed to construct a 1,608,322 sf industrial complex comprised of five buildings on 92.3 acres. The project would have a significant impact on GHG emissions.
P-19	P05-0192	Per the City of Perris' 2006 EIR, the project proposed development of an approximately 700,000 square foot industrial building on a 40-acre. The project would have a significant impact on GHG emissions.

Project ID	Project Name	Environmental Document Summary
P-20	P05-0113	Per the City of Perris' 2009 EIR, the project proposed subdividing the site into five legal parcels, four of which would be developed with industrial/warehouse buildings for a total of 1,750,000 sf. The project would have a less than significant impact on GHG emissions with mitigation.
P-21	P07-09-0018	Per the City of Perris' 2008 IS, the project proposed the development of a 173,000 sf industrial building on 8.7 acres. The project would have a less than significant impact on GHG emissions.
P-22	NICOL	Per the City of Perris' 2016 IS/MND, the project proposed a 380,000 sf warehouse building on 21.63 acres. The project would have a less than significant impact on GHG emissions. The project would have a less than significant impact on GHG emissions.
P-23	Westcoast Textiles	Per the City of Perris' 2016 IS, the project proposed construction of a 187,850 sf industrial/manufacturing building on 9 acres. The project would have a less than significant impact on GHG emissions.
P-24	Optimus Logistics Center 1	Per the City of Perris' 2016 EIR, the project proposed to construct a high-cube warehouse consisting of two buildings totaling 1,455,781 sf on 68.99 acres. The project would have a significant impact on GHG emissions.
P-25	Optimus Logistics Center 2	Per the City of Perris' 2015 EIR, the project proposed construction of warehouse development site encompassing 1,037,811 square feet in two buildings on 48.4 acres. The project would have a less than significant impact on GHG emissions.
P-26	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 811,620 square feet (sf) of industrial high-cube, non-refrigerated warehouse/distribution uses on the approximate 37.3-acre site. The project would have a potentially significant impact on GHG emissions.
P-27	Perris DC (Industrial Property Trust)/Integra	Per the City of Perris' 2014 EIR, the project proposed construction and operation of up to 864,000 square feet (sf) of industrial warehouse/distribution uses on the approximate 43.2-acre site. The project would have a significant impact on GHG emissions.
P-28	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 1,189,860 square feet (sf) of high-cube warehouse/distribution uses on the approximate 55-acre Project site. The project would have a significant impact on GHG emissions.

Project ID	Project Name	Environmental Document Summary
P-30	Avelina	Per the City of Perris' 2003 IS, the project proposed to increase residential density on a 158.2 acre property to 475 dwelling units. There is a less than significant impact on the GHG in the area.
P-31	Perris Family Apartments	Per the City of Perris' 2013 IS, the project proposed to construct a 75-unit multi-family apartment complex on 7 vacant acres. There is a less than significant impact on the GHG in the area with mitigation measures.
P-32	Lewis Retail Center	Per the City of Perris' 2009 IS, the project proposed to construct 643,000 sf of commercial shopping center on 68 acres. There is a potentially significant impact on the GHG in the area.
P-35	Verano Apartments	Per the City of Perris' 2013 IS, the project proposed increasing the number of residential units from 19 to 40 and reducing the commercial component from 17,000 sq. ft. to 1,000 sq. ft. for retail and to allow a 2,000 sq. ft. day care facility. There is a less than significant impact on the GHG in the area.
P-37	Cabrillo	Per the City of Perris’ Initial Study, the project proposed to amend the General Plan (GP) and Zoning designation of approximately 36.21 acres of land from R-6,000 to MFR-14 Residential, along with a Text Amendment to narrow the lot frontage from 50-feet to 45-feet for lots greater than 4,500 square feet to facilitate the entitlement of Tentative Tract Map (TTM) 36343, a 184 lot residential subdivision. There is a less than significant impact on the GHG in the area.
P-58	Jordan Distribution	Per the City of Perris's June 2008 Notice of Determination, the project would develop a 378,521 square foot tilt-up industrial building for warehouse distribution uses on 17.1 acres. The project would have a less than significant impact on GHG emissions.
R-1	Sycamore Canyon Business Park - Bldgs 1&2	Per the City of Riverside's January 2017 Final EIR, the project would develop approximately 1.43 million square feet of business park uses on approximately 920 acres. There is a less than significant impact on the GHG in the area with mitigation measures.
R-2	Alessandro Business Center (Western Realco)	Per the City of Riverside's February 2015 Addendum to the Final EIR, the project would develop 662,018 square feet of industrial warehouse uses on 36.7 acres. There is no impact on the GHG in the area.
R-3	P07-1028, -0102; and P09-0416, -0418, -0419	Per the City of Riverside's December 2009 Final EIR, the project would develop a 36.91 acre business park development for light industrial, warehouse distribution, and office uses on 80.07 acres. There is no impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
R-4	Quail Run	Per the City of Riverside's January 2016 Initial Study, the project would develop a 13-building apartment complex on approximately 16 acres of a 30.9 acre site that also would include parking structures and spaces, and open space. There is a less than significant impact on the GHG in the area.
R-5	Canyon Springs Healthcare Campus Specific Plan	Per the City of Riverside's July 2017 Draft EIR, the project would develop a healthcare campus on 50.85 acres, including an approximately 234-unit senior housing facility; approximately 310,200-square-foot (267-unit, 290-bed) independent living/memory care, assisted living, and skilled nursing facility; an approximately 324,000-square-foot (180-bed) hospital; approximately 22,000 square-foot central energy plant; approximately 70,000-square-foot medical office building; an additional 300,000-square feet of medical office building uses with retail; multiple multi-level parking structures; and an approximately 180,000-square-foot (100-bed) hospital addition. A helipad/helistop also is proposed. There is a less than significant impact on the GHG in the area with mitigation measures.
R-16	Sycamore Canyon Specific Plan	Per the City of Riverside's 1993 amended Specific Plan/EIR, the Sycamore Canyon Business Park Specific Plan describes a planned industrial park consisting of approximately 920 acres of industrial and commercial uses within a 1,400 acre project area. Approximately 480 acres of the total 1,500 acre Sycamore Canyon Wilderness Park is located within the Plan area. There is a major impact on the Air emissions/quality. It does not specifically mention an impact on the GHG in the area.
RC-5	Villages of Lakeview -Residential/Commercial Development	Per Riverside County's August 2016 Draft EIR, the Villages of Lakeview project proposes a master-planned community comprised of approximately 2,800 acres in the Lakeview/Nuevo area of Riverside County. Proposed land uses within the Specific Plan include a wide range of residential products, mixed-uses, retail, schools with joint-use parks, public and private amenities, an array of parks, trails, open space, roads, and other infrastructure. Existing infrastructure such as water, sewer, storm drain, and roadways will also be expanded as part of the Villages of Lakeview project. There is a significant and unavoidable impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
RC-9	Oleander Business Park, PP20699	Per what appear to be public meeting slides presenting information about Riverside County's May 2008 Final EIR for this project, the project would subdivide approximately 68.8 acres to develop approximately 1,206,710 square feet of industrial buildings. The slides do not specifically mention an impact from the GHG in the area. However, it is important to note that GHG is excluded from the slide titled: “Significant Impacts not mitigated”.
RC-10	Majestic Freeway Business Center, SP 341 / PP21552	Per Riverside County's December 2006 Initial Study, the project would develop 947,000 square feet of light industrial warehouse and distribution uses and a 1.62 acre detention basin on 47.25 acres. There is no impact on the GHG in the area.
RC-11	Alessandro Commerce Center	Per Riverside County's April 2009 screencheck draft EIR, the project would develop 409,000 square feet of warehouse, 42,000 square feet of light industrial, 10,000 square feet of retail/restaurant, and 258,000 square feet of office uses, associated parking, and three detention basins on 54.4 acres. There is no impact on the GHG in the area.
RC-12	Cores Industrial Partners	Per Riverside County’s October 2010 ND, the project proposes to bring the Zoning Code into compliance with SB 1627 and to strengthen the development standards for wireless telecommunications facilities in order to ensure high-quality design and compatibility with surrounding uses. There is no impact on the GHG in the area.
RC-13	Sunny-Cal Specific Plan (#40)	Per the City of Beaumont's June 2007 Response to Late Comments on the EIR, the project would develop a 907-unit housing project on up to 323.3 acres. There is no impact on the GHG in the area.
RC-34	Emerald Acres SP (SP00381)	Per Riverside County's January 2016 Initial Study, the project would develop the approximately 332.6-acre site as a residential community consisting of a maximum of 355 single family dwelling units on 76.3 acres; 179 multi-family dwelling units on 16.7 acres; 4.88 acres of commercial uses; a community park on 6.8 acres; 209.7 acres of open space; a 0.9-acre sewer lift station; and roadway improvements. There is a potentially significant impact on the GHG in the area.
RC-35	TR34677, TR31100, TR32391, TR33448, TR31101, TR31009, TR32282	Per Riverside County's February 2004 environmental assessment form/initial study, the project would subdivide 6.7 acres of a 71 acre parcel into 8 single-family residential lots, a detention basin, and 2.2 acres of open space. There is no impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
RC-37	TR36504	Per Riverside County’s IS, the project proposes a Schedule ‘A’ subdivision of 162.05 acre gross area into 527 single-family residential lots. In addition to 527 residential lots, the subdivision also includes an 8.54 acre lot for a park, a 4.7 acre lot for a detention/debris basin, and an approximately 18 acre open space lot. There is a less than significant impact on the GHG in the area with mitigation measures.
RC-38	San Gorgonio Crossings	Per Riverside County's May 2017 Recirculated Draft EIR, the project would develop two house high-cube warehouse buildings on an approximately 229 acre site, of which approximately 16 acres are located within the City of Calimesa. Approximately 140.23 acres of the site would be included within the developed portion of the project; 84.8 acres would remain natural open space. There is a less than significant impact on the GHG in the area with mitigation measures.
RD-1	Tract 18988	Per the City of Redlands' June 2015 MND, the project would widen Pioneer Avenue to preserve existing deodar cedar trees along an approximately 1,100 linear foot segment between Texas Street and Furlow Drive. The project also would develop 82 single-family residential lots on 30.51 acres. There is no impact on the GHG in the area.
RD-3	Newland Homes Tract	Per the City of Redlands' March 2018 ISMND, the Project would result in the construction of 105 single family detached dwelling units and a neighborhood park on 39.84 acres. There is a less than significant impact on the GHG in the area.
RD-4	Redlands Pennsylvania Tract	Per the City of Redlands' March 2018 ISMND, the Project would result in the subdivision of a 24.87 acre project site into 67 residential lots and 10 lots as open space. Additionally, the Project seeks approval to remove 5 acres from an Agricultural Preserve. There is a less than significant on the GHG in the area.
RD-6	Woodsprings Hotel	Per the City of Redlands' March 2018 IS, the Project would result in the construction of a 124-room hotel on a 2.68-acre property. There is a less than significant impact on the GHG in the area.
RD-10	Park Ave Industrial Center	Per the City of Redlands' March 2014 MND, the project would develop approximately 170,000 square feet of light industrial uses, including 289 parking spaces and 12, 500 square feet of office space. There is a less than significant impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
RD-11	Marriott Springhill Suites	Per the August 2016 technical memorandum regarding the Trip Generation, Distribution, and Assignment Analysis for the project, the project would develop a four-story 88-room hotel with rooms, suites, and 97 parking spaces. There is a significant cumulative impact on the GHG in the area.
RD-12	I-10 Redlands LC - B	Per the August 2014 letter responding to comments on the proposed MND, the project would develop approximately 1.1 million square feet for warehousing/ fulfillment/distribution center uses on 50.67 acres. There is a less than significant impact on the GHG in the area.
RD-14	Redlands DC 772,000 SF (2015)	Per the City of Redlands' September 2013 MND, the project would develop 771,839 square feet of warehouse distribution center on 35.59 acres and related parking. There is a less than significant impact on GHG in the area.
RD-16	APL Logistics	Per the May 2012 City of Redlands Commission Review and Approval No. 873, the project would develop 809,338 square feet of warehouse uses on 37.4 acres. There is a less than significant impact on the GHG in the area.
SB-1	Redlands Gateway Logistics - B	Per the County of San Bernardino’s 2009 IS, the project would result in the construction of 5 two-story structures and 7 single-story structures with a maximum floor area of 216,500 square feet, and a three-story hotel with 180 rooms and a floor area of 80,000 square feet. There is a less than significant impact on the GHG in the area.
SB-2	Redlands Gateway Logistics - A	Per the County of San Bernardino’s 2014 IS, the project proposes to subdivide 42.66 acres into 2 lots. Parcel 1 is 14.81 acres and Parcel 2 is 27.85. There is a less than significant impact on the GHG in the area.
SB-3	Prologis #12	Per the County of San Bernardino’s 2013 IS, the project would result in a conditional use permit to establish a 593,916 square-foot industrial building to be use as a “high cube” warehouse distribution facility, a tentative parcel map for a one lot subdivision, and a general plan amendment to change the official land use district from East Valley/General commercial to East Valley/regional industrial on 27.42 acres. There is a less than significant impact on the GHG in the area.
SB-4	Prologis #17	Per the County of San Bernardino's April 2014 MND, the Project would result in the construction of a 777,620 square foot industrial building and the relocation of an existing telecommunication tower on a 35.98 acre site. There is a less than significant impact on the GHG in the area.

Project ID	Project Name	Environmental Document Summary
SB-6	Prologis #8	Per the County of San Bernardino's 2007 IS, the project would result in the construction four industrial buildings to be used a "High Cube" and general warehouse distribution facilities. There is a less than significant impact on the GHG in the area.
SB-7	Sam Redlands Tract	Per the City of Redlands' March 2017 ISMND, the Project would result in the subdivision of an 11.97 acre site into 34 single family residential lots, 4 lettered lots, and the demolition of existing structures. There is a less than significant impact on the GHG in the area.
SB-8	Jacinto Tract	Per the City of Redlands' July 2016 ISMND, the Project would result in the subdivision of an 18.54 acre site into 40 residential lots. There is a less than significant impact on the GHG in the area.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife's 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. There is a less than significant impact on the GHG in the area.

6.7.3 Cumulative Evaluation

Bearing in mind that CEQA does not require "perfection" but instead "adequacy, completeness, and a good faith effort at full disclosure," the analysis of project GHG emissions and climate change is based on methodologies and information available at the time this EIR was prepared. While information is presented below to assist the public and the City's decision-makers in understanding the project's potential contribution to global climate change impacts, the information available to the City is not sufficiently detailed to allow a direct comparison between particular project characteristics and particular climate change impacts, nor between any particular proposed mitigation measure and any reduction in climate change impacts.

6.7.3.1 Greenhouse Gas Emissions

Impact: *The project's contribution to the generation of cumulative greenhouse gas emissions would not be cumulatively considerable.*

Threshold: Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Cumulative Impact Analysis

The project would emit GHGs mainly from direct sources such as combustion of fuels from worker vehicles and construction equipment. Section 4.7.6.1 Greenhouse Gas Emissions, found that construction of the project would contribute approximately from 11,738 metric tons of CO_2e in its first year of construction and up to approximately 20,659 mt CO_2e per year of construction during the 16-year construction period. Over the 16-year construction period the project would emit a total of 221,381 mt CO_2e. The SCAQMD recommends that construction emissions be averaged over a 30-year period. Average over a 30-year period results in approximately 7,379 mt CO_2e.

Operational or long-term emissions occur over the life of the project. Mobile emissions were calculated using emission factors for the actual year assessed. The motor vehicle and truck emissions for Phase 1 (2018 to 2025) use emission factors for the year 2025, whereas motor vehicle and truck emissions for Phase 2 (2026 to buildout, 2040) use emission factors for the year 2040. CARB has designed a California cap-and-trade program that is enforceable and meets the requirements of AB 32 and SB 32. The program began on January 1, 2012, placing GHG emissions limits on capped sectors (e.g., electricity generation, petroleum refining, cement production, and large industrial facilities that emit more than 25,000 MT CO2e per year), and enforcing compliance obligations beginning with 2013 emissions. Vehicle fuels were placed under the cap in 2015, and with the passage of AB 398, the program was extended through 2030. The Cap-and-Trade Program allocates emissions permits across covered entities in each sector. As shown in Section 4.7.6.1 Greenhouse Gas Emissions, the project's unmitigated uncapped emissions of approximately 22,854 mt CO_2e per year are over the SCAQMD's significance threshold of 10,000 mt CO_2e per year.

Out of the 24 environmental documents that evaluated GHG emissions, eight (8) documents provided quantitative operation and construction emissions and utilized the SCAQMD's Interim CEQA GHG Significance Thresholds to determine the respective project's level of significance. All eight (8) of the projects that were identified were either residential or commercial projects; therefore, Tier 3 of the SCAQMD's draft threshold for residential/commercial projects, 3,000 mt CO_2e per year, was used in each of the greenhouse assessments. All eight (8) projects that provided quantitative emissions were found to be less than significant and no cumulative impacts would be generated. Furthermore, the additional 16 projects that provided a qualitative GHG analysis were found to be less than significant and not contribute to a cumulative impact. However, although these 24 projects had less than significant impacts, the geographic cumulative area includes 360 projects, all of which could contribute to a significant cumulative impact. Given that the project would have a potentially significant impact to GHG emissions prior to the application of mitigation, this project's contribution to cumulative impact sis considered to be considerable prior to mitigation.

Significance Level Before Mitigation: Cumulatively considerable significant impact.

Mitigation Measures: As identified in Section 4.7.6.1, **Mitigation Measures 4.7.6.1A** is required to reduce solid waste and greenhouse gas emissions from construction and operation of project development.

Significance Level After Mitigation: Less than significant impact. The project's mitigated uncapped emissions of 8,013 mt CO_2e per year would not exceed the SCAQMD's significance threshold of 10,000 mt CO_2e per year. When considered with the other projects' less than significant impacts, the project would not contribute to a significant cumulative impact.

6.7.3.2 Greenhouse Gas Plan, Policy, Regulation Consistency

Impact: *The project, together with cumulative projects, would not cumulatively contribute to conflicts with applicable plans, policies and regulations to reduce greenhouse gas emissions. The project would not be cumulatively considerable.*

Threshold:	Would the project conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?

Cumulative Impact Analysis

Section 4.7.6.2 Greenhouse Gas Plan, Policy, Regulation Consistency, assesses the project's consistency with applicable federal, state, regional, and local GHG reduction strategies. The project would comply with all mandatory reduction strategies such as water conservation, energy efficiency, solid waste reduction, and efficiency measures related to transportation and motor vehicles. In addition, the project would go beyond energy conservation measures and exceed minimal compliance with 2016 Title 24 requirements by approximately 16 percent at full buildout.

Although all cumulative projects are required to comply with mandatory federal, state, regional, and applicable local GHG reduction measures, it would be speculative to assume that all cumulative projects would be consistent with all applicable plans, policies, and regulations related to the reduction of GHG emissions. However, as discussed in Section 4.7.6.2, the project would comply with and would not conflict with applicable GHG reduction measures. Additionally, the project would contribute to further reductions by exceeding minimum compliance with Title 24 requirements by approximately 16 percent at full buildout, incorporating an alternative fuel service station, and supporting infrastructure to accommodate future electric vehicle populations. Therefore, the project's contribution to cumulative impacts would not be cumulatively considerable.

Significance Level Before Mitigation: Cumulatively considerable significant impact.

Mitigation Measures: Implementation of previously referenced **Mitigation Measures 4.3.6.2A, 4.3.6.3B, 4.3.6.4A, 4.3.6.3C, 4.3.6.3D, 4.7.6.1A, 4.7.6.1B, 4.7.6.1C**, **4.7.6.1D, 4.16.1.6.1A, 4.16.1.6.1B,** and **4.16.1.6.1C** will help reduce project-related GHG emissions and therefore make it more consistent with GHG reduction plans, policies, and/or regulations.

Significance Level After Mitigation: Less than significant impact. The 24 environmental documents that evaluated GHG emissions found that their respective projects would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases and were found to be less than significant. Because the project's impact would be less than significant with mitigation, and the other projects' impacts were found to be less than significant, the project is not considered to be cumulatively considerable.

6.8 Hazards and Hazardous Materials

Cumulative effects to hazards and hazardous materials are described in this section. A summary of the project's incremental contribution to potential cumulative impacts to hazards and hazardous materials is provided in Section 6.8.1. The geographic and temporal scopes for cumulative impacts to hazards and hazardous materials is provided in Section 6.8.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the hazards and hazardous materials issues are discussed in Section 6.8.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.8.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the City will fully build out by 2040, the cumulative impact analysis assumes a more intense level of cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.8-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if their impacts would cause or contribute to a significant cumulative impact to hazards and hazardous materials.

6.8.1 Project Impact Findings

The project's effects to hazards and hazardous materials are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project's impacts (see Section 4.8 of the Revised Sections of the FEIR) is provided as well as a reference to the specific section and impact number if the impact determination is significant.

Could the project:

- For a project located within an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, result in a safety hazard for people residing or working in the project area; **No Impact, Section 4.8.5.1.**
- For a project located within the vicinity of a private airstrip, result in a safety hazard for people working in the project area; **No Impact, Section 4.8.5.1.**
- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school; **Less than Significant, Section 4.8.5.2.**
- Create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials; **Less than Significant, Section 4.8.5.3.**
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions; **Less than Significant, Section 4.8.5.3.**

- Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment; **Less than Significant, Section 4.8.5.4.**
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation; **Less than Significant, Section 4.8.5.5.**
- Result in the exposure of people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands. **Less than Significant, Section 4.8.5.6.**
- Create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials; **Less than Significant with Mitigation, Section 4.8.6.1, Impacts 4.8.6.1A and 4.8.6.1B.**

Pursuant to CEQA Guidelines §15130, "a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR." Because the project would result in no impact related to an airport land use plan or people living or working near a public airport, public use airport, or a private airstrip, it could not cause or contribute to any potential cumulative impact in any of these respects.

Because development of the project could result in a less-than-significant impact related to the remaining considerations, the analysis below evaluates whether impacts of the project could combine with the incremental impacts of other projects in the cumulative scenario to cause or contribute to a significant cumulative effect and, if so, whether the project's contribution would be cumulatively considerable.

6.8.2 Geographic and Temporal Scope

The cumulative impact geographic area for hazards and hazardous materials is the City of Moreno Valley because the City has adopted specific safety policies and regulations to reduce potential hazards and hazardous materials impacts. In addition, the geographic area for potential cumulative effects from the routine transport of hazardous materials is also the City of Moreno Valley because the hazardous materials would be transferred by trucks along major roadways and freeways (particularly SR-60) adjacent to land uses within the City of Moreno Valley. Cumulative impacts related to hazards and hazardous materials could result from the project in conjunction with other past, present and future projects located within the City of Moreno Valley. The geographic area for cumulative hazards and hazardous materials impacts is shown on Figure 6.8-1. The projects located within the cumulative hazards and hazardous materials impact area are listed in Table 6.8-1. The project would contribute to cumulative hazards and hazardous materials conditions starting with the transportation to the project site of project-related hazardous materials and lasting for the duration of onsite construction work and the operation of the project.

Hazards and Hazardous Materials Cumulative Projects Area

ESA

Table 6.8-1: Hazards and Hazardous Material Cumulative Projects Summary

Project ID	Project Name	Environmental Document Summary
MV-3	ProLogis	Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-4	Westridge Commerce Center	The Project’s development of a 937,260 square foot warehouse distribution facility would contribute to cumulative impacts from the transport of hazardous materials within the geographic area.
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley’s 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf. There is no impact from the hazards and hazardous materials in the area.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley’s 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres. There is no impact from the hazards and hazardous materials in the area.
MV-9	TR32459 / Sussex Capital	Per the City of Moreno Valley’s 2006 ND, the project is for a single family residential tract with 11 lots on 13 acres and is zoned R1. The lots range from 41,021 sq ft to 59,627 sq ft in size. There is no impact from the hazards and hazardous materials in the area.
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots. There is no impact from the hazards and hazardous materials in the area.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres. There is no impact from the hazards and hazardous materials in the area.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes. There is no impact from the hazards and hazardous materials in the area.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space. There is no impact from the hazards and hazardous materials in the area.
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres. There is no impact from the hazards and hazardous materials in the area.

Project ID	Project Name	Environmental Document Summary
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes. There is no impact from the hazards and hazardous materials in the area.
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres. There is no impact from the hazards an hazardous materials in the area.
MV-20	Moreno Marketplace	Per the City of Moreno Valley's June 2006 Negative Declaration, this project would develop a 95,905 square foot retail center on 10.46 acres. There is no impact from the hazards and hazardous materials in the area.
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-24	TM 36436 (PA12-0005)	Per the City of Moreno Valley's December 2012 MND, this project would subdivide 43.52 acres for 159 single family residential lots. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres. There is no impact from the hazards and hazardous materials in the area.
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres. There is no impact from the hazards and hazardous materials in the area.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acres. There is no impact from the hazards and hazardous materials in the area.

Project ID	Project Name	Environmental Document Summary
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres. There is no impact from the hazards and hazardous materials in the area.
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots. There is no impact from the hazards and hazardous materials in the area.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres. There is no impact from the hazards and hazardous materials in the area.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots. There is no impact from the hazards and hazardous materials in the area.
MV-34	TR34397 / Winchester Associates	Per the City of Moreno Valley's April 2007 initial study/environmental checklist form, the project would subdivide 19 acres for 50 single-family residential lots. There is no impact from the hazards and hazardous materials in the area.
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins. There is no impact from the hazards and hazardous materials in the area.
MV-36	TM 31618 (PA03-0106)	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 18.99 acres for 56 single-family residential lots. There is no impact from the hazards and hazardous materials in the area.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is no impact from the hazards and hazardous materials in the area.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is no impact from the hazards and hazardous materials in the area.

Project ID	Project Name	Environmental Document Summary
MV-41	First Nandina Logistics Center	Based on the City of Moreno Valley's October 2014 Facts, Findings, and Statement of Overriding Considerations, the project would develop approximately1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of mezzanine space on 72.9 acres. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site. There is a less than significant impact from the hazards and hazardous materials in the area with mitigation measures.
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a hat will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land. There is no impact from the hazards and hazardous materials in the area.
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays. There is no impact from the hazards and hazardous materials in the area.
MV-45	Iris Plaza	Per the City of Moreno Valley’s IS, the project would construct a 109,289 sq. ft. shopping center on approximately 12.4 acres of land within the Community Commercial (CC) land use district. There is no impact from the hazards and hazardous materials in the area.
MV-47	PA07-0129 TR 35606 SFR	No environmental documentation was available for review. However, there is a planning commission resolution, which states that the project is not likely to cause substantial environmental impact. It does mention an impact from the hazards and hazardous materials in the area.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	The Project’s subdivision of a 75.05-acre property into four parcels with business center land uses would contribute to cumulative impacts from the transport of hazardous materials within the geographic area.
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped. There is a less than significant impact from the hazards and hazardous materials in the area.

Project ID	Project Name	Environmental Document Summary
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site. There is no impact from the hazards and hazardous materials in the area.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. There is no new impact from the hazards and hazardous materials in the area.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-56	Tract Map 33810	No environmental documentation was available for review. However, there is a planning commission resolution that states that the project is exempt from the requirements of CEQA guidelines. It does specifically mention an impact from the hazards and hazardous materials in the area.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots. There is no impact from the hazards and hazardous materials in the area.
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The resolution states that there will be no impact on the environment. It did not specifically mention the impact from hazards and hazardous material in the area.

Project ID	Project Name	Environmental Document Summary
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. There is no impact from the hazards and hazardous materials in the area.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. There is no impact from the hazards and hazardous materials in the area.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 square feet of new retail/commercial uses on the approximately 22.28-acre site. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. There is no impact from the hazards and hazardous materials in the area.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. There is no impact from the hazards and hazardous materials in the area.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact from the hazards and hazardous materials in the area.
MV-69	PA07-0039, (Industrial Area SP)	N Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact from the hazards and hazardous materials in the area.
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. There is no impact from the hazards and hazardous materials in the area.

Project ID	Project Name	Environmental Document Summary
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley's 2008 ND, the project would build a 522,772 square foot industrial warehouse building on 25.96 acres of land. There is no impact from the hazards and hazardous materials in the area.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. There is a less than significant impact from the hazards and hazardous materials in the area.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. There is no impact from the hazards and hazardous materials in the area.
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. There is no impact from the hazards and hazardous materials in the area.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2010 ND, the project subdivides 16.9 acres into 6 pads for commercial retail use. There is no impact from the hazards and hazardous materials in the area.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. There is no impact from the hazards and hazardous materials in the area.
MV-88	TR33771 / Creative Design Associates	No environmental documentation was available for review. However, there is a planning commission resolution for a 12 unit condominium complex on approximately 0.9 acres. The resolution does state that there will be no impact on the environment in the area. It does not specifically mention an impact from the hazards and hazardous materials in the area.
MV-89	TR35663 / Kha	No environmental documentation was available for review. However, there is a notice of exemption for a mixed use development on approximately 2.2 acres, which states that there is no evidence of potential for significant environmental impacts. It does not specifically mention an impact from the hazards and hazardous materials in the area.

Project ID	Project Name	Environmental Document Summary
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. There is no impact from the hazards and hazardous materials in the area.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. There is no impact from the hazards and hazardous materials in the area.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. There is a less than significant impact from the hazards and hazardous material in the area with mitigation measures.
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. There is no impact from the hazards and hazardous materials in the area.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. There is no impact from the hazards and hazardous materials in the area.
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. There is no impact from the hazards and hazardous materials in the area.

Project ID	Project Name	Environmental Document Summary
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. There is no impact from the hazards and hazardous materials in the area.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. There is no impact from the hazards and hazardous materials in the area.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. There is no impact on the hazards and hazardous materials in the area.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. There is a less than significant impact from the hazards and hazardous materials in the area with mitigation measures.
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact from the hazards and hazardous materials in the area.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. There is no impact from the hazards and hazardous materials in the area.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact from the hazards and hazardous materials in the area.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres. The resolution does not mention the impact on the environment in the area. It also does not mention the impact from the hazards and hazardous materials in the area.

Project ID	Project Name	Environmental Document Summary
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. There is a less than significant impact from the hazards and hazardous materials in the area with mitigation measures.
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. There is no impact from the hazards and hazardous materials in the area.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. There is no impact from the hazards and hazardous materials in the area.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. There is no impact from the hazards and hazardous materials in the area.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. There is no impact from the hazards and hazardous materials in the area.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. There is no impact from the hazards and hazardous materials in the area.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife’s 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. There is a less than significant impact from the hazards and hazardous materials in the area with mitigation measures.

6.8.3 Cumulative Impact Evaluation

6.8.3.1 Existing or Proposed School

Impact: *The project would not contribute to the exposure of students to potential significant cumulative impacts related to hazardous emissions within one-quarter mile of an existing or proposed school.*

Threshold:	Would the project emit hazardous emissions or handle acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Cumulative Impact Analysis

Cumulative developments within the City of Moreno Valley may be located within one-quarter mile of an existing or proposed school and could emit hazardous emissions and/or handle acutely hazardous materials, substances, or waste. Therefore, the increases in potential exposure of school-age children to hazardous emissions or substances could result in significant cumulative impacts associated with exposure. There are no existing school facilities within one-quarter of a mile of the project area. The nearest existing school is Calvary Chapel Christian School which is located approximately 1.17 miles northwest of the project. There is one proposed elementary school site that is located within one-quarter mile of the WLC project area. The site for proposed Wilmot Elementary School is planned to be located on Bay Avenue at Wilmot Street, approximately 0.25 mile west of the project area.

The amount and type of materials that would be used during project construction (building and infrastructure) or stored in the high-cube logistics distribution center after construction is unknown at this time. The emission of air pollutants is discussed in the Air Quality Section of the EIR. While the warehouse facilities themselves are not expected to use acutely hazardous materials, the possibility exists that such materials could be stored or transported to and from the project site. For the purposes of this analysis, it is assumed that the project would handle substances that may be acutely hazardous. The handling of hazardous materials or emission of hazardous substances in accordance with the Hazardous Materials Business Emergency Plan (HMBEP) as required by applicable local, State, and Federal standards, ordinances, and regulations would ensure that impacts associated with environmental and health hazards related to an accidental release of hazardous materials or emissions of hazardous substance near existing or proposed schools would be less than significant. The project would not contribute to cumulative safety hazards for school-age children within ¼-mile of the project because the nearest existing school is 1.17 miles from the project site; therefore, the project would not cause or contribute to any potential significant cumulative impacts to existing schools.

Many of the cumulative projects would use, handle, store, and/or transport hazardous materials or require demolition of structures containing such materials within ¼-mile of a proposed school. Cumulative projects would be required to use, store, and transport all potentially hazardous materials in accordance with the manufacturers' instructions and handle materials in accordance with Federal, State, and local health and safety standards and regulations. Compliance with existing standards and regulations would ensure that projects in the cumulative scenario would not result in significant impacts to the public, including school-age children, or the environment through the routine transport, storage, use, or handling of hazardous materials. Some of the cumulative projects may be on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5. However, each cumulative project would be required to comply with existing Federal, State, and local regulations related to hazardous material sites, including cleanup sites, and hazardous materials generators. As such, cumulative development would account for clean-up of many existing hazardous conditions and would not result in significant cumulative impacts related to the exposure of students to hazardous emissions within 0.25-mile of a proposed school.

Significance Level Before Mitigation: Less than significant.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.8.3.2 Routine Transport, Use, Disposal of Hazardous Materials and Reasonable Foreseeable Upset and Accident Conditions

Impact: *The project would contribute incrementally to a less than significant cumulative hazard to the public through the routine transport, use, or disposal of hazardous materials or through* reasonably foreseeable upset and accident conditions.

Threshold:	Would the project create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials? Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident?

Cumulative Impact Analysis

Cumulative projects (such as MV-4, and MV-48) in the City of Moreno Valley would routinely transport, use, or dispose of hazardous materials. Further, these cumulative projects could create significant hazards to the public or the environment through reasonably foreseeable upset and accident conditions during construction or operation activities. Related projects would be required to use, store, and transport all potentially hazardous materials in accordance with the manufacturers' instructions and handle materials in accordance with Federal, State, and local health and safety standards and regulations. Compliance with existing standards and regulations would ensure that the projects in the cumulative scenario would not result in significant impacts to the public or the environment through the routine transport, storage, use, or handling of hazardous materials. Some of the cumulative projects may be on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5. However, each such project would be required to comply with existing Federal, State, and local regulations related to hazardous material sites, including cleanup sites, and hazardous materials generators. As such, cumulative development would account for clean-up of many existing hazardous conditions and would not result in cumulatively significant impacts.

The project's incremental less than significant contribution, in combination with the impacts of other cumulative projects, could create a significant impact related to this issue. Some of these risks are site-specific and localized, such as businesses that handle hazardous materials within their facilities (i.e., on site); these types of hazmat impacts are generally limited to the project site. It is also possible there would be incrementally increased impacts by the transport and disposal of hazardous materials related to warehouse operations on the project site. For example, the substantial increase in trucks in and around the WLC site would incrementally increase the risks of accidents involving truck-related fuels (e.g., fire or explosion). However, the number of trucks containing hazardous materials on the road in a given area at any given time would be difficult if not impossible to calculate, and it would be likewise difficult to estimate the number and/or location of accidental spills and leaks, which, by their nature, are accidental or unplanned occurrences, it would be impossible to predict the specific occurrence of such events on the project site. Despite these uncertainties, it is reasonable to assume that with an increase in vehicles transporting hazardous materials would incrementally increase the potential for accidents on a regional basis. However, the enforcement of applicable local, State, and Federal standards, ordinances, and regulations will ensure that potential cumulative impacts associated with environmental and health hazards related to an accidental release of hazardous materials would be less than significant.

Significance Level Before Mitigation: Less than significant.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.8.3.3 Located on a List of Hazardous Material Sites

Impact: *The project's less-than-significant contribution to cumulative hazards to the public or the environment by being located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 would not cause or contribute to a significant cumulative effect.*

Threshold:	Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment?

Cumulative Impact Analysis

Several cumulative projects could be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment. However, these projects would be required to comply with existing Federal, State, and local regulations related to hazardous material sites, including cleanup sites, and hazardous materials generators. As such, cumulative development would account for clean-up of many existing hazardous conditions and would not result in cumulatively significant impacts.

The project site is not located on a site compiled pursuant to Government Code Section 65962.5. As a result, the project's contribution to potential cumulative impacts related to development on a hazardous materials site would not cause or contribute to a significant cumulative effect.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

6.8.3.4 Conflict with Emergency Response Plans

Impact: *The project's less than significant contribution to cumulative interference with an adopted emergency response plan or emergency evacuation would not cause or contribute to a significant cumulative effect.*

Threshold:	Would the project impair the implementation of or physically interfere with an adopted emergency response plan or emergency evacuation?

Cumulative Impact Analysis

Cumulative projects within the City of Moreno Valley could result in interference with an adopted emergency response plan or emergency evacuation plan. However, this would be based on the location of the project and the project-specific design requirements. The risks associated with impairment or physical interference with an adopted emergency response plan or emergency evaluation plan in the City can only be reduced through conformance with police, fire, building code regulations, and the responsible transportation authority. It is anticipated that cumulative projects would request the appropriate approvals and be in conformance with applicable codes and regulations. Therefore, cumulative development would not impair the implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

The project has been designed and would be constructed and maintained in accordance with applicable standards associated with vehicular access, ensuring that adequate emergency access and evacuation would be provided. Construction activities that may temporarily restrict vehicular traffic would be required to implement appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. Compliance with existing regulations for emergency access and evacuation would ensure that impacts related to this issue would be less than significant. As a result, the project's incremental less than significant contribution to any potential cumulative impacts related to emergency response and evacuation would not cause or contribute to a significant cumulative impact.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.8.3.5 Wildland Fire Risks

Impact:	*The project's incremental less than significant contribution to cumulative human and structural risks associated with wildland fires would not cause or contribute to a significant cumulative effect.*
Threshold:	Expose people or structures to a significant risk or loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Cumulative Impact Analysis

The City of Moreno Valley is subject to both wildland and urban fires. Wildfires pose a threat to the northern and eastern portions of the City. Cumulative projects in the City could be located in areas subject to wildland and urban fires. Cumulative impacts involving wildfires consists of future development adjacent to a High Fire Hazard Area. The risk to each future project is based on the location and interface between urbanized area and wildland areas. The risks associated with development in these area can only be reduced through the additional/improved fire stations, equipment, additional personnel, and conformance with Fire and Building Code regulations, it is anticipated that cumulative development within the project area would not create a significant and cumulative impact associated with wildland fire hazards.

Development of the eastern portion of the project site could expose persons or property to wildland fire risks given the proximity of the project area adjacent to a High Fire Hazard Area. Regardless of this proximity, all new structures in the project area must be constructed in compliance with Title 24 of the California Code of Regulations to safeguard life and property from fire hazards, including the installation of automated fire suppression systems. Compliance with these standards would be enforced during building permit review and the construction inspection period. In addition, no development would be allowed within the San Jacinto Fault Zone, which runs parallel to, and west of Gilman Springs Road; this area of limited development would serve as a fuel or fire break to help protect future occupied uses within the project area. Compliance with existing standards, codes and regulations for fire safety would ensure that cumulative impacts related to this issue would be less than significant. The project's incremental less-than-significant contribution, in combination with the impacts of other cumulative projects, would not cause or contribute to significant cumulative impacts related to risks from wildland fires.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

6.8.3.6 On-site Conditions Involving Hazardous Materials

Impact: *The project's contribution to cumulative hazardous materials impacts from the demolition of existing on-site structures and excavation of potential contaminated soil would be cumulatively considerable.*

Threshold:	Would the project create a significant hazard to the public through the routine transport, use, or disposal of hazardous materials?

Cumulative Impact Analysis

Cumulative development in the project area could result in the demolition and removal of structures containing hazardous building materials such as asbestos containing materials (ACM) and lead based paint (LBP). As discussed above, cumulative development could result in the routine use, transport, or disposal of hazardous materials.

The project could result in the exposure of onsite workers and the environment to hazardous building materials. This exposure could result in significant impacts. In addition, the Specific Plan proposes an alternative fuels station to be constructed in the Specific Plan area. It would provide fuels for motor vehicles visiting the project. Since this facility would store large volumes of motor fuel including natural gas under liquefied and compressed conditions, there is a potential for fire and/or explosion. This is a potentially significant hazards impact. The project's incremental impacts, together with the incremental impacts of other projects in the cumulative scenario, would result in significant cumulative hazard impacts involving the use, transport, or disposal of hazardous materials. The project's incremental contribution would be cumulatively considerable.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Implementation of **Mitigation Measures 4.8.6.1A, 4.8.6.1B, 4.8.6.1C,** and **4.8.6.1D** is required.

Significance Level After Mitigation: Less than significant impact.

6.9 Hydrology and Water Quality

Cumulative effects to hydrology and water quality are described in this section. A summary of the project's incremental contribution to potential cumulative impacts to hydrology and water quality issues is provided in Section 6.9.1. The geographic and temporal scopes for hydrology and water quality issues are provided in Section 6.9.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the hydrology and water quality issues are discussed in Section 6.9.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.9.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the City will fully build out by 2040, the cumulative impact analysis assumes a more intense level of cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.9-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if their impacts would cause or contribute to a significant cumulative effect and, if so, whether the project's contribution would be cumulatively considerable.

6.9.1 Project Impact Findings

The project's effects to hydrology and water quality are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project impacts (see Section 4.9 of the Revised Sections of the FEIR) is provided as well as a reference to the specific section and impact number if the impact determination is significant.

Would the project:

- Expose people or structure to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam? **Less than Significant, Section 4.9.5.1.**
- Expose people or structure to a significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow? **Less than Significant, Section 4.9.5.2.**
- Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level? **Less than Significant, Section 4.9.5.3.**
- Place within a 100-year flood hazard area structures that would impede or redirect flood flows? **Less than Significant, Section 4.9.5.4.**

- Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? **Less than Significant, Section 4.9.5.4.**
- Substantially alter the existing local drainage patterns of the site and substantially increase the rate or amount of surface runoff in a manner which would result in substantial erosion, siltation, or flooding on site or off site? **Less than Significant with Mitigation, Section 4.9.6.1, Impact 4.9.6.1.**
- Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff? **Less than Significant with Mitigation, Section 4.9.6.1, Impact 4.9.6.1.**
- Violate any water quality standards or waste discharge requirements during construction phases of the project in form of increased soil erosion, sedimentation, or storm water discharges? **Less than Significant with Mitigation, Section 4.9.6.2, Impact 4.9.6.2.**
- Violate any water quality standards or waste discharge requirements during the operational phases of the project in the form of increased soil erosion, sedimentation, or urban runoff? **Section 4.9.6.3, Impact 4.9.6.3.**

As shown, there are no unmitigated project-specific significant and unavoidable impacts to hydrology and water quality associated with the project.

6.9.2 Geographic and Temporal Scope

To determine the project's cumulative impacts to hydrology and water quality, the tributary drainage area, flow direction of stormwater runoff from the project site were considered as were downstream drainage areas and facilities. As outlined in the FEIR, stormwater runoff from the project site flows in a southerly direction to the San Jacinto River. As shown in Figure 6.9-1 and 6.9-2, a topographic divide located west of World Logistics Center Parkway separates stormwater flows from the project site to the San Jacinto River by two routes. Runoff west of the divide flows to the Perris Valley Storm Drain (PVSD) at a gradient also ranging from 1 to 2 percent. Runoff east of the divide flows through the San Jacinto Valley at a gradient also ranging from 1 to 2 percent to the San Jacinto Wildlife Area (SJWA).

The area tributary to the PVSD consists of two subareas, Sunnymead and Moreno, as delineated by the Riverside County Flood Control & Water Conservation District (RCFC&WCD). The PVSD watershed begins in the Badlands to the north and extends to Mariposa Avenue to the south, Ellsworth Street to the west, and the topographic divide within the project site to the east. The area tributary to the SJWA incudes the Middle and Upper San Jacinto River watershed area and extends from the Badlands to the north, the Bernasconi Hills and Lakeview Mountains to the south, the headwaters of the San Jacinto River to the east, and the topographic divide just west of World Logistics Center Parkway. Both the PVSD and the SJWA watershed areas flow to the lower San Jacinto River south of the project site. Flows are then conveyed through the lower San Jacinto River to Canyon Lake, again to the lower San Jacinto River, and ultimately to Lake Elsinore.

For the PVSD area, SJWA, and other portions of the San Jacinto River watershed areas, the past, present, and probable future projects were identified and included in the cumulative impacts analysis. These projects are listed in Table 6.9-1 and shown on Figure 6.9-1. For the area tributary to the PVSD there are a total of 106 projects. These projects consist of a variety of project types and sizes including various commercial areas such as a gas station, a commercial auto mall, a Walmart, and several apartments and single-family developments. For the area tributary to the SJWA, there are 14 planned projects, including four projects adjacent to, within, or near the SJWA. These four projects are the Badlands Landfill Improvement Project, the Quail Ranch Specific Plan, the SJWA Land Management Plan and the Villages of Lakeview Project. For the other portions of the San Jacinto Watershed south of the PVSD area and SJWA there are 120 projects consisting of a variety of commercial, business and residential projects.

Groundwater Cumulative Projects Area

ESA

Each of the projects are required to mitigate their impacts for hydrology and water quality and implement BMPs pursuant to the local agency's regulations such as the Moreno Valley Municipal Code Chapter 8.10 et seq. and § 8.21.170. Per the local regulations, each project is required to prepare a Water Quality Management Plan and comply with the Santa Ana Regional Quality Control Board Order No. R8-2010- 0033, NPDES Permit No. CAS618033 (NPDES Permit). The environmental documents, where available, were reviewed for each project to determine the type of drainage and water quality facilities to be constructed incompliance with the NPDES Permit. Each project was required to construct drainage and water quality facilities to mitigate the impacts. Each project analyzed cumulative impacts and concluded that the impacts would be less than significant since all projects in the watershed are required to comply with the local agency's drainage requirements and NPDES Permit and mitigate their individual impacts. The drainage facilities consisted of construction of storm drains and detention basins to mitigate increased peak flows, velocities and volumes.

The types of water quality facilities constructed include extended detention/sedimentation basins, infiltration basins, water quality basins sand filters, vegetated swales, and bioretention areas. For example, the ProLogis project includes on-site extended detention/sedimentation basins, sand filters, and vegetated swales which will treat all of the site's runoff. The Moreno Valley Logistics Center (MV-54) includes on-site, structural source control best management practices (BMPs) consisting of six water quality/detention basins as well as operational source controls prior to water being discharged from the site. The First Nandia Logistics Center includes three detention and water quality basins. The Modular Logistics Center (MV-44) constructed two water quality detention basins. The Villages of Lakeview Project includes construction of two regional water quality basins prior to flows being discharged to the San Jacinto River, although the majority go the project area is downstream of the SJWA. The SJWA Land Management Plan includes construction of source control and low impact development (LID) BMPs including bioretention facilities, infiltration trenches, filter strips, or vegetated buffers to detain and treat runoff before letting it seep away slowly. The Quail Ranch Project does not have an environmental document completed yet. However, the Quail Ranch Project will be required to comply with the local regulations and NPDES permit, as well.

The cumulative projects geographic boundary for hydrology/water quality is shown in Figure 6.9-1. The projects located within the hydrology and water quality impact area is listed in Table 6.9-1.

The project would contribute to cumulative hydrology and water quality conditions starting with the initiation of onsite work and lasting for the duration of the project.

Table 6.9-1 – Hydrology and Water Quality Cumulative Projects Summary

Project ID	Project	Environmental Document Summary
B-9	Sundance (#17)	Per the City of Beaumont Planning Department's 2004 EIR, the Sundance Specific Plan Amendment to the Deutsch Specific Plan would result in the development of 1,968 single-family units, 2,208 homes, and 540 condo units, commercial space, and supporting land uses on 1,195 acres. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
B-11	San Gorgonio Village, Phase 2 (#45)	Per the City of Beaumont Planning Department's 2007 MND, the San Gregorio Village Specific Plan would provide for the development of approximately 225,000 square feet of commercial and restaurant uses on approximately 23 acres. There is a less than significant impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
B-12	Beaumont Commercial Center	Per the City of Beaumont Planning Department's 2016 IS, the Beaumont Commercial Center would provide for the development of five commercial buildings with 58,603 square feet of retails, service, and restaurant uses. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
B-14	Potrero Creek Estates (#26)	Per the City of Beaumont Planning Department's 1988 EIR, the Potrero Creek Estates Specific Plan would result in the residential development of 1,028 single family lots on 737 acres. The EIR states that the water quality is of satisfactory quality. Impact from the project is not mentioned.
H-3	Tres Cerritos Specific Plan	Per the City of Hemet's NOC, the project proposes to develop 178 single-family homes on 51.2 acres. There is no impact on the hydrology and water quality in the area.
H-4	Sanderson Square	Per the City of Hemet's 2006 IS, the Sanderson Square Specific Plan would result in the development off commercial and industrial uses on approximately 45 acres. There is a less than significant impact on the hydrology and water quality in the area.
H-5	McSweeny Farms Specific Plan	Per the City of Hemet's 2003 excerpt of an EIR, the McSweeny Farms Properties Specific Plan would result in the construction of 2,482 residential units within 442 acres. The excerpt does not mention an impact on the hydrology and water quality in the area.
H-6	Ramona Creek Specific Plan	Per the City of Hemet's 2014 EIR, the Ramona Creek Specific Plan and General Plan Amendment would result in the development of a multiple-use commercial and residential community. There is no impact on the hydrology and water quality in the area.
H-7	Peppertree Specific Plan	Per the City of Hemet's 2003 ISMND, the Peppertree Specific Plan would result in the development of 456 residences, and recreational spaces of 79.2 acres. There is a less than significant impact on the hydrology and water quality in the area.
H-9	Pulte Del Web (TTM 31807 and 31808)	Per the City of Hemet's 2005 SEIR, the Tentative Tract Map 31807, Tentative Tract Map 31808, and Specific Plan Amendment SPA 04-1 would result in the amendment of a land use plan for a 10 acre site from commercial to high medium density residential and the division of 154.77 acres into 611 residential lots, an adult community center, and open space. The SEIR does not mention an impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
H-10	Downtown Hemet Specific Plan	Per the City of Hemet's 2017 ISMND, the proposed Downtown Hemet Specific Plan is a comprehensive plan that features a land use plan, circulation plan, urban design framework, utility infrastructure plan, development standards, design guidelines, and sustainability plan for future development within a 360-acre area in downtown Hemet. There is a less than significant impact on the hydrology and water quality in the area.
M-2	Meridian Business Park Phases I and II	Per the March Joint Powers Authority's 2017 EIR , the project would result in the development of a 130 acre business park. There is a less than significant impact on the hydrology and water quality in the area.
M-8	March LifeCare Campus Specific Plan	Per the March Joint Powers Authority's 2009 EIR, the project would result in the development of a medical campus on approximately 236 acres. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
M-9	TM 34748	Per the March Joint Powers Authority's 2010 ND, the project proposes to build a 135 single-family residential lot subdivision on 40 acres. There is no impact on the hydrology and water quality in the area.
M-11	PA 06-0014 (Pierce Hardy Limited Partnership)	Per the March Joint Power's Authority's draft ND, the project would construct a Retail/Storage Lumber Yard Complex (approximately 67,800 square feet of total building space) on 11.0 acres. There is no impact on the hydrology and water quality in the area.
MV-3	ProLogis	Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres. There is a less than significant impact on the hydrology and water quality in the area.
MV-4	Westridge Commerce Center	Per the City of Moreno Valley's April 2011 Final EIR, the project would develop approximately 937,260 square feet of light industrial warehouse/ distribution uses and related infrastructure on 55 acres. There is a less than significant impact on the hydrology and water quality in the area.
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley's 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf. There is no impact on the hydrology and water quality in the area.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres. There is no impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-9	TR32459 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project is for a single family residential tract with 11 lots on 13 acres and is zoned R1. The lots range from 41,021 sq ft to 59,627 sq ft in size. There is no impact on the hydrology and water quality in the area.
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots. There is no impact on the hydrology and water quality in the area.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres. There is no impact on the hydrology and water quality in the area.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes. There is no impact on the hydrology and water quality in the area.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space. There is no impact on the hydrology and water quality in the area.
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres. There is no impact on the hydrology and water quality in the area.
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes. There is no impact on the hydrology and water quality in the area.
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres. There is a less than significant impact on the hydrology and water quality in the area.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres. There is no impact on the hydrology and water quality in the area.
MV-20	Moreno Marketplace	Per the City of Moreno Valley's June 2006 Negative Declaration, this project would develop a 95,905 square foot retail center on 10.46 acres. There is no impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres. There is a less than significant impact on the hydrology and water quality in the area.
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots. There is a less than significant impact on the hydrology and water quality in the area.
MV-24	TM 36436 (PA12-0005)	Per the City of Moreno Valley's December 2012 MND, this project would subdivide 43.52 acres for 159 single family residential lots. There is a less than significant impact on the hydrology and water quality in the area.
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres. There is no impact on the hydrology and water quality in the area.
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres. There is no impact on the hydrology and water quality in the area.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acres. There is no impact on the hydrology and water quality in the area.
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres. There is no impact on the hydrology and water quality in the area.
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots. There is no impact on the hydrology and water quality in the area.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres. There is no impact on the hydrology and water quality in the area.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots. There is no impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-34	TR34397 / Winchester Associates	Per the City of Moreno Valley's April 2007 initial study/environmental checklist form, the project would subdivide 19 acres for 50 single-family residential lots. There is no impact on the hydrology and water quality in the area.
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins. There is no impact on the hydrology and water quality in the area.
MV-36	TM 31618 (PA03-0106)	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 18.99 acres for 56 single-family residential lots. There is no impact on the hydrology and water quality in the area.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
MV-41	First Nandina Logistics Center	Based on the City of Moreno Valley's October 2014 Facts, Findings, and Statement of Overriding Considerations, the project would develop approximately1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of mezzanine space on 72.9 acres. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a hat will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land. There is no new impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays. There is no impact on the hydrology and water quality in the area.
MV-45	Iris Plaza	Per the City of Moreno Valley's IS, the project would construct a 109,289 sq. ft. shopping center on approximately 12.4 acres of land within the Community Commercial (CC) land use district. There is a less than significant impact on the hydrology and water quality in the area.
MV-47	PA07-0129 TR 35606 SFR	No environmental documentation was available for review. However, there is a planning commission resolution, which states that the project is not likely to cause substantial environmental impact. The resolution does not specifically mention an impact on the hydrology and water quality in the area.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	Per the City of Moreno Valley's Environmental Checklist, the project would prepare an EIR to subdivide 75.05-acre property into four parcels with business center land uses. There is a less than significant impact on the hydrology and water quality in the area.
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped. There is a less than significant impact on the hydrology and water quality in the area.
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site. There is no impact on the hydrology and water quality in the area.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. There is no impact on the hydrology and water quality in the area.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space. There is a less than significant impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. There is a less than significant impact on the hydrology and water quality in the area.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. There is a less than significant impact on the hydrology and water quality in the area.
MV-56	Tract Map 33810	No environmental documentation was available for review. However, there is a planning commission resolution that states that the project is exempt from the requirements of CEQA guidelines. The resolution does not specifically mention an impact on hydrology and water quality in the area.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots. There is no impact on the hydrology and water quality in the area.
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact on the hydrology and water quality in the area.
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. There is no impact on the hydrology and water quality in the area.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. There is no impact on the hydrology and water quality in the area.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 square feet of new retail/commercial uses on the approximately 22.28-acre site. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. There is a less than significant impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. There is no impact on the hydrology and water quality in the area.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. There is no impact on the hydrology and water quality in the area.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. There is a less than significant impact on the hydrology and water quality in the area.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the hydrology and water quality in the area.
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the hydrology and water quality in the area.
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. There is no impact on the hydrology and water quality in the area with mitigation measures.
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley’s 2008 ND, the project would build a 522,772 square foot industrial warehouse building on 25.96 acres of land. There is no impact on the hydrology and water quality in the area.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. There is a less than significant impact on the hydrology and water quality in the area.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. There is a less than significant impact on the hydrology and water quality in the area.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. There is a less than significant impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. There is no impact on the hydrology and water quality in the area.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2010 ND, the project subdivides 16.9 acres into 6 pads for commercial retail use. There is no impact on the hydrology and water quality in the area.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. There is no impact on the hydrology and water quality in the area.
MV-88	TR33771 / Creative Design Associates	No environmental documentation was available for review. However, there is a planning commission resolution for a 12 unit condominium complex on approximately 0.9 acres. The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact on the hydrology and water quality in the area.
MV-89	TR35663 / Kha	No environmental documentation was available for review. However, there is a notice of exemption for a mixed use development on approximately 2.2 acres, which states that there is no evidence of potential for significant environmental impacts. It does not specifically mention an impact on the hydrology and water quality in the area.
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. There is no impact on the hydrology and water quality in the area.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. There is no impact on the hydrology and water quality in the area.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. There is a less than significant impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. There is a less than significant impact on the hydrology and water quality in the area.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. There is a less than significant impact on the hydrology and water quality in the area.
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. There is no impact on the hydrology and water quality in the area.
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. There is no impact on the hydrology and water quality in the area.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. There is no impact on the hydrology and water quality in the area.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. There is no impact on the hydrology and water quality in the area.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. There is no impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact on the hydrology and water quality in the area.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. There is no impact on the hydrology and water quality in the area.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. The resolution states that there is no impact on the environment in the area. It does not specifically mention an impact on the hydrology and water quality in the area.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres. The resolution states that the project is exempt from CEQA guidelines. It does specifically mention an impact on the hydrology and water quality in the area.
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. There is a less than significant impact on the hydrology and water quality in the area.
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. There is no impact on the hydrology and water quality in the area.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. There is no impact on the hydrology and water quality in the area.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. There is no impact on the hydrology and water quality in the area.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. There is no impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. There is no impact on the hydrology and water quality in the area.
P-2	TR34716	Per the City of Perris' 2013 FEIR, the project involves the construction and operation of up to 600,000 gross square feet (gsf) of light industrial/warehouse uses. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
P-4	Bookend	Per the City of Perris' 2015 MND, the project proposed to subdivide an existing vacant parcel into five new industrial parcels with a total building area of 165,000 sf. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
P-5	Markham East	Per the City of Perris's June 2007 Notice of Determination, the project would develop 462,692 square feet of light industrial warehouse/distribution uses in a single building with associated roadway and utility infrastructure and landscape improvements on 22.25 acres. There is no impact on the hydrology and water quality in the area.
P-7	Duke Warehouse	Per the City of Perris's Facts, Findings and Statement of Overriding Considerations, the project would redesign ate a large portion of the northern part of the City with broad categories of compatible commercial and industrial uses on 34.57 acres. Uses would include a 668,681 square foot industrial/warehouse building that includes 19,200 square feet of office space. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
P-8	First Perry Logistics Project	Per the City of Perris's November 2017 Notice of Determination, the project would develop a 236,961 square foot industrial building on 11.06 acres. There is a less than significant impact on the hydrology and water quality in the area.
P-10	IDS	Per City of Perris 2005 Final EIR would result in the Perris Warehouse/Distribution Facility Project. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
P-11	Ridge II	Per the City of Perris 2007 NOC and Environmental Doc Transmittal, project proposes a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.

Project ID	Project	Environmental Document Summary
P-12	Starcrest, P011-0005; 08-11-0006	Per the City of Perris Final EIR, the proposed project is the expansion of an existing internet/mailorder fulfillment facility to an adjacent property. The existing Starcrest building is approximately 232,215 square feet in size. The expansion would include a 454,008 sf building north of and adjacent to Starcrest's existing facility. There is a less than significant impact ton the hydrology and water quality in the area with mitigation measures.
P-14	Rados Distribution Center	Per the City of Perris 2010 Final EIR, proposed project is an approximately 1,191,080 sq ft distribution center on approximately 61.63 gross acres. There is no impact on the hydrology and water quality in the area.
P-15	Duke Perris Logistics Center I	Per the City of Perris 2017 Final EIR, the project would result in the Duke Warehouse at Indian Avenue and Markham Street. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
P-16	Perris Ridge Commerce Center I	Per the City of Perris' 2007 excerpt of an EIR, the project proposes the establishment of a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures on 91 acres. The project would have a less than significant impact on water quality.
P-18	P07-07-0029	Per the City of Perris' 2009 EIR, the project proposed to construct a 1,608,322 sf industrial complex comprised of five buildings on 92.3 acres. There is a less than significant impact on the hydrology and water quality in the area.
P-19	P05-0192	Per the City of Perris' 2006 EIR, the project proposed development of an approximately 700,000 square foot industrial building on a 40-acre. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
P-20	P05-0113	Per the City of Perris' 2009 EIR, the project proposed subdividing the site into five legal parcels, four of which would be developed with industrial/warehouse buildings for a total of 1,750,000 sf. There is a less than significant impact on the hydrology and water quality in the area.
P-21	P07-09-0018	Per the City of Perris' 2008 IS, the project proposed the development of a 173,000 sf industrial building on 8.7 acres. There is a less than significant impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
P-22	NICOL	Per the City of Perris' 2016 IS/MND, the project proposed a 380,000 sf warehouse building on 21.63 acres. There is a less than significant impact on the hydrology and water quality in the area.
P-23	Westcoast Textiles	Per the City of Perris' 2016 IS, the project proposed construction of a 187,850 sf industrial/manufacturing building on 9 acres. There is no impact on the hydrology and water quality in the area.
P-24	Optimus Logistics Center 1	Per the City of Perris' 2016 EIR, the project proposed to construct a high-cube warehouse consisting of two buildings totaling 1,455,781 sf on 68.99 acres. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
P-25	Optimus Logistics Center 2	Per the City of Perris' 2015 EIR, the project proposed construction of warehouse development site encompassing 1,037,811 square feet in two buildings on 48.4 acres. There is a less than significant impact on the hydrology and water quality in the area.
P-26	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 811,620 square feet (sf) of industrial high-cube, non-refrigerated warehouse/distribution uses on the approximate 37.3-acre site. There is a potentially significant impact on the hydrology and water quality in the area.
P-27	Perris DC (Industrial Property Trust)/Integra	Per the City of Perris' 2014 EIR, the project proposed construction and operation of up to 864,000 square feet (sf) of industrial warehouse/distribution uses on the approximate 43.2-acre site. There is a less than significant impact on the hydrology and water quality in the area.
P-28	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 1,189,860 square feet (sf) of high-cube warehouse/distribution uses on the approximate 55-acre Project site. There is a potentially significant impact on the hydrology and water quality in the area.
P-30	Avelina	Per the City of Perris' 2003 IS, the project proposed to increase residential density on a 158.2 acre property to 475 dwelling units. There is a less than significant impact on the hydrology and water quality in the area.
P-31	Perris Family Apartments	Per the City of Perris' 2013 IS, the project proposed to construct a 75-unit multi-family apartment complex on 7 vacant acres. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.

Project ID	Project	Environmental Document Summary
P-32	Lewis Retail Center	Per the City of Perris' 2009 IS, the project proposed to construct 643,000 sf of commercial shopping center on 68 acres. There is a potentially significant impact on the hydrology and water quality in the area.
P-35	Verano Apartments	Per the City of Perris' 2013 IS, the project proposed increasing the number of residential units from 19 to 40 and reducing the commercial component from 17,000 sq. ft. to 1,000 sq. ft. for retail and to allow a 2,000 sq. ft. day care facility. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
P-37	Cabrillo	Per the City of Perris' Initial Study, the project proposed to amend the General Plan (GP) and Zoning designation of approximately 36.21 acres of land from R-6,000 to MFR-14 Residential, along with a Text Amendment to narrow the lot frontage from 50-feet to 45-feet for lots greater than 4,500 square feet to facilitate the entitlement of Tentative Tract Map (TTM) 36343, a 184 lot residential subdivision. There is a less than significant impact on the hydrology and water quality in the area.
RC-5	Villages of Lakeview -Residential/Commercial Development	Per Riverside County's August 2016 Draft EIR, the Villages of Lakeview project proposes a master-planned community comprised of approximately 2,800 acres in the Lakeview/Nuevo area of Riverside County. Proposed land uses within the Specific Plan include a wide range of residential products, mixed-uses, retail, schools with joint-use parks, public and private amenities, an array of parks, trails, open space, roads, and other infrastructure. Existing infrastructure such as water, sewer, storm drain, and roadways will also be expanded as part of the Villages of Lakeview project. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
RC-9	Oleander Business Park, PP20699	Per what appear to be public meeting slides presenting information about Riverside County's May 2008 Final EIR for this project, the project would subdivide approximately 68.8 acres to develop approximately 1,206,710 square feet of industrial buildings. The slides do not specifically mention an impact on the hydrology and water quality in the area.
RC-10	Majestic Freeway Business Center, SP 341 / PP21552	Per Riverside County's December 2006 Initial Study, the project would develop 947,000 square feet of light industrial warehouse and distribution uses and a 1.62 acre detention basin on 47.25 acres. There is no impact on the hydrology and water quality in the area.

Project ID	Project	Environmental Document Summary
RC-12	Cores Industrial Partners	Per Riverside County's October 2010 ND, the project proposes to bring the Zoning Code into compliance with SB 1627 and to strengthen the development standards for wireless telecommunications facilities in order to ensure high-quality design and compatibility with surrounding uses. There is a less than significant impact on the hydrology and water quality in the area.
RC-34	Emerald Acres SP (SP00381)	Per Riverside County's January 2016 Initial Study, the project would develop the approximately 332.6-acre site as a residential community consisting of a maximum of 355 single family dwelling units on 76.3 acres; 179 multi-family dwelling units on 16.7 acres; 4.88 acres of commercial uses; a community park on 6.8 acres; 209.7 acres of open space; a 0.9-acre sewer lift station; and roadway improvements. There is potentially significant impact on the hydrology and water quality in the area with mitigation measures.
RC-35	TR34677, TR31100, TR32391, TR33448, TR31101, TR31009, TR32282	Per Riverside County's February 2004 environmental assessment form/initial study, the project would subdivide 6.7 acres of a 71 acre parcel into 8 single-family residential lots, a detention basin, and 2.2 acres of open space. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.
RC-37	TR36504	Per Riverside County's IS, the project proposes a Schedule 'A' subdivision of 162.05 acre gross area into 527 single-family residential lots. In addition to 527 residential lots, the subdivision also includes an 8.54 acre lot for a park, a 4.7 acre lot for a detention/debris basin, and an approximately 18 acre open space lot. There is a less than significant impact on the hydrology and water quality in the area.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife's 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. There is a less than significant impact on the hydrology and water quality in the area with mitigation measures.

This section also addresses potential cumulative impacts to groundwater. The cumulative impact geographic area for groundwater is the area under the jurisdiction of the Eastern Municipal Water District (EMWD) because groundwater within the EMWD is produced from groundwater basins underlying the EMWD service area. These two basins are the West San Jacinto Groundwater Basin Management Plan area and the Hemet/San Jacinto Water Management Plan area. In addition, EMWDD is a key player in the efforts to protect groundwater quality and reliability. Cumulative projects within the EMWD service area will be evaluated with the project to determine if a significant cumulative groundwater impact would occur. The cumulative projects geographic boundary for groundwater is shown in Figure 6.9B. The projects located within the groundwater impact area are listed in Table 6.9-2. The project would contribute to cumulative groundwater conditions starting with project-related alteration of on-site conditions and lasting for the duration of the project.

6.9.3 Cumulative Impact Evaluation

6.9.3.1 Seismic Flooding-Related Impacts

Impact: *The project's incremental impact would not cause or contribute to a significant cumulative effect associated with the exposure of people or structures to potential flooding from the failure of a levee or dam.*

Threshold: Would the project expose people or structure to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam?

Cumulative Impact Analysis

Cumulative development within the watershed that encompasses the project site and offsite improvement areas could be subject to potential flooding due to a failure of the nearest dam. The nearest dams to the project site are Pigeon Pass Dam at Poorman's Reservoir located approximately five miles northwest of the project site and Lake Perris Dam located approximately four miles southwest of the project site. Although cumulative development could be exposed to inundation flooding, the project is not within anticipated inundation areas of either dam or any other dam as mapped within the City of Moreno Valley General Plan Final Program EIR. Therefore, the implementation of the project would not contribute to the exposure of people or structures to risk of loss, injury, or death involving flooding as a result of failure of either the Poorman Reservoir (Pigeon Pass Dam) or Lake Perris Dam. Therefore, the project would not cause or contribute to any cumulative effect associated with the exposure of people or structures to flooding.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.9.3.2 Seismic-Related Impacts

Impact: *The project would not cause or contribute to a significant cumulative impact relating to the exposure of people or structures to potential significant cumulative inundation impacts from seiche, tsunami, or mudflow.*

Threshold:	Would the project expose people or structure to a significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow?

Cumulative Impact Analysis

Cumulative development within the watershed that encompasses the project site and offsite improvement areas would not be subject to potential inundation by seiche or tsunami. As described in Section 4.9.5.2, the nearest enclosed body of water that could be subjected to seiche conditions is Lake Perris, but the Perris Dam has been designed to prevent seiche phenomena. The watershed is not located near the Pacific Ocean which is where tsunami risks occur. Therefore, cumulative development would not expose people or structures to inundation flooding due to seiche or tsunamis. As a result, the project would not cause or contribute to any significant cumulative seiche or tsunami inundation impacts.

Cumulative development within the watershed could expose people and structures to mudflow inundation due to the presence of steep slopes within the watershed. This exposure could result in significant cumulative impacts. However, because the project site as well as offsite improvement areas do not have steep slopes, the project's contribution to potential cumulative mudflow inundation impacts would not be cumulatively considerable.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Not cumulatively considerable.

6.9.3.3 Groundwater

Impact: *The project would not cause or contribute to a significant cumulative depletion of groundwater supplies or the interference with groundwater recharge.*

Threshold:	Would the project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level?

Cumulative Impact Analysis

Cumulative development within the Eastern Municipal Water District (EMWD) service area is planned to be supplied exclusively with imported water provided by the Metropolitan Water District. Therefore, cumulative development would not deplete groundwater supplies from use of groundwater. As a result, the project would not contribute to cumulative impacts to groundwater supplies.

Cumulative development would reduce the amount of pervious surfaces within the EMWD service area. This reduction of potential groundwater infiltration areas could cause a significant impact on groundwater recharge. However, because the project includes the implementation of bioretention areas and detention basins that would provide for infiltration opportunities, the project's contribution to potential significant cumulative groundwater infiltration impacts would not be cumulatively considerable.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Not cumulatively considerable.

6.9.3.4 100-Year Flooding-Related Impacts

Impact: *The project would not cause or contribute to significant impacts relating ot the placement of structures within a 100-year flood hazard area that would impede or redirect flood flows.*

Threshold: Would the project place within a 100-year flood hazard area structures that would impede or redirect flood flows?

Threshold: Would the project place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

Cumulative Impact Analysis

Cumulative development within the watershed that encompasses the project site and offsite improvement areas include areas subject to 100-year storms according to the FEMA FIRM maps. Therefore, cumulative development could expose structures or housing to flood hazards and result in significant cumulative flood hazard impacts. However, because the project and offsite improvements would not located in any areas subject to flooding during a 100-year storm, the implementation of the project would not cause or contribute to any potential significant cumulative flood hazard to structures or housing.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.9.3.5 Drainage Pattern and Capacity-Related Impacts

Impact: *The project's incremental contribution would not cause or contribute to significant cumulative impacts to erosion, siltation, or flooding due to alterations of existing drainages or exceedance of drainage capacities or the addition of pollutant runoff.*

Threshold:	Would the project substantially alter the existing local drainage patters of the site and substantially increase the rate or amount of surface runoff in a manner which would result in substantial erosion, siltation, or flooding on site or off site?
Threshold:	Would the project create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?

Cumulative Impact Analysis

Cumulative development within the watershed will result in an increase in impervious surfaces in addition to changes in land use and associated pollutant runoff characteristics. Increased impervious surfaces are likely to alter existing hydrology by potentially increasing surface water runoff and increase potential pollutant loads. Following are the evaluations of cumulative hydrology and cumulative erosion, siltation and flooding impacts.

Hydrology

To analyze the cumulative impacts for hydrology, the geographic scope was determined based on the watershed area and potential impacts to downstream drainage facilities. As discussed above, the proposed project is located in the San Jacinto River watershed and is tributary to two separate sub-watershed areas, the PVSD Watershed and the SJWA watershed, prior to flows reaching the San Jacinto River. For the area to the west, the PVSD is the most downstream drainage facility that the WLC Project is tributary to before flows reach the San Jacinto River. It is necessary to consider the downstream drainage areas and their facilities when evaluating cumulative impacts for hydrology. The PVSD is a major drainage facility draining a large area including the City of Moreno Valley and any flow impacts to the facility would be important to analyze the effects. For this reason, on the west side, the area tributary to the PVSD was selected as the geographic area for the cumulative impacts analysis. On the east side, flows drain to the SJWA before reaching the San Jacinto River. The SJWA is an important habitat and water feature within the watershed and it is necessary to analyze any potential flow impacts to the area. For this reason, for flows draining to the east, the area tributary to the SJWA was chosen as the geographic area for considering potential cumulative effects. This area includes the upstream portion of the San Jacinto Watershed as the SJWA extends to the south side of the San Jacinto River.

As discussed in Section 4.9 of the FEIR, runoff from the western portion of the project site flows west toward the Perris Valley Storm Drain (PVSD), while runoff from the eastern portion of the project site flows south into Mystic Lake, and (during times of high storm flow), reaches the San Jacinto River south of the San Jacinto Wildlife Area. Table 6.9-1 identifies the cumulative projects that are located in each watershed.

PVSD Watershed Area

The PVSD watershed area is divided into two sub-watersheds, Sunnymead and Moreno, tributary to the PVSD. The RCFC&WCD has adopted Master Drainage Plans (MDPs) for each of the sub-watershed areas, Sunnymead MDP (RCFC&WCD, 1991) and Moreno MDP (RCFC&WCD, 2015) that serve as guides for development in these areas. The Moreno MDP was recently updated to include the hydrology of the WLC development. Potentially cumulative projects (such as MV-39, MV-41 and MV-48) would be required to conform to the MDPs by mitigating any increase in project flows such that any flows leaving the project boundary would be equal to or less than existing conditions. In addition, the cumulative projects would be required to contribute through the MDP Fee Program for the construction of facilities identified in the MDPs. Many of the cumulative projects such as MV-39, MV-41 and MV-48 include infiltration and/or detention basins to reduce offsite flow.

Portions of the proposed project are tributary to Line “F” of the Moreno MDP. As identified in the FEIR, Line “F” from Redlands Blvd to south of Eucalyptus Avenue would be constructed as part of the proposed project. Because it is not known when the proposed Moreno MDP Sinclair Basin north of SR-60 will be constructed, Line "F" was sized without the Sinclair Basin and all flows pass under SR-60. In addition, a detention/infiltration basin would be constructed to detain and infiltrate onsite flows as required by Mitigation Measures 4.9.6.1A and 4.9.6.1B such that flows leaving the project boundary will be less than existing in terms of peak flow, velocities, and volume for each of the 2, 5, 10, 25, and 100-year storms. As such, there would be no impact on downstream drainage facilities as a result of the development of the proposed project and the project would not cause or contribute to any cumulative impacts. In addition, construction of Line "F" by the project would exceed its obligation of MDP fees. An analysis of the volume of runoff and infiltration for the pre- and post- project conditions was performed which included hydrologic modeling. Pre-project conditions consist of agricultural uses. Post-project conditions consist of the development of the project. Post-project detention basins would be constructed not only for storm peak attenuation, but also for infiltration. The analysis showed that the project's impacts would be fully mitigated with the implementation of the detention/ infiltration basins.

The volume of runoff after the project is constructed would be less than the existing volume of runoff and the amount of infiltration and groundwater recharge would increase by a small amount, which would provide a net benefit to groundwater recharge. The proposed project's drainage improvements would be designed to have sufficient capacity to accommodate and convey storm water runoff flows generated by the project as well as expected future storm water runoff flows associated with buildout of the Moreno MDP area. All of the cumulative projects in the Moreno MDP and Sunnymead MDP areas would be required to mitigate flows to equal to or less than existing and/or demonstrate that storm drain capacity is available to service their anticipated flows and that their project is consistent with the MDPs. Section 15130 (a) (3) of the CEQA Guidelines states "A project's contribution is less than cumulatively considerable if the project is required to implement or fund its fair share of a mitigation measure or measures designed to alleviate the cumulative impact." The project's compliance with the Moreno MDP meets this requirement. In addition, there would be zero hydrologic impact on downstream drainage facilities due to the project; therefore, the project would not contribute to any cumulative impacts. As such, cumulative impacts would be less than significant.

SJWA Watershed Area

The portion of the project site located east of the topographic divide drains to the SJWA. In addition to the project, one current and one potential project are tributary to the SJWA. They are the Badlands Landfill Improvements Project located north of the project site and the Quail Ranch Specific Plan located southeast of the project site. Runoff from the Badlands Landfill flows through the project site. The hydrologic study for the project considered flows from the Badlands Landfill. The Badlands Landfill Improvement project does not change the pervious cover of the site. As such, flows from the Landfill Improvements Project would not increase above existing and would be consistent with the existing flows north of the project.

Downstream of the project site, the Quail Ranch Specific Plan Project is proposed. This cumulative project consists of a planned residential community. Currently, there are no specific details on this cumulative project. Stormwater flows generated by the cumulative project site could increase, however, the developer would be required to alleviate any increase in flows leaving a site and demonstrate that the cumulative project does not increase storm flows such as peak flow, velocities, and volume for each of the 2, 5, 10, 25, and 100-year storms. The cumulative project would be required to demonstrate that storm drain capacity is available to service the anticipated flows and that the project is consistent with the MDPs. As such, cumulative downstream capacity impacts within the SJWA watershed area would be less than significant. Because the project would reduce storm flows leaving the project site so that they do not exceed existing flows, the project's contribution to potential cumulative erosion and siltation impacts within the SJWA watershed area would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: Although no mitigation measures are required; the applicant has committed to implementing Mitigation Measures 4.9.6.1A and 4.9.6.1B to further reduce the project's less-than-significant contribution to the less than significant cumulative impact to erosion, siltation and flooding.

Significance Level After Mitigation: Less than significant cumulative impact.

6.9.3.6 Construction-Related Water Quality Impacts

Impact: *The project's incremental contribution would not cause or contribute to a significant cumulative increase in surface water pollution during construction.*

Threshold:	Would the project violate any water quality standards or waste discharge requirements during construction phases of the project in form of increased soil erosion, sedimentation, or storm water discharges?

Cumulative Impact Analysis

Cumulative projects within the watershed would result in disturbance of surface soils and removal of vegetative cover during construction activities that could potentially result in erosion and sedimentation and the degradation of surface water quality. In addition, cumulative construction activities that use on-site construction equipment could introduce a risk of storm water contamination in downstream conveyance facilities. Spills and leaks could occur from the use of construction equipment during construction activities as well as from construction equipment located within staging areas. These spills and leaks could include substances such as fuels, oils, solvents, and paints.

As each cumulative project receives construction approval, compliance with the National Pollutant Elimination System (NPDES) General Construction permit would be required. To comply, construction site BMPs would be required to control runoff, sediment, erosion and ensure that construction waste is adequately handled and disposed. These BMPs are required elements of a Stormwater Pollution Prevention Plan that describes the construction operator's activities to comply with the NPDES General Construction permit. Because cumulative projects would be required to comply with the requirements of the NPDES General Construction permit program, cumulative water quality impacts to downstream areas would be less than significant. The project's less than significant incremental contribution would not combine with the impacts of other projects in the cumulative scenario to cause or contribute to a significant cumulative effect.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: Although no mitigation measures are required; the applicant has committed to implementing Mitigation Measures 4.9.6.1A and 4.9.6.1B to further reduce the project's contribution to the less than significant cumulative water quality impacts during construction activities.

Significance Level After Mitigation: Less than significant cumulative impact.

6.9.3.7 Operational-Related Water Quality Impacts

Impact: *The project's contribution to the significant cumulative increase in surface water pollution during operation would be cumulatively considerable.*

Threshold:	Would the project violate any water quality standards or waste discharge requirements during the operational phases of the project in the form of increased soil erosion, sedimentation, or urban runoff?

Cumulative Impact Analysis

As discussed previously, the project site is tributary to two sub-watersheds, the Perris Valley Storm Drain and the San Jacinto Wildlife Area. Both sub-watersheds are tributary to the downstream Receiving Waters of the San Jacinto River, Canyon Lake and Lake Elsinore, two of which are impaired water bodies. Below is a discussion of cumulative water quality effects within the San Jacinto watershed. In addition, the water quality of runoff into the SJWA is also discussed.

San Jacinto Watershed

The operational activities associated with the cumulative projects would increase the potential for contaminants to enter stormwater runoff. Storm runoff from the roadways, parking lots, commercial and industrial buildings as well as residential uses can carry a variety of pollutants such as sediment, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser extent) trace metals such as zinc, copper, lead, cadmium, and iron, which may lead to the degradation of storm water in downstream channels. Runoff from landscaped areas within cumulative projects may contain elevated levels of phosphorus, nitrogen, and suspended solids. Oil and other hydrocarbons from vehicles are also expected in cumulative stormwater runoff. These pollutants are commonly categorized into eight categories: sediments, nutrients, metals, toxic organic compounds, trash and debris, pathogens, oil and grease and pesticides. Table 6.9-3 identifies the downstream receiving waters from the project site and states if the receiving water is listed as impaired on the 303(d) List or has a total maximum daily load (TMDL) adopted for a certain type of pollutant.

Table 6.9-3: Pollutant Stressors in Receiving Waters

Storm Drain/Receiving Waters	303(d) Listing	Adopted TMDL Pollutants
San Jacinto River	None	None
Canyon Lake	Nutrients (Phosphorus & Nitrogen), Pathogens	Phosphorus, Nitrogen
Lake Elsinore	Nutrients, Organic Enrichment/Low Dissolved Oxygen, PCBs, Sediment Toxicity, Unknown Toxicity	Phosphorus, Nitrogen, Dissolved Oxygen

The operational activities associated with the cumulative projects within the San Jacinto watershed area have the potential to add pollutants to downstream Receiving Waters. The operational activities associated with the project have the potential to generate similar pollutants as those identified above for cumulative projects. These pollutants include sediment, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser extent) trace metals such as zinc, copper, lead, cadmium, and iron. The addition of these pollutants have the potential to degrade downstream receiving waters. The impacts of the project together with the impacts of other projects in the cumulative scenario could result in significant cumulative water quality impacts during operational activities. Given the size of the project site and scale of the proposed development, the project's contribution to this significant water quality impact would be cumulatively considerable.

San Jacinto Wildlife Area

Cumulative development tributary to the SJWA includes one current and one potential project. They are the Badlands Landfill Improvements Project located north of the project site and the Quail Ranch Specific Plan located southeast of the project site. Runoff from the Badlands Landfill flows through the project site. The hydrologic study for the project considered flows from the Badlands Landfill. The future operational activities of the Quail Ranch Specific Plan could contribute pollutants to the San Jacinto Wildlife Area. The operational activities associated with the project could also contribute pollutants to stormwater runoff conveyed to the San Jacinto Wildlife Area. These pollutants include sediments, nutrients, metals, toxic organic compounds, trash and debris, pathogens, oil and grease and pesticides. The implementation of the cumulative development, including the project, could increase various pollutants into the San Jacinto Wildlife Area, and thus result in significant cumulative water quality impacts during operational activities.

Given the size of the project site and scale of the proposed development, the project's contribution to this significant water quality impact would be cumulatively considerable.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: The implementation of Mitigation **Measures 4.9.63A** through **4.9.6.3C** would be required.

Significance Level After Mitigation: Less than cumulatively considerable contribution to the significant cumulative impact. The implementation of specific BMPs would control pollutant runoff from the project site to downstream areas within the San Jacinto Watershed as well as the San Jacinto Wildlife Area. The maintenance of the onsite water quality basins would ensure adequate facilities for stormwater treatment. Lastly, the establishment of a Water Quality Mitigation Monitoring Plan would allow periodic sampling of the quality of the storm flows before conveyance to downstream areas. The implementation of these measures would reduce the project's contribution to potential significant cumulative operational water quality impacts to a less than cumulatively considerable level.

6.10 Land Use and Planning

Cumulative effects to land use and planning are described in this section. A summary of the project's incremental contribution to potential cumulative impacts to land use and planning is provided in Section 6.10.1. The geographic and temporal scopes of cumulative analysis are provided in Section 6.10.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the land use and planning issues are discussed in Section 6.10.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.10.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the City will fully build out by 2040, the cumulative impact analysis assumes a more intense level of cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.10-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if their impacts would cause or contribute to a significant cumulative impact to land use and planning and, if so, whether the propose project's incremental contribution would be cumulatively considerable.

6.10.1 Project Impact Findings

The project's effects to land use and planning are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project impacts (see Section 4.10 of the Revised Sections of the FEIR) is provided as well as a reference to the specific section and impact number if the impact determination is significant.

Could the project:

- Physically divide an established community; **Significant and Unavoidable, Section 4.10.6.**
- Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect; **Less than Significant, Section 4.10.5.2.**
- Conflict with any applicable habitat conservation plan or natural community conservation plan. **Less than Significant, Section 4.10.5.1.**

6.10.2 Geographic and Temporal Scope

The cumulative impact geographic area for land use and planning is the City of Moreno Valley because the project site is located within the jurisdiction of the City of Moreno Valley. The City determines how the local plans and policies are implemented and determines how the regional plans and policies of the Southern California Association of Governments that include the City's jurisdiction are implemented. Cumulative impacts to land use and planning could result from the project in conjunction with other past, present and future projects located within the City of Moreno Valley. The project site is currently designated as Business Park in the Moreno Valley General Plan, and development of the project site is subject to the World Logistics Center Specific Plan. The incremental impacts of potentially cumulative projects within the City of Moreno Valley have been evaluated together with the impacts of the project to determine if a significant cumulative impact would occur. The geographic area for cumulative land use and planning impacts is shown on Figure 6.10-1. The projects located within the cumulative land use and planning impact area are listed in Table 6.10-1. The project would contribute to cumulative impacts to land use and planning from when development activities commence on the project site and would last for the duration of the project.

Table 6.10-1: Land Use and Planning Cumulative Projects Summary

Project ID	Project Name	Environmental Document Summary
MV-3	ProLogis	Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres. There is a significant and unavoidable impact on the land use and planning in the area.
MV-4	Westridge Commerce Center	The Project’s development of a 937,260 square foot warehouse distribution facility would contribute to cumulative conflicts with land use policies and habitat conservation plan
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley’s 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf. There is no impact on the land use and planning in the area.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley’s 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres. There is no impact on the land use and planning in the area.
MV-9	TR32459 / Sussex Capital	Per the City of Moreno Valley’s 2006 ND, the project is for a single family residential tract with 11 lots on 13 acres and is zoned R1. The lots range from 41,021 sq ft to 59,627 sq ft in size. There is no impact on the land use and planning in the area.
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots. There is no impact on the land use and planning in the area.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres. There is no impact on the land use and planning in the area.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes. There is no impact on the land use and planning in the area.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space. There is a no impact on the land use and planning in the area.
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres. There is no impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes. There is no impact on the land use and planning in the area.
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres. There is no impact on the land use and planning in the area.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres. There is no impact on the land use and planning in the area.
MV-20	Moreno Marketplace	Per the City of Moreno Valley's June 2006 Negative Declaration, this project would develop a 95,905 square foot retail center on 10.46 acres. There is no impact on the land use and planning in the area.
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres. There is a less than significant impact on the land use and planning in the area.
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots. There is no impact on the land use and planning in the area.
MV-24	TM 36436 (PA12-0005)	The Project’s subdivision of 43.52 acres into 159 single family residential lots would contribute to cumulative conflicts with land use policies and habitat conservation plan
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres. There is no impact on the land use and planning in the area.
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres. There is no impact on the land use and planning in the area.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acres. There is no impact on the land use and planning in the area.
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres. There is no impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots. There is no impact on the land use and planning in the area.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres. There is no impact on the land use and planning in the area.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots. There is a less than significant impact on land use and planning in the area.
MV-34	TR34397 / Winchester Associates	Per the City of Moreno Valley's April 2007 initial study/environmental checklist form, the project would subdivide 19 acres for 50 single-family residential lots. There is no impact on the land use and planning in the area.
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins. There is no impact on the land use and planning in the area.
MV-36	TM 31618 (PA03-0106)	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 18.99 acres for 56 single-family residential lots. There is no impact on the land use and planning in the area.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is no impact on the land use and planning in the area.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is no impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-41	First Nandina Logistics Center	Based on the City of Moreno Valley's October 2014 Facts, Findings, and Statement of Overriding Considerations, the project would develop approximately1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of mezzanine space on 72.9 acres. There is no impact on the land use and planning in the area.
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site. There is no impact on the land use and planning in the area.
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a hat will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land. There is no impact on the land use and planning in the area.
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays. There is no impact on the land use and planning in the area.
MV-45	Iris Plaza	Per the City of Moreno Valley’s IS, the project would construct a 109,289 sq. ft. shopping center on approximately 12.4 acres of land within the Community Commercial (CC) land use district. There is a less than significant impact on the land use and planning in the area.
MV-47	PA07-0129 TR 35606 SFR	No environmental documentation was available for review. However, there is a planning commission resolution, which states that the project is not likely to cause substantial environmental impact. The resolution does not specifically mention an impact on the land use and planning in the area.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	Per the City of Moreno Valley's Environmental Checklist, the project would prepare an EIR to subdivide 75.05-acre property into four parcels with business center land uses. There is a less than significant impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped. There is a less than significant impact on the land use and planning in the area.
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site. There is no impact on the land use and planning in the area.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. There is no impact on the land use and planning in the area.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space. There is no impact on the land use and planning in the area.
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. There is no impact on the land use and planning in the area.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. There is a significant and unavoidable cumulatively considerable impact on the land use and planning in the area.
MV-56	Tract Map 33810	No environmental documentation was available for review. However, there is a planning commission resolution that states that the project is exempt from the requirements of CEQA guidelines. The resolution does not mention an impact on the land use and planning in the area.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots. There is no impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The resolution states that there is no impact on the environment in the area. It does not mention an impact on the land use and planning in the area.
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. There is no impact on the land use and planning in the area.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. There is no impact on the land use and planning in the area.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 square feet of new retail/commercial uses on the approximately 22.28-acre site. There is a less than significant impact on the land use and planning in the area.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. There is a less than significant impact on the land use and planning in the area.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. There is no impact on the land use and planning in the area.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. There is no impact on the land use and planning in the area.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. There is no impact on the land use and planning in the area.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the land use and planning in the area.
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. There is no impact on the land use and planning in the area.
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley’s 2008 ND, the project would build a 522,772 square foot industrial warehouse building on 25.96 acres of land. There is no impact on the land use and planning in the area.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. There is a less than significant impact on the land use and planning in the area.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. There is no impact on the land use and planning in the area.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. There is no impact on the land use and planning in the area.
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. There is no impact on the land use and planning in the area.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2010 ND, the project subdivides 16.9 acres into 6 pads for commercial retail use. There is no impact on the land use and planning in the area.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. There is no impact on the land use and planning the area.
MV-88	TR33771 / Creative Design Associates	No environmental documentation was available for review. However, there is a planning commission resolution for a 12 unit condominium complex on approximately 0.9 acres. The resolution states that there will be no impact on the environment in the area. It does not mention an impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-89	TR35663 / Kha	No environmental documentation was available for review. However, there is a notice of exemption for a mixed use development on approximately 2.2 acres, which states that there is no evidence of potential for significant environmental impacts. The exemption does not specifically mention an impact on the land use and planning in the area.
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. There is no impact on the land use and planning in the area.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. There is no impact on the land use and planning in the area.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. There is no impact on the land use and planning in the area.
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. There is a less than significant impact on the land use and planning in the area with mitigation measures.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. There is a less than significant impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. There is no impact on the land use and planning in the area.
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. There is no impact on the land use and planning in the area.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. There is no impact on the land use and planning in the area.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. There is no impact on the land use and planning in the area.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. There is a less than significant impact on the land use and planning in the area.
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. The resolution states that there is no impact on the environment. The resolution does not specifically mention an impact on the land use and planning in the area.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. There is no impact on the land use and planning in the area.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. The resolution states there is no impact on the environment in the area. It does not specifically state an impact on the land use and planning in the area.

Project ID	Project Name	Environmental Document Summary
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres. The resolution does not mention an impact on the environment. It also does not mention an impact on the land use and planning in the area.
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. There is a less than significant impact on the land use and planning in the area with mitigation measures.
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. There is no impact on the land use and planning in the area.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. There is no impact on the land use and planning in the area.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. There is no impact on the land use and planning in the area.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. There is no impact on the land use and planning in the area.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. There is no impact on the land use and planning in the area.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife’s 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. There is no impact on the land use and planning in the area.

6.10.3 Cumulative Impact Evaluation

6.10.3.1 Conflict with Any Applicable Habitat or Natural Community Conservation Plan

Impact: *The project would not contribute to a significant cumulative effect relating to conflicts with a habitat or natural community conservation plan.*

Threshold:	Would the proposed WLC project conflict with any applicable habitat conservation plan or natural community conservation plan?

Cumulative Impact Analysis

Cumulative projects are located within the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) and the Stephens' Kangaroo Rat (SKR) Habitat Conservation Plan (HCP) areas. Based on a review of each of the potentially cumulative projects, each that would be subject to the MSHCP and/or SKR HCP would be required to pay a fee to sustain the plant and wildlife populations within the MSHCP and the species population in the SKR HCP areas.

Projects subject to the MSHCP are required to pay a fee that will eventually result in an MSHCP Conservation Area in excess of 500,000 acres and focuses on conservation of 146 species including amphibians, reptiles, birds, mammals, invertebrates, and plants. Certain species require additional measures to ensure that the population of the species is sustained. Because each of the cumulative projects within the MSHCP area is required to comply with the provisions of the MSHCP, no significant cumulative impact would result. In addition, since the project also would be required to comply with the MSHCP, the project's incremental impact on the species within the MSHCP would not combine with the incremental impacts of the other cumulative projects to cause or contribute to a significant cumulative impact.

Projects subject to the SKR HCP are required to pay a fee so that the funds can be used to acquire and permanently conserve, maintain and fund the conservation, preservation, restoration and enhancement of SKR occupied habitat. The implementation of the HCP has demonstrated the acquisition of habitat and sustaining the population of the SKR. Therefore, implementation of the cumulative projects would not result in a significant cumulative impact. In addition, because the project also would be subject to the SKR HCP, including the requirement to pay a conservation fee, the project's incremental impact on the SKR program would not combine with the incremental impacts of the other cumulative projects to cause or contribute to a significant cumulative impact.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.10.3.2 Conflict with Applicable Land Use Plans, Policies, or Regulations (Regional)

Impact: *The project would not contribute to potential significant cumulative impacts related to conflicts with regional plans or policies.*

Threshold:	Conflict with any applicable regional land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Cumulative Impact Analysis

Certain goals and policies of regional plans are applicable to certain cumulative projects. The regional plans evaluated in Section 4.10.5.2 of the FEIR included the Riverside County Airport Land Use Plan, the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), and the SCAG Regional Comprehensive Plan.

Some among the cumulative projects are located within the Airport Land Use Plan (ALUP) for March Air Reserve Base. Those projects are expected to comply with the ALUP regulations; however, there is a possibility that one or more could be inconsistent with the ALUP in a way that results in potential significant cumulative impacts. Because the project is not located within an ALUP, the project would not cause or contribute to any potential cumulative ALUP impact. Therefore, the project would result in no cumulative impacts to ALUP regulations.

The RTP/SCS includes policies that provide a strong commitment to reduce emissions from traffic and transportation. The RTP/SCS provides a blueprint for improving quality of life for residents by providing more choices for where they will live, work, play, and how they will move around. Many of the cumulative projects include the development of residential uses within the City of Moreno Valley. These projects are expected to be consistent with some of the policies identified in the RTP/SCS; however, cumulatively, the cumulative projects are not assisting in reducing potential commute traffic emissions. Therefore, development of the cumulative projects could result in significant cumulative impacts. With the implementation of the project, approximately 25,000 new jobs would be eventually created, which would nearly double the number of jobs within the City. This increase in jobs would positively affect commute patterns for residents within the City as well as within the region by reducing commuter trips. The project is consistent with the applicable policies of the RTP/SCS. Because the project would be consistent with the applicable RTP/SCS policies, the project would not contribute to any adverse cumulative conflicts associated with the RTP/SCS.

The RCP's overall goal is to reinvigorate the region's economy, avoid social and economic inequities and the geographical dislocation of communities, and to maintain the region's quality of life. Because the applicability of the RCP is to projects of "regional significance," the cumulative projects that include warehousing would be applicable. These warehousing projects would result in the creation of employment opportunities that would assist the City in balancing the current housing rich condition. These cumulative projects could modify commuting patterns to reduce overall vehicle miles travelled. These projects of "regional significance" would be consistent with the RCP and therefore would be less than cumulatively significant. The project is also considered a project of "regional significance." The project's anticipated increase of approximately 25,000 new employment opportunities would also modify commuting patterns so that overall vehicle miles travelled could be reduced. Because the project would be consistent with the policies of the RCP, the project would not contribute to potential adverse cumulative impacts to the implementation of the RCP.

In summary, the project would not contribute to potential adverse cumulative impacts related to the implementation of the policies of the applicable regional plans.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.10.3.3 Conflict with Applicable Land Use Plans, Policies, or Regulations (Local)

Impact: *The project would not contribute to potential significant cumulative conflicts with the City of Moreno Valley General Plan.*

Threshold:	Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the General Plan, Specific Plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Cumulative Impact Analysis

Cumulative projects (including MV 4 and MV 24, for example) were consistent with the City's General Plan as they were proposed; others required amendments to the City's General Plan to become compliant. Based on a review of the available environmental documents for the cumulative projects that included an amendment, the amended land uses were still consistent with the goals, policies and objectives of the City's General Plan. The cumulative projects resulted in less than significant environmental effects related to the City's General Plan land use goals, policies and objectives.

As stated in Section 4.10.5.3 of the FEIR, the project included amendments to the General Plan; however, in November 2015, the City adopted the proposed amendments submitted through the initiative process. Even prior to the adoption, the FEIR identified that the project was consistent with the goals, policies and objectives of the General Plan. Therefore, the project would not contribute to any potential cumulative impacts relating to consistency with the City of Moreno Valley General Plan.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.10.3.4 Physically Divide an Established Community

Impact: *The project's contribution to cumulative impacts related to physically dividing the established existing rural residences on the project site would be cumulatively considerable.*

Threshold:	Would the proposed WLC project physically divide an established community?

Cumulative Impact Analysis

A few of the cumulative projects are proposed adjacent to the project site, primarily including residential uses but also including two warehouse uses along SR-60. The area primarily west of Redlands Boulevard includes residential uses as well as vacant land that is designated for residential uses in the City of Moreno Valley General Plan. These cumulative projects would not contribute to project's physical division of the established rural residential uses located on the project site. Because cumulative impacts include the effects of the project in combination with other cumulative projects and the project, as discussed below, would result in a significant physical division of the established onsite residences, there would be a significant cumulative impact. The project's contribution to this significant cumulative impact would be cumulatively considerable.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Because the project's physical division of the established onsite rural residences would be exacerbated by the incremental impacts of adjacent projects in the cumulative scenario, the determination in Section 4.10.6.1 of the Final EIR that there is no effective mitigation available to protect or separate these existing residences from future warehousing buildings and operations is equally applicable to the cumulative condition.

Significance Level After Mitigation: Cumulatively considerable contribution to a significant cumulative impact. Because there is no effective means of reducing the significant impact related to physically dividing the established onsite rural residences, this cumulative impact would be significant and unavoidable.

6.11 Mineral Resources

Pursuant to CEQA Guidelines §15130, “a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR.” Because the proposed project would result in no impact related to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state or of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan, it could not cause or contribute to any potential cumulative impact in either respect.

6.12 Noise

Cumulative effects to noise are described in this section. A summary of the project's potential impacts to noise issues is provided in Section 6.12.1. The cumulative impact geographic area for noise issues is provided in Section 6.12.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the noise issues are discussed in Section 6.12.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.12.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the city will fully build out by 2040, the cumulative impact analysis assumes worse case cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Figures 6.12-1 and 6.12-2 and Tables 6.12-1 and 6.12-2 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if they would contribute to a cumulatively considerable impact to noise. These potentially cumulative impacts are documented in the following section.

6.12.1 Project Impact Findings

The project's effects to noise are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project impacts (see Section 4.12 of the Revised Sections of the FEIR) is provided as well as a reference to the specific section and impact number if the impact determination is significant.

Could the project:

- Expose people to or cause generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies; **Significant and Unavoidable, Section 4.12.6.1; Less than Significant, Section 4.12.6.3**
- Exposure people to or cause generation of excessive groundborne vibration or groundborne noise levels; **Less than Significant, Section 4.12.5.1.**
- A substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project; **Significant and Unavoidable with Mitigation, Section 4.12.6.1; Significant and Unavoidable, Section 4.12.6.2.**
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; **No Impact, Section 4.12.5.2.**
- For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels. **No Impact, Section 4.12.5.2.**

The standards within the *City of Moreno Valley General Plan* and *Moreno Valley Municipal Code* determine the acceptable noise environment for project and its vicinity. The standards are as follows:

- To the extent feasible, ensure through the design review process that exterior noise levels at commercial and industrial areas do not exceed 65 dBA CNEL.
- Consider the following uses noise-sensitive and discourage them in areas where exterior noise levels exceed 65 dBA CNEL unless measures are implemented that reduce the noise exposure below this level: single-family and multiple-family residential uses, group homes, hospitals, schools and other learning institutions, and parks and open space areas where quiet is a basis for use.

The project's incremental contribution to a cumulative traffic noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when project traffic increases noise levels by 1 dB or more over existing pre-project conditions and the predicted future cumulative with project traffic noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

6.12.2 Geographic and Temporal Scope

Cumulative impacts to noise could result from the project in conjunction with other past, present and future projects located within two cumulative impact project areas: 1) the cumulative traffic noise impact project boundary (this area includes the entire City of Moreno Valley and portions of the Cities of Riverside, Redlands, Beaumont, Perris, San Jacinto, Hemet and Calimesa, as well as portions of unincorporated Riverside and San Bernardino County and the March JPA), and: 2) 500' from the proposed limits of construction for cumulative construction impact projects. The cumulative traffic noise impact area is based on the cumulative traffic impact area where past, present, and future projects contribute 50 average daily trips (ADT) or more to the roadway network and therefore to the traffic noise environment. Construction noise and vibration impacts are limited to the immediate area of construction activity. Therefore, the geographic scope of cumulative construction noise impacts encompass cumulative projects located within 500' of the project boundary.

Cumulative projects within the identified operational and construction noise areas will be evaluated with the project to determine if any cumulative impact would occur. The geographic area for cumulative construction noise impacts is shown on Figure 6.12-1. Cumulative operational noise impacts is shown on Figure 6.12-2. There are no projects with CEQA documents located within the cumulative construction noise impact area, although the cumulative projects identified within the cumulative construction noise impact area have been evaluated in this section. The projects located within the cumulative operational noise impact area are listed in Table 6.12.

Table 6.12-1: Noise Cumulative Projects Summary

Project ID	Project Name	Environmental Document Summary
B-3	Heartland	Per the City of Beaumont Planning Department's 1994 EIR, the Heartland Specific Plan would develop low and medium density housing, and supporting land uses on 417.2 acres. There is a less than significant impact on the noise in the area with mitigation measures.
B-4	Hidden Canyon	Per the City of Beaumont Planning Department's 2004 EIR, the Hidden Canyon EIR Addendum to the Beaumont Gateway Specific Plan would result in the development of 426 residential units, commercial space and open space on 196.5 acres. There will be a significant impact on the noise in the area despite mitigation measures.
B-5	ProLogis/Rolling Hills Ranch Industrial	Per the City of Beaumont Planning Department's 2004 EIR, the Second Amendment to the Rolling Hills Ranch Specific Plan would change the 152,9 acre property's General Plan land use designation from low density residential to Business Park. There will be a less than significant impact on the noise in the area with mitigation measures.
B-7	Kirkwood Ranch (#14)	Per the City of Beaumont Planning Department's 1990 EIR, the Kirkwood Ranch Specific Plan would develop 470 single family detached units and 60 multi-family units on a 128 acre site. In the short term, there is an unavoidable impact on the noise in the area from construction. The long term noise will have a less than significant impact on the noise in the area with mitigation measures.
B-9	Sundance (#17)	Per the City of Beaumont Planning Department's 2004 EIR, the Sundance Specific Plan Amendment to the Deutsch Specific Plan would result in the development of 1,968 single-family units, 2,208 homes, and 540 condo units, commercial space, and supporting land uses on 1,195 acres. There will be a less than significant impact on the noise in the area with mitigation measures.
B-10	Tract No. 32850 (#39)	Per the City of Beaumont Planning Department's 2005 ND, the Tract Map 32850 would divide a 29.09 acre parcel into 103 single-family residential lots. There is no impact on the noise in the area.
B-11	San Gorgonio Village, Phase 2 (#45)	Per the City of Beaumont Planning Department's 2007 MND, the San Gregorio Village Specific Plan would provide for the development of approximately 225,000 square feet of commercial and restaurant uses on approximately 23 acres. There is a less than significant impact on the noise in the area with mitigation measures.

Project ID	Project Name	Environmental Document Summary
B-12	Beaumont Commercial Center	Per the City of Beaumont Planning Department's 2016 IS, the Beaumont Commercial Center would provide for the development of five commercial buildings with 58,603 square feet of retails, service, and restaurant uses. There is a less than significant impact on the noise in the area with mitigation measures.
B-14	Potrero Creek Estates (#26)	Per the City of Beaumont Planning Department's 1988 EIR, the Potrero Creek Estates Specific Plan would result in the residential development of 1,028 single family lots on 737 acres. The EIR does not mention if there will be an impact on the noise in the area.
H-3	Tres Cerritos Specific Plan	Per the City of Hemet's NOC, the project proposes to develop 178 single-family homes on 51.2 acres. There is no impact on the noise in the area.
H-4	Sanderson Square	Per the City of Hemet's 2006 IS, the Sanderson Square Specific Plan would result in the development off commercial and industrial uses on approximately 45 acres. There is a potentially significant impact on the noise in the area.
H-5	McSweeny Farms Specific Plan	Per the City of Hemet's 2003 excerpt of an EIR, the McSweeny Farms Properties Specific Plan would result in the construction of 2,482 residential units within 442 acres. The excerpt does not contain information on the impact on noise in the area.
H-6	Ramona Creek Specific Plan	Per the City of Hemet's 2014 EIR, the Ramona Creek Specific Plan and General Plan Amendment would result in the development of a multiple-use commercial and residential community. There is a less than significant impact on the noise in the area with mitigation measures.
H-7	Peppertree Specific Plan	Per the City of Hemet's 2003 ISMND, the Peppertree Specific Plan would result in the development of 456 residences, and recreational spaces of 79.2 acres. There is a less than significant impact on the noise in the area.
H-9	Pulte Del Web (TTM 31807 and 31808)	Per the City of Hemet's 2005 SEIR, the Tentative Tract Map 31807, Tentative Tract Map 31808, and Specific Plan Amendment SPA 04-1 would result in the amendment of a land use plan for a 10 acre site from commercial to high medium density residential and the division of 154.77 acres into 611 residential lots, an adult community center, and open space. The EIR does not mention an impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
H-10	Downtown Hemet Specific Plan	Per the City of Hemet's 2017 ISMND, the proposed Downtown Hemet Specific Plan is a comprehensive plan that features a land use plan, circulation plan, urban design framework, utility infrastructure plan, development standards, design guidelines, and sustainability plan for future development within a 360-acre area in downtown Hemet. There is a less than significant impact on the noise in the area with mitigation measures.
M-2	Meridian Business Park Phases I and II	Per the March Joint Powers Authority's 2017 EIR , the project would result in the development of a 130 acre business park. There is a less than significant impact on the noise in the area with mitigation measures.
M-8	March LifeCare Campus Specific Plan	Per the March Joint Powers Authority's 2009 EIR, the project would result in the development of a medical campus on approximately 236 acres. There is a significant and unavoidable impact on noise in the area.
M-9	TM 34748	Per the March Joint Powers Authority's 2010 ND, the project proposes to build a 135 single-family residential lot subdivision on 40 acres. There is no impact on the noise in the area.
M-11	PA 06-0014 (Pierce Hardy Limited Partnership)	Per the March Joint Power's Authority's draft ND, the project would construct a Retail/Storage Lumber Yard Complex (approximately 67,800 square feet of total building space) on 11.0 acres. There is no impact on the noise in the area.
MV-3	ProLogis	Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres. There is a less than significant impact on the noise in the area with mitigation measures.
MV-4	Westridge Commerce Center	Per the City of Moreno Valley's April 2011 Final EIR, the project would develop approximately 937,260 square feet of light industrial warehouse/ distribution uses and related infrastructure on 55 acres. There is a less than significant impact on the noise in the area with mitigation measures.
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley's 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf. There is no impact on the noise in the area.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres. There is no impact on the noise in the area.
MV-9	TR32459 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project is for a single family residential tract with 11 lots on 13 acres and is zoned R1. The lots range from 41,021 sq ft to 59,627 sq ft in size. There is no impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots. There is no impact on the noise in the area.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres. There is no impact on the noise in the area.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes. There is no impact on the noise in the area.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space. There is no impact on the noise in the area.
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres. There is no impact on the noise in the area.
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes. There is no impact on the noise in the area.
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres. There is no impact on the noise in the area.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres. There is no impact on the noise in the area.
MV-20	Moreno Marketplace	Per the City of Moreno Valley's June 2006 Negative Declaration, this project would develop a 95,905 square foot retail center on 10.46 acres. There is no impact on the noise in the area.
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres. There is no impact on the noise in the area. There is no impact on the noise in the area.
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots. There is a less than significant impact on the noise in the area.
MV-24	TM 36436 (PA12-0005)	Per the City of Moreno Valley's December 2012 MND, this project would subdivide 43.52 acres for 159 single family residential lots. There is a less than significant impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres. There is no impact on the noise in the area.
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres. There is no impact on the noise in the area.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acres. There is no impact on the noise in the area.
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres. There is no impact on the noise in the area.
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots. There is no impact on the noise in the area.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres. There is no impact on the noise in the area.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots. There is no impact on the noise in the area.
MV-34	TR34397 / Winchester Associates	Per the City of Moreno Valley's April 2007 initial study/environmental checklist form, the project would subdivide 19 acres for 50 single-family residential lots. There is no impact on the noise in the area.
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins. There is no impact on the noise in the area.
MV-36	TM 31618 (PA03-0106)	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 18.99 acres for 56 single-family residential lots. There is no impact on the noise in the area.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is a less than significant impact on the noise in the area with mitigation measures.

Project ID	Project Name	Environmental Document Summary
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. There is a less than significant impact on the noise in the area with mitigation measures.
MV-41	First Nandina Logistics Center	Based on the City of Moreno Valley's October 2014 Facts, Findings, and Statement of Overriding Considerations, the project would develop approximately1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of mezzanine space on 72.9 acres. There is a less than significant impact on the noise in the area with mitigation measures.
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site. There is a significant impact to the noise in the area.
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a project that will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land. There is no impact on the noise in the area.
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays. There is a significant and unavoidable direct and cumulative impact (near-term) on the noise in the area.
MV-45	Iris Plaza	Per the City of Moreno Valley’s IS, the project would construct a 109,289 sq. ft. shopping center on approximately 12.4 acres of land within the Community Commercial (CC) land use district. There is no impact on the noise in the area.
MV-47	PA07-0129 TR 35606 SFR	No environmental documentation was available for review. However, there is a planning commission resolution, which states that the project is not likely to cause substantial environmental impact. The resolution does not specifically mention an impact on noise in the area.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	Per the City of Moreno Valley's Environmental Checklist, the project would prepare an EIR to subdivide 75.05-acre property into four parcels with business center land uses. There is a less than significant impact on the noise in the area with mitigation measures.

Project ID	Project Name	Environmental Document Summary
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped. There is a less than significant impact on the noise in the area with mitigation measures.
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site. There is no impact on the noise in the area.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. There is no impact on the noise in the area.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space. There is a less than significant impact on the noise in the area with mitigation measures.
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. There is a less than significant impact on the noise in the area.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. There is a less than significant impact on the noise in the area with mitigation measures.
MV-56	Tract Map 33810	No environmental documentation was available for review. However, there is a planning commission resolution that states that the project is exempt from the requirements of CEQA guidelines. The resolution does not specifically mention an impact on the noise in the area.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots. There is no impact on the noise in the area.
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The resolution states that the project will not cause an impact on the environment. It does not mention an impact on the noise in the area.
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. There is no impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. There is no impact on the noise in the area.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 square feet of new retail/commercial uses on the approximately 22.28-acre site. There is a less than significant impact on the noise in the area.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. There is a less than significant impact on the noise in the area.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. There is no impact on the noise in the area.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. There is no impact on the noise in the area.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. There is a less than significant impact on the noise in the area.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the noise in the area.
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. There is no impact on the noise in the area.
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. There is no impact on the noise in the area.
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley’s 2008 ND, the project would build a 522,772 square foot industrial warehouse building on 25.96 acres of land. There is no impact on the noise in the area.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. There is a less than significant impact on the noise in the area.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. There is a less than significant impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. There is no impact on the noise in the area.
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. There is no impact on the noise in the area.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2010 ND, the project subdivides 16.9 acres into 6 pads for commercial retail use. There is no impact on the noise in the area.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. There is no impact on the noise in the area.
MV-88	TR33771 / Creative Design Associates	No environmental documentation was available for review. However, there is a planning commission resolution for a 12 unit condominium complex on approximately 0.9 acres. The resolution states that there will be no significant impact on the environment. It does not mention an impact on the noise in the area.
MV-89	TR35663 / Kha	No environmental documentation was available for review. However, there is a notice of exemption for a mixed use development on approximately 2.2 acres, which states that there is no evidence of potential for significant environmental impacts. It does not specifically mention an impact on noise in the area.
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. There is no impact on the noise in the area.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. There is no impact on the noise in the area.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. There is a less than significant impact on the noise in the area with mitigation measures.

Project ID	Project Name	Environmental Document Summary
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. There is a less than significant impact on the noise in the area with mitigation measures.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. There is a less than significant impact on the noise in the area with mitigation measures.
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. There is no impact on the noise in the area.
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. There is no impact on the noise in the area.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. There is no impact on the noise in the area.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. There is a less than significant impact on the noise in the area.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. There is a less than significant impact on the noise in the area.
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. The resolution states that there would be impact on the environment. It does not mention an impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. There is a less than significant impact on the noise in the area.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. The resolution states that there will be no impact on the environment. It does not mention an impact on noise in the area.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres. The resolution does not mention whether or not there would be an impact on the environment, including noise, in the area.
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. There is a less than significant impact on the noise in the area with mitigation measures.
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. There is a less than significant impact on the noise in the area with mitigation measures.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. There is no impact on the noise in the area.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. There is no impact on the noise in the area.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. There is no impact on the noise in the area.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. There is no impact on the noise in the area.
P-2	TR34716	Per the City of Perris’ 2013 FEIR, the project involves the construction and operation of up to 600,000 gross square feet (gsf) of light industrial/warehouse uses. There is a less than significant impact on the noise in the area with mitigation measures.

Project ID	Project Name	Environmental Document Summary
P-4	Bookend	Per the City of Perris' 2015 MND, the project proposed to subdivide an existing vacant parcel into five new industrial parcels with a total building area of 165,000 sf. There is no impact on the noise in the area.
P-5	Markham East	Per the City of Perris's June 2007 Notice of Determination, the project would develop 462,692 square feet of light industrial warehouse/distribution uses in a single building with associated roadway and utility infrastructure and landscape improvements on 22.25 acres. There is no impact on the noise in the area.
P-7	Duke Warehouse	Per the City of Perris's Facts, Findings and Statement of Overriding Considerations, the project would redesign ate a large portion of the northern part of the City with broad categories of compatible commercial and industrial uses on 34.57 acres. Uses would include a 668,681 square foot industrial/warehouse building that includes 19,200 square feet of office space. There is a potentially significant impact on the noise in the area.
P-8	First Perry Logistics Project	Per the City of Perris's November 2017 Notice of Determination, the project would develop a 236,961 square foot industrial building on 11.06 acres. There is a less than significant impact on the noise in the area with mitigation measures.
P-10	IDS	Per City of Perris 2005 Final EIR would result in the Perris Warehouse/Distribution Facility Project. There is a less than significant impact on the noise in the area with mitigation measures.
P-11	Ridge II	Per the City of Perris 2007 NOC and Environmental Doc Transmittal, project proposes a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures. There is a less than significant impact on the noise in the area with mitigation measures.
P-12	Starcrest, P011-0005; 08-11-0006	Per the City of Perris Final EIR, the project is the expansion of an existing internet/mailorder fulfillment facility to an adjacent property. The existing Starcrest building is approximately 232,215 square feet in size. The expansion would include a 454,008 sf building north of and adjacent to Starcrest's existing facility. There is a less than significant impact on the noise in the area with mitigation measures.
P-14	Rados Distribution Center	Per the City of Perris 2010 Final EIR, project is an approximately 1,191,080 sq ft distribution center on approximately 61.63 gross acres. There is no impact on the noise in the area.
P-15	Duke Perris Logistics Center I	Per the City of Perris 2017 Final EIR, the project would result in the Duke Warehouse at Indian Avenue and Markham Street. There is a less than significant impact on the noise in the area with mitigation measures.

Project ID	Project Name	Environmental Document Summary
P-16	Perris Ridge Commerce Center I	Per the City of Perris' 2007 excerpt of an EIR, the project proposes the establishment of a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures on 91 acres. The excerpt does not mention an impact on the noise in the area.
P-18	P07-07-0029	Per the City of Perris' 2009 EIR, the project proposed to construct a 1,608,322 sf industrial complex comprised of five buildings on 92.3 acres. There is a less than significant impact on the noise in the area with mitigation measures.
P-19	P05-0192	Per the City of Perris' 2006 EIR, the project proposed development of an approximately 700,000 square foot industrial building on a 40-acre. There is a less than significant impact on the noise in the area with mitigation measures.
P-20	P05-0113	Per the City of Perris' 2009 EIR, the project proposed subdividing the site into five legal parcels, four of which would be developed with industrial/warehouse buildings for a total of 1,750,000 sf. There is a less than significant impact on the noise in the area with mitigation measures.
P-21	P07-09-0018	Per the City of Perris' 2008 IS, the project proposed the development of a 173,000 sf industrial building on 8.7 acres. There is a less than significant impact on the noise in the area.
P-22	NICOL	Per the City of Perris' 2016 IS/MND, the project proposed a 380,000 sf warehouse building on 21.63 acres. There is a less than significant impact on the noise in the area.
P-23	Westcoast Textiles	Per the City of Perris' 2016 IS, the project proposed construction of a 187,850 sf industrial/manufacturing building on 9 acres. There is a less than significant impact on the noise in the area with mitigation measures.
P-24	Optimus Logistics Center 1	Per the City of Perris' 2016 EIR, the project proposed to construct a high-cube warehouse consisting of two buildings totaling 1,455,781 sf on 68.99 acres. There is a less than significant impact on the noise in the area with mitigation measures.
P-25	Optimus Logistics Center 2	Per the City of Perris' 2015 EIR, the project proposed construction of warehouse development site encompassing 1,037,811 square feet in two buildings on 48.4 acres. There is a less than significant impact on the noise in the area with mitigation measures.
P-26	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 811,620 square feet (sf) of industrial high-cube, non-refrigerated warehouse/distribution uses on the approximate 37.3-acre site. There is a potentially significant impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
P-27	Perris DC (Industrial Property Trust)/Integra	Per the City of Perris' 2014 EIR, the project proposed construction and operation of up to 864,000 square feet (sf) of industrial warehouse/distribution uses on the approximate 43.2-acre site. There is a less than significant impact on the noise in the area with mitigation measures.
P-28	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 1,189,860 square feet (sf) of high-cube warehouse/distribution uses on the approximate 55-acre Project site. There is a potentially significant impact on the noise in the area.
P-30	Avelina	Per the City of Perris' 2003 IS, the project proposed to increase residential density on a 158.2 acre property to 475 dwelling units. There is a less than significant impact on the noise in the area with mitigation measures.
P-31	Perris Family Apartments	Per the City of Perris' 2013 IS, the project proposed to construct a 75-unit multi-family apartment complex on 7 vacant acres. There is a less than significant impact on the noise in the area with mitigation measures.
P-32	Lewis Retail Center	Per the City of Perris' 2009 IS, the project proposed to construct 643,000 sf of commercial shopping center on 68 acres. There is a potentially significant impact on the noise in the area.
P-35	Verano Apartments	Per the City of Perris' 2013 IS, the project proposed increasing the number of residential units from 19 to 40 and reducing the commercial component from 17,000 sq. ft. to 1,000 sq. ft. for retail and to allow a 2,000 sq. ft. day care facility. There is a less than significant impact on the noise in the area with mitigation measures.
P-37	Cabrillo	Per the City of Perris’ Initial Study, the project proposed to amend the General Plan (GP) and Zoning designation of approximately 36.21 acres of land from R-6,000 to MFR-14 Residential, along with a Text Amendment to narrow the lot frontage from 50-feet to 45-feet for lots greater than 4,500 square feet to facilitate the entitlement of Tentative Tract Map (TTM) 36343, a 184 lot residential subdivision. There is a less than significant impact on the noise in the area.
P-58	Jordan Distribution	Per the City of Perris's June 2008 Notice of Determination, the project would develop a 378,521 square foot tilt-up industrial building for warehouse distribution uses on 17.1 acres. There is a less than significant impact on the noise in the area.
R-1	Sycamore Canyon Business Park - Bldgs 1&2	Per the City of Riverside's January 2017 Final EIR, the project would develop approximately 1.43 million square feet of business park uses on approximately 920 acres. There is a significant and unavoidable impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
R-2	Alessandro Business Center (Western Realco)	Per the City of Riverside's February 2015 Addendum to the Final EIR, the project would develop 662,018 square feet of industrial warehouse uses on 36.7 acres. There is a less than significant impact on the noise in the area with mitigation measures.
R-4	Quail Run	Per the City of Riverside's January 2016 Initial Study, the project would develop a 13-building apartment complex on approximately 16 acres of a 30.9 acre site that also would include parking structures and spaces, and open space. There is a less than significant impact on the noise in the area with mitigation measures.
R-5	Canyon Springs Healthcare Campus Specific Plan	Per the City of Riverside's July 2017 Draft EIR, the project would develop a healthcare campus on 50.85 acres, including an approximately 234-unit senior housing facility; approximately 310,200-square-foot (267-unit, 290-bed) independent living/memory care, assisted living, and skilled nursing facility; an approximately 324,000-square-foot (180-bed) hospital; approximately 22,000 square-foot central energy plant; approximately 70,000-square-foot medical office building; an additional 300,000-square feet of medical office building uses with retail; multiple multi-level parking structures; and an approximately 180,000-square-foot (100-bed) hospital addition. A helipad/helistop also is proposed. There is a less than significant impact on the noise in the area with mitigation measures.
R-16	Sycamore Canyon Specific Plan	Per the City of Riverside's 1993 amended Specific Plan/EIR, the Sycamore Canyon Business Park Specific Plan describes a planned industrial park consisting of approximately 920 acres of industrial and commercial uses within a 1,400 acre project area. Approximately 480 acres of the total 1,500 acre Sycamore Canyon Wilderness Park is located within the Plan area. There is a significant impact on the noise in the area.
RC-5	Villages of Lakeview -Residential/Commercial Development	Per Riverside County's August 2016 Draft EIR, the Villages of Lakeview project proposes a master-planned community comprised of approximately 2,800 acres in the Lakeview/Nuevo area of Riverside County. Proposed land uses within the Specific Plan include a wide range of residential products, mixed-uses, retail, schools with joint-use parks, public and private amenities, an array of parks, trails, open space, roads, and other infrastructure. Existing infrastructure such as water, sewer, storm drain, and roadways will also be expanded as part of the Villages of Lakeview project. There is a significant and unavoidable impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
RC-9	Oleander Business Park, PP20699	Per what appear to be public meeting slides presenting information about Riverside County's May 2008 Final EIR for this project, the project would subdivide approximately 68.8 acres to develop approximately 1,206,710 square feet of industrial buildings. The slides do not mention an impact on the noise in the area.
RC-10	Majestic Freeway Business Center, SP 341 / PP21552	Per Riverside County's December 2006 Initial Study, the project would develop 947,000 square feet of light industrial warehouse and distribution uses and a 1.62 acre detention basin on 47.25 acres. There is a less than significant impact on the noise in the area.
RC-11	Alessandro Commerce Center	Per Riverside County's April 2009 screencheck draft EIR, the project would develop 409,000 square feet of warehouse, 42,000 square feet of light industrial, 10,000 square feet of retail/restaurant, and 258,000 square feet of office uses, associated parking, and three detention basins on 54.4 acres. There is a less than significant impact on the noise in the area with mitigation measures.
RC-12	Cores Industrial Partners	Per Riverside County’s October 2010 ND, the project proposes to bring the Zoning Code into compliance with SB 1627 and to strengthen the development standards for wireless telecommunications facilities in order to ensure high-quality design and compatibility with surrounding uses. There is no impact on the noise in the area.
RC-13	Sunny-Cal Specific Plan (#40)	Per the City of Beaumont's June 2007 Response to Late Comments on the EIR, the project would develop a 907-unit housing project on up to 323.3 acres. The response to comments do not mention an impact on the noise in the area.
RC-34	Emerald Acres SP (SP00381)	Per Riverside County's January 2016 Initial Study, the project would develop the approximately 332.6-acre site as a residential community consisting of a maximum of 355 single family dwelling units on 76.3 acres; 179 multi-family dwelling units on 16.7 acres; 4.88 acres of commercial uses; a community park on 6.8 acres; 209.7 acres of open space; a 0.9-acre sewer lift station; and roadway improvements. There is potentially significant impact on the noise in the area.
RC-35	TR34677, TR31100, TR32391, TR33448, TR31101, TR31009, TR32282	Per Riverside County's February 2004 environmental assessment form/initial study, the project would subdivide 6.7 acres of a 71 acre parcel into 8 single-family residential lots, a detention basin, and 2.2 acres of open space. There is a less than significant impact on the noise in the area with mitigation measures.

Project ID	Project Name	Environmental Document Summary
RC-37	TR36504	Per Riverside County's IS, the project proposes a Schedule 'A' subdivision of 162.05 acre gross area into 527 single-family residential lots. In addition to 527 residential lots, the subdivision also includes an 8.54 acre lot for a park, a 4.7 acre lot for a detention/debris basin, and an approximately 18 acre open space lot. There is a less than significant impact on the noise in the area.
RC-38	San Gorgonio Crossings	Per Riverside County's May 2017 Recirculated Draft EIR, the project would develop two house high-cube warehouse buildings on an approximately 229 acre site, of which approximately 16 acres are located within the City of Calimesa. Approximately 140.23 acres of the site would be included within the developed portion of the project; 84.8 acres would remain natural open space. There is a less than significant impact on the noise in the area.
RD-1	Tract 18988	Per the City of Redlands' June 2015 MND, the project would widen Pioneer Avenue to preserve existing deodar cedar trees along an approximately 1,100 linear foot segment between Texas Street and Furlow Drive. The project also would develop 82 single-family residential lots on 30.51 acres. There is a less than significant impact on the noise in the area with mitigation measures.
RD-3	Newland Homes Tract	Per the City of Redlands' March 2018 ISMND, the Project would result in the construction of 105 single family detached dwelling units and a neighborhood park on 39.84 acres. There is a less than significant impact on the noise in the area with mitigation measures.
RD-4	Redlands Pennsylvania Tract	Per the City of Redlands' March 2018 ISMND, the Project would result in the subdivision of a 24.87 acre project site into 67 residential lots and 10 lots as open space. Additionally, the Project seeks approval to remove 5 acres from an Agricultural Preserve. There is a less than significant impact on the noise in the area.
RD-6	Woodsprings Hotel	Per the City of Redlands' March 2018 IS, the Project would result in the construction of a 124-room hotel on a 2.68-acre property. There is a less than significant impact on the noise in the area.
RD-10	Park Ave Industrial Center	Per the City of Redlands' March 2014 MND, the project would develop approximately 170,000 square feet of light industrial uses, including 289 parking spaces and 12, 500 square feet of office space. There is a less than significant impact on the noise in the area with mitigation measures.
RD-11	Marriott Springhill Suites	Per the August 2016 technical memorandum regarding the Trip Generation, Distribution, and Assignment Analysis for the project, the project would develop a four-story 88-room hotel with rooms, suites, and 97 parking spaces. There is a less than significant impact on the noise in the area.

Project ID	Project Name	Environmental Document Summary
RD-12	I-10 Redlands LC - B	Per the August 2014 letter responding to comments on the proposed MND, the project would develop approximately 1.1 million square feet for warehousing/ fulfillment/distribution center uses on 50.67 acres. There is a less than significant impact on the noise in the area.
RD-14	Redlands DC 772,000 SF (2015)	Per the City of Redlands' September 2013 MND, the project would develop 771,839 square feet of warehouse distribution center on 35.59 acres and related parking. There is a less than significant impact on the noise in the area.
RD-16	APL Logistics	Per the May 2012 City of Redlands Commission Review and Approval No. 873, the project would develop 809,338 square feet of warehouse uses on 37.4 acres. There is a less than significant impact on the noise in the area with mitigation measures.
SB-1	Redlands Gateway Logistics - B	Per the County of San Bernardino’s 2009 IS, the project would result in the construction of 5 two-story structures and 7 single-story structures with a maximum floor area of 216,500 square feet, and a three-story hotel with 180 rooms and a floor area of 80,000 square feet. There is a less than significant impact on the noise in the area.
SB-2	Redlands Gateway Logistics - A	Per the County of San Bernardino’s 2014 IS, the project proposes to subdivide 42.66 acres into 2 lots. Parcel 1 is 14.81 acres and Parcel 2 is 27.85. There is a less than significant impact on the noise in the area with mitigation measures.
SB-3	Prologis #12	Per the County of San Bernardino’s 2013 IS, the project would result in a conditional use permit to establish a 593,916 square-foot industrial building to be use as a “high cube” warehouse distribution facility, a tentative parcel map for a one lot subdivision, and a general plan amendment to change the official land use district from East Valley/General commercial to East Valley/regional industrial on 27.42 acres. There is a less than significant impact on the noise in the area.
SB-4	Prologis #17	Per the County of San Bernardino's April 2014 MND, the Project would result in the construction of a 777,620 square foot industrial building and the relocation of an existing telecommunication tower on a 35.98 acre site. There is a less than significant impact on the noise in the area.
SB-6	Prologis #8	Per the County of San Bernardino’s 2007 IS, the project would result in the construction four industrial buildings to be used a “High Cube” and general warehouse distribution facilities. There is a less than significant impact on the noise in the area.
SB-7	Sam Redlands Tract	Per the City of Redlands' March 2017 ISMND, the Project would result in the subdivision of an 11.97 acre site into 34 single family residential lots, 4 lettered lots, and the demolition of existing structures. There is a less than significant impact on the noise in the area with mitigation measures.

Project ID	Project Name	Environmental Document Summary
SB-8	Jacinto Tract	Per the City of Redlands' July 2016 ISMND, the Project would result in the subdivision of an 18.54 acre site into 40 residential lots. There is a less than significant impact on the noise in the area.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife's 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. There is no impact on the noise in the area.

6.12.3 Cumulative Impact Evaluation

6.12.3.1 Groundborne Vibration Impacts

Impact: *The project's contribution to the cumulative exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels would be less than cumulatively considerable.*

Threshold: Could the project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Cumulative Impact Analysis

Construction of the Project would generate ground-borne construction vibration during site clearing, grading and shoring activities. Project construction would generate varying degrees of ground vibration, depending on the construction procedures and the construction equipment used. The construction activities that typically generate the most severe vibrations, such as blasting and impact pile driving, would not occur for the Project. As discussed in Section 4.12.5.1, construction activities are not anticipated to generate perceptible vibration velocities. Therefore, impacts would be less than significant.

Two cumulative projects are located at distances that could undergo construction activities during the project's 16-year construction period: P06-158/Gascon and MV-6: Highland Fairview Corporate Park, and MV-126: TTM 33222. Due to the rapid attenuation characteristics of ground-borne vibration and distance from each of the Related Projects to the project site, there is no potential for cumulative construction impacts with respect to ground-borne vibration. Therefore, cumulative impacts would be less than significant.

The project's operations would include typical commercial-grade stationary mechanical and electrical equipment, such as air handling units, condenser units, and exhaust fans, which would produce vibration. In addition, the primary sources of transient vibration would include truck circulation within the proposed parking areas and internal drive aisles. Ground-borne vibration generated by each of the above-mentioned activities would generate up to approximately 0.005 in/sec at 50 feet from the source.[1] The potential vibration levels from all Project operational sources at the closest existing sensitive receptor locations would be less than the significance threshold of 0.5 in/sec PPV significance threshold for potential residential building damage and 0.1 in/sec PPV significance threshold for human annoyance. As such, vibration

---

[1] This vibration estimate is based on data presented in the USDOT Federal Transit Administration, 2006.

impacts associated with operation of the project would be below the significance threshold and would not be cumulatively considerable.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

6.12.3.2 Airport Noise Impacts

Impact: *The project is not located within an airport land use plan or within two miles of a public airport, public use airport, or private airstrip. No significant impacts would occur.*

Threshold: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, results in exposure of people residing or working in the project area to excessive noise levels. For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

Cumulative Impact Analysis

The project is not located within an airport land use plan or within two miles of a public airport, public use airport, or private airstrip. The project area is located approximately 5.5 miles northeast of March Airfield (MAF) and is not located within two miles of a private airstrip. MAF is a joint-use airport, used for both military and civilian purposes. March Air Reserve Base (MARB) is the military operator of MAF and March Inland Port (MIP) is the civilian operator of the airport. This facility is anticipated to play an increasingly important role in the transportation of goods and cargo for the Southern California region. Existing flight patterns affect a large portion of the City of Moreno Valley, along a path that affects the western portion of the City in a northwest/southeast alignment. Aircraft operations from the airport currently contribute intermittent single-event noise.

There is potential for single-event noise exposure levels from MAF activity to affect the project. The exposure levels will vary dependent upon the type of aircraft and flight track flown for each operation at MAF. However, the project is not identified as being within the noise or safety contours delineated for MARB Airport and is not subject to Airport Land Use Commission (ALUC) compatibility analyses.[2] In addition, the project is not considered to contain sensitive receivers and, therefore, the impacts from these single-event noise levels are considered to be below the level of significance. The City's exterior noise standard for industrial uses is 70 dBA CNEL. MAF noise levels are less than 60 dB CNEL within the project area. Therefore, the project would not have the potential to expose people to excessive noise levels from airport operations. Therefore, less than significant noise impacts would occur regarding these issues from implementation of the project.

Significance Level Before Mitigation: No impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: No impact.

6.12.3.3 Short-term Construction Noise Impacts

Impact: *The project's contribution to short-term construction noise levels in the project vicinity is cumulatively considerable.*

---

[2] *Figure 5.4-1 March Reserve Air Base Noise Impact Area*, City of Moreno Valley General Plan EIR, July 2006.

Threshold:	Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Cumulative Impact Analysis

Construction crew commutes and the transport of construction equipment, and materials to the WLCSP area would incrementally increase noise levels on access roads leading to the site. Secondary sources of noise would include noise generated during excavation, grading, and building erection on the project site. The net increase in project site noise levels generated by these activities and other sources has been quantitatively estimated and compared to the applicable noise standards and thresholds of significance. Three cumulative projects are located at distances that could undergo construction activities during the project's 16-year construction period: MV-5: P06-158/Gascon, MV-6: Highland Fairview Corporate Park, and MV-126: TTM 33222. Construction of the western portion of the project would result in significant and unavoidable impacts. Should any of these three cumulative projects undergo construction while the western portion of the project is under construction, cumulative construction noise impacts would occur, potentially exposing sensitive receptors to cumulative construction noise greater than that experienced from project construction alone. Therefore, project construction would result in cumulatively considerable and potentially significant cumulative noise impacts.

The three cumulative construction projects do not have CEQA documents in which construction noise has been analyzed. Therefore, assuming that construction of Related Projects would consist of similar construction activity and equipment as the project, receptors located nearest both the project and each of the related projects could potentially be exposed to noise level increase of 10.1 dBA L_{eq} and 44.4 dBA L_{eq} as summarized in Table 6.12-2.

Table 6.12-2: Cumulative Construction Noise Impacts - Unmitigated

Related Project	Distance of Nearest Receptor[1] (feet)	Distance of Receptor to Project	Combined Construction Noise Level (dBA Leq) [2]	Existing Ambient (dBA Leq) [3]	Construction Plus Ambient (dBA Leq)	Increase over Ambient (dBA Leq)
MV-5	600	120	79.2	69.6	79.7	10.1
MV-6	600	120	79.7	69.6	79.7	10.1
MV-126	25	25	96.0	51.6	96.0	44.4

Notes:
* Noise levels are added logarithmically.
1 Distance to nearest receptor south of SR-60.
2 Assumes unmitigated project construction noise levels shown in Table 4.12.K and unmitigated construction noise levels for Related Projects.
3 See Table 4.12-1

Significance Level Before Mitigation: Significant impact

Mitigation Measures: As indicated in Section 4.12.6.1, construction noise impacts have been identified and **Mitigation Measure 4.12.6.1A** has presented to reduce construction noise impacts to the greatest extent feasible.

Significance Level After Mitigation: Implementation of Mitigation Measure 4.12.6.1A would reduce construction noise levels at nearby sensitive receptors through implementation of a NRCP, which is expected to attenuate construction noise levels by 10 dB and prohibit construction activities within 800 feet of residences during nighttime hours. A distance of 800 feet is the point at which any project-related construction activity is not expected to exceed the City of Moreno Valley's nighttime noise standard of 55 dBA L_{eq}. As shown in Section 4.12, Table 4.12-8 and Table 4.12-9, even with implementation of Mitigation Measure 4.12.6.1A, sensitive receptors located near on-site and off-site construction areas would be exposed to construction noise levels that would elevate the existing ambient noise levels above the applied 10 dB substantial temporary increase threshold. As shown in Table 6.12-3, with implementation of mitigation measures to project construction noise levels, cumulative construction noise at sensitive receptors nearest Related Project MV-126 is expected to remain significant and unavoidable. Therefore, this would result in a significant and unavoidable cumulative impact with mitigation.

Table 6.12-3: Cumulative Construction Noise Impacts – Mitigated Project

Related Project	Distance of Nearest Receptor[1] (feet)	Distance of Receptor to Project	Combined Construction Noise Level (dBA Leq) [2]	Existing Ambient (dBA Leq) [3]	Construction Plus Ambient (dBA Leq)	Increase over Ambient (dBA Leq)
MV-5	600	120	70.5	69.6	73.1	3.5
MV-6	600	120	70.5	69.6	73.1	3.5
MV-126	25	25	93.4	51.6	93.4	41.8

Notes:
* Noise levels are added logarithmically.
1 Distance to nearest receptor south of SR-60.
2 Assumes mitigated project construction noise levels shown in Table 4.12-8 and unmitigated construction noise levels for Related Projects.
3 See Table 4.12-1.

Significance Level After Mitigation: Significant impact.

6.12.3.4 Long-term Traffic Noise Impacts

Impact: *The project's contribution to long-term traffic noise levels in the project vicinity is cumulatively considerable.*

Threshold: Would the project result in a substantial temporary, periodic, and/or permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Cumulative Impact Analysis

Cumulative traffic volumes contained in the TIA were developed for the Future Year 2025 and Buildout 2040 analysis time horizons. Traffic volumes for each time horizon were developed utilizing a combination of various future traffic growth methods as follows. For Future Year 2025, traffic volumes were developed by interpolating year 2040 traffic volume projections from the Riverside County Transportation and Analysis Model (RivTAM) to year 2025 plus traffic from a list of past, present, and reasonably foreseeable projects (see Table 6.12B). For Buildout Year 2040, traffic volumes were developed by utilizing the year 2040 traffic volume projections from the RivTAM plus traffic from a list of past, present, and reasonably foreseeable projects.

Three hundred and thirty-nine (339) roadway links and eighty-nine (89) freeway segments were analyzed in the noise analysis. The change in noise level was calculated for all 428 roadway and freeway links with and without the project for the existing case (2018), 2025, and 2040 buildout scenarios. Segments with noise increases less than 1.5 dB would not have a substantial noise increase and were not presented in the main body of the noise report (i.e., the tables and figures). Similarly, any segments that do not have sensitive receptors (e.g., residential uses) were also not presented in the main body of the noise report. Based on this filtering process, of the 428 segments analyzed, 21 segments have sensitive receptors and an increase of 1.5 dB for at least one buildout scenario analyzed in Section 4.12 and were therefore addressed in the analysis. Evaluation of all other segments is included in Appendix D of this Revised FEIR.

Cumulative noise impacts associated with roadway noise have been addressed based on the cumulative traffic volumes, analyzing the difference between future plus project traffic noise and existing without project traffic noise to account for cumulative projects as well as ambient growth as a worst-case scenario. Table 6.12-4 provides a comparison of Future Year 2025 with project noise levels and Existing Conditions and if a significant impact (project-specific or cumulatively significant) occurs. Table 6.12-5 provides a comparison of Buildout Year 2040 with project noise levels and Existing Conditions and if a significant impact (project-specific or cumulatively significant) occurs.

Table 6.12-4: Cumulative Impact for Phase 1 (2025) Plus Project Traffic Noise Levels (dBA)

Roadway Segment	CNEL (dBA) at 100 feet			
	Existing	Phase I (2025) Plus Project	Cumulative Increment (Project Contribution)	Substantial Increase?
World Logistics Center Pkwy (Eucalyptus Avenue to Street F)	52.6	69.5	16.9	Yes
Alessandro Boulevard (Cactus Avenue Extension to World Logistics Center Pkwy)	51.9	63.5	11.6	Yes
Cactus Avenue Extension (Alessandro Boulevard to Cactus Avenue)	0.0	63.9	63.9	Yes
John F Kennedy Drive (south of Cactus Avenue)	63.8	65.5	1.7	No
Redlands Boulevard (SR-60 to Eucalyptus Avenue)	65.6	67.6	2.0	Yes
Street F (east of World Logistics Center Parkway)	0.0	58.1	58.1	Yes
Cactus Avenue (west of Redlands Boulevard)	60.2	61.4	1.2	No
Ironwood Avenue (Redlands Boulevard to Highland Boulevard)	50.7	54.3	3.6	No
Theodore Street (SR-60 to Ironwood Avenue)	59.6	60.5	0.9	No
Ironwood Avenue (Moreno Beach Drive to Redlands Boulevard)	60.4	62.1	1.7	No
Cactus Avenue (Redlands Boulevard to Cactus Avenue Extension)	51.9	63.5	11.6	Yes
Locust Avenue (Moreno Beach Drive to Smiley Boulevard)	42.1	47.2	5.1	Yes
Locust Avenue (Moreno Beach Drive to Redlands Boulevard)	54.6	56.2	1.6	No
Moreno Beach Drive (Locust Avenue to Ironwood Avenue)	54.1	55.0	0.9	No
Kitching Street (Krameria Avenue to Lurin Avenue)	61.9	64.9	3.0	Yes
Sunset Drive (Crown Street to Alessandro Road)	47.4	49.0	1.6	No
SR-60 EB Ramps (SR-60 to Central Avenue)	57.4	65.5	8.1	Yes
Freeways				
SR-60 (Perris Boulevard to Nason Street)	80.1	81.6	1.5	Yes
SR-60 (Moreno Beach Drive to Redlands Boulevard)	77.9	80.4	2.5	Yes
SR-215 (Mill Street to 2nd Street)	82.9	83.1	0.2	No
SR-215 (Baseline Road to Highland Avenue/SR-210	80.4	80.6	0.2	No

Source: ESA, 2018

As identified in Table 6.12-4, implementation of the proposed WLC project would contribute to cumulative changes in traffic noise levels in Year 2025 (Phase I). The largest project-related increase in traffic noise would be along Street D/Cactus Avenue Extension (Alessandro Avenue to Cactus Avenue) and along Street F (east of World Logistics Center Parkway), where increases of 63.9 dBA and 58.1 dBA, respectively, are predicted for the 2025 With Project Phase 1 scenario over the 2018 Existing Conditions scenario. However, the increases associated with these roadway segments is attributable in part to Street D/Cactus Avenue Extension and Street F being new roads that will be constructed by the project through open space areas that are currently vacant and don't contribute to the overall ambient noise environment. A total of eleven road segments would result in a substantial noise increase attributable to the project, resulting in a significant cumulative impact requiring mitigation.

Table 6.12-5: Cumulative Impact for Buildout (2040) Plus Project Traffic Noise Levels (dBA)

Roadway Segment	CNEL (dBA) at 100 feet			
	Existing	Buildout (2040) Plus Project	Cumulative Increment (Project Contribution)	Substantial Increase?
World Logistics Center Pkwy (Eucalyptus Avenue to Street F)	52.6	71.0	18.4	Yes
Alessandro Boulevard (Cactus Avenue Extension to World Logistics Center Pkwy)	51.9	66.7	14.8	Yes
Cactus Avenue Extension (Alessandro Boulevard to Cactus Avenue)	0.0	66.8	66.8	Yes
John F Kennedy Drive (south of Cactus Avenue)	63.8	67.0	3.2	Yes
Redlands Boulevard (SR-60 to Eucalyptus Avenue)	65.6	69.2	3.6	Yes
Street F (east of World Logistics Center Parkway)	0.0	68.3	68.3	Yes
Cactus Avenue (west of Redlands Boulevard)	60.2	64.9	4.7	Yes
Ironwood Avenue (Redlands Boulevard to Highland Boulevard)	50.7	58.2	7.5	Yes
Theodore Street (SR-60 to Ironwood Avenue)	59.6	66.0	6.4	Yes
Ironwood Avenue (Moreno Beach Drive to Redlands Boulevard)	60.4	64.6	4.2	Yes
Cactus Avenue (Redlands Boulevard to Cactus Avenue Extension)	51.9	66.7	14.8	Yes
Locust Avenue (Moreno Beach Drive to Smiley Boulevard)	42.1	61.3	19.2	Yes
Locust Avenue (Moreno Beach Drive to Redlands Boulevard)	54.6	60.9	6.3	Yes
Moreno Beach Drive (Locust Avenue to Ironwood Avenue)	54.1	63.0	8.9	Yes
Kitching Street (Krameria Avenue to Lurin Avenue)	61.9	68.4	6.5	Yes
Sunset Drive (Crown Street to Alessandro Road)	47.4	49.0	1.6	Yes
SR-60 EB Ramps (SR-60 to Central Avenue)	57.4	66.5	9.1	Yes
Freeways				
SR-60 (Perris Boulevard to Nason Street)	80.1	82.4	2.3	Yes
SR-60 (Moreno Beach Drive to Redlands Boulevard)	77.9	81.6	3.7	Yes
SR-215 (Mill Street to 2nd Street)	82.9	84.8	1.9	Yes
SR-215 (Baseline Road to Highland Avenue/SR-210	80.4	82.1	1.7	Yes

Increases in noise levels associated with Buildout Year (2040) traffic conditions on area roadways range up to 68.3 dBA. As identified in the Table 6.12-6, the greatest increase in noise levels would be along Street D/Cactus Avenue Extension (Alessandro Boulevard to Cactus Avenue) and along Street F (east of World Logistics Center Parkway), where increases of 66.8 dBA and 68.3 dBA, respectively, are predicted for the Buildout Year 2040 With Project scenario over the 2018 Existing Conditions scenario. However, the increases associated with these roadway segments is attributable in part to Cactus Avenue Extension and Street F, being new roads that will be constructed by the project through open space areas that are currently vacant and don't contribute to the overall ambient noise environment. A total of twenty-one road and freeway segments would result in a substantial noise increase attributable to the project, resulting in a significant impact requiring mitigation.

The project calls for improvements to several of the roadways around the project area in order to accommodate the projected increase in project traffic volumes. The presence of residential uses occurs within the WLCSP project and nearby area. These roadway segments are analyzed against the thresholds for determining significant impacts defined previously in Section 4.12.6.2. As described previously in Section 4.12.4, the project's incremental contribution to a cumulative noise increase would be considered cumulatively considerable and significant when ambient noise levels affect noise-sensitive land uses and when the project increases noise levels by 1 dB or more over pre-project conditions and the predicted future cumulative with project noise levels cause the following cumulative increases:

- Increase noise levels by 5 dB or more where the existing noise level is less than 60 CNEL;
- Increase noise levels by 3 dB or more where the existing noise level is 60 to 65 CNEL; or
- Increase noise levels by 1.5 dB or more where the existing noise level is greater than 65 CNEL.

Cumulative noise impacts associated with roadway noise have been addressed based on the 2025 and 2040 time horizons analyses for the roadway segments identified for analysis in Section 4.12. Table 6.12-5 and Table 6.12-6 show the Future Year 2025 and Buildout 2040, respectively, CNEL values with the project and if a substantial increase would be produced based on the cumulatively significant significance criteria identified above. Traffic noise level increases from the existing baseline condition and the future (2025 and 2040) time horizons are attributable to the intermingled effects of both the cumulative (i.e., past, present, and reasonably foreseeable projects) development projects in the project vicinity and region as well as the project.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: As indicated in Section 4.12.6.2, roadway noise impacts have been identified and **Mitigation Measures 4.12.6.2A** through **4.12.62D** have been presented to reduce roadway noise impacts to the greatest extent feasible.

Significance Level After Mitigation: Significant impact. As disclosed in Section 4.12.6.2, there are numerous instances in which there is no feasible means to reduce roadway noise impacts because of the existing developed nature of the affected roadway segment and/or the scattered nature of the sensitive receptors (i.e., residences), which prohibits the effectiveness of a soundwall. For those segments at which there is a cumulatively considerable impact and there is no feasible means to provide mitigation, the significant cumulative impact will remain significant and unavoidable.

6.12.3.5 Long-term Operational Noise Impacts

Impact:	*The project's contribution to the cumulative exposure of persons to long-term operational noise would not be cumulatively considerable.*
Threshold:	Would the project cause exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies?

Cumulative Impact Analysis

On-site operational noises are individual noise occurrences and are not typically additive in nature. It is extremely unlikely that adjacent properties will generate noises that would be additive in nature because of two important reasons. First, the noise sources would have to be adjacent or in close proximity to one another in order for the noises to intermingle. Second, the sensitive receptor or receptors would also have to be adjacent to or in close proximity to the noise generators. Because the project assumes 24-hour operations, it is conservatively assumed that the geographic limit for cumulative on-site operational noise would include the three cumulative projects located adjacent to the project site. Cumulative project MV-126 consists of residential uses and would therefore not generate noise levels equivalent to the project. Assuming that the remaining two cumulative projects (MV-5 and MV-6) would generate noise at the same time as the project and at distances and levels that would be additive in nature, a significant cumulative noise impact at sensitive receptors could occur.

As discussed in Section 4.12.6.3 of the FEIR, on-site operational activity would include noise from truck delivery, loading/unloading activities at the loading areas, heating, ventilation, and air-conditioning equipment and other noise-producing activities within the parking lot. On-site activity would generate noise levels of up to 56.9 dBA L_{eq} at a distance of 50 feet. Related Projects MV-5 and MV-6 do not have CEQA documents in which on-site operational noise has been analyzed. Therefore, assuming that operation of Related Projects MV-5 and MV-6 would consist of similar on-site activity as the project, Table 6.12-6 summarizes the potential cumulative noise level increases at this receptor (referred to as R5 in Section 4.12). As shown in Table 6.12-6, cumulative on-site noise levels would not result in perceptible increases in ambient noise (3 dBA). Therefore, on-site project operations would not result in cumulatively considerable on-site operational noise impacts.

Table 6.12-6: Cumulative On-Site Operational Noise Impacts – Unmitigated Project

Related Project	Distance of Nearest Receptor[1] (feet)	Distance of Receptor to Project	Combined On-site Operational Noise Level (dBA Leq) [2]	Existing Ambient Day/Night (dBA Leq) [3]	On-Site Operation Plus Ambient Day / Night (dBA Leq)	Increase over Ambient (dBA Leq)
MV-5 + MV-6	600	120	49.5	69.6 / 66.9	69.6 / 67.0	0.0 / 0.1

Notes:
* Noise levels are added logarithmically.
1 Distance to nearest receptor south of SR-60.
2 Assumes a reference noise level of 56.9 dBA L_{eq} at 50 feet.
3 See Table 4.12-1.

With regard to on-site residential uses, the project would result in significant impacts at on-site residential uses. However, the nearest on-site residence to cumulative projects MV-5 and MV-6 is located at a distance greater than 2,400 feet. At this distance on-site operational noise at MV-5 and MV-6 would be negligible. Therefore, cumulative impacts would not occur.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: Mitigation Measure 4.12.62D has been presented to reduce noise impacts from fixed mechanical equipment and internal roadways to the greatest extent feasible. With implementation of **Mitigation Measure 4.12.62D**, mechanical equipment noise and on-site mobile and idling activity would not exceed the City's nighttime exterior noise standard for off-site residential uses.

Significance Level After Mitigation: Less than significant impact. Implementation of **Mitigation Measure 4.12.6.2D** would eliminate any noise impacts on off-site residential areas due to the operation of logistic activities. Through the provision of a 250-foot setback, berms, and/or soundwalls, noise levels at the nearest residences would be reduced to below the City's thresholds. Therefore, with adherence to the identified mitigation measure, off-site impacts associated with this issue would be less than significant and would be less than cumulatively considerable. With respect to on-site residential uses, Section 4.12.6.3 determined that impacts to on-site residential uses would be less than significant with implementation of **Mitigation Measure 4.12.6.2D.** Additionally, the nearest on-site residence to cumulative projects MV-5 and MV-6 is located at a distance greater than 2,400 feet. At this distance on-site operational noise at MV-5 and MV-6 would be negligible. Therefore, cumulative impacts would not occur.

6.12.3.6 Long-term Utility Noise Impacts

Impact:	*The project's contribution to long-term utility noise impacts in excess of City standards is less than cumulatively considerable.*
Threshold:	Would the project cause exposure of persons to or generation of noise levels in excess of standards established in the City of Moreno Valley General Plan, Moreno Valley Municipal Code, or applicable standards of other agencies?

Cumulative Impact Analysis

There is one existing SDG&E compressor station and two existing SCGC facilities located adjacent to the WLC Specific Plan area. No other similar facilities were identified in proximity to the WLC Specific Plan area.

The L_{eq} noise level generated by the compressor station does not exceed 60 dBA L_{eq} beyond the property lines of the facility. For SCGC blow-down events, noise generated could reach as high as 130 dBA just outside the fence line of the southern facility and in excess of 135 dB just outside the fence line of the northern facility. People within approximately 250 feet of the blow-down points would be exposed to noise levels greater than 115 dBA. No sensitive receptors are located such that noise levels from the compressor station and on-site project activity would result in cumulatively considerable impacts. Therefore, noise impacts associated with the operation of the compressor station in conjunction with project operations would not be cumulative considerable and would be less than significant.

SCGC blow-down events also have the potential to produce groundborne vibration. However, the effect of the blow-down groundborne vibration would be limited to within 100 feet of the equipment and would not be perceived beyond the facility fence line, resulting in a less than significant impact and no mitigation is required.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

6.13 Population, Housing, Employment

Cumulative effects to population, housing, and employment are described in this section. A summary of the project's potential incremental impacts to cumulative population, housing, and employment issues is provided in Section 6.13.1. The geographic and temporal scopes for cumulative impacts to population, housing, and employment issues are provided in Section 6.13.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the population, housing, and employment issues are discussed in Section 6.13.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.13.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the City will fully build out by 2040, the cumulative impact analysis assumes a more intense level of cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.13-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if their impacts would cause or contribute to a significant cumulative impact and, if so, if the project's incremental contribution would cumulatively considerable.

6.13.1 Project Impact Findings

The project's effects to population, housing, and employment are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project's impacts (see Section 4.13 of the Revised Sections of the FEIR is provided as well as a reference to the specific section and impact number if the impact determination is significant.

Would the project:

- Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure); **Less than Significant, Section 4.13.5.1.**
- Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure) that may lead to fiscal or economic impacts; **Less than Significant, Section 4.13.5.1.**
- Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere; **Less than Significant, Section 4.13.5.2.**
- Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere. **Less than Significant, Section 4.13.5.2.**

As shown, there are no unmitigated project-specific significant and unavoidable impacts to population, housing, and employment identified in the FEIR.

6.13.2 Geographic and Temporal Scope

The cumulative impact geographic area for population, housing, and employment is the City of Moreno Valley. This geographic area was selected to capture growth within the City of Moreno Valley. Cumulative impacts to population, housing, and employment could result from the project in conjunction with other past, present and future projects located within the City of Moreno Valley. The geographic area for cumulative population and housing impacts is shown on Figure 6.13-1. The projects located within the cumulative population and housing impact area are listed in Table 6.13-1. The project would contribute to cumulative conditions starting as soon as project-generated jobs are created and would continue to contribute for the duration of the project.

Population, Housing, and Employment Cumulative Projects Area

ESA

Table 6.13-1: Population, Housing, and Employment Cumulative Project Summary

Project ID	Project	Environmental Document Summary
MV-3	ProLogis	The Project's development of 2,244,638 square feet of distribution warehouse space would contribute to the cumulative increase in population and demand for housing due to the creation of 1,532 job opportunities within the geographic area.
MV-4	Westridge Commerce Center	The Project's development of a 937,260 square foot warehouse distribution facility would contribute to the cumulative increase in population and demand for housing due to the creation of job opportunities within the geographic area.
MV-7	TR33962 / Pacific Scene Homes	The Project's subdivision of a 20-acre parcel into 31 single family lots would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-8	TR32460 / Sussex Capital	The Project's addition of 57 single family residential units would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-9	TR32459 / Sussex Capital	The Project's addition of 11 single-family residential lots on 13 acres would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-10	TR30998 / Pacific Communities	The Project's subdivision of 60 acres into 47 single family lots would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-11	TR30411 / Pacific Communities	The Project's development of 25 single-family homes on 30.02 acres would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-18	Convenience Store / Fueling Station	The Project's construction of a fueling station and convenience store would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-19	Senior Assisted Living	The Project's building of a 139-unit senior assisted living facility would contribute to the cumulative increase in population due to the availability of assisted living facilities and the provision of job opportunities within the geographic area.
MV-20	Moreno Marketplace	The Project's development of 95,905 square foot retail center would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.

Project ID	Project	Environmental Document Summary
MV-21	PEN16-0053 Medical Center	The Project’s development of a medical complex on 18.38 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-24	TM 36436 (PA12-0005)	The Project’s subdivision of 43.52 acres into 159 single family residential lots would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-25	TR32142	The Project’s development of 172 multi-family residences on 19.3 acres would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-27	TR32917 / Empire land	The Project’s development of 227 condominiums on 17.9 acres would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-29	TR36340	The Project’s development of 276 condominiums on 32 acres would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-37	Vogel /PA09-004	The Project’s development of 1,616,133 square feet of distribution warehouse space on 71 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	The Project’s development of 1,616,133 square feet of distribution warehouse space on 71 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-41	First Nandina Logistics Center	The Project’s development of 1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of distribution warehouse would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-42	Indian Street Commerce Center	The Project’s development of 446,350 square feet of light industrial uses on 19.64 acre site would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-43	Ivan Devries / PA06-0017	The Project’s development of 446,350 square feet of light industrial uses on 19.64 acre site would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.

Project ID	Project	Environmental Document Summary
MV-44	Modular Logistics Center (Kearny RE Co)	The Project's development of 1,109,378 of office space 50.84 acre site would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-45	Iris Plaza	The construction of a 109,289 square foot shopping center on 12.4 acres of land would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	The Project's subdivision of a 75.05-acre property into four parcels with business center land uses would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	The Project's development of a 1,560,046 square foot warehouse would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-50	San Michele Industrial Center, (Industrial Area SP)	The Project's development of a 414,533 square foot warehouse on a 17.17 acre-site would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-51	Nandina Distribution Center IDS	The Project's development of a 770,867 industrial building on a 38 acre-site would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-52	First Industrial III & IV, (Industrial Area SP)	The Project's development of a 880,000 square foot warehouse would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-53	I-215 Logistics Center (Amazon)	The Project's development of a 1,705,000 square foot distribution warehouse would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-54	Moreno Valley Logistics Center (Prologis)	The Project's development of a 1,736,180 square foot logistics center would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-60	Tract Map 36401	The Project's development of 216 dwelling units on a 19.4 acre site would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area.
MV-61	Walmart & Gas Station	The Project's development of a 193,000 square-feet of retail/commercial uses on a 22.28-acre site would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.

Project ID	Project	Environmental Document Summary
MV-63	PA14-0053 (TTM 36760) Legacy Park	The Project's subdivision of 53 acres into 221 single family residential lots would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-66	TR34988 / Stratus Properties	The Project's construction of 271 dwelling units on 3.75 acres of outdoor recreation area would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-67	TR32515	The Project's construction of 174 senior single-family residential lots would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-68	PA07-0035	The Project's development of six industrial buildings on a 19.14 acre parcel would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-69	PA07-0039, (Industrial Area SP)	The Project's development of six industrial buildings on a 19.14 acre parcel would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-75	Aqua Bella Specific Plan	The Project's construction of 2,922 adult community dwelling units on 685 acres would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-78	Overton Moore Properties PA08-0072	The Project's development of a 522,772 square foot industrial warehouse building on 25.96 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-79	Shaw Development	The Project's development of a 366,698 square foot industrial warehouse building on 25.96 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-80	PA15-0032 MV Cactus Center	The Project's development of 39,950 square feet of warehouse buildings, and mixed retail uses on 6.3 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	The Project's development of a 353,859 square foot of warehouse on 16.55 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.

Project ID	Project	Environmental Document Summary
MV-84	PA16-0075 Brodiaea Business Center	The Project’s development of 8 industrial buildings on 126 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	The Project’s subdivision of 16.9 acres into 6 pads for commercial retail use would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-89	TR35663 / Kha	The Project’s development of mixed use on approximately 2.2 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-93	PA14-0042 Edgemont Apartments	The Project’s development of 112 apartment units on approximately 5.89 acres would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-94	PA15-0002 Box Springs Apartments	The Project’s development of 266 apartment units on approximately 12 acres would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-95	Moreno Beach Marketplace / Lowes	The Project’s development of retail space on 14.2 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-97	32005 Red Hill Village, LLC	The Project’s development of 214 clustered and single-family residential lots would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-100	32215 Winchester Associates "Scottish Village"	The Project’s development of 194 clustered and single-family residential lots on 26.12-acre site would contribute to the cumulative increase in population but would have a beneficial impact to cumulative housing supply within the geographic area
MV-103	Gateway Business Park	The Project’s development of a business park on 25.3 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area. areas.
MV-114	Stoneridge Town Centre - Vacant Restaurant	The Project’s development of 563,328 square feet of commercial uses would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
MV-116	31621 Peter Sanchez	The Project’s development of 563,328 square feet of commercial use on 55.45 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.

Project ID	Project	Environmental Document Summary
MV-117	Riverside County Office Building	The Project's development of 52,250 square feet of office building use on 5.8 acres would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.
SJWA-1	San Jacinto Wildlife Land Management Plan	The Project's development of a land management plan would contribute to the cumulative increase in population due to the provision of job opportunities within the geographic area.

6.13.3 Cumulative Impact Evaluation

6.13.3.1 Population Growth

Impact: *The project's less than significant contribution to cumulative conditions would not cause or contribute to potential significant cumulative impacts related to substantial population growth in the area. Additionally, the project's less than significant contribution to cumulative conditions would not cause or contribute to a potential significant cumulative impact relating to population growth in the area that may lead to fiscal or economic impacts.*

Threshold: Would the proposed WLC project induce substantial population growth in an area, either directly (e.g., new homes and businesses) or indirectly (e.g., extension of roads and infrastructure)?

Would the proposed WLC project induce substantial population growth in an area, either directly (e.g., new homes and businesses) or indirectly (e.g., extension of roads and infrastructure) that may lead to fiscal or economic impacts?

Cumulative Impact Analysis

As discussed in Section 4.13 of the FEIR, the project would not contribute to substantial population growth and therefore would not result in an increased demand on the current or future housing in the region. It therefore would have a less-than-significant impact on inducing substantial population growth, or inducing substantial population growth that would lead to fiscal or economic impacts.

According to the Southern California Association of Governments (SCAG), the City of Moreno Valley is considered housing rich and jobs poor, with more than 3,000 vacant residential units (SCAG 2017). As the WLC project area represents the last largest remaining vacant land in the City of Moreno Valley, it would not significantly induce growth into areas where growth was not previously anticipated. Further, the project could result in an influx of new workers who would need to locate temporarily or permanently in the area. The City currently has an adequate supply of for-sale and rental housing. Implementation of the proposed project would benefit population and housing conditions relative to employment and jobs/housing ratio. MV 3 and MV 4 CEQA documents evaluated the effect on population housing and employment.

Other projects in the cumulative scenario would bring a mix of residential, employment, retail, medical and recreational uses that collectively would support the planned growth and local and regional population and housing goals within the geographic area of cumulative consideration. The incremental impacts of the proposed project, together with the incremental impacts of other projects in the cumulative scenario, would not cause or contribute to significant cumulative growth inducing impacts.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.13.3.2 Displace Substantial Housing/People

Impact: *The project's contribution to the displacement of substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere is less than cumulatively considerable.*

Threshold:	Would the proposed WLC project displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere?

Cumulative Impact Analysis

Projects in the cumulative scenario are a mix of residential, industrial, retail/commercial, office and medical uses. A majority of these projects, including the project, are proposed on vacant parcels of land and/or would not displace people or housing. Additionally, according to SCAG, the City of Moreno Valley is considered housing rich and jobs poor, with more than 3,000 vacant residential units (SCAG 2017). Therefore, while the cumulative projects, including the project, may result in an influx of new workers who would need to locate temporarily or permanently in the area, they would benefit the population and housing conditions relative to employment and jobs/housing ratio, and would result in cumulatively less than significant impacts on the displacement of people or existing housing.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.14 Public Services and Facilities

Cumulative effects to public services and facilities are described in this section. A summary of the project's incremental contribution to potential cumulative impacts to public services and facilities is provided in Section 6.14.1. The geographic and temporal scopes are provided in Section 6.14.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the public services and facilities issues are discussed in Section 6.14.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.14.3 as well as mitigation measures, if applicable, and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the City will fully build out by 2040, the cumulative impact analysis assumes a more intense level of cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.14-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if their impacts would cause or contribute to a significant cumulative ly considerable impact to public services and utilities. These potentially cumulative impacts are documented in the following section.

6.14.1 Project Impact Findings

The project's effects to public services and facilities are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project impacts (see Section 4.14 of Revised Sections of the FEIR) is provided as well as a reference to the specific section. All of the public services and facilities that were evaluated were determined to experience a less than significant impact with the implementation of the project.

6.14.1.1 Police Protection

Would the project:

- Cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for **Police Protection – Less than Significant, Section 4.14.1;**

  As shown, there are no unmitigated project-specific significant and unavoidable impacts to police services and facilities identified in the FEIR.

6.14.1.2 Fire Protection

Would the project:

- Cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for **Fire Protection – Less than Significant Impact, Section 4.14.2;**

As shown, there are no unmitigated project-specific significant and unavoidable impacts to fire services and facilities identified in the FEIR.

6.14.1.3 Schools

Would the project:

- Cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for **Schools – Less than Significant, Section 4.14.3;**

As shown, there are no unmitigated project-specific significant and unavoidable impacts to schools identified in the FEIR.

6.14.1.4 Parks, Recreation, and Trails

Would the project:

- Cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for **Parks, Recreation and Trails – Less than Significant, Section 4.14.4;**

As shown, there are no unmitigated project-specific significant and unavoidable impacts to park, recreation and trail facilities identified in the FEIR.

6.14.2 Geographic and Temporal Scope

The cumulative impact geographic area for police, fire, and parks/recreation is the City of Moreno Valley because these services are provided by the City within its jurisdictional boundary. The cumulative impact geographic area for schools is the Moreno Valley Unified School District (MVUSD) and the San Jacinto Unified School District (SJUSD) because these school districts serve portions of the project site. Cumulative impacts to public services and utilities could result from the project in conjunction with other past, present and future projects located within the City of Moreno Valley and within the MVUSD and SJUSD. Cumulative projects within the City and both school districts will be evaluated with the project to determine if any cumulative impact would occur. The geographic area for cumulative police, fire, and parks/recreation impacts is shown on Figure 6.14-1. The geographic area for cumulative school impacts is shown on Figure 6.14-2. The projects located within the cumulative police, fire, and parks/recreation impact area is listed in Table 6.14-1. The projects located within the school impact area is listed in Table 6.14-2. As significant crossover exists between the two impact areas, projects included in both tables are described only once in Table 6.14-1.

Table 6.14-1: Public Services (Police, Fire, and Parks) Cumulative Projects Summary

Project ID	Project Name	Environmental Document Summary
MV-3	ProLogis	The Project's development of 2,244,638 square feet of distribution warehouse space would contribute to the cumulative demand on public services (including fire, police schools, parks, and others) due to the increase in residents within the affected service areas.
MV-4	Westridge Commerce Center	The Project's development of a 937,260 square foot warehouse distribution facility contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in business activity within the affected service areas.
MV-7	TR33962 / Pacific Scene Homes	The Project's subdivision of a 20-acre parcel into 31 single family lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-8	TR32460 / Sussex Capital	The Project's addition of 57 single family residential units would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas..
MV-9	TR32459 / Sussex Capital	The Project's addition of 11 single-family residential lots on 13 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-10	TR30998 / Pacific Communities	The Project's subdivision of 60 acres into 47 single family lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-11	TR30411 / Pacific Communities	The Project's development of 25 single-family homes on 30.02 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-14	TR32548 / Gabel, Cook & Associates	The Project's subdivision of 36.24 acres for residential purposes would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-15	TR32218 / Whitney	The Project's subdivision of 17.25 acres for 63 single-family homes and open space would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-16	TR32284 / 26thCorporation & Granite Capitol	The Project's development of 32 residential lots on 8.77 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-17	TR31590 / Winchester Associates	The Project's subdivision of 30 acres for 96 single family homes would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-18	Convenience Store / Fueling Station	The Project's construction of a fueling station and convenience store would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in customer circulation within affected service areas.
MV-19	Senior Assisted Living	The Project's building of a 139-unit senior assisted living facility would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-20	Moreno Marketplace	The Project's development of 95,905 square foot retail center would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-21	PEN16-0053 Medical Center	The Project's development of a medical complex on 18.38 acres would contribute to the cumulative demand on public services (including fire, police schools, parks, and others) due to the increase in residents within the affected service areas.
MV-22	TR36882 (PA15-0010) SFR	The Project's subdivision of 9.4 acres into 40 residential lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-24	TM 36436 (PA12-0005)	The Project's subdivision of 43.52 acres into 159 single family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-25	TR32142	The Project's development of 172 multi-family residences on 19.3 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-27	TR32917 / Empire land	The Project's development of 227 condominiums on 17.9 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-28	TR34329 / Granite Capitol	The Project's development of 90 condominiums on 10.41 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-29	TR36340	The Project's development of 276 condominiums on 32 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-30	PA03-0168 TR 31517	The Project's development of 83 single-family residential lots on 31.71 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-32	TTM 31592 (P13-078) SFR	The Project's development of 115 single-family homes would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-33	TR32645 / Winchester Associates	The Project's subdivision of 18.48 acres into 53 single family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-34	TR34397 / Winchester Associates	The Project's subdivision of 19 acres into 50 single family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-35	TR31771 / Sanchez	The Project's subdivision of 9.34 acres into 25 single family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-36	TM 31618 (PA03-0106)	The Project's subdivision of 18.99 acres into 56 single family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-37	Vogel /PA09-004	The Project's development of 1,616,133 square feet of distribution warehouse space on 71 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	The Project's development of 1,616,133 square feet of distribution warehouse space on 71 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-41	First Nandina Logistics Center	The Project's development of 1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of distribution warehouse would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-42	Indian Street Commerce Center	The Project's development of 446,350 square feet of light industrial uses on 19.64 acre site would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-43	Ivan Devries / PA06-0017	The Project’s development of 446,350 square feet of light industrial uses on 19.64 acre site would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-44	Modular Logistics Center (Kearny RE Co)	The Project’s development of 1,109,378 of office space 50.84 acre site would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-45	Iris Plaza	The construction of a 109,289 square foot shopping center on 12.4 acres of land would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees, business activity, and customers within the affected service areas.
MV-47	PA07-0129 TR 35606 SFR	The Project’s subdivision of a 4.8 acre parcel into 16 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	The Project’s subdivision of a 75.05-acre property into four parcels with business center land uses would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees, business activity, and customers within the affected service areas.
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	The Project’s development of a 1,560,046 square foot warehouse would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees, business activity, and customers within the affected service areas.
MV-50	San Michele Industrial Center, (Industrial Area SP)	The Project’s development of a 414,533 square foot warehouse on a 17.17 acre-site would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees, business activity, and customers within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-51	Nandina Distribution Center IDS	The Project’s development of a 770,867 industrial building on a 38 acre-site would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees, business activity, and customers within the affected service areas.
MV-52	First Industrial III & IV, (Industrial Area SP)	The Project’s development of a 880,000 square foot warehouse would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees, business activity, and customers within the affected service areas.
MV-53	I-215 Logistics Center (Amazon)	The Project’s development of a 1,705,000 square foot distribution warehouse would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-54	Moreno Valley Logistics Center (Prologis)	The Project’s development of a 1,736,180 square foot logistics center would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-56	Tract Map 33810	The Project’s subdivision of 4.62 acres into 16 lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-57	Tract Map 34151	The Project’s subdivision of 8.95 acres into 37 single-family lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-58	Tract Map 33024	The Project’s subdivision of 2.17 acres into 8 single-family lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-59	Tract Map 31442	The Project’s subdivision of 15.8 acres into 63 single-family lots would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-60	Tract Map 36401	The Project's development of 216 dwelling units on a 19.4 acre site would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in residents within the affected service areas.
MV-61	Walmart & Gas Station	The Project's development of a 193,000 square-feet of retail/commercial uses on a 22.28-acre site would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-63	PA14-0053 (TTM 36760) Legacy Park	The Project's subdivision of 53 acres into 221 single family residential lots would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in residents within the affected service areas.
MV-65	TR33607 / TL Group	The Project's construction of 52 condominiums on 4.28 acres would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in residents within the affected service areas.
MV-66	TR34988 / Stratus Properties	The Project's construction of 271 dwelling units on 3.75 acres of outdoor recreation area would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in residents within the affected service areas.
MV-67	TR32515	The Project's construction of 174 senior single-family residential lots would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in residents within the affected service areas.
MV-68	PA07-0035	The Project's development of six industrial buildings on a 19.14 acre parcel would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-69	PA07-0039, (Industrial Area SP)	The Project's development of six industrial buildings on a 19.14 acre parcel would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-75	Aqua Bella Specific Plan	The Project's construction of 2,922 adult community dwelling units on 685 acres would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in residents within the affected service areas.
MV-78	Overton Moore Properties PA08-0072	The Project's development of a 522,772 square foot industrial warehouse building on 25.96 acres would contribute to the cumulative demand on public services (including fire, police, schools, parks, and others) due to the increase in employees and business activity within the affected service areas.
MV-79	Shaw Development	The Project's development of a 366,698 square foot industrial warehouse building on 25.96 acres would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in employees and business activity within the affected service areas.
MV-80	PA15-0032 MV Cactus Center	The Project's development of 39,950 square feet of warehouse buildings, and mixed retail uses on 6.3 acres would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in employees and business activity within the affected service areas.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	The Project's development of a 353,859 square foot of warehouse on 16.55 acres would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in employees and business activity within the affected service areas.
MV-84	PA16-0075 Brodiaea Business Center	The Project's development of 8 industrial buildings on 126 acres would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in employees and business activity within the affected service areas.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	The Project's subdivision of 16.9 acres into 6 pads for commercial retail use would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in employees, customers, and business activity within the affected service areas.
MV-86	TR32505 / DR Horton	The Project's subdivision of 18.66 acres into 72 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in residents within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-88	TR33771 / Creative Design Associates	The Project's construction of 12 condominiums on 0.9 acres would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in residents within the affected service areas.
MV-89	TR35663 / Kha	The Project's development of mixed use on approximately 2.2 acres would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in employees, customers, and business activity within the affected service areas.
MV-91	TR31305 / Richmond American	The Project's subdivision of 22.9 acres into 87 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-92	TR 33256	The Project's subdivision of 28.6 acres into 99 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-93	PA14-0042 Edgemont Apartments	The Project's development of 112 apartment units on approximately 5.89 acres would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-94	PA15-0002 Box Springs Apartments	The Project's development of 266 apartment units on approximately 12 acres would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-95	Moreno Beach Marketplace / Lowes	The Project's development of retail space on 14.2 acres would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in employees, customers, and business activity within the affected service areas.
MV-96	31394 Pigeon Pass, Ltd.	The Project's subdivision of 46 acres into 78 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-97	32005 Red Hill Village, LLC	The Project’s development of 214 clustered and single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-98	33388 SCH Development, LLC	The Project’s subdivision of 19.5 acres into 16 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-100	32215 Winchester Associates "Scottish Village"	The Project’s development of 194 clustered and single-family residential lots on 26.12-acre site would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-103	Gateway Business Park	The Project’s development of a business park on 25.3 acres would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in employees, customers, and business activity within the affected service areas.
MV-106	35304 Jimmy Lee	The Project’s development of 15 dwelling units on 0.9-acre site would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-110	TM 33417	The Project’s development of 15 dwelling units on 0.9-acre site would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-111	35769 Michael Chen	The Project’s development of 16 condo units on 1.21-acre site would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-112	PA09-0006 Jim Nydam	The Project’s development of 15 affordable housing units on 1.57-acre site would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.

Project ID	Project Name	Environmental Document Summary
MV-113	Ironwood Residential	The Project's subdivision of 75 acres into 101 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-114	Stoneridge Town Centre - Vacant Restaurant	The Project's subdivision of 75 acres into 101 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-116	31621 Peter Sanchez	The Project's development of 563,328 square feet of commercial use on 55.45 acres would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in employees, customers, and business activity within the affected service areas.
MV-117	Riverside County Office Building	The Project's development of 52,250 square feet of office building use on 5.8 acres would contribute to the cumulative demand on public services (including fire, police, and others) due to the increase in employees, customers, and business activity within the affected service areas.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	The Project's subdivision of 75 acres into 101 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
MV-119	32126 Salvador Torres	The Project's subdivision of 9 acres into 35 single-family residential lots would contribute to the cumulative demand on public services (including fire, police, schools, and others) due to the increase in residents within the affected service areas.
SJWA-1	San Jacinto Wildlife Land Management Plan	The Project's development of a land management plan would contribute to the cumulative demand for police and fire protection due to the increase in recreational trails and wildfire management activities.

R-2	Alessandro Business Center (Western Realco)	The Project's development of 662,018 square feet of industrial warehouse space could contribute to the cumulative demand on schools if employees relocated to the area with school aged children.
R-5	Canyon Springs Healthcare Campus Specific Plan	The Project's development of a healthcare campus on 50.85 acres would contribute to the cumulative demand on schools due to potential population growth as a result of 2,450 new permanent jobs.
M-2	Meridian Business Park Phases I and II	The Project's development of a 130 acre business park would contribute to the cumulative demand on schools due to potential population growth from the addition of new jobs.
M-8	March LifeCare Campus Specific Plan	The development of a medical campus on approximately 236 acres would contribute to the cumulative demand on schools due to potential population growth from the addition of new jobs.
M-9	TM 34748	The Project's subdivision of 40 acres into 135 single-family residential lots would contribute to the cumulative demand on schools due to the increase of residents within the school district.

6.14.3 Cumulative Impact Evaluation

6.14.3.1 Police Protection

6.14.3.1.1 New or Altered Law Enforcement Facilities

Impact: *The project's contribution to significant environmental effects from new or altered law enforcement facilities would be less than cumulatively considerable.*

Threshold:	Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered law enforcement facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for police services?

Cumulative Impact Analysis

The cumulative impact geographic area for police protection services is the City of Moreno Valley. Police protection services for the City, including the project and cumulative development, is provided by the City of Moreno Valley Police Department (MVPD), which contracts police services from the Riverside County Sheriff's Department (RCSD). As such, the City has access to all of the RCSD services which include dispatch, a specials weapons and tactics (SWAT) team, a bomb squad, a dive team, off-highway enforcement team, and a helicopter.

In general, impacts to the MVPD services and facilities during the construction of cumulative development would be addressed as part of each cumulative project's development review process conducted by the City. During construction of cumulative development, equipment and building materials could be temporarily stored on the cumulative project sites, which could result in theft, graffiti, and vandalism. Many cumulative project sites are located in areas of moderate to high vehicular activity from nearby streets. In addition, the construction sites of the cumulative projects would be fenced along the perimeters, when applicable, with the height and fence materials subject to review and approval by the City. Temporary lane closures may be required for right-of-way frontage improvements and utility construction. However, these closures would be temporary in nature and in the event of partial lane closures, both directions of travel on area roadways and access to the cumulative project sites would be maintained. Due to their proximity to the project site, should project construction occur concurrently with the construction of cumulative projects MV-4, MV-5, MV-6, and MV-126, coordination with these construction sites would be implemented through each cumulative project's respective construction traffic management plan, if applicable, which would ensure emergency access and traffic flow are maintained on adjacent right-of-ways. In addition, construction-related traffic generated by the cumulative development would not significantly impact the MVPD responses within the vicinities of the cumulative projects as emergency vehicles normally have a variety of options for avoiding traffic, such using sirens to clear a path of travel or driving in the lanes of opposing traffic.

According to the MVPD, there are no planned improvements for the MVPD facilities.[1],[2] If expanded police facilities were determined warranted by the MVPD, and were foreseeable, the impacts of the construction and operation of such a station would be analyzed at that time under CEQA as a project independent of the cumulative development. Moreover, the expansion of any police station would likely be on an infill lot potentially less than an acre in size. Generally, development associated with typical police stations is unlikely to result in significant unavoidable impacts, and projects involving the construction or expansion of a police station are typically anticipated to be addressed pursuant to CEQA through the use of a Class 32 categorical infill exemptions (CEQA Guidelines 15332) or (mitigated) negative declarations since they are likely relatively small structures on infill parcels. Accordingly, the

---

[1] Deputy M. Reilly #4695, Community Services Unit, Moreno Valley Police Department, letter correspondence for the Ironwood Residential Project, dated June 7, 2016. Ironwood Residential Project Final Initial Study/Mitigated Negative Declaration, prepared by ESA, dated February 2017.

[2] Ibid.

need for additional police protection services as part of an unplanned or expanded police station at this time is not an environmental impact of a project or one that a project is required to mitigated.[3]

It is expected that the cumulative projects (particularly those of a larger nature) would be subject to discretionary review by the MVPD on a project-by-project basis to ensure that sufficient security measures are implemented to reduce potential impacts to police protection services. Many of the cumulative projects would also be expected, when applicable, to provide on-site security, personnel and/or design features for their residents and patrons per standard development practices for the given uses. Further, the City would collect development impact fees from the cumulative projects that would be used to fund the MVPD expenditures as necessary to offset any cumulative incremental impact from each cumulative project on police protection services. The protection of public safety is the first responsibility of local government, and local officials have an obligation to give priority to the provision of adequate public safety services, which are typically financed through the City general funds.

With regard to emergency response times, cumulative projects would introduce new uses which would generate additional traffic in the vicinity of the cumulative development. Traffic from the cumulative development could have the potential to affect emergency vehicle response times to the cumulative project sites and surrounding properties due to travel time delays caused by the additional traffic. Emergency vehicles would access the cumulative project sites directly from the surrounding roadways. The drivers of emergency vehicles have a variety of options for avoiding traffic, such as using sirens to clear a path of travel or driving in the lanes of opposing traffic. As such, emergency access to the vicinity of cumulative development would be maintained at all times, and the increase in cumulative traffic generated by cumulative development would not significantly impact emergency vehicle response times. Further, consistent with the *City of Hayward v. Trustees of California State University*,[4] significant impacts under CEQA consist of adverse changes in any of the physical conditions within the area a project, and potential impacts on emergency response times are not an environmental impact that CEQA requires a project to mitigate.

The project is located in an area of high vehicular activity and would provide construction fencing and private security during construction. As such, the project would not cause a significant impact to police protection services during construction. Therefore, the project’s contribution to cumulative impacts during construction on the MVPD’s emergency response would not be cumulatively considerable.

The project would be designed and operated per applicable standards required by the City for new development in regard to public safety. The project would be required to pay the applicable development impact fees to the City. Similar to cumulative development, the drivers of emergency vehicles would have a variety of options for avoiding traffic, such as using sirens to clear a path of travel or driving in the lanes of opposing traffic. Therefore, the project’s contribution to cumulative impacts to MVPD facilities would not be cumulatively considerable.

Based on the above considerations, the project would result in a less than cumulatively considerable contribution to the need for the construction of new, or expanded police facilities and, as such, cumulative impacts on police protection services would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Board of Trustees (Alameda County Superior Court No. RG09480852); Hayward Planning Association et al., v. Board of Trustees of the California State University, http://law.justia.com/cases/california/court-of-appeal/2015/a131412a.html, accessed April 2018.

Significance Level After Mitigation: Less than significant impact.

6.14.3.2 Fire Protection

6.14.3.2.1 New or Altered Fire-Fighting Facilities

Impact:	*The project's contribution to significant environmental effects from new or altered fire-fighting facilities would be less than cumulatively considerable.*
Threshold:	Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered fire-fighting facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire services?

Cumulative Impact Analysis

The cumulative impact geographic area for fire protection is the City of Moreno Valley. Fire protection for the City, including the project and cumulative development, is provided by the City of Moreno Valley Fire Department (MVFD), which contracts with the Riverside County Fire Department (RCFD).

In general, impacts to the MVFD services and facilities during the construction of cumulative development would be addressed as part of each cumulative project's development review process conducted by the City. Construction activities associated with cumulative development may temporarily increase the demand for fire protection and emergency medical services, and may cause the occasional exposure of combustible materials, such as wood, plastics, sawdust, covering and coatings, to heat sources including machinery and equipment sparking, exposed electrical lines, welding activities, and chemical reactions in combustible materials and coatings. However, in compliance with the requirements of the California Occupational Safety and Health Administration (OSHA), all construction managers and personnel of cumulative development would be trained in fire prevention and emergency response. Further, fire suppression equipment specific to construction of the cumulative development would be maintained on the cumulative project sites. As applicable, all cumulative construction activities would be required to comply with the 2013 California Building Code (CBC); the 2013 California Fire Code (CFD); and the City's Fire Code.

Construction activities may involve temporary lane closures of right-of-way frontage improvements and utility construction. However, these closures would be temporary in nature and in the event of partial lane closures, both directions of travel on area roadways and access to the cumulative project sites would be maintained. Due to their proximity to the project site, should project construction occur concurrently with the construction of cumulative projects MV-4, MV-5, MV-6, and MV-126, coordination with these construction sites would be implemented through each cumulative project's respective construction traffic management plan, if applicable, which would ensure emergency access and traffic flow are maintained on adjacent right-of-ways. In addition, construction-related traffic generated by the cumulative development would not significantly impact MVFD response within the vicinities of the cumulative projects as emergency vehicles normally have a variety of options for avoiding traffic, such using sirens to clear a path of travel or driving in the lanes of opposing traffic.

During operation, although the cumulative demand on MVFD services would increase, cumulative impacts on fire protection and emergency medical services would be reduced through each cumulative project's regulatory compliance and site-specific design and safety features. Each cumulative project would be subject to the required review by the MVFD for compliance with Fire Code and Building Code regulations related to emergency response, emergency access, fire flow, and fire safety that would reduce potential cumulative impacts to fire protection and emergency services. Further, the City would collect development impact fees from cumulative projects that would be used to fund MVFD expenditures as necessary to offset any cumulative incremental impact from each cumulative project on fire protection services. The protection of public safety is the first responsibility of local government, and local officials have an obligation to give priority to the provision of adequate public safety services, which are typically financed through the City general funds.

With regard to emergency response times, cumulative projects would introduce new uses which would generate additional traffic in the vicinity of the cumulative development. Traffic from the cumulative development could have the potential to affect emergency vehicle response times to the cumulative project sites and surrounding properties due to travel time delays caused by the additional traffic. The drivers of emergency vehicles have a variety of options for avoiding traffic, such as using sirens to clear a path of travel or driving in the lanes of opposing traffic. As such, emergency access would be maintained at all times, and the increase in cumulative traffic generated by cumulative development would not significantly impact emergency vehicle response times to the affected areas. Further, consistent with the *City of Hayward v. Trustees of California State University*,[5] significant impacts under CEQA consist of adverse changes in any of the physical conditions within the area a project, and potential impacts on emergency response times are not an environmental impact that CEQA requires a project to mitigate.

Cumulative project sites which are located in Very High Fire Severity Zone (VHFSZ) and susceptible to wildland fire hazards would adhere to the special construction features set forth in Chapter 7A of the CBC. Further, any significant risk of loss, injury, or death involving wildland fires, would be minimized to the maximum extent feasible through implementation of cumulative project-specific fuel modification plans, if applicable, that would be subject to review and approval by the MVFD.

In compliance with OSHA, the project would require all construction managers and personnel to be trained in fire prevention and emergency response. Fire suppression equipment would be maintained onsite and all construction activities would comply with the 2013 CBC, 2013 CFD, and the City's Fire Code. Therefore, the project's contribution to cumulative impacts during construction on MVFD's emergency response would not be cumulatively considerable.

The project would be subject to the required review of the MVFD for compliance with the Fire Code and Building Code regulations related to emergency response, emergency access, fire flow, and fire safety that would reduce potential impacts to fire protection and emergency services. The project includes a future 1.5-acre urban fire station within its boundaries to be dedicated to the City to help offset increased fire service needs. The new fire station will be located at the north end of Planning Area 11 and is required to be built during Phase I. Placement of the new fire station is subject to review and approval by the Fire Chief. As portions of the project site are located within a State-designated VHFSZ, the project would comply with Chapter 7A of the CBC. Further, the project would be required to pay the applicable development impact fees to the City. Compliance with payment of fees could further offset the cumulative impact from the cumulative projects on the project's proposed fire station. Therefore, the project's contribution to cumulative impacts to MVPD facilities would not be cumulatively considerable.

Based on the above considerations, the project would result in a less than cumulatively considerable contribution to the need for the construction of new, or expanded fire facilities and, as such, cumulative impacts on fire protection services would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

---

Board of Trustees (Alameda County Superior Court No. RG09480852); Hayward Planning Association et al., v. Board of Trustees of the California State University, http://law.justia.com/cases/california/court-of-appeal/2015/a131412a.html, accessed April 2018.

6.14.3.3 Schools

6.14.3.3.1 New or Altered School Facilities

Impact: *The project's contribution to significant environmental effects from new or altered school facilities would be less than cumulatively considerable.*

Threshold:	Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered school facilities, need for new or physically altered school facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?

Cumulative Impact Analysis

The project and cumulative development would be served by the MVUSD and SJUSD. The MVUSD includes 23 elementary schools, 6 middle schools, 5 high schools, and 9 specialized schools. The SJUSD includes 1 preschool, 7 elementary schools, 2 middle schools, 2 high schools, and 2 specialized schools.

Construction of the cumulative development would require the participation of construction employees who would be hired from a mobile regional construction work force that moves from project to project. Typically, construction workers pass through various development projects on an intermittent bass as their particular trades are required. Given the mobility and short durations of work at a particular site, and a large construction labor pool that can be drawn upon in the region, construction employees would not be expected to relocate their residences within this region or move from other regions as a result of their work on the cumulative development. Accordingly, construction of cumulative development is not anticipated to generate new students needing to attend local schools within the MVUSD or SJUSD.

The MVUSD and SJUSD monitors enrollment numbers at all schools within their districts. Seating shortages can be addressed through changes in attendance boundaries and new/expanded school facilities. Nonetheless, cumulative development is expected to generate students that would attend local schools within the MVUSD and SJUSD. As such, this cumulative development could require new or expanded school facilities. The cumulative projects would be required to pay development fees for schools to the MVUSD or SJUSD prior to the issuance of grading permits pursuant to SB 50. Pursuant to Government Code Section 65995, the payment of developer fees would be considered full and complete mitigation of schools impacts by cumulative development.

Construction of the project is not anticipated to generate new students needing to attend local school within the MVUSD or SJUSD. The project does not include residential uses but is expected to generate approximately 15,000 to 25,000 new jobs in the City. According to Section 4.14.3.5 of the FEIR, it is speculative to estimate how many workers would actually live within the City and how many would commute from the surrounding area. Although the exact number is speculative, any increase is not expected to be substantial and would not generate significant new demands related to the need for new or altered schools. Further, the project would be required to pay development fees pursuant to SB 50. Therefore, the project's contribution to cumulative impacts to school facilities would be less than cumulatively considerable.

Based on the above considerations, the project would result in a less than cumulatively considerable contribution to the need for the construction of new, or expanded school facilities and, as such, cumulative impacts on schools would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

6.14.3.4 Parks Recreation, and Trails

6.14.3.4.1 Deterioration of Existing Park, Recreation and Trail Facilities

Impact: *The project's contribution to the deterioration of existing park, recreation and trail facilities would be less than cumulatively considerable.*

Threshold:	Would the project result in increased use of existing neighborhood and regional parks or other recreational facilities (e.g., trails) where substantial physical deterioration would occur or be accelerated?

Cumulative Impact Analysis

The cumulative impact geographic area for parks, recreation, and trails is the City of Moreno Valley. The City maintains over 358 acres of parks and park facilities and approximately 10 miles of trails. This includes 39 parks and facilities including senior recreation centers and conference centers as well as 20 lighted sports fields.

Most park visits originate from residential uses. Typically, employees are engaged in their work during the day and do not contribute substantial demand for parks. If employees use the parks, such usage would occur during the week rather the weekend. Construction workers may visit a park to eat lunch or for recreation after a day of work. Cumulative development would increase the residential and visitor population which could create new demand on parks and recreation space in the vicinities of the cumulative projects. Some cumulative projects could include recreational facilities and open space features that would serve cumulative project residents and guests and would thereby reduce cumulative demand on public parks. Pursuant to the Quimby Act, the City would require the dedication of land, or the payment of fees for park and/or recreational facilities from the cumulative projects to offset any cumulative incremental impact from each cumulative project on parks, recreation, and trails. Therefore, with the dedication of land, or the payment of development fees, cumulative development would not substantially deteriorate or accelerate the deterioration of recreational facilities or resources.

The project includes the development of a master-planned logistics center; no residential development is proposed. There is a potential for the project to indirectly generate new residents in the City, although predicting the exact number would be too speculative. Trail linkages are provided as part of the project for future linkages to Gilman Springs Road, to the Lake Perris State Recreation Area, and to the San Jacinto Wildlife Area. Future development within the project site will pay the applicable development impact fees for parks or recreational services. Therefore, the project's contribution to cumulative impacts to parks, recreation, and trails would be less than cumulatively considerable.

Based on the above considerations, the project would result in less than cumulatively considerable contribution to increased use of existing neighborhood and regional parks or other recreational facilities where substantial physical deterioration would occur or be accelerated. As such, cumulative impacts on parks, recreation, and trails would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

Impact: *The project's contribution to environmental effects associated with the construction or expansion of recreational facilities would be less than cumulatively considerable.*

Threshold:	Would the project include recreational facilities or require the construction or expansion of recreational facilities that would have an adverse physical effect on the environment.

Cumulative Impact Analysis

Cumulative development could result in the construction or expansion of recreational facilities that could have an adverse physical effect on the environment. However, to offset the cumulative demand on park facilities and services, the project applicants of each residential cumulative project would be responsible for meeting the parkland dedication or fee requirements pursuant to the Quimby Act. Therefore, with the parkland dedication or payment of development fees, cumulative development would not have an adverse physical effect on the environment.

The project does not include the construction or expansion of a recreational facility since it would not create any substantial demands on recreational facilities. Therefore, the project's contribution to cumulative impacts to parks, recreation, and trails would not be cumulatively considerable.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant impact.

6.15 Traffic and Circulation

Cumulative effects to traffic and circulation are described in this section. The entire revised traffic study is located in Appendix F. A summary of the project's potential impacts to traffic and circulation issues is provided in Section 6.15.1. The cumulative impact geographic area for traffic and circulation issues is provided in Section 6.15.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the traffic and circulation issues are discussed in Section 6.15.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.15.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the city will fully build out by 2040, the cumulative impact analysis assumes worse case cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.15-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if they would contribute to a cumulatively considerable impact to traffic and circulation. These potentially cumulative impacts are documented in the following section.

In 2012 an application was made to the City of Moreno Valley for the World Logistics Center (WLC), a new plan for the area that had been subject to the Moreno Highlands Specific Plan. A notice of preparation for the WLC environmental impact report (EIR) was issued in February 2012. A traffic impact analysis (TIA) was prepared as one of several technical studies in support of the EIR and submitted to the City in September 2014. The full Draft EIR, including traffic sections based on the TIA, was submitted for public comment in February 2013 and was the subject of public hearings held in June 2015. The General Plan Amendment, zoning change, and the WLC Specific Plan, were adopted by the City Council in August 2015 and adopted again through the initiative process in November 2015.

In the time since the 2014 TIA, a number of developments have occurred that affect the forecast of traffic impacts from the WLC. These changes include:

- The most important new development was the completion in October 2016 of *High-Cube Warehouse Vehicle Trip Generation Analysis*, a major trip generation study for high-cube warehouses, the predominant form of land use in the WLC. This study was jointly sponsored by the South Coast Air Quality Management District (SCAQMD) and the National Association of Industrial and Office Properties (NAIOP), and was conducted by the Institute of Transportation Engineers (ITE). The results were incorporated into the 10th edition of ITE's *Trip Generation Manual*.
- This study replaces the multitude of earlier, smaller studies that produced conflicting results and created uncertainty regarding the amount of traffic generated by the newer, more automated type of high-cube warehouse proposed for the WLC. The 2016 study found that on average, warehouses generate fewer trips than had been assumed in the previous TIA for every analysis period (24% fewer in the AM peak period, 14% fewer in the PM peak hour, and 15% fewer on a daily basis).

However, the volume of truck trips being generated in off-peak periods was higher than had been previously assumed.

- The trip generation rates for other land uses (light logistics, convenience market, etc.) were also updated to those in the 10th edition of ITE's *Trip Generation Manual*.
- The study analysis years were updated so that 2018 is used for Existing Conditions, 2025 is used for Phase 1, and 2040 is used for Cumulative Conditions.
- The assumptions regarding background (i.e. non-WLC) land development have been updated to reflect the Sustainable Community Strategy adopted by SCAG in 2016. The list of reasonably foreseeable projects was also updated to account for projects that have been completed or have dropped out, and for projects that have been added to the pipeline.
- The assumptions regarding changes to the transportation network have been updated to reflect the Regional Transportation Plan adopted by SCAG in 2016. The existing conditions network was also updated to account for projects completed since the base year of the previous TIA (2012).
- New traffic counts were performed for all study intersections and roadway segments, and new data was collected for volumes on the study freeway segments.
- An analysis of the effect of the Project on regional vehicle-miles of travel (VMT) has been added. This analysis was done primarily to provide data needed for the air quality analysis. Readers may be aware that, as a result of Senate Bill 743 (Steinberg, 2013), CEQA analysis of traffic impacts is likely to change at some point in the future from LOS-based to VMT-based. This change will not take effect before January 1st 2020 at the earliest, so the LOS approach that is the primary focus of the current study accords with current state law. The VMT analysis is therefore included in this traffic study for informational purposes only.

  Please note one other change that has no effect on the analysis, which is that Parsons Brinckerhoff Inc. was acquired by WSP USA Inc. So although the company name on the cover of this report is different from that on the previous report, lead traffic engineer and key staff from the previous study also conducted the current study.

6.15.1 Project Impact Findings

The project's effects to traffic and circulation are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project impacts (see Section 4.15 of Revised Final Programmatic EIR Sections (RFPEIRS) is provided as well as a reference to the specific section and impact number if the impact determination is significant.

Could the project:

- Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways, and freeways, pedestrian and bicycle paths, and mass transit; **Significant and Unavoidable, Section 4.15.6.1.**
- Cause a decrease from satisfactory LOS (based on local agency adopted standards) to an unsatisfactory LOS on a study area intersection, roadway segment, freeway mainline lane, freeway weaving segment or freeway ramp. A significant cumulative traffic impact would occur if the project contributes traffic toward those facilities operating at unsatisfactory LOS in the without project condition. The adopted LOS standards are as follows:
  - Roadway segments and intersections: LOS C; and LOS D as outlined in previously referenced Table 4.15.E. **Significant and Unavoidable, Section 4.15.6.1, Section 4.15.6.2, Section 4.15.6.3, Section 4.15.6.4, Section 4.15.6.5.**

  - Intersections: LOS C and LOS D as outlined in previously referenced Table 4.15.Z. **Significant and Unavoidable, Section 4.15.6.1, Section 4.15.6.2, Section 4.15.6.3, Section 4.15.6.4, Section 4.15.6.5.**
  - Freeway mainline: LOS D. **Significant and Unavoidable, Section 4.15.6.1**, **Section 4.15.6.2, Section 4.15.6.3, Section 4.15.6.4, Section 4.15.6.4, Section 4.15.6.5.**
  - Freeway Ramp Merge/Diverge: LOS D. **Significant and Unavoidable, Section 4.15.6.1, Section 4.15.6.2, Section 4.15.6.3, Section 4.15.6.4, Section 4.15.6.5.**
- Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways; **Significant and Unavoidable, Section 4.15.6.3, Section 4.15.6.4, Section 4.15.6.5.**
- Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location, which results in substantial safety risks; **Less than Significant, Section 4.15.5.1.**
- Substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); **Less than Significant, Section 4.15.5.2.**
- Result in inadequate emergency access; **Less than Significant, Section 4.15.5.3.**
- Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. **Less than Significant, Section 4.15.5.4.**

As shown, there are no unmitigated project-specific significant and unavoidable impacts to traffic and circulation identified in the FEIR.

6.15.2 Geographic and Temporal Scope

Cumulative impacts to traffic and transportation could result from the project in conjunction with other past, present and future projects located within the 50 ADT cumulative projects impact area. This area includes the entire City of Moreno Valley and portions of the Cities of Riverside, Redlands, Beaumont, Perris, San Jacinto, Hemet and Calimesa, as well as portions of unincorporated Riverside and San Bernardino County, and the March JPA. Cumulative projects within the identified overall cumulative project area will be evaluated with the project to determine if any cumulative impact would occur. The geographic area for cumulative transportation and traffic impacts is shown on Figure 6.15-1. The projects located within the cumulative transportation and traffic impact area is listed in Table 6.15-1.

Traffic and Transportation Cumulative Projects Area

ESA

Table 6.15-1: Traffic and Circulation Cumulative Projects Summary

Project ID	Project Name	Environmental Document Summary
B-2	Tournament Hills 3	No project description available.
B-3	Heartland	Per the City of Beaumont Planning Department's 1994 EIR, the Heartland Specific Plan would develop low and medium density housing, and supporting land uses on 417.2 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
B-4	Hidden Canyon	Per the City of Beaumont Planning Department's 2004 EIR, the Hidden Canyon EIR Addendum to the Beaumont Gateway Specific Plan would result in the development of 426 residential units, commercial space and open space on 196.5 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
B-5	ProLogis/Rolling Hills Ranch Industrial	Per the City of Beaumont Planning Department's 2004 EIR, the Second Amendment to the Rolling Hills Ranch Specific Plan would change the 152,9 acre property's General Plan land use designation from low density residential to Business Park. The project would have a less than significant impact on traffic and circulation with mitigation.
B-7	Kirkwood Ranch (#14)	Per the City of Beaumont Planning Department's 1990 EIR, the Kirkwood Ranch Specific Plan would develop 470 single family detached units and 60 multi-family units on a 128 acre site. The project would have a significant impact on traffic and circulation.
B-9	Sundance (#17)	Per the City of Beaumont Planning Department's 2004 EIR, the Sundance Specific Plan Amendment to the Deutsch Specific Plan would result in the development of 1,968 single-family units, 2,208 homes, and 540 condo units, commercial space, and supporting land uses on 1,195 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
B-10	Tract No. 32850 (#39)	Per the City of Beaumont Planning Department's 2005 ND, the Tract Map 32850 would divide a 29.09 acre parcel into 103 single-family residential lots. The project would have a less than significant impact on traffic and circulation.
B-11	San Gorgonio Village, Phase 2 (#45)	Per the City of Beaumont Planning Department's 2007 MND, the San Gregorio Village Specific Plan would provide for the development of approximately 225,000 square feet of commercial and restaurant uses on approximately 23 acres. The project would have a less than significant impact on traffic and circulation with mitigation.

Project ID	Project Name	Environmental Document Summary
B-12	Beaumont Commercial Center	Per the City of Beaumont Planning Department's 2016 IS, the Beaumont Commercial Center would provide for the development of five commercial buildings with 58,603 square feet of retails, service, and restaurant uses. The project would have a less than significant impact on traffic and circulation with mitigation.
B-14	Potrero Creek Estates (#26)	Per the City of Beaumont Planning Department's 1988 EIR, the Potrero Creek Estates Specific Plan would result in the residential development of 1,028 single family lots on 737 acres. The project would have potentially significant impacts on traffic and circulation.
H-3	Tres Cerritos Specific Plan	Per the City of Hemet's NOC, the project proposes to develop 178 single-family homes on 51.2 acres. The project would have a less than significant impact on traffic and circulation.
H-4	Sanderson Square	Per the City of Hemet's 2006 IS, the Sanderson Square Specific Plan would result in the development off commercial and industrial uses on approximately 45 acres. The project would have a potentially significant impact on traffic and circulation.
H-5	McSweeny Farms Specific Plan	Per the City of Hemet's 2003 excerpt of an EIR, the McSweeny Farms Properties Specific Plan would result in the construction of 2,482 residential units within 442 acres. No information in document related to traffic and circulation.
H-6	Ramona Creek Specific Plan	Per the City of Hemet's 2014 EIR, the Ramona Creek Specific Plan and General Plan Amendment would result in the development of a multiple-use commercial and residential community. No information in document on level of impact on traffic and circulation after mitigation.
H-7	Peppertree Specific Plan	Per the City of Hemet's 2003 ISMND, the Peppertree Specific Plan would result in the development of 456 residences, and recreational spaces of 79.2 acres. The project would have a less than significant impact on traffic and circulation.
H-9	Pulte Del Web (TTM 31807 and 31808)	Per the City of Hemet's 2005 SEIR, the Tentative Tract Map 31807, Tentative Tract Map 31808, and Specific Plan Amendment SPA 04-1 would result in the amendment of a land use plan for a 10 acre site from commercial to high medium density residential and the division of 154.77 acres into 611 residential lots, an adult community center, and open space. No information in provided documentation on impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
H-10	Downtown Hemet Specific Plan	Per the City of Hemet's 2017 ISMND, the proposed Downtown Hemet Specific Plan is a comprehensive plan that features a land use plan, circulation plan, urban design framework, utility infrastructure plan, development standards, design guidelines, and sustainability plan for future development within a 360-acre area in downtown Hemet. The project would have a less than significant impact on traffic and circulation with mitigation.
M-2	Meridian Business Park Phases I and II	Per the March Joint Powers Authority's 2017 EIR, the project would result in the development of a 130 acre business park. The project would have a significant impact on traffic and circulation.
M-8	March LifeCare Campus Specific Plan	Per the March Joint Powers Authority's 2009 EIR, the project would result in the development of a medical campus on approximately 236 acres. The project would have a significant impact on traffic and circulation.
M-9	TM 34748	Per the March Joint Powers Authority's 2010 ND, the project proposes to build a 135 single-family residential lot subdivision on 40 acres. The project would have a less than significant impact on traffic and circulation.
M-11	PA 06-0014 (Pierce Hardy Limited Partnership)	Per the March Joint Power's Authority's draft ND, the project would construct a Retail/Storage Lumber Yard Complex (approximately 67,800 square feet of total building space) on 11.0 acres. The project would have a less than significant impact on traffic and circulation.
MV-3	ProLogis	Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres. No information in document on level of impact on traffic and circulation after mitigation.
MV-4	Westridge Commerce Center	Per the City of Moreno Valley's April 2011 Final EIR, the project would develop approximately 937,260 square feet of light industrial warehouse/ distribution uses and related infrastructure on 55 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley's 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf. The project would have a less than significant impact on traffic and circulation.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
MV-9	TR32459 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project is for a single family residential tract with 11 lots on 13 acres and is zoned R1. The lots range from 41,021 sq ft to 59,627 sq ft in size. The project would have a less than significant impact on traffic and circulation.
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots. The project would have a less than significant impact on traffic and circulation.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres. The project would have a less than significant impact on traffic and circulation.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes. The project would have a less than significant impact on traffic and circulation.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space. The project would have a less than significant impact on traffic and circulation.
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres. The project would have a less than significant impact on traffic and circulation.
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes. The project would have a less than significant impact on traffic and circulation.
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres. The project would have a less than significant impact on traffic and circulation.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres. The project would have a less than significant impact on traffic and circulation.
MV-20	Moreno Marketplace	Per the City of Moreno Valley's June 2006 Negative Declaration, this project would develop a 95,905 square foot retail center on 10.46 acres. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots. The project would have no impact on traffic and circulation.
MV-24	TM 36436 (PA12-0005)	Per the City of Moreno Valley's December 2012 MND, this project would subdivide 43.52 acres for 159 single family residential lots. The project would have a less than significant impact on traffic and circulation.
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres. The project would have a less than significant impact on traffic and circulation.
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres. The project would have a less than significant impact on traffic and circulation.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acres. The project would have a less than significant impact on traffic and circulation.
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres. The project would have a less than significant impact on traffic and circulation.
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots. The project would have a less than significant impact on traffic and circulation.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres. The project would have a less than significant impact on traffic and circulation.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
MV-34	TR34397 / Winchester Associates	Per the City of Moreno Valley's April 2007 initial study/environmental checklist form, the project would subdivide 19 acres for 50 single-family residential lots. The project would have a less than significant impact on traffic and circulation.
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins. The project would have a less than significant impact on traffic and circulation.
MV-36	TM 31618 (PA03-0106)	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 18.99 acres for 56 single-family residential lots. The project would have a less than significant impact on traffic and circulation.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. No information in document on level of impact on traffic and circulation after mitigation.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. No information in document on level of impact on traffic and circulation after mitigation.
MV-41	First Nandina Logistics Center	Based on the City of Moreno Valley's October 2014 Facts, Findings, and Statement of Overriding Considerations, the project would develop approximately1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of mezzanine space on 72.9 acres. The project would have a significant, cumulatively considerable impact on traffic and circulation.
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site. The project would have a significant impact on traffic and circulation.
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a hat will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays. The project would have a significant impact on traffic and circulation.
MV-45	Iris Plaza	Per the City of Moreno Valley's IS, the project would construct a 109,289 sq. ft. shopping center on approximately 12.4 acres of land within the Community Commercial (CC) land use district. The project would have a less than significant impact on traffic and circulation.
MV-47	PA07-0129 TR 35606 SFR	No environmental documentation was available for review. However, there is a planning commission resolution, which states that the project is not likely to cause substantial environmental impact.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	Per the City of Moreno Valley's Environmental Checklist, the project would prepare an EIR to subdivide 75.05-acre property into four parcels with business center land uses. The project would have a significant impact on traffic and circulation.
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped. The project would have a less than significant impact on traffic and circulation.
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site. The project would have a less than significant impact on traffic and circulation.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. The project would have a less than significant impact on traffic and circulation.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. The project would have a less than significant impact on traffic and circulation.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. The project would have a significant impact on traffic and circulation.
MV-56	Tract Map 33810	No environmental documentation was available for review. However, there is a planning commission resolution that states that the project is exempt from the requirements of CEQA guidelines.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots. The project would have a less than significant impact on traffic and circulation.
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The project would have a less than significant impact on traffic and circulation.
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. The project would have a less than significant impact on traffic and circulation.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. The project would have a less than significant impact on traffic and circulation.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 square feet of new retail/commercial uses on the approximately 22.28-acre site. The project would have a significant impact on traffic and circulation.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. The project would have a less than significant impact on traffic and circulation with mitigation.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. The project would have a less than significant impact on traffic and circulation.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. The project would have a less than significant impact on traffic and circulation.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. The project would have a less than significant impact on traffic and circulation.
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. The project would have a less than significant impact on traffic and circulation.
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. The project would have a less than significant impact on traffic and circulation.
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley’s 2008 ND, the project would build a 522,772 square foot industrial warehouse building on 25.96 acres of land. The project would have a less than significant impact on traffic and circulation.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. The project would have a less than significant impact on traffic and circulation.
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2010 ND, the project subdivides 16.9 acres into 6 pads for commercial retail use. The project would have a less than significant impact on traffic and circulation.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. The project would have a less than significant impact on traffic and circulation.
MV-88	TR33771 / Creative Design Associates	No environmental documentation was available for review. However, there is a planning commission resolution for a 12 unit condominium complex on approximately 0.9 acres.
MV-89	TR35663 / Kha	No environmental documentation was available for review. However, there is a notice of exemption for a mixed use development on approximately 2.2 acres, which states that there is no evidence of potential for significant environmental impacts.
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. The project would have a less than significant impact on traffic and circulation.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. The project would have a less than significant impact on traffic and circulation.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. The project would have a less than significant impact on traffic and circulation.
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. The project would have a less than significant impact on traffic and circulation with mitigation.

Project ID	Project Name	Environmental Document Summary
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. The project would have a less than significant impact on traffic and circulation with mitigation.
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. The project would have a less than significant impact on traffic and circulation.
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. The project would have a less than significant impact on traffic and circulation.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. The project would have a less than significant impact on traffic and circulation.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. The project would have a less than significant impact on traffic and circulation.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. The project would have a less than significant impact on traffic and circulation.
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. Project was exempt from environmental review.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. Project was exempt from environmental review.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres. Project was exempt from environmental review.
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. The project would have a less than significant impact on traffic and circulation.
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. The project would have a less than significant impact on traffic and circulation.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. The project would have a less than significant impact on traffic and circulation.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. The project would have a less than significant impact on traffic and circulation.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. The project would have a less than significant impact on traffic and circulation.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. The project would have a less than significant impact on traffic and circulation.
P-2	TR34716	Per the City of Perris’ 2013 FEIR, the project involves the construction and operation of up to 600,000 gross square feet (gsf) of light industrial/warehouse uses. The project would have a significant, cumulative impact on traffic and circulation.
P-4	Bookend	Per the City of Perris' 2015 MND, the project proposed to subdivide an existing vacant parcel into five new industrial parcels with a total building area of 165,000 sf. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
P-5	Markham East	Per the City of Perris's June 2007 Notice of Determination, the project would develop 462,692 square feet of light industrial warehouse/distribution uses in a single building with associated roadway and utility infrastructure and landscape improvements on 22.25 acres. The project would have a less than significant impact on traffic and circulation.
P-7	Duke Warehouse	Per the City of Perris's Facts, Findings and Statement of Overriding Considerations, the project would redesign ate a large portion of the northern part of the City with broad categories of compatible commercial and industrial uses on 34.57 acres. Uses would include a 668,681 square foot industrial/warehouse building that includes 19,200 square feet of office space. The project would have a less than significant impact on traffic and circulation with mitigation.
P-8	First Perry Logistics Project	Per the City of Perris's November 2017 Notice of Determination, the project would develop a 236,961 square foot industrial building on 11.06 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
P-10	IDS	Per City of Perris 2005 Final EIR would result in the Perris Warehouse/Distribution Facility Project. The project would have a less than significant impact on traffic and circulation with mitigation.
P-11	Ridge II	Per the City of Perris 2007 NOC and Environmental Doc Transmittal, project proposes a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures. The project would have a less than significant impact on traffic and circulation with mitigation.
P-12	Starcrest, P011-0005; 08-11-0006	Per the City of Perris Final EIR, the proposed project is the expansion of an existing internet/mailorder fulfillment facility to an adjacent property. The existing Starcrest building is approximately 232,215 square feet in size. The expansion would include a 454,008 sf building north of and adjacent to Starcrest's existing facility. The project would have a less than significant impact on traffic and circulation.
P-14	Rados Distribution Center	Per the City of Perris 2010 Final EIR, proposed project is an approximately 1,191,080 sq ft distribution center on approximately 61.63 gross acres. The project would have a less than significant impact on traffic and circulation with mitigation.

Project ID	Project Name	Environmental Document Summary
P-15	Duke Perris Logistics Center I	Per the City of Perris 2017 Final EIR, the project would result in the Duke Warehouse at Indian Avenue and Markham Street. No information in provided document on impact significance after mitigation incorporated.
P-16	Perris Ridge Commerce Center I	Per the City of Perris' 2007 excerpt of an EIR, the project proposes the establishment of a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures on 91 acres. No information in provided document on impact significance after mitigation incorporated. The project would have a less than significant impact on traffic and circulation with mitigation.
P-18	P07-07-0029	Per the City of Perris' 2009 EIR, the project proposed to construct a 1,608,322 sf industrial complex comprised of five buildings on 92.3 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
P-19	P05-0192	Per the City of Perris' 2006 EIR, the project proposed development of an approximately 700,000 square foot industrial building on a 40-acre. The project would have potentially significant impacts on traffic and circulation.
P-20	P05-0113	Per the City of Perris' 2009 EIR, the project proposed subdividing the site into five legal parcels, four of which would be developed with industrial/warehouse buildings for a total of 1,750,000 sf. The project has mitigation measures in place for traffic and circulation impacts, no information on if impacts are significant after mitigation implemented.
P-21	P07-09-0018	Per the City of Perris' 2008 IS, the project proposed the development of a 173,000 sf industrial building on 8.7 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
P-22	NICOL	Per the City of Perris' 2016 IS/MND, the project proposed a 380,000 sf warehouse building on 21.63 acres. The project would have a less than significant impact on traffic and circulation.
P-23	Westcoast Textiles	Per the City of Perris' 2016 IS, the project proposed construction of a 187,850 sf industrial/manufacturing building on 9 acres. The project would have a less than significant impact on traffic and circulation.
P-24	Optimus Logistics Center 1	Per the City of Perris' 2016 EIR, the project proposed to construct a high-cube warehouse consisting of two buildings totaling 1,455,781 sf on 68.99 acres. The project has mitigation measures in place for traffic and circulation impacts, no information on if impacts are significant after mitigation implemented.

Project ID	Project Name	Environmental Document Summary
P-25	Optimus Logistics Center 2	Per the City of Perris' 2015 EIR, the project proposed construction of warehouse development site encompassing 1,037,811 square feet in two buildings on 48.4 acres. The project would have a less than significant impact on traffic and circulation.
P-26	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 811,620 square feet (sf) of industrial high-cube, non-refrigerated warehouse/distribution uses on the approximate 37.3-acre site. The project would have a potentially significant impact on traffic and circulation.
P-27	Perris DC (Industrial Property Trust)/Integra	Per the City of Perris' 2014 EIR, the project proposed construction and operation of up to 864,000 square feet (sf) of industrial warehouse/distribution uses on the approximate 43.2-acre site. The project would result in significant cumulative traffic and circulation impacts.
P-28	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 1,189,860 square feet (sf) of high-cube warehouse/distribution uses on the approximate 55-acre Project site. The project would have significant traffic and circulation impacts related to project-generated traffic and freeway segments.
P-30	Avelina	Per the City of Perris' 2003 IS, the project proposed to increase residential density on a 158.2 acre property to 475 dwelling units. The project would have a less than significant impact on traffic and circulation with mitigation.
P-31	Perris Family Apartments	Per the City of Perris' 2013 IS, the project proposed to construct a 75-unit multi-family apartment complex on 7 vacant acres. The project would have a less than significant impact on traffic and circulation.
P-32	Lewis Retail Center	Per the City of Perris' 2009 IS, the project proposed to construct 643,000 sf of commercial shopping center on 68 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
P-35	Verano Apartments	Per the City of Perris' 2013 IS, the project proposed increasing the number of residential units from 19 to 40 and reducing the commercial component from 17,000 sq. ft. to 1,000 sq. ft. for retail and to allow a 2,000 sq. ft. day care facility. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
P-37	Cabrillo	Per the City of Perris' Initial Study, the project proposed to amend the General Plan (GP) and Zoning designation of approximately 36.21 acres of land from R-6,000 to MFR-14 Residential, along with a Text Amendment to narrow the lot frontage from 50-feet to 45-feet for lots greater than 4,500 square feet to facilitate the entitlement of Tentative Tract Map (TTM) 36343, a 184 lot residential subdivision. The project would have a less than significant impact on traffic and circulation with mitigation.
P-58	Jordan Distribution	Per the City of Perris's June 2008 Notice of Determination, the project would develop a 378,521 square foot tilt-up industrial building for warehouse distribution uses on 17.1 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
R-1	Sycamore Canyon Business Park - Bldgs 1&2	Per the City of Riverside's January 2017 Final EIR, the project would develop approximately 1.43 million square feet of business park uses on approximately 920 acres. The project will result in significant impacts to traffic and circulation.
R-2	Alessandro Business Center (Western Realco)	Per the City of Riverside's February 2015 Addendum to the Final EIR, the project would develop 662,018 square feet of industrial warehouse uses on 36.7 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
R-4	Quail Run	Per the City of Riverside's January 2016 Initial Study, the project would develop a 13-building apartment complex on approximately 16 acres of a 30.9 acre site that also would include parking structures and spaces, and open space. The project would have a less than significant impact on traffic and circulation with mitigation.
R-5	Canyon Springs Healthcare Campus Specific Plan	Per the City of Riverside's July 2017 Draft EIR, the project would develop a healthcare campus on 50.85 acres, including an approximately 234-unit senior housing facility; approximately 310,200-square-foot (267-unit, 290-bed) independent living/memory care, assisted living, and skilled nursing facility; an approximately 324,000-square-foot (180-bed) hospital; approximately 22,000 square-foot central energy plant; approximately 70,000-square-foot medical office building; an additional 300,000-square feet of medical office building uses with retail; multiple multi-level parking structures; and an approximately 180,000-square-foot (100-bed) hospital addition. A helipad/helistop also is proposed. The project would have a significant and cumulative impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
R-16	Sycamore Canyon Specific Plan	Per the City of Riverside's 1993 amended Specific Plan/EIR, the Sycamore Canyon Business Park Specific Plan describes a planned industrial park consisting of approximately 920 acres of industrial and commercial uses within a 1,400 acre project area. Approximately 480 acres of the total 1,500 acre Sycamore Canyon Wilderness Park is located within the Plan area. The project would have potential significant impacts on traffic and circulation.
RC-5	Villages of Lakeview -Residential/Commercial Development	Per Riverside County's August 2016 Draft EIR, the Villages of Lakeview project proposes a master-planned community comprised of approximately 2,800 acres in the Lakeview/Nuevo area of Riverside County. Proposed land uses within the Specific Plan include a wide range of residential products, mixed-uses, retail, schools with joint-use parks, public and private amenities, an array of parks, trails, open space, roads, and other infrastructure. Existing infrastructure such as water, sewer, storm drain, and roadways will also be expanded as part of the Villages of Lakeview project. The project would have significant and cumulative impacts to traffic and circulation.
RC-9	Oleander Business Park, PP20699	Per what appear to be public meeting slides presenting information about Riverside County's May 2008 Final EIR for this project, the project would subdivide approximately 68.8 acres to develop approximately 1,206,710 square feet of industrial buildings. The project would have significant and cumulative impacts to traffic and circulation.
RC-10	Majestic Freeway Business Center, SP 341 / PP21552	Per Riverside County's December 2006 Initial Study, the project would develop 947,000 square feet of light industrial warehouse and distribution uses and a 1.62 acre detention basin on 47.25 acres. The project would have less than significant impacts on traffic and circulation.
RC-11	Alessandro Commerce Center	Per Riverside County's April 2009 screencheck draft EIR, the project would develop 409,000 square feet of warehouse, 42,000 square feet of light industrial, 10,000 square feet of retail/restaurant, and 258,000 square feet of office uses, associated parking, and three detention basins on 54.4 acres. The project has mitigation measures in place for traffic and circulation impacts, no information on if impacts are significant after mitigation implemented.

Project ID	Project Name	Environmental Document Summary
RC-12	Cores Industrial Partners	Per Riverside County’s October 2010 ND, the project proposes to bring the Zoning Code into compliance with SB 1627 and to strengthen the development standards for wireless telecommunications facilities in order to ensure high-quality design and compatibility with surrounding uses. The project would have less than significant impacts on traffic and circulation.
RC-13	Sunny-Cal Specific Plan (#40)	Per the City of Beaumont's June 2007 Response to Late Comments on the EIR, the project would develop a 907-unit housing project on up to 323.3 acres. The project would have less than significant impacts on traffic and circulation with mitigation.
RC-34	Emerald Acres SP (SP00381)	Per Riverside County's January 2016 Initial Study, the project would develop the approximately 332.6-acre site as a residential community consisting of a maximum of 355 single family dwelling units on 76.3 acres; 179 multi-family dwelling units on 16.7 acres; 4.88 acres of commercial uses; a community park on 6.8 acres; 209.7 acres of open space; a 0.9-acre sewer lift station; and roadway improvements. The project would have a potentially significant impact on cultural resources.
RC-35	TR34677, TR31100, TR32391, TR33448, TR31101, TR31009, TR32282	Per Riverside County's February 2004 environmental assessment form/initial study, the project would subdivide 6.7 acres of a 71 acre parcel into 8 single-family residential lots, a detention basin, and 2.2 acres of open space. The project would have a less than significant impact on traffic and circulation with mitigation.
RC-37	TR36504	Per Riverside County’s IS, the project proposes a Schedule ‘A’ subdivision of 162.05 acre gross area into 527 single-family residential lots. In addition to 527 residential lots, the subdivision also includes an 8.54 acre lot for a park, a 4.7 acre lot for a detention/debris basin, and an approximately 18 acre open space lot. The project would have a less than significant impact on traffic and circulation with mitigation.
RC-38	San Gorgonio Crossings	Per Riverside County's May 2017 Recirculated Draft EIR, the project would develop two house high-cube warehouse buildings on an approximately 229 acre site, of which approximately 16 acres are located within the City of Calimesa. Approximately 140.23 acres of the site would be included within the developed portion of the project; 84.8 acres would remain natural open space. The project would have significant impacts to traffic and circulation.

Project ID	Project Name	Environmental Document Summary
RD-1	Tract 18988	Per the City of Redlands' June 2015 MND, the project would widen Pioneer Avenue to preserve existing deodar cedar trees along an approximately 1,100 linear foot segment between Texas Street and Furlow Drive. The project also would develop 82 single-family residential lots on 30.51 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
RD-3	Newland Homes Tract	Per the City of Redlands' March 2018 ISMND, the Project would result in the construction of 105 single family detached dwelling units and a neighborhood park on 39.84 acres. The project would have a less than significant impact on traffic and circulation with mitigation.
RD-4	Redlands Pennsylvania Tract	Per the City of Redlands' March 2018 ISMND, the Project would result in the subdivision of a 24.87 acre project site into 67 residential lots and 10 lots as open space. Additionally, the Project seeks approval to remove 5 acres from an Agricultural Preserve. The project would have a less than significant impact on traffic and circulation.
RD-6	Woodsprings Hotel	Per the City of Redlands' March 2018 IS, the Project would result in the construction of a 124-room hotel on a 2.68-acre property. The project would have a less than significant impact on traffic and circulation.
RD-10	Park Ave Industrial Center	Per the City of Redlands' March 2014 MND, the project would develop approximately 170,000 square feet of light industrial uses, including 289 parking spaces and 12, 500 square feet of office space. The project would have a less than significant impact on traffic and circulation with mitigation.
RD-11	Marriott Springhill Suites	Per the August 2016 technical memorandum regarding the Trip Generation, Distribution, and Assignment Analysis for the project, the project would develop a four-story 88-room hotel with rooms, suites, and 97 parking spaces. The project would have a less than significant impact on traffic and circulation.
RD-12	I-10 Redlands LC - B	Per the August 2014 letter responding to comments on the proposed MND, the project would develop approximately 1.1 million square feet for warehousing/ fulfillment/distribution center uses on 50.67 acres. The project would have a less than significant impact on traffic and circulation.
RD-14	Redlands DC 772,000 SF (2015)	Per the City of Redlands' September 2013 MND, the project would develop 771,839 square feet of warehouse distribution center on 35.59 acres and related parking. The project would have a less than significant impact on traffic and circulation with mitigation.

Project ID	Project Name	Environmental Document Summary
RD-16	APL Logistics	Per the May 2012 City of Redlands Commission Review and Approval No. 873, the project would develop 809,338 square feet of warehouse uses on 37.4 acres. The project would have a less than significant impact on traffic and circulation.
SB-1	Redlands Gateway Logistics - B	Per the County of San Bernardino’s 2009 IS, the project would result in the construction of 5 two-story structures and 7 single-story structures with a maximum floor area of 216,500 square feet, and a three-story hotel with 180 rooms and a floor area of 80,000 square feet. The project would have a less than significant impact on traffic and circulation.
SB-2	Redlands Gateway Logistics - A	Per the County of San Bernardino’s 2014 IS, the project proposes to subdivide 42.66 acres into 2 lots. Parcel 1 is 14.81 acres and Parcel 2 is 27.85. The project would have a less than significant impact on traffic and circulation.
SB-3	Prologis #12	Per the County of San Bernardino’s 2013 IS, the project would result in a conditional use permit to establish a 593,916 square-foot industrial building to be use as a “high cube” warehouse distribution facility, a tentative parcel map for a one lot subdivision, and a general plan amendment to change the official land use district from East Valley/General commercial to East Valley/regional industrial on 27.42 acres. The project would have a less than significant impact on traffic and circulation.
SB-4	Prologis #17	Per the County of San Bernardino's April 2014 MND, the Project would result in the construction of a 777,620 square foot industrial building and the relocation of an existing telecommunication tower on a 35.98 acre site. The project would have a less than significant impact on traffic and circulation.
SB-6	Prologis #8	Per the County of San Bernardino’s 2007 IS, the project would result in the construction four industrial buildings to be used a “High Cube” and general warehouse distribution facilities. The project would have a less than significant impact on traffic and circulation.
SB-7	Sam Redlands Tract	Per the City of Redlands' March 2017 ISMND, the Project would result in the subdivision of an 11.97 acre site into 34 single family residential lots, 4 lettered lots, and the demolition of existing structures. The project would have a less than significant impact on traffic and circulation.
SB-8	Jacinto Tract	Per the City of Redlands' July 2016 ISMND, the Project would result in the subdivision of an 18.54 acre site into 40 residential lots. The project would have a less than significant impact on traffic and circulation.

Project ID	Project Name	Environmental Document Summary
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife's 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. The project would have a less than significant impact on traffic and circulation with mitigation.

6.15.3 Cumulative Impact Evaluation

Cumulative traffic impacts are evaluated in the revised traffic study contained in Appendix F. Identified cumulative traffic impacts and associated mitigation measures are documented in Chapter 11-F of the traffic study, and in the tables identified below. Please refer to Appendix F for the complete discussion of cumulative traffic impacts, mitigation measures, feasibility and level of significance after mitigation.

6.15.3.1 Air Traffic Patterns

Impact: *The project would not contribute to cumulative changes in air traffic patterns.*

Threshold: Would the project result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

Cumulative Impact Analysis

The project would not affect air traffic patterns and therefore, would not contribute to any cumulative changes in air traffic patterns.

Significance Level Before Mitigation: No impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: No impact.

6.15.3.2 Design Hazard Features

Impact: *The project would not contribute to the cumulative increases in hazards due to a design feature or incompatible use.*

Threshold: Would the project substantially increase hazards due to a design feature or incompatible use?

Cumulative Impact Analysis

The project roadway system has been designed to conform to all city of Moreno Valley and professional traffic engineering design requirements. The majority of the larger cumulative projects identified in the cumulative project impact area evaluated cumulative traffic impacts in their respective CEQA documents. The traffic impact analysis prepared for this Revised Sections of the FEIR includes a comprehensive cumulative traffic impact analysis and associated mitigation measures. These cumulative impact mitigation measures are included in this section.

Significance Level Before Mitigation: No impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: No impact.

6.15.3.3 Emergency Access

Impact: *The project would not contribute to the cumulative inadequate emergency access.*

Threshold: Would the project result in inadequate emergency access?

Cumulative Impact Analysis: The project roadway system has been designed to conform to all city of Moreno Valley and professional traffic engineering design requirements.

Significance Level Before Mitigation: No impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: No impact.

6.15.3.4 Alternative Transportation Policies, Plans, or Programs

Impact: *The project would not contribute to any cumulative conflict with adopted policies, plans, or programs supporting alternative transportation.*

Threshold: Would the project conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?

Cumulative Impact Analysis

The project roadway system has been designed to conform to all city of Moreno Valley and professional traffic engineering design requirements. The majority of the larger cumulative projects identified in the cumulative project impact area evaluated cumulative traffic impacts in their respective CEQA documents. The traffic impact analysis prepared for this Revised Sections of the FEIR includes a comprehensive cumulative traffic impact analysis and associated mitigation measures. These cumulative impact mitigation measures are included in this section.

Significance Level Before Mitigation: No impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: No impact.

6.15.3.5 Existing with Phase 1 Conditions Traffic and Level of Service

Impact: *The project's contribution to onsite and surrounding circulation system impacts under the Existing with Phase 1 Conditions would be cumulatively considerable.*

Threshold: Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways, and freeways, pedestrian and bicycle paths, and mass transit.

A significant project-specific traffic impact would occur if the project would cause a decrease from satisfactory LOS (based on local agency adopted standards) to an unsatisfactory LOS on a study area intersection, roadway segment, freeway mainline lane, freeway weaving segment or freeway ramp. A significant cumulative traffic impact would occur if the project contributes traffic toward those facilities operating at unsatisfactory LOS in the pre-project condition. The adopted LOS standards are as follows:

- Roadway segments: LOS C and LOS D as outlined in previously referenced Tables 4.15.B and 4.15.C.
- Intersections: LOS C and LOS D as outlined in previously referenced Table 4.15.Z.
- Freeway mainline: LOS D.

– Freeway Ramp Merge/Diverge: LOS D.

Cumulative Impact Analysis: The majority of the larger cumulative projects identified in the cumulative project impact area evaluated cumulative traffic impacts in their respective CEQA documents. The traffic impact analysis prepared for this Revised Sections of the FEIR includes a comprehensive cumulative traffic impact analysis and associated mitigation measures. These cumulative impact mitigation measures are included in this section. Please refer to Appendix F for the cumulative traffic impact analysis.

Significance Level Before Mitigation: Significant impacts for certain facilities

Mitigation Measures: Please refer to Appendix F and below for mitigation measures.

Significance Level After Mitigation: Less than significant impact.

6.15.3.6 Existing with Project (Buildout) Conditions Traffic and Level of Service

Impact: *The project's contribution to onsite and surrounding circulation system impacts under the Existing with Project (Buildout) Conditions would be cumulatively considerable.*

Cumulative traffic impacts and mitigation measures have been evaluated for the following scenarios:

- Cumulative Impacts – Roadway Sections
- Cumulative Impacts – Intersections
- Cumulative Impacts – Freeway Impacts

Cumulative traffic impacts and mitigation measures are documented in the tables in Appendix F:

- Cumulative Impacts – Roadway Sections: Appendix F, Table 74
- Cumulative Impacts – Intersections: Appendix F, Table 75
- Cumulative Impacts – Freeway Impacts: Appendix F, Table 76

All cumulative traffic impacts have been reduced to less than significant levels through the application of the identified mitigation measures. Some mitigation measures may be determined to be infeasible and as a result, cause a significant cumulative impact.

Threshold: Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways, and freeways, pedestrian and bicycle paths, and mass transit.

A significant project-specific traffic impact would occur if the project would cause a decrease from satisfactory LOS (based on local agency adopted standards) to an unsatisfactory LOS on a study area intersection, roadway segment, freeway mainline lane, freeway weaving segment or freeway ramp. A significant cumulative traffic impact would occur if the project contributes traffic toward those facilities operating at unsatisfactory LOS in the pre-project condition. The adopted LOS standards are as follows:

– Roadway segments: LOS C and LOS D as outlined in previously referenced Tables 4.15.B and 4.15.C.

– Intersections: LOS C and LOS D as outlined in previously referenced Table 4.15.Z.

– Freeway mainline: LOS D.

– Freeway Ramp Merge/Diverge: LOS D.

Cumulative Impact Analysis: **T**he majority of the larger cumulative projects identified in the cumulative project impact area evaluated cumulative traffic impacts in their respective CEQA documents. The traffic impact analysis prepared for this Revised Sections of the FEIR includes a comprehensive cumulative traffic impact analysis and associated mitigation measures. These cumulative impact mitigation measures are included in this section. **P**lease refer to Appendix F for the cumulative traffic impact analysis.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Please refer to Appendix F and below for mitigation measures

Significance Level After Mitigation: Less than significant impact.

6.15.3.7 Year 2025 With Phase 1 Conditions Traffic and Level of Service Impacts

Impact: *The project's contribution to onsite and surrounding circulation system impacts under the Year 2025 With Phase 1 Conditions would be cumulatively considerable.*

Cumulative traffic impacts and mitigation measures have been evaluated for the following scenarios:

- Cumulative Impacts – Roadway Sections
- Cumulative Impacts – Intersections
- Cumulative Impacts – Freeway Impacts

Cumulative traffic impacts and mitigation measures are documented in the tables in Appendix F:

- Cumulative Impacts – Roadway Sections: Appendix F, Table 74
- Cumulative Impacts – Intersections: Appendix F, Table 75
- Cumulative Impacts – Freeway Impacts: Appendix F, Table 76

All cumulative traffic impacts have been reduced to less than significant levels through the application of the identified mitigation measures. Some mitigation measures may be determined to be infeasible and as a result, cause a significant cumulative impact.

Threshold: Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways, and freeways, pedestrian and bicycle paths, and mass transit.

Would the project conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

A significant project-specific traffic impact would occur if the project would cause a decrease from satisfactory LOS (based on local agency adopted standards) to an unsatisfactory LOS on a study area intersection, roadway segment, freeway mainline lane, freeway weaving segment or freeway ramp. A significant cumulative traffic impact would occur if the project contributes traffic toward those facilities operating at unsatisfactory LOS in the pre-project condition. The adopted LOS standards are as follows:

– Roadway segments: LOS C and LOS D as outlined in previously referenced Tables 4.15.B and 4.15.C.

- Intersections: LOS C and LOS D as outlined in previously referenced Table 4.15.Z.
- Freeway mainline: LOS D.
- Freeway Ramp Merge/Diverge: LOS D.

Cumulative Impact Analysis: The majority of the larger cumulative projects identified in the cumulative project impact area evaluated cumulative traffic impacts in their respective CEQA documents. The traffic impact analysis prepared for this Revised Sections of the FEIR includes a comprehensive cumulative traffic impact analysis and associated mitigation measures. These cumulative impact mitigation measures are included in this section. Please refer to Appendix F and Tables 6.15-1 and 6-15-2 for the cumulative traffic impact analysis.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Please refer to Appendix F and below for mitigation measures.

Significance Level After Mitigation: Less than significant impact.

6.15.3.8 Year 2040 Cumulative with Project Conditions Traffic and Level of Service Impacts

Impact: *The project's contribution to onsite and surrounding circulation system impacts under the Year 2040 Cumulative with Project Conditions would be cumulatively considerable.*

Cumulative Impacts to Roadway sections, Intersections and Mitigation Measures are summarized in Tables 6.15-2 and 6.15-3, and in the text following the tables.

Table 6.15-2: Cumulative Impacts to Roadway Sections and Mitigation Measures

Study Roadway		From	To	Jurisdiction	LOS Standard*	Existing LOS	Existing Plus Build-out LOS	Does the Project have a Significant Impact?	Mitigation Measures Required to Reduce Project Impacts to Less-Than-Significant	Is the Mitigation Feasible?	LOS After Feasible Mitigations are Implemented	Impact Significant After Feasible Mitigations are Implemented?	Is There an Existing Deficiency?	Developer Action Required
(A)				(B)	(C)	(D)	(E)	(F)	(G)	(H)	(I)	(J)	(K)	(L)
Road Section Impacts that are Considered Significant and Unavoidable (because they are not under the control of the City of Moreno Valley)

Notes:

"NB" and "SB" denote northbound and southbound respectively

"EB" and "WB" denote eastbound and westbound respectively

▨ Indicates LOS exceeds the target level

"CSS" means cross-street is stop-controlled

"AWS" means all-way stop

"RABT" means roundabout

When refering to lanes, "T" demotes a through lane

When refering to lanes, "L" demotes a left-turn lane

When refering to lanes, "R" demotes a right-turn lane

Cumulative Impacts on Study Intersections and Mitigation Measures

The project's cumulative impacts on study intersections is summarized in Table 6.15.2, and described in detail below:

- **Theodore St./Ironwood Ave. intersection** (IN-12) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Signalizing the intersection would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Moreno Beach Dr./Cactus Ave. intersection** (IN-25) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Constructing a second eastbound left-turn lane and changing a northbound through lane to a shared through-right-turn lane would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Redlands Blvd./Cactus Ave. intersection** (IN-27) should be signalized and added eastbound and westbound left-turn lanes in the short term (see previous section on direct impacts) and may exceed the target LOS threshold at some point in the 2025-to-2040 period. Constructing a northbound left-turn lane and a southbound left turn lane would reduce project impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval.
- **Moreno Beach Dr./John Kennedy Dr.** (IN-28) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Changing the east/west directions from protected to split phase and converting a westbound through lane to a share through-left-turn lane would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval.
- **Sunnymead Blvd./Perris Blvd.** (IN-32) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding a westbound left turn lane would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Moreno Beach Dr./Locust Ave. intersection** (IN-35) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Signalizing the intersection and constructing a westbound left-turn lane would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Iris Ave./Perris Blvd. intersection** (IN-39) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Constructing a second westbound left-turn lane and a second southbound left-turn lane would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Lasselle St./Iris Ave. intersection** (IN-41) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding a third westbound left-turn lane and an eastbound right-turn lane would reduce project impacts to a less-than-significant level. This improvement is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact.

- **Nason St/Alessandro Blvd.** (IN-51) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding a permissive overlap phase for the eastbound right turn, southbound right turn, and westbound right turn would reduce cumulative impacts to a less-than-significant level. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact.
- **Kitching St./Cactus Ave.** (IN-52) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Changing the southbound right turn lane into a shared southbound through-right-turn lane would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Lasselle St./Cactus Ave.** (IN-53) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding a westbound left turn lane would reduce cumulative impacts to a less-than-significant level. This intersection is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact.
- **Morrison St./Cactus Ave.** (IN-54) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding a westbound right turn lane with overlap phasing would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Nason St./Cactus Ave.** (IN-55) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Changing the southbound shared through-right-turn lane into a right turn lane with overlap phasing would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Indian St./Cactus Ave.** (IN-64) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding a northbound left turn lane would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Perris Blvd./Cactus Ave.** (IN-65) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding an eastbound right turn lane, a southbound left turn lane, and a northbound right turn overlap phase would reduce cumulative impacts to a less-than-significant level. This intersection is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact.
- **Elsworth St./Alessandro Blvd.** (IN-71) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding a northbound left turn lane would reduce cumulative impacts to a less-than-significant level. The City will require the developer to pay a fair-share contribution towards this improvement as a condition of approval. This intersection is eligible for funds under the DIF program, which is expected to provide the remaining funds needed to implement the improvement.
- **Central Ave./Lochmoor Dr. intersection** (IN-75) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Converting the northbound approach to one left-turn lane and a shared left-right-turn lane and changing the eastbound approach to two through lanes and one right turn lane would reduce cumulative impacts to a less-than-significant level.

This intersection is under the jurisdiction of the City of Riverside. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact. However, because both the intersection and the funding source are outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable. The City will work with the City of Riverside and WRCOG to direct TUMF funding for improvements that would provide an acceptable LOS at this intersection.

- **Alessandro Blvd./Mission Grove Pkwy. intersection** (IN-80) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Adding an eastbound left turn lane and a northbound through lane, and changing the westbound approach to have two left turn lanes, three through lanes, and one right turn lane3, and changing the southbound approach to one right turn, two through, and one left turn lane would reduce cumulative impacts to a less-than-significant level.

  This intersection is under the jurisdiction of the City of Riverside. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact. However, because both the intersection and the funding source are outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable. The City will work with the City of Riverside and WRCOG to direct TUMF funding for improvements that would provide an acceptable LOS at this intersection.

- **Central Ave./Canyon Crest Dr. intersection** (IN-88) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Changing the eastbound approach to one left turn, two through, and one right turn lane, changing the southbound approach to two left turn, two through, and one right turn lane, adding a westbound left-turn lane, and a northbound left-turn lane would reduce cumulative impacts to a less-than-significant level.

  This intersection is under the jurisdiction of the City of Riverside. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact. However, because both the intersection and the funding source are outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable. The City will work with the City of Riverside and WRCOG to direct TUMF funding for improvements that would provide an acceptable LOS at this intersection.

- **Arlington Ave./Indiana Ave./SR-91 northbound ramps** (IN-91) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Changing the northbound right turn to permissive with an overlap phase would reduce cumulative impacts to a less-than-significant level.

  This intersection is under the jurisdiction of the City of Riverside. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact. However, because both the intersection and the funding source are outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable. The City will work with the City of Riverside and WRCOG to direct TUMF funding for improvements that would provide an acceptable LOS at this intersection.

- **Horace St./Arlington Ave.** (IN-93) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Changing the eastbound approach to one left, two through, and one right turn lane would reduce cumulative impacts to a less-than-significant level.

This intersection is under the jurisdiction of the City of Riverside. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact. However, because both the intersection and the funding source are outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable. The City will work with the City of Riverside and WRCOG to direct TUMF funding for improvements that would provide an acceptable LOS at this intersection.

- **Arlington Ave./Victoria Ave. intersection** (IN-94) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Changing the westbound approach to one left, two through, and one right turn lane, and adding an eastbound left turn lane would reduce cumulative impacts to a less-than-significant level.

  This intersection is under the jurisdiction of the City of Riverside. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact. However, because both the intersection and the funding source are outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable. The City will work with the City of Riverside and WRCOG to direct TUMF funding for improvements that would provide an acceptable LOS at this intersection.

- **Alessandro Blvd./Chicago Ave**. **intersection** (IN-95) is already built out to near the practical limit before grade separation is required (it has five lanes for each approach). Despite this it already operates at LOS "F" in the PM peak period. Reconfiguring the southbound approach to one left turn, three through, and one right turn would mitigation the Project's cumulative impact but still result in LOS "F" during peak hours. There are established residential communities on each corner that would be impacted by such a widening or by grade separation. These mitigation measures are thus likely to be infeasible, and the project impact at this location is therefore considered to be a significant and unavoidable.

- **Ramona Expwy./Indian St. intersection** (IN-101) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Constructing one eastbound right-turn lane, a second northbound left-turn lane, and one northbound right-turn lane, and modifying the traffic signal to provide overlap phasing for all right-turn movements would reduce cumulative impacts to a less-than-significant level.

  This intersection is under the jurisdiction of the City of Perris. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact. However, because both the intersection and the funding source are outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable. The City will work with the City of Perris and WRCOG to direct TUMF funding for improvements that would provide an acceptable LOS at this intersection.

- **Evans Rd./Rider St. intersection** (IN-107) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Reconfiguring the southbound approach to have one left turn, two through, and one right turn lane would reduce cumulative impacts to a less-than-significant level.

  This intersection is under the jurisdiction of the City of Perris. It is eligible for TUMF funding. The City will collect TUMF fees in accordance with Municipal Code Chapter 3.44, and payment of these fees will constitute the mitigation for this impact. However, because both the intersection and the funding source are outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable. The City will work with the City of Perris and WRCOG to direct TUMF funding for improvements that would provide an acceptable LOS at this intersection.

- **Gilman Springs Rd./Bridge St. intersection** (IN-123) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Signalizing the intersection and having eastbound left and right turn lanes would reduce cumulative impacts to a less-than-significant level.

  This intersection is under the jurisdiction of Riverside County. The City will require the developer to pay a fair-share contribution towards improvement of this intersection as a condition of approval if the Riverside County has a fair share program in effect at the time of approval that would provide the remaining funds needed to construct the improvements. However, because intersection is outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable.

- **SR-79 (Sanderson Ave) SB/Gilman Springs Rd.** (IN-125) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Signalizing the intersection would reduce cumulative impacts to a less-than-significant level.

  This intersection is under the jurisdiction of Riverside County. The City will require the developer to pay a fair-share contribution towards improvement of this intersection as a condition of approval if the Riverside County has a fair share program in effect at the time of approval that would provide the remaining funds needed to construct the improvements. However, because intersection is outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made. The project's impacts on this intersection must therefore be considered significant and unavoidable.

- **W. 6th St./Beaumont Ave. intersection** (IN-130) will exceed the target LOS threshold at some point in the 2025-to-2040 period. Reconfiguring the eastbound approach to two left, two through, and one right turn, and reconfiguring the northbound approach to one left, two through and one right turn, and making the eastbound and westbound left turns protected movements would reduce cumulative impacts to a less-than-significant level.

  There are established commercial buildings on the corners on the northern part of the intersection that would be impacted by such a widening. These mitigation measures are thus infeasible, and the project impact at this location is therefore considered to be significant and unavoidable.

Cumulative Freeway Impacts and Mitigation Measures

The WLC's cumulative impacts on the freeways system are described in detail below:

Cumulative Impacts on Mainline Basic Sections

- **Eastbound SR-60 from Reservoir St. to Ramona Ave.** (F-2) will exceed the target LOS threshold at some point in the 2025-to-2040 period and traffic density would increase under 2040 Plus Build-out conditions. Adding a mixed-flow lane would bring the LOS to within the target threshold. The addition of a lane is identified in the Transportation Concept Report.
  The state freeway system is owned and operated by Caltrans and is thus outside the jurisdiction of the City of Moreno Valley. The City will work with Caltrans to establish a mechanism for collecting funds from developers for use in funding needed freeway improvements. However, since at the present time no such mechanism exists that would ensure that WLC funds contributed to Caltrans or any other state agency would be used to implement specific improvements that mitigate WLC

The following general mitigation measures apply to the implementation of the above outlined specific mitigation measures:

4.15.7.4A: A traffic impact analysis ("TIA"), conforming to the guidelines for TIAs adopted by the City shall be submitted in conjunction with each Plot Plan application within the WLCSP. Prior to the approval of Plot Plans, the City shall review the Revised TIA to determine if any of the traffic improvements listed in the above tables need to be implemented as part of the plot plan. The TIA prepared for the Revised Sections of the FEIR are required to be completed prior to the issuance of a certificate of occupancy for each building. If the City determines that any of the improvements within Moreno Valley are required to be constructed in order to ensure that the traffic impacts which will result from the construction and operation of the building will be mitigated into insignificance, then the completion of construction of the improvements prior to the issuance of a Certificate of Occupancy for the building shall be made a Condition of Approval of the Plot Plan. Construction of improvements within the City shall be subject to reimbursement agreement for those costs that exceed the fair share contribution determined for the specific Plot Plan application. If the City determines that any of the improvements outside Moreno Valley are required to be constructed in order to ensure that the traffic impacts which will result from the construction and operation of the building will be mitigated to a less than significant level, then the payment of any necessary fair share contribution as prescribed in MM 4.15.7F prior to the issuance of a Certificate of Occupancy for the building shall be made a Condition of Approval of the Plot Plan. If the City determines that the traffic impacts which will result from the construction or operation of a building will be significantly more adverse than those shown in the Revised TIA, further environmental review shall be conducted prior to the approval of the Plot Plan pursuant to Public Resources Code § 21166 and CEQA Guidelines § 15162 to determine what additional mitigation measures, if any, will be required in order to maintain the appropriate levels of service.

4.15.7.4B: As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require the dedication of appropriate right-of-way, where feasible, consistent with the Subdivision Map Act for frontage street improvements contained within the World Logistics Center Specific Plan Circulation Map. Required dedications shall be made prior to the issuance of occupancy permits for the requested development.

4.15.7.4C: As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require the Applicant to construct or to fully fund the transportation measures identified in the development's TIA (see MM4.15.7.4A) as needed to mitigate the transportation impacts within the city of the Plot Plan development. The payment or construction shall be made prior to the issuance of occupancy permits for the requested development. This condition shall apply only to mitigation measures where a mechanism has been established to collect funds from the project and any other funds to needed to complete the improvements.

4.15.7.4D: As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require each project to pay the requisite Transportation Uniform Mitigation Fee (TUMF) as set forth in Municipal Code Chapter 3.44. Required TUMF payments shall be made prior to the issuance of occupancy permits for the requested development.

4.15.7.4E: In order to ensure that all of the Project's traffic impacts are mitigated to the greatest extent feasible, the Applicant shall contribute its fair share of the cost of the needed traffic improvements that are not within the City as identified in the Traffic Impact Analysis, i.e., under the jurisdiction of other cities, the County of Riverside or Caltrans, pursuant to MM Trans-6. As used in this mitigation measure, the Applicant's "fair share" has been determined in compliance with the requirements of the Fee Mitigation Act, Government Code § 66000 et seq., and, pursuant to § 66001(g), does not require that the Applicant be responsible for making up for any existing deficiencies. Mitigation measures are summarized in Tables 4.15-1 to 4.15-13.

4.15.7.4F: The Applicant shall pay its portion of the fair share of the cost of traffic improvements identified in the Transportation Impact Analysis for those significantly impacted road segments and intersections for each warehouse building within the World Logistics Center if the impacted jurisdiction has established a fair share contribution program prior to the approval of a building-specific plot plan. The City shall determine whether a fair share program exists in the impacted jurisdiction and, if one does exist, require that the appropriate fees are paid by the Applicant, consistent with the requirements below, prior to the issuance of a certificate of occupancy for the building in question. If no fair share program exists or if the existing programs are not consistent with the requirements below, then no payment of fees shall be required. The impacts are to be determined on a road segment or intersection basis. Nothing in this condition requires the payment of a traffic impact fee imposed by another jurisdiction which covers improvement to facilities where the Project does not have a significant impact. Fair-share contributions will be determined on a building-by-building basis as a share of the impact of the Project as a whole (for each segment or intersection where the WLC project as a whole has a significant impact identified in the Revised Sections of the FEIR) as determined by the Revised Traffic Impact Analysis and will be due as each certificate of occupancy is issued. The fair share payments for the significantly impacted road segments and intersections identified in the Revised Sections of the FEIR will be required even though the impact resulting from a specific building does not, by itself, cause a significant impact.

For example, the intersection of Martin Luther King Blvd. and the I-215 northbound ramps (Intersection IN-85) in the City of Riverside was identified as a place where the WLC contributes to cumulatively significant impacts, and where the fair share contribution of the WLC project as a whole was computed to be 0.6%. If the City of Riverside establishes a fair share contribution program consistent with this MM to improve that intersection, then when a certificate of occupancy is to be issued for a 2-million sq. ft. high-cube warehouse in the WLC (approximately 5% of the entire WLC project) the amount of the fair share payment due from the Applicant to the City of Riverside would be computed as follows:

Amount Due = Total cost of Improvement * Total WLC fair Share (0.6%) as determined by TIA * % attributable to the building that is subject to the certificate of occupancy (5%)

A similar calculation would be done for each subsequent building, with payments for each due at the time of issuance of the certificate of occupancy. As a result, while each building individually would not produce a significant impact, and therefore would not be required to pay any mitigation fees if considered by itself, the total amount of the payments for all of the buildings would be equal to the fair share payment for the entire WLC to the extent that the responsible jurisdiction has chosen to adopt a fair share contribution funding program consistent with MM 4.15.7.4F.

4.15.7.4G: City shall work directly with WRCOG to request that TUMF funding priorities be shifted to align with the needs of the City, including improvements identified in this TIA. Toward this end, City shall meet regularly with WRCOG.

Level of Significance after Mitigation: The mitigation measures described above can be usefully grouped into four categories based on who is responsible for the facility, which is the primary determinant of the level of significance after mitigation. The four categories are as follows:

On-Site Improvements – These are changes to the road system within the WLC project site that are being undertaken as part of the WLC project. The developer shall be responsible for constructing the improvements described in the section "Proposed Road Network" in Chapter 4 above in accordance with City standards for roadway construction and the roadway cross-sections in the proposed Specific Plan. Completion of these improvements shall constitute the developer's mitigation of the project's on-site impacts. When these improvements are completed the project's impacts on the roadway system within the WLC project site will be mitigated to a less-than-significant level.

Off-Site Improvements for Non-TUMF Roads Under the Jurisdiction of the City of Moreno Valley - These are improvements to public streets in Moreno Valley that are outside the area covered by the proposed WLC Specific Plan Amendment. The developer shall be responsible for paying the DIF as set forth in Municipal Code Chapter 3.42 which the City shall use to implement the mitigation measures identified in Tables 6.15-1 and 6-15-2. The developer shall also be required to pay its fair share of the improvements to City streets that are not in the DIF program where there are significant project impacts. These payments shall constitute the developer's mitigation of project impacts on this category of roads. When these improvements are completed the project's impacts on the City roadway system will be mitigated to a less-than-significant level.

Off-Site Improvements to TUMF Facilities – These are improvements to roads that are part of the TUMF Regional System of Highways and Arterials, some of which are under the jurisdiction of Moreno Valley and others are located in other jurisdictions. The developer shall be responsible for paying the TUMF fees in effect at the time of approval. These payments shall constitute the developer's mitigation of project impacts to this category of roads.

The City shall implement the mitigation measures identified in Tables 6.15-1 and 6.15-2. to TUMF facilities under the City's jurisdiction. When these improvements are completed the project's impacts on the roadway system within the WLC project site will be mitigated to a less-than-significant level.

The City shall work with the other member agencies of WRCOG to program TUMF funds to implement the mitigation measures outside the jurisdiction of the City of Moreno Valley. To the extent that TUMF fees provided by the developer are used to implement the recommended improvements the project's impacts would be less-than-significant. However, because the City does not have direct control over TUMF funding the City cannot ensure that the identified improvements would be made. Thus at this point the project's impacts on these facilities must be considered significant and unavoidable.

Off-Site Improvements to Roads Outside the Jurisdiction of the City and Not Part of the TUMF Program – This category includes all of the recommended mitigation measures that are under the jurisdiction of Riverside County, Caltrans, and other municipalities and that are not included in the TUMF Regional System of Highways and Arterials.

At this time the City does not have cooperative agreements with neighboring jurisdictions that would serve as a mechanism for collecting and distributing developer funds to cover the cost of cross-jurisdictions mitigation measures, other than the TUMF program. The City shall therefore work with the City of Redlands and Riverside County to collect funds from the developer and to implement the signalization of the San Timoteo Rd./Alessandro Rd. intersection and the San Timoteo Rd./Live Oak Canyon intersection (respectively). The City shall also work with the City of Riverside to collect a fair-share contribution from the developer to signalize the Martin Luther King Blvd./I-215 northbound ramp intersection. To the extent that the City is able to establish such a mechanism (as described in MM Trans-6) and the other jurisdiction constructs the recommended improvement the project's impacts would be less-than-significant. However, because the City cannot guarantee that such a mechanism will be established and does not have direct control over facilities outside of its jurisdiction the City cannot ensure that the identified improvements would be made. Thus at this point the project's impacts on these facilities must be considered significant and unavoidable.

Similarly, the City has not entered into an agreement with Caltrans for the collection of developer payments for improvements to the state highway system other than freeway interchange improvements funded through the TUMF program. Nor has Caltrans established a program to collect fair-share contributions to freeway improvements such as those identified instead, Caltrans has traditionally relied on other means to fund freeway improvements; means involving multiple stages of review and input from other agencies, with priorities and constraints applied at each stage, that preclude a direct connection between developer-provided fair-share funds and specific highway improvements.

Decisions on funding for improvements to the state highway system are made by four bodies, namely[1]:

> Legislature: Establishes overall policies, including determining funding sources and distribution, and spending priorities through state statutes such as Revenue and Taxation Code, Streets and Highways Code, and Government Code. The Legislature appropriates funds through the annual budget for transportation projects and has authority to designate transportation projects statutorily.
>
> California Transportation Commission (CTC): The nine-member CTC, appointed by the Governor, reviews and adopts the state transportation programs and approves projects nominated by Caltrans and regional agencies for funding. The CTC recommends policy and funding priorities to the Legislature and is also responsible for project delivery oversight.
>
> California Department of Transportation (Caltrans): Caltrans owns, operates and maintains the state highway system. Caltrans plans, designs, and nominates interregional capital improvement projects on the state highway system and also manages the intercity rail operation.
>
> Metropolitan Planning Organizations (MPOs) and Regional Transportation Planning Agencies (RTPAs): MPOs and RTPAs are responsible for planning, coordinating and administering funds for regional transportation systems. In California, 17 MPOs and 48 RTPAs develop 20-year Regional Transportation Plans (RTPs) as well as 5-year Regional Transportation Improvement Program (RTIP), which identify projects for the regional portion of the State Transportation Improvement Program (STIP). SCAG is the MPO for Riverside County.

Most funds for improvements to the state highway system come through the State Highway Account (SHA), which receives funding from a variety of sources including:

- motor vehicle fuel taxes, part of which goes into the Highway Users Tax Account, a portion of which goes to the SHA and the rest goes to cities and counties according to a statutory formula.
- The fuel tax swap, enacted in 2011 (Fuel Tax Swap Fix), reenacted the provisions of the Fuel Tax Swap of 2010 addressing issues raised by the passage of Propositions 22 and 26. The Fuel Tax Swap eliminated the state sales tax on gasoline and instead imposed an additional excise tax on gasoline of 17.3¢ (July 2010). The increase in the excise tax would generate revenues equivalent to what would have been collected from the state sales tax on gasoline. These revenues are intended for new road construction (STIP), highway maintenance and operations (SHOPP), and local roadways.

---

[1] This information came from *Transportation Funding in California*, Caltrans Economic Analysis Branch, 2011, page 2.

- the federal fuel tax, which goes into the Highway Trust fund for use on the portions of the system that are designated ad federal aid highways.

In addition, local sales tax measures, such as Measure A in Riverside County, and the proceeds of Proposition 1B provide funding for improvements to certain portions of the state highway system.

The key feature of this system pertaining to the recommended freeway mitigation measures is that this system is outside the control of the City of Moreno Valley. The City shall work with Caltrans to establish a mechanism for collecting funds from developers for use in funding needed freeway improvements (as described in MM Trans-6). However, since at the present time no such mechanism exists that would ensure that WLC funds contributed to Caltrans or any other state agency would be used to implement specific improvements that mitigate WLC impacts, and there is no mechanism by which the City can construct or guarantee the construction of any improvements to the freeway system by itself, the project's impacts on the state highway system must be considered significant and unavoidable.

Cumulative traffic impacts and mitigation measures have been evaluated for the following scenarios:

- Cumulative Impacts – Roadway Sections
- Cumulative Impacts – Intersections
- Cumulative Impacts – Freeway Impacts

Cumulative traffic impacts and mitigation measures are documented in the tables in Appendix F:

- Cumulative Impacts – Roadway Sections: Appendix F, Table 74
- Cumulative Impacts – Intersections: Appendix F, Table 75
- Cumulative Impacts – Freeway Impacts: Appendix F, Table 76

All cumulative traffic impacts have been reduced to less than significant levels through the application of the identified mitigation measures. Some mitigation measures may be determined to be infeasible and as a result, cause a significant cumulative impact.

Threshold: Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways, and freeways, pedestrian and bicycle paths, and mass transit.

Would the project conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

A significant project-specific traffic impact would occur if the project would cause a decrease from satisfactory LOS (based on local agency adopted standards) to an unsatisfactory LOS on a study area intersection, roadway segment, freeway mainline lane, freeway weaving segment or freeway ramp. A significant cumulative traffic impact would occur if the project contributes traffic toward those facilities operating at unsatisfactory LOS in the pre-project condition. The adopted LOS standards are as follows:

– Roadway segments: LOS C and LOS D as outlined in previously referenced Tables 4.15.B and 4.15.C.

– Intersections: LOS C and LOS D as outlined in previously referenced Table 4.15.Z.

- Freeway mainline: LOS D.
- Freeway Ramp Merge/Diverge: LOS D.

Cumulative Impact Analysis: Please refer to Appendix F for the cumulative traffic impact analysis.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Please refer to Appendix F and below for mitigation measures.

Significance Level After Mitigation: Less than significant impact.

6.15.3.9 Freeway Impacts from Truck Trips to the Ports of Los Angeles and Long Beach

Impact: *The project's contribution to freeway impacts from truck trips to the Ports of Los Angeles and Long Beach would be cumulatively considerable.*

Cumulative traffic impacts and mitigation measures have been evaluated for the following scenarios:

- Volumes Along Routes to Ports
- Cumulative Impacts – Roadway Sections
- Cumulative Impacts – Intersections
- Cumulative Impacts – Freeway Impacts

Cumulative traffic impacts and mitigation measures are documented in the tables in Appendix F:

- Volumes Along Routes to Ports: Appendix F, Tables 87-98
- Cumulative Impacts – Roadway Sections: Appendix F, Table 74
- Cumulative Impacts – Intersections: Appendix F, Table 75
- Cumulative Impacts – Freeway Impacts: Appendix F, Table 76

All cumulative traffic impacts have been reduced to less than significant levels through the application of the identified mitigation measures. Some mitigation measures may be determined to be infeasible and as a result, cause a significant cumulative impact.

Threshold: Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways, and freeways, pedestrian and bicycle paths, and mass transit.

Would the project conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

A significant project-specific traffic impact would occur if the project would cause a decrease from satisfactory LOS (based on local agency adopted standards) to an unsatisfactory LOS on a study area intersection, roadway segment, freeway mainline lane, freeway weaving segment or freeway ramp. A significant cumulative traffic impact would occur if the project contributes traffic toward those facilities operating at unsatisfactory LOS in the pre-project condition. The adopted LOS standards are as follows:

- Roadway segments: LOS C and LOS D as outlined in previously referenced Tables 4.15.B and 4.15.C.

  - Intersections: LOS C and LOS D as outlined in previously referenced Table 4.15.2.
  - Freeway mainline: LOS D.
  - Freeway Ramp Merge/Diverge: LOS D.

Cumulative Impact Analysis: Please refer to Appendix F for the cumulative traffic impact analysis.

Significance Level Before Mitigation: Significant impact.

Mitigation Measures: Please refer to Appendix F and below for mitigation measures.

Significant Level After Mitigation: Less than significant impact.

Mitigation Measure Summary

Based on the analysis described above following Mitigation Measures are required:

6.16 Utilities and Service Systems

Cumulative effects to utilities and service systems are described in this section. A summary of the project's incremental contribution to potential cumulative impacts to utilities and service system issues is provided in Section 6.16.1. The geographic and temporal scopes for utilities and service systems is provided in Section 6.16.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the utilities and service systems issues are discussed in Section 6.16.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 6.16.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the City will fully build out by 2040, the cumulative impact analysis assumes a more intense level of cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts. The cumulative projects identified in Tables 6.16-1 and 6.16-2, and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if their impacts would cause or contribute to a significant cumulative impact and, if so, whether the project's incremental impact would be cumulatively considerable.

6.16.1 Project Impact Findings

The project's effects to utilities and service systems are summarized in this section, and the impacts have been evaluated against the following thresholds that were developed based on the CEQA Guidelines Appendix G thresholds, as modified to address potential project impacts. After each threshold, a significance determination for the project's impacts (see Section 4.16 of the Revised Sections of the FEIR) is provided as well as a reference to the specific section and impact number if the impact determination is significant.

6.16.1.1 Water Supply

Would the project:

- Require or result in the construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects; **Less than Significant, Section 4.16.1.5.1.**
- Have insufficient water supplies available to serve the project from existing entitlements and resources, or need new or expanded entitlements. **Less than Significant with Mitigation, Section 4.16.1.6.1.**
- Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects; **Less than Significant with Mitigation, Section 4.16.1.6.2.**

6.16.1.2 Wastewater

Would the project:

- Exceed wastewater treatment requirements of the Santa Ana Regional Water Quality Control Board; **Less than Significant, Section 4.16.2.5.1.**
- Result in a determination by the wastewater treatment provider, which services or may serve the project, that it lacks adequate capacity to serve the project's projected demand in addition to the provider's existing commitments; **Less than Significant, Section 4.16.2.5.2.**
- Require or result in the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. **Less than Significant, Section 4.16.2.5.2.**

6.16.1.3 Solid Waste

Would the project:

- Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs; **Less than Significant, Section 4.16.3.5.1.**
- Fail to comply with applicable Federal, State, and local statutes and regulations related to solid waste. **Less than Significant, Section 4.16.3.5.2.**

6.16.2 Geographic and Temporal Scope

The cumulative impact geographic area for utilities and service systems includes the Eastern Municipal Water District (EMWD) and Waste Management Services areas. The geographic area was selected to access the potential impacts to capacity within each service district. Cumulative impacts to utilities and service systems could result from impacts of the project in conjunction with the impacts of other past, present and future projects located within the EMWD and Waste Management service areas. The cumulative projects geographic boundary for Utilities and Service Systems is shown in Figure 6.16-1, Water and Wastewater and Figure 6.16-2B, Solid Waste. The projects located within the utilities and service systems cumulative impact area are listed in Table 6.16-1 and 6.16-2. The project would contribute to cumulative utilities and service system impacts starting with project construction and lasting for the duration of the project.

Table 6.16-1: Water and Wastewater Cumulative Projects Summary

Project ID	Project	Environmental Document Summary
H-3	Tres Cerritos Specific Plan	Per the City of Hemet's 2008 EIR, the Tres Cerritos Specific Plan would result in the development of 787 residential units, park and open space, on 154.7 acres. The project requires water and wastewater service which could result in cumulative impacts.
H-4	Sanderson Square	Per the City of Hemet's 2006 IS, the Sanderson Square Specific Plan would result in the development off commercial and industrial uses on approximately 45 acres. The project requires water and wastewater service which could result in cumulative impacts.
H-5	McSweeny Farms Specific Plan	Per the City of Hemet's 2003 EIR, the McSweeny Farms Properties Specific Plan would result in the construction of 2,482 residential units within 442 acres. The project requires water and wastewater service which could result in cumulative impacts.
H-6	Ramona Creek Specific Plan	Per the City of Hemet's 2014 EIR, the Ramona Creek Specific Plan and General Plan Amendment would result in the development of a multiple-use commercial and residential community. The project requires water and wastewater service which could result in cumulative impacts.
H-7	Peppertree Specific Plan	Per the City of Hemet's 2003 ISMND, the Peppertree Specific Plan would result in the development of 456 residences, and recreational spaces of 79.2 acres. The project requires water and wastewater service which could result in cumulative impacts.
H-9	Pulte Del Web (TTM 31807 and 31808)	Per the City of Hemet's 2005 SEIR, the Tentative Tract Map 31807, Tentative Tract Map 31808, and Specific Plan Amendment SPA 04-1 would result in the amendment of a land use plan for a 10 acre site from commercial to high medium density residential and the division of 154.77 acres into 611 residential lots, an adult community center, and open space. The project requires water and wastewater service which could result in cumulative impacts.
H-10	Downtown Hemet Specific Plan	Per the City of Hemet’s 2017 ISMND, the proposed Downtown Hemet Specific Plan is a comprehensive plan that features a land use plan, circulation plan, urban design framework, utility infrastructure plan, development standards, design guidelines, and sustainability plan for future development within a 360-acre area in downtown Hemet. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
M-11	PA 06-0014 (Pierce Hardy Limited Partnership)	Per the March Joint Power's Authority's draft ND, the project would construct a Retail/Storage Lumber Yard Complex (approximately 67,800 square feet of total building space) on 11.0 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-3	ProLogis	Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-4	Westridge Commerce Center	Per the City of Moreno Valley's April 2011 Final EIR, the project would develop approximately 937,260 square feet of light industrial warehouse/ distribution uses and related infrastructure on 55 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley's 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf. The project requires water and wastewater service which could result in cumulative impacts.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes. The project requires water and wastewater service which could result in cumulative impacts.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes. The project requires water and wastewater service which could result in cumulative impacts.
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-20	Moreno Marketplace	Per the City of Moreno Valley's June 2006 Negative Declaration, this project would develop a 95,905 square foot retail center on 10.46 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-24	TM 36436 (PA12-0005)	Per the City of Moreno Valley's December 2012 MND, this project would subdivide 43.52 acres for 159 single family residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acres The project requires water and wastewater service which could result in cumulative impacts.
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-34	TR34397 / Winchester Associates	Per the City of Moreno Valley's April 2007 initial study/environmental checklist form, the project would subdivide 19 acres for 50 single-family residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-36	TM 31618 (PA03-0106)	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 18.99 acres for 56 single-family residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-39	VIP Moreno Valley (Sares Regis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-41	First Nandina Logistics Center	Based on the City of Moreno Valley's October 2014 Facts, Findings, and Statement of Overriding Considerations, the project would develop approximately1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of mezzanine space on 72.9 acres.
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site. The project requires water and wastewater service which could result in cumulative impacts.
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a project that will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land. The project requires water and wastewater service which could result in cumulative impacts.
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped. The project requires water and wastewater service which could result in cumulative impacts.
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space. The project requires water and wastewater service which could result in cumulative impacts.
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land. The project requires water and wastewater service which could result in cumulative impacts.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space. The project requires water and wastewater service which could result in cumulative impacts.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots.
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units. The project requires water and wastewater service which could result in cumulative impacts. The project requires water and wastewater service which could result in cumulative impacts. The project requires water and wastewater service which could result in cumulative impacts.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 sq new retail/commercial uses on the approximately 22.28-acre site. The project requires water and wastewater service which could result in cumulative impacts.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area. The project requires water and wastewater service which could result in cumulative impacts.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel. The project requires water and wastewater service which could result in cumulative impacts.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. The project requires water and wastewater service which could result in cumulative impacts.
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone. The project requires water and wastewater service which could result in cumulative impacts.
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots. The project requires water and wastewater service which could result in cumulative impacts.
MV-88	TR33771 / Creative Design Associates	
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594. The project requires water and wastewater service which could result in cumulative impacts.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area. The project requires water and wastewater service which could result in cumulative impacts.
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project. The project requires water and wastewater service which could result in cumulative impacts.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans. The project requires water and wastewater service which could result in cumulative impacts.
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's 2006 ND, the project would subdivide a 46 gross acre site into 78 single-family residential lots within area adjacent to city limits. Applicant is proposing Pre-zoning and a GP Amendment to establish an R3 land use district and request the expansion of the Moreno Valley SOI and annex the project into the City. The project requires water and wastewater service which could result in cumulative impacts.
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision. The project requires water and wastewater service which could result in cumulative impacts.
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site. The project requires water and wastewater service which could result in cumulative impacts.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres.
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses. The project requires water and wastewater service which could result in cumulative impacts.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes. The project requires water and wastewater service which could result in cumulative impacts.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres. The project requires water and wastewater service which could result in cumulative impacts.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes. The project requires water and wastewater service which could result in cumulative impacts.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes. The project requires water and wastewater service which could result in cumulative impacts.
P-2	TR34716	Per the City of Perris' 2013 FEIR, the project involves the construction and operation of up to 600,000 gross square feet (gsf) of light industrial/warehouse uses. The project requires water and wastewater service which could result in cumulative impacts.
P-4	Bookend	Per the City of Perris' 2015 MND, the project proposed to subdivide an existing vacant parcel into five new industrial parcels with a total building area of 165,000 sf. The project requires water and wastewater service which could result in cumulative impacts.
P-5	Markham East	Per the City of Perris's June 2007 Notice of Determination, the project would develop 462,692 square feet of light industrial warehouse/distribution uses in a single building with associated roadway and utility infrastructure and landscape improvements on 22.25 acres. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
P-7	Duke Warehouse	Per the City of Perris's Facts, Findings and Statement of Overriding Considerations, the project would redesign ate a large portion of the northern part of the City with broad categories of compatible commercial and industrial uses on 34.57 acres. Uses would include a 668,681 square foot industrial/warehouse building that includes 19,200 square feet of office space. The project requires water and wastewater service which could result in cumulative impacts.
P-8	First Perry Logistics Project	Per the City of Perris's November 2017 Notice of Determination, the project would develop a 236,961 square foot industrial building on 11.06 acres. The project requires water and wastewater service which could result in cumulative impacts.
P-10	IDS	Per City of Perris 2005 Final EIR would result in the Perris Warehouse/Distribution Facility Project. The project requires water and wastewater service which could result in cumulative impacts.
P-11	Ridge II	Per the City of Perris 2007 NOC and Environmental Doc Transmittal, project proposes a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures. The project requires water and wastewater service which could result in cumulative impacts.
P-14	Rados Distribution Center	Per the City of Perris 2010 Final EIR, project is an approximately 1,191,080 sq ft distribution center on approximately 61.63 gross acres. The project requires water and wastewater service which could result in cumulative impacts.
P-15	Duke Perris Logistics Center I	Per the City of Perris 2017 Fina EIR, the project would result in the Duke Warehouse at Indian Avenue and Markham Street. The project requires water and wastewater service which could result in cumulative impacts.
P-16	Perris Ridge Commerce Center I	Per the City of Perris' 2007 EIR, the project proposes the establishment of a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures on 91 acres. The project requires water and wastewater service which could result in cumulative impacts.
P-18	P07-07-0029	Per the City of Perris' 2009 EIR, the project proposed to construct a 1,608,322 sf industrial complex comprised of five buildings on 92.3 acres. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
P-19	P05-0192	Per the City of Perris' 2006 EIR, the project proposed development of an approximately 700,000 square foot industrial building on a 40-acre. The project requires water and wastewater service which could result in cumulative impacts.
P-20	P05-0113	Per the City of Perris' 2009 EIR, the project proposed subdividing the site into five legal parcels, four of which would be developed with industrial/warehouse buildings for a total of 1,750,000 sf. The project requires water and wastewater service which could result in cumulative impacts.
P-21	P07-09-0018	Per the City of Perris' 2008 IS, the project proposed the development of a 173,000 sf industrial building on 8.7 acres. The project requires water and wastewater service which could result in cumulative impacts.
P-22	NICOL	Per the City of Perris' 2016 IS/MND, the project proposed a 380,000 sf warehouse building on 21.63 acres. The project requires water and wastewater service which could result in cumulative impacts.
P-23	Westcoast Textiles	Per the City of Perris' 2016 IS, the project proposed construction of a 187,850 sf industrial/manufacturing building on 9 acres. The project requires water and wastewater service which could result in cumulative impacts.
P-24	Optimus Logistics Center 1	Per the City of Perris' 2016 EIR, the project proposed to construct a high-cube warehouse consisting of two buildings totaling 1,455,781 sf on 68.99 acres. The project requires water and wastewater service which could result in cumulative impacts.
P-25	Optimus Logistics Center 2	Per the City of Perris' 2015 EIR, the project proposed construction of warehouse development site encompassing 1,037,811 square feet in two buildings on 48.4 acres. The project requires water and wastewater service which could result in cumulative impacts.
P-26	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 811,620 square feet (sf) of industrial high-cube, non-refrigerated warehouse/distribution uses on the approximate 37.3-acre site. The project requires water and wastewater service which could result in cumulative impacts.
P-27	Perris DC (Industrial Property Trust)/Integra	Per the City of Perris' 2014 EIR, the project proposed construction and operation of up to 864,000 square feet (sf) of industrial warehouse/distribution uses on the approximate 43.2-acre site. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
P-28	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 1,189,860 square feet (sf) of high-cube warehouse/distribution uses on the approximate 55-acre Project site. The project requires water and wastewater service which could result in cumulative impacts.
P-30	Avelina	Per the City of Perris' 2003 IS, the project proposed to increase residential density on a 158.2 acre property to 475 dwelling units. The project requires water and wastewater service which could result in cumulative impacts.
P-31	Perris Family Apartments	Per the City of Perris' 2013 IS, the project proposed to construct a 75-unit multi-family apartment complex on 7 vacant acres. The project requires water and wastewater service which could result in cumulative impacts.
P-32	Lewis Retail Center	Per the City of Perris' 2009 IS, the project proposed to construct 643,000 sf of commercial shopping center on 68 acres. The project requires water and wastewater service which could result in cumulative impacts.
P-35	Verano Apartments	Per the City of Perris' 2013 IS, the project proposed increasing the number of residential units from 19 to 40 and reducing the commercial component from 17,000 sq. ft. to 1,000 sq. ft. for retail and to allow a 2,000 sq. ft. day care facility. The project requires water and wastewater service which could result in cumulative impacts.
P-58	Jordan Distribution	Per the City of Perris's June 2008 Notice of Determination, the project would develop a 378,521 square foot tilt-up industrial building for warehouse distribution uses on 17.1 acres. The project requires water and wastewater service which could result in cumulative impacts.

Project ID	Project	Environmental Document Summary
R-5	Canyon Springs Healthcare Campus Specific Plan	Per the City of Riverside's July 2017 Draft EIR, the project would develop a healthcare campus on 50.85 acres, including an approximately 234-unit senior housing facility; approximately 310,200-square-foot (267-unit, 290-bed) independent living/memory care, assisted living, and skilled nursing facility; an approximately 324,000-square-foot (180-bed) hospital; approximately 22,000 square-foot central energy plant; approximately 70,000-square-foot medical office building; an additional 300,000-square feet of medical office building uses with retail; multiple multi-level parking structures; and an approximately 180,000-square-foot (100-bed) hospital addition. A helipad/helistop also is proposed. The project requires water and wastewater service which could result in cumulative impacts.
RC-5	Villages of Lakeview -Residential/Commercial Development	Per Riverside County's August 2016 Draft EIR, the Villages of Lakeview project proposes a master-planned community comprised of approximately 2,800 acres in the Lakeview/Nuevo area of Riverside County. Proposed land uses within the Specific Plan include a wide range of residential products, mixed-uses, retail, schools with joint-use parks, public and private amenities, an array of parks, trails, open space, roads, and other infrastructure. Existing infrastructure such as water, sewer, storm drain, and roadways will also be expanded as part of the Villages of Lakeview project. The project requires water and wastewater service which could result in cumulative impacts.
RC-9	Oleander Business Park, PP20699	Per what appear to be public meeting slides presenting information about Riverside County's May 2008 Final EIR for this project, the project would subdivide approximately 68.8 acres to develop approximately 1,206,710 square feet of industrial buildings. The project requires water and wastewater service which could result in cumulative impacts.
RC-10	Majestic Freeway Business Center, SP 341 / PP21552	Per Riverside County's December 2006 Initial Study, the project would develop 947,000 square feet of light industrial warehouse and distribution uses and a 1.62 acre detention basin on 47.25 acres.

Project ID	Project	Environmental Document Summary
RC-34	Emerald Acres SP (SP00381)	Per Riverside County's January 2016 Initial Study, the project would develop the approximately 332.6-acre site as a residential community consisting of a maximum of 355 single family dwelling units on 76.3 acres; 179 multi-family dwelling units on 16.7 acres; 4.88 acres of commercial uses; a community park on 6.8 acres; 209.7 acres of open space; a 0.9-acre sewer lift station; and roadway improvements. The project requires water and wastewater service which could result in cumulative impacts.
RC-35	TR34677, TR31100, TR32391, TR33448, TR31101, TR31009, TR32282	Per Riverside County's February 2004 environmental assessment form/initial study, the project would subdivide 6.7 acres of a 71 acre parcel into 8 single-family residential lots, a detention basin, and 2.2 acres of open space. The project requires water and wastewater service which could result in cumulative impacts.
RC-38	San Gorgonio Crossings	Per Riverside County's May 2017 Recirculated Draft EIR, the project would develop two house high-cube warehouse buildings on an approximately 229 acre site, of which approximately 16 acres are located within the City of Calimesa. Approximately 140.23 acres of the site would be included within the developed portion of the project; 84.8 acres would remain natural open space. The project requires water and wastewater service which could result in cumulative impacts.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife’s 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking. The project requires water and wastewater service which could result in cumulative impacts.

Table 6.16-2: Solid Waste Cumulative Projects Summary

Project ID	Project Name	Environmental Document Summary
B-3	Heartland	Per the City of Beaumont Planning Department's 1994 EIR, the Heartland Specific Plan would develop low and medium density housing, and supporting land uses on 417.2 acres.
B-4	Hidden Canyon	Per the City of Beaumont Planning Department's 2004 EIR, the Hidden Canyon EIR Addendum to the Beaumont Gateway Specific Plan would result in the development of 426 residential units, commercial space and open space on 196.5 acres
B-5	ProLogis/Rolling Hills Ranch Industrial	Per the City of Beaumont Planning Department's 2004 EIR, the Second Amendment to the Rolling Hills Ranch Specific Plan would change the 152,9 acre property's General Plan land use designation from low density residential to Business Park
B-7	Kirkwood Ranch (#14)	Per the City of Beaumont Planning Department's 1990 EIR, the Kirkwood Ranch Specific Plan would develop 470 single family detached units and 60 multi-family units on a 128 acre site.
B-9	Sundance (#17)	Per the City of Beaumont Planning Department's 2004 EIR, the Sundance Specific Plan Amendment to the Deutsch Specific Plan would result in the development of 1,968 single-family units, 2,208 homes, and 540 condo units, commercial space, and supporting land uses on 1,195 acres
B-10	Tract No. 32850 (#39)	Per the City of Beaumont Planning Department's 2005 ND, the Tract Map 32850 would divide a 29.09 acre parcel into 103 single-family residential lots.
B-11	San Gorgonio Village, Phase 2 (#45)	Per the City of Beaumont Planning Department's 2007 MND, the San Gregorio Village Specific Plan would provide for the development of approximately 225,000 square feet of commercial and restaurant uses on approximately 23 acres.
B-12	Beaumont Commercial Center	Per the City of Beaumont Planning Department's 2016 IS, the Beaumont Commercial Center would provide for the development of five commercial buildings with 58,603 square feet of retails, service, and restaurant uses.
B-14	Potrero Creek Estates (#26)	Per the City of Beaumont Planning Department's 1988 EIR, the Potrero Creek Estates Specific Plan would result in the residential development of 1,028 single family lots on 737 acres.
H-3	Tres Cerritos Specific Plan	Per the City of Hemet's 2008 EIR , the Tres Cerritos Specific Plan would result in the development of 787 residential units, park and open space, on 154.7 acres.

Project ID	Project Name	Environmental Document Summary
H-4	Sanderson Square	Per the City of Hemet's 2006 IS, the Sanderson Square Specific Plan would result in the development off commercial and industrial uses on approximately 45 acres.
H-5	McSweeny Farms Specific Plan	Per the City of Hemet's 2003 EIR, the McSweeny Farms Properties Specific Plan would result in the construction of 2,482 residential units within 442 acres.
H-6	Ramona Creek Specific Plan	Per the City of Hemet's 2014 EIR, the Ramona Creek Specific Plan and General Plan Amendment would result in the development of a multiple-use commercial and residential community.
H-7	Peppertree Specific Plan	Per the City of Hemet's 2003 ISMND, the Peppertree Specific Plan would result in the development of 456 residences, and recreational spaces of 79.2 acres
H-9	Pulte Del Web (TTM 31807 and 31808)	Per the City of Hemet's 2005 SEIR, the Tentative Tract Map 31807, Tentative Tract Map 31808, and Specific Plan Amendment SPA 04-1 would result in the amendment of a land use plan for a 10 acre site from commercial to high medium density residential and the division of 154.77 acres into 611 residential lots, an adult community center, and open space.
H-10	Downtown Hemet Specific Plan	Per the City of Hemet’s 2017 ISMND, the proposed Downtown Hemet Specific Plan is a comprehensive plan that features a land use plan, circulation plan, urban design framework, utility infrastructure plan, development standards, design guidelines, and sustainability plan for future development within a 360-acre area in downtown Hemet.
M-2	Meridian Business Park Phases I and II	Per the March Joint Powers Authority's 2017 EIR , the project would result in the development of a 130 acre business park.
M-8	March LifeCare Campus Specific Plan	Per the March Joint Powers Authority's 2009 EIR, the project would result in the development of a medical campus on approximately 236 acres.
M-11	PA 06-0014 (Pierce Hardy Limited Partnership)	Per the March Joint Power’s Authority’s draft ND, the project would construct a Retail/Storage Lumber Yard Complex (approximately 67,800 square feet of total building space) on 11.0 acres.
MV-3	ProLogis	Per the City of Moreno Valley's September 2014 EIR, this project would develop approximately 2,244,638 square feet of distribution warehouse uses on approximately 122.8-acres.
MV-4	Westridge Commerce Center	Per the City of Moreno Valley's April 2011 Final EIR, the project would develop approximately 937,260 square feet of light industrial warehouse/ distribution uses and related infrastructure on 55 acres.

Project ID	Project Name	Environmental Document Summary
MV-7	TR33962 / Pacific Scene Homes	Per the City of Moreno Valley's 2006 ND, the project would subdivide 20 acres into 31 single-family residential lots ranging in size from 20,001 sf to 27,562 sf.
MV-8	TR32460 / Sussex Capital	Per the City of Moreno Valley's 2006 ND, the project proposes 57 single family residential lots and 2 detention basins on 36.7 acres.
MV-10	TR30998 / Pacific Communities	Per the City of Moreno Valley, the project would subdivide 60 acres into 47 single family lots.
MV-11	TR30411 / Pacific Communities	Per the City of Moreno Valley's 2002 Negative Declaration, this project would result in 25 single family homes on 30.02 acres.
MV-14	TR32548 / Gabel, Cook & Associates	Per the City of Moreno Valley's November 2005 Negative Declaration, this project would subdivide 36.24 acres for residential purposes.
MV-15	TR32218 / Whitney	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 17.25 acres for 63 single-family homes and open space.
MV-16	TR32284 / 26thCorporation & Granite Capitol	Per the City of Moreno Valley's October 2004 Negative Declaration, this project would result in the development of 32 residential lots on 8.77 acres.
MV-17	TR31590 / Winchester Associates	Per the City of Moreno Valley's May 2005 Negative Declaration, this project would subdivide 30acres for 96 single family homes.
MV-18	Convenience Store / Fueling Station	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a gas station (including a 4,000 square foot convenience store and an automated drive through car wash) on 4.17 acres.
MV-19	Senior Assisted Living	Per the City of Moreno Valley's environmental checklist/initial study, this project would develop a 98,434 square foot, 139 unit (155 bed) senior assisted living facility on 7.33 acres.
MV-20	Moreno Marketplace	Per the City of Moreno Valley's June 2006 Negative Declaration, this project would develop a 95,905 square foot retail center on 10.46 acres.
MV-21	PEN16-0053 Medical Center	Per the City of Moreno Valley's November 2017 MND, this project would develop a medical complex on 18.38 acres.
MV-22	TR36882 (PA15-0010) SFR	Per the City of Moreno Valley's June 2015 MND, this project would subdivide 9.4 acres for 40 residential lots.
MV-24	TM 36436 (PA12-0005)	Per the City of Moreno Valley's December 2012 MND, this project would subdivide 43.52 acres for 159 single family residential lots.
MV-25	TR32142	Per the City of Moreno Valley's June 2004 Negative Declaration, this project would result in the development of 172 multi-family residences on 19.3 acres.

Project ID	Project Name	Environmental Document Summary
MV-27	TR32917 / Empire land	Per the City of Moreno Valley's March 2005 Negative Declaration, this project would result in the development of a 227-unit condominium project on 17.9 acres.
MV-28	TR34329 / Granite Capitol	Per the City of Moreno Valley's June 2007 initial study/environmental checklist form, this project would result in the development of 90 condominium units on 10.41 acre
MV-29	TR36340	Per the City of Moreno Valley's April 2005 Negative Declaration, this project would develop a 276-unit condominium complex on 32 acres.
MV-30	PA03-0168 TR 31517	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 31.71 acres for the development of 83 single-family residential lots.
MV-32	TTM 31592 (P13-078) SFR	Per the City of Moreno Valley's March 2014 Negative Declaration/Addendum, the project revises downward the level of previously-approved development. As a result, 115 single-family homes would be built on 64.65 acres within an overall project site of 203.52 acres.
MV-33	TR32645 / Winchester Associates	Per the City of Moreno Valley's December 2004 Negative Declaration, the project would subdivide 20 acres for 53 single-family residential lots.
MV-34	TR34397 / Winchester Associates	Per the City of Moreno Valley's April 2007 initial study/environmental checklist form, the project would subdivide 19 acres for 50 single-family residential lots.
MV-35	TR31771 / Sanchez	Per the City of Moreno Valley's April 2006 Negative Declaration, the project would subdivide 9.34 acres for 25 single-family residential lots and two water quality basins.
MV-36	TM 31618 (PA03-0106)	Per the City of Moreno Valley's November 2004 Negative Declaration, the project would subdivide 18.99 acres for 56 single-family residential lots.
MV-37	Vogel /PA09-004	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres.
MV-39	VIP Moreno Valley (SaresRegis/Vogel)	Per the City of Moreno Valley's June 2012 EIR, the project would develop approximately 1,616,133 square feet of distribution warehouse uses (including business office space and parking) on approximately 71 acres.
MV-41	First Nandina Logistics Center	Based on the City of Moreno Valley's October 2014 Facts, Findings, and Statement of Overriding Considerations, the project would develop approximately1,371,210 square feet of warehouse uses; 12,000 square feet of office space; and 66,790 square feet of mezzanine space on 72.9 acres.

Project ID	Project Name	Environmental Document Summary
MV-42	Indian Street Commerce Center	Per the City of Moreno Valley's 2016 FEIR, the project would prepare the Indian Street Commerce Center Project which proposes approximately 446,350 square feet of light industrial uses within an approximately 19.64-acre site.
MV-43	Ivan Devries / PA06-0017	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare the IS for a project that will build distribution warehouse buildings totaling approximately 569,200 sf on 28.64 acres of land.
MV-44	Modular Logistics Center (Kearny RE Co)	Per the City of Moreno Valley's 2017 FEIR, the project would prepare an EIR that would redevelop 50.84 acres with one logistic warehouse building containing 1,109,378 sf of building space with 256 loading bays.
MV-48	PA11-001 thru 007, March Business Center (Industrial Area SP)	Per the City of Moreno Valley's Environmental Checklist, the project would prepare an EIR to subdivide 75.05-acre property into four parcels with business center land uses.
MV-49	PA07-0079/0080/0093, & 0121 and PA08-0018, Indian Business Park, (Industrial Area SP)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare an IS for one 1,560,046 sf warehouse building on a project site that is currently vacant and undeveloped.
MV-50	San Michele Industrial Center, (Industrial Area SP)	Per the City of Moreno Valley's 2005 ND, the project would prepare an ND for a 414,533 sf warehouse distribution facility on 17.17-net acre site.
MV-51	Nandina Distribution Center IDS	Per the City of Moreno Valley's 2007 IS and Environmental Checklist, the project would prepare an MND to construct a 770,867 square foot industrial building located on the southeast corner of Heacock Street and San Michele Road on approximately 38 acres.
MV-52	First Industrial III & IV, (Industrial Area SP)	Per the City of Moreno Valley's 2008 IS and Environmental Checklist, the project would prepare an MND for a project that consists of two industrial buildings with a total of approximately 880,000 square feet of warehouse space.
MV-53	I-215 Logistics Center (Amazon)	Per the City of Moreno Valley's IS and Environmental Checklist, the project would prepare a MND for the construction of two (2) distribution warehouse buildings totaling 1,705,000 sf on approximately 76 acres of land.
MV-54	Moreno Valley Logistics Center (Prologis)	Per the City of Moreno Valley's 2017 MMP, the project would prepare MMP for the construction and operation of a logistics center with four (4) buildings and a combined 1,736,180 square feet (sf) of total floor space.
MV-57	Tract Map 34151	Per the City of Moreno Valley's 2006 General Plan Resolution, the project would subdivide 8.95 acres into 37 single-family lots.

Project ID	Project Name	Environmental Document Summary
MV-58	Tract Map 33024	Per the City of Moreno Valley's 2005 General Plan Resolution, the project would subdivide 2.17-net acres into 8 single-family lots.
MV-59	Tract Map 31442	Per the City of Moreno Valley's 2004 MND, the project would subdivide the 15.8-net acres into 63 single-family residential lots.
MV-60	Tract Map 36401	Per the City of Moreno Valley's 2012 ND, the project would subdivide 19.4 acre project site and 9 common areas lot to build three types of residential product for a total of 216 dwelling units.
MV-61	Walmart & Gas Station	Per the City of Moreno Valley's 2015 FEIR, the project would develop approximately 193,000 square feet of new retail/commercial uses on the approximately 22.28-acre site.
MV-63	PA14-0053 (TTM 36760) Legacy Park	Per the City of Moreno Valley's 2017 MND, the project would subdivide the 53 acre site into a total of 221 single family residential lots.
MV-65	TR33607 / TL Group	Per the City of Moreno Valley's 2006 ND, the project would complete a 52-unti condominium on 4.28 acres.
MV-66	TR34988 / Stratus Properties	Per the City of Moreno Valley's 2007 ND, the project would propose 271 units on 3.75 acres of outdoor recreation area.
MV-67	TR32515	Per the City of Moreno Valley's 2005 ND, the project would develop 174 senior single-family residential lots and retain natural open space on a 38.4 acre parcel.
MV-68	PA07-0035	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel.
MV-69	PA07-0039, (Industrial Area SP)	Per the City of Moreno Valley's 2009 ND, the project would develop six industrial buildings on 19.14 acre parcel.
MV-75	Aqua Bella Specific Plan	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres.
MV-78	Overton Moore Properties PA08-0072	Per the City of Moreno Valley's 2005 EIR, the project would develop a gated active-adult community containing 2,922 dwelling units on 685 acres.
MV-79	Shaw Development	Per the City of Moreno Valley's 2014 IS and Environmental Checklist, the project proposes construction and operation of an approximate 366,698 square-foot warehouse on approximately 16.07 acres.
MV-80	PA15-0032 MV Cactus Center	Per the City of Moreno Valley's 2017 IS and environmental checklist, the project proposes to develop a 39,950 sf warehouse building, gas station, car wash, and 3 fast-food restaurant on 6.3 acres.
MV-81	Ridge Property Trust, PA07-0147 & PA 07-0157	Per the City of Moreno Valley's 2010 IS and environmental checklist, the project proposed to build a 353,859 sf warehouse distribution building on 16.55 acres in a light industrial zone.

Project ID	Project Name	Environmental Document Summary
MV-84	PA16-0075 Brodiaea Business Center	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres.
MV-85	Retail Center / Winco Foods, PA08-0079/0080/0081	Per the City of Moreno Valley's 2017 IS, the project would develop 8 industrial buildings and 1 future industrial building on 126 acres.
MV-86	TR32505 / DR Horton	Per the City of Moreno Valley's 2007 ND, the project would subdivide 18.66 acres into 72 single-family residential lots.
MV-91	TR31305 / Richmond American	Per the City of Moreno Valley's 2004 ND, the project would subdivide 22.9-net acres in the R5 zone into 87 single-family residential lots. A portion of the subject site was previously subdivided as part of Tract Map No. 27251.
MV-92	TR 33256	Per the City of Moreno Valley's 2005 ND, the project would subdivide 28.6-net acres in the R5 zone into 99 single-family residential lots. The site backs to SR 60. The Tract's northern boundary will change because of the expansion of Caltrans ROW to complete improvements to the eastbound off-ramp. A portion of the site includes approved Tentative Tract Map No. 28594.
MV-93	PA14-0042 Edgemont Apartments	Per the County of Riverside's 2001 Final SP/EIR would result in the development of the Oak Valley & SCPGA Gold Course Area.
MV-94	PA15-0002 Box Springs Apartments	Per the City of Moreno Valley's 2015 Addendum to MND SCH No. 2007101131, the project site will consist of the same approx. 12 acres for the proposed 266-unit multi-family residential development which is an increase of 26 units and a modification to the building designs and locations. Mitigation Measures and Conditions Approval from the original project will be included in the modified project.
MV-95	Moreno Beach Marketplace / Lowes	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans.
MV-96	31394 Pigeon Pass, Ltd.	Per the City of Moreno Valley's IS/Checklist, the project proposes to develop 14.2 acres with approximately 11.58 acres remaining vacant. Project includes a total of four applications, GP Amendment, Zone Change, and 2 Master Plot Plans.
MV-97	32005 Red Hill Village, LLC	Per the City of Moreno Valley's 2005 ND, project includes a tentative tract map to develop a Planned Unit Development consisting of approximately 214 clustered and single-family residential gated community.
MV-98	33388 SCH Development, LLC	Per the City of Moreno Valley's 2007 ND, project proposes to subdivide a 19.5 gross acre parcel into a 16 lot single-family residential subdivision.

Project ID	Project Name	Environmental Document Summary
MV-100	32215 Winchester Associates "Scottish Village"	Per City of Moreno Valley's 2006 IS/Environmental Checklist Form, project proposes a planned residential development of 194 residential units on a 26.12-acre site.
MV-103	Gateway Business Park	Per the City of Moreno Valley's 2008 IS and environmental checklist, the project would develop a business park consisting of 16 buildings with office, industrial, and warehouse space and associated parking areas on 25.3 acres.
MV-106	35304 Jimmy Lee	Per the City of Moreno Valley's 2007 Resolution, the project would develop 12 condominiums with 15 dwelling units on 0.9 acres.
MV-110	TM 33417	Per the City of Moreno Valley's Environmental Checklist, the project would propose a 60 unit condominium complex on 7.40 acres.
MV-111	35769 Michael Chen	Per City of Moreno Valley Planning Commission Resolution 2009-21, this tentative tract map is for a 16-unit condominium complex on 1.21 acres.
MV-112	PA09-0006 Jim Nydam	Per City of Moreno Valley Planning Commission Resolution 2009-25, this project would result in the development of a 15-unit affordable housing project on 1.57 acres.
MV-113	Ironwood Residential	Per the City of Moreno Valley's November 2016 MND, this project would develop 101 single family home subdivision on approximately 75 acres, including open space, a park, trails, streets, utility improvements, and related infrastructure.
MV-114	Stoneridge Town Centre - Vacant Restaurant	Per the City of Moreno Valley's March 2006 Negative Declaration, this project would subdivide a 55.45 acre parcel into 25 individual parcels to be developed as 563,328 square feet of commercial uses.
MV-116	31621 Peter Sanchez	Per the City of Moreno Valley's Checklist form, this project would subdivide 3.1 acres to be developed as 12 single family homes.
MV-117	Riverside County Office Building	Per the City of Moreno Valley's September 2014 Negative Declaration, this project would develop a 52,250 square foot office building and 342 parking spaces on 5.8 acres.
MV-118	28860 Professor's Fun IV, LLC/Winchester Associates, Inc.	Per the City of Moreno Valley's December 2003 checklist form, this project would subdivide 46.16 acres for nine single family homes.
MV-119	32126 Salvador Torres	Per the City of Moreno Valley's November 2007 Negative Declaration, this project would subdivide 9 acres for 35 single family homes.
P-2	TR34716	Per the City of Perris' 2013 FEIR, the project involves the construction and operation of up to 600,000 gross square feet (gsf) of light industrial/warehouse uses.
P-4	Bookend	Per the City of Perris' 2015 MND, the project proposed to subdivide an existing vacant parcel into five new industrial parcels with a total building area of 165,000 sf.

Project ID	Project Name	Environmental Document Summary
P-5	Markham East	Per the City of Perris's June 2007 Notice of Determination, the project would develop 462,692 square feet of light industrial warehouse/distribution uses in a single building with associated roadway and utility infrastructure and landscape improvements on 22.25 acres.
P-7	Duke Warehouse	Per the City of Perris's Facts, Findings and Statement of Overriding Considerations, the project would redesign ate a large portion of the northern part of the City with broad categories of compatible commercial and industrial uses on 34.57 acres. Uses would include a 668,681 square foot industrial/warehouse building that includes 19,200 square feet of office space.
P-8	First Perry Logistics Project	Per the City of Perris's November 2017 Notice of Determination, the project would develop a 236,961 square foot industrial building on 11.06 acres.
P-10	IDS	Per City of Perris 2005 Final EIR would result in the Perris Warehouse/Distribution Facility Project.
P-11	Ridge II	Per the City of Perris 2007 NOC and Environmental Doc Transmittal, project proposes a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures.
P-14	Rados Distribution Center	Per the City of Perris 2010 Final EIR, project is an approximately 1,191,080 sq ft distribution center on approximately 61.63 gross acres.
P-15	Duke Perris Logistics Center I	Per the City of Perris 2017 Fina EIR, the project would result in the Duke Warehouse at Indian Avenue and Markham Street.
P-16	Perris Ridge Commerce Center I	Per the City of Perris' 2007 EIR, the project proposes the establishment of a new industrial warehouse use, incorporating approximately 2 million square feet of building area in two structures on 91 acres.
P-18	P07-07-0029	Per the City of Perris' 2009 EIR, the project proposed to construct a 1,608,322 sf industrial complex comprised of five buildings on 92.3 acres.
P-19	P05-0192	Per the City of Perris' 2006 EIR, the project proposed development of an approximately 700,000 square foot industrial building on a 40-acre.
P-20	P05-0113	Per the City of Perris' 2009 EIR, the project proposed subdividing the site into five legal parcels, four of which would be developed with industrial/warehouse buildings for a total of 1,750,000 sf.
P-21	P07-09-0018	Per the City of Perris' 2008 IS, the project proposed the development of a 173,000 sf industrial building on 8.7 acres.

Project ID	Project Name	Environmental Document Summary
P-22	NICOL	Per the City of Perris' 2016 IS/MND, the project proposed a 380,000 sf warehouse building on 21.63 acres.
P-23	Westcoast Textiles	Per the City of Perris' 2016 IS, the project proposed construction of a 187,850 sf industrial/manufacturing building on 9 acres.
P-24	Optimus Logistics Center 1	Per the City of Perris' 2016 EIR, the project proposed to construct a high-cube warehouse consisting of two buildings totaling 1,455,781 sf on 68.99 acres.
P-25	Optimus Logistics Center 2	Per the City of Perris' 2015 EIR, the project proposed construction of warehouse development site encompassing 1,037,811 square feet in two buildings on 48.4 acres.
P-26	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 811,620 square feet (sf) of industrial high-cube, non-refrigerated warehouse/distribution uses on the approximate 37.3-acre site.
P-27	Perris DC (Industrial Property Trust)/Integra	Per the City of Perris' 2014 EIR, the project proposed construction and operation of up to 864,000 square feet (sf) of industrial warehouse/distribution uses on the approximate 43.2-acre site.
P-28	Duke Warehouse	Per the City of Perris' 2017 IS, the project proposed construction and operation of approximately 1,189,860 square feet (sf) of high-cube warehouse/distribution uses on the approximate 55-acre Project site.
P-30	Avelina	Per the City of Perris' 2003 IS, the project proposed to increase residential density on a 158.2 acre property to 475 dwelling units.
P-31	Perris Family Apartments	Per the City of Perris' 2013 IS, the project proposed to construct a 75-unit multi-family apartment complex on 7 vacant acres.
P-32	Lewis Retail Center	Per the City of Perris' 2009 IS, the project proposed to construct 643,000 sf of commercial shopping center on 68 acres.
P-35	Verano Apartments	Per the City of Perris' 2013 IS, the project proposed increasing the number of residential units from 19 to 40 and reducing the commercial component from 17,000 sq. ft. to 1,000 sq. ft. for retail and to allow a 2,000 sq. ft. day care facility.
P-58	Jordan Distribution	Per the City of Perris's June 2008 Notice of Determination, the project would develop a 378,521 square foot tilt-up industrial building for warehouse distribution uses on 17.1 acres.
R-1	Sycamore Canyon Business Park - Bldgs 1&2	Per the City of Riverside's January 2017 Final EIR, the project would develop approximately 1.43 million square feet of business park uses on approximately 920 acres.
R-2	Alessandro Business Center (Western Realco)	Per the City of Riverside's February 2015 Addendum to the Final EIR, the project would develop 662,018 square feet of industrial warehouse uses on 36.7 acres.

Project ID	Project Name	Environmental Document Summary
R-4	Quail Run	Per the City of Riverside's January 2016 Initial Study, the project would develop a 13-building apartment complex on approximately 16 acres of a 30.9 acre site that also would include parking structures and spaces, and open space.
R-5	Canyon Springs Healthcare Campus Specific Plan	Per the City of Riverside's July 2017 Draft EIR, the project would develop a healthcare campus on 50.85 acres, including an approximately 234-unit senior housing facility; approximately 310,200-square-foot (267-unit, 290-bed) independent living/memory care, assisted living, and skilled nursing facility; an approximately 324,000-square-foot (180-bed) hospital; approximately 22,000 square-foot central energy plant; approximately 70,000-square-foot medical office building; an additional 300,000-square feet of medical office building uses with retail; multiple multi-level parking structures; and an approximately 180,000-square-foot (100-bed) hospital addition. A helipad/helistop also is proposed.
RC-5	Villages of Lakeview -Residential/Commercial Development	Per Riverside County's August 2016 Draft EIR, the Villages of Lakeview project proposes a master-planned community comprised of approximately 2,800 acres in the Lakeview/Nuevo area of Riverside County. Proposed land uses within the Specific Plan include a wide range of residential products, mixed-uses, retail, schools with joint-use parks, public and private amenities, an array of parks, trails, open space, roads, and other infrastructure. Existing infrastructure such as water, sewer, storm drain, and roadways will also be expanded as part of the Villages of Lakeview project.
RC-9	Oleander Business Park, PP20699	Per what appear to be public meeting slides presenting information about Riverside County's May 2008 Final EIR for this project, the project would subdivide approximately 68.8 acres to develop approximately 1,206,710 square feet of industrial buildings.
RC-10	Majestic Freeway Business Center, SP 341 / PP21552	Per Riverside County's December 2006 Initial Study, the project would develop 947,000 square feet of light industrial warehouse and distribution uses and a 1.62 acre detention basin on 47.25 acres.
RC-11	Alessandro Commerce Center	Per Riverside County's April 2009 screencheck draft EIR, the project would develop 409,000 square feet of warehouse, 42,000 square feet of light industrial, 10,000 square feet of retail/restaurant, and 258,000 square feet of office uses, associated parking, and three detention basins on 54.4 acres.

Project ID	Project Name	Environmental Document Summary
RC-13	Sunny-Cal Specific Plan (#40)	Per the City of Beaumont's June 2007 Response to Late Comments on the EIR, the project would develop a 907-unit housing project on up to 323.3 acres.
RC-34	Emerald Acres SP (SP00381)	Per Riverside County's January 2016 Initial Study, the project would develop the approximately 332.6-acre site as a residential community consisting of a maximum of 355 single family dwelling units on 76.3 acres; 179 multi-family dwelling units on 16.7 acres; 4.88 acres of commercial uses; a community park on 6.8 acres; 209.7 acres of open space; a 0.9-acre sewer lift station; and roadway improvements.
RC-35	TR34677, TR31100, TR32391, TR33448, TR31101, TR31009, TR32282	Per Riverside County's February 2004 environmental assessment form/initial study, the project would subdivide 6.7 acres of a 71 acre parcel into 8 single-family residential lots, a detention basin, and 2.2 acres of open space.
RC-38	San Gorgonio Crossings	Per Riverside County's May 2017 Recirculated Draft EIR, the project would develop two house high-cube warehouse buildings on an approximately 229 acre site, of which approximately 16 acres are located within the City of Calimesa. Approximately 140.23 acres of the site would be included within the developed portion of the project; 84.8 acres would remain natural open space.
SJWA-1	San Jacinto Wildlife Land Management Plan	Per the California Department of Fish and Wildlife’s 2017 Draft PEIR, the project involves the proposed Land Management Plan (LMP) for the approximately 20,126 acre San Jacinto Wildlife Area. Public uses that would continue to be permitted under the draft LMP include waterfowl and upland small game hunting, bird watching, hiking, hunting dog training, fishing, horseback riding, nature study, photography, and mountain biking.

6.16.3 Cumulative Impact Evaluation

6.16.3.1 Water Supply

6.16.3.1.1 Construction of Expansion of Water Treatment Facilities

Impact: *The project’s incremental contribution to environmental effects associated with the construction of new water treatment facilities or expansion of existing facilities would not cause or contribute to a significant cumulative effect.*

Threshold: Would the proposed WLC project require the construction of new water treatment facilities or expansion of existing facilities, the construction of which would cause significant environmental effects?

Cumulative Impact Analysis

The cumulative impact geographic area for water treatment facilities is the EMWD. Cumulative impacts to water treatment facilities could result from the project in conjunction with other past, present and future projects located within the EMWD resulting in impacts due to construction of water treatment facilities. Water treatment services for the City, including the project site and cumulative project sites, is provided by the EMWD.

According to FEIR Section 4.16, the project would require the construction of new water reservoirs to serve each of three water pressure zones (1967, 1860, and 1764). All three reservoir sites are located outside of the Specific Plan boundary. As development proceeds within the project area, new waterlines, ranging in size from 12 to 24 inches, will be constructed in the existing and future street rights-of-way to connect the future water tanks to the development area. The water system will require a new pump station at the 1764 reservoir and an upgrade to the existing EMWD pump station near Cottonwood Avenue and Redlands Boulevard. All water facilities for the project would be constructed to EMWD standards and would be subject to a Plan of Service approval by EMWD (Specific Plan Section 3.5.1). Potential significant environmental impacts associated with such construction include air quality, traffic, biological resources, cultural resources, noise, hydrology, water quality, and other impacts as identified and analyzed in Chapters 4.0, 5.0 and 6.0 of this FEIR. None of those sections identified construction or operation of the project’s new or expanded water facilities as resulting in significant impacts apart from those already analyzed in this FEIR.

Annually, a 5-year Capital Improvement Plan (CIP) is prepared by the EMWD. The EMWD’s CIP outlines specific projects and their funding sources. Each project is also submitted individually to the Board for authorization and approval. This allows the EMWD to match needed facilities with development trends accurately. Funding for the EMWD’s microfiltration plants, distribution pipes, and the recharge and recovery program is listed in the most recent EMWD CIP. Development and construction of the cumulative scenario would be included in the most recent EMWD CIP. Each applicant also would have to fund the costs of the water-related infrastructure needed to serve a particular site. All new facilities proposed or necessitated by projects in the cumulative scenario would be subject to applicable CEQA review, and would be required to comply with all applicable laws and regulations protecting environmental resources. Cumulative project CEQA documents within the district boundary have been reviewed and the findings have been incorporated into this analysis.

Based on the above considerations, the impacts of the project would not combine with other projects in the cumulative scenario to cause or contribute to a significant cumulative impact. to water treatment facilities.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.16.3.2 Adequate Water Supply

Impact:	*The project’s incremental contribution to cumulative demand on water supplies requiring the need for new or expanded entitlements would not cause or contribute to a significant cumulative effect.*
Threshold:	Would the proposed WLC project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

Cumulative Impact Analysis

The cumulative impact geographic area for water supply is the EMWD. The project would involve an increase in demand for water supplies. Cumulative projects also could result in potential water supply impacts, and incrementally increase the long-term demand for water service.

The WSA prepared for the project by the EMWD concluded that the water demand for the proposed on-site uses would be approximately 1,991.25 AFY.[1] The EMWD considers this a "worst-case" estimate based on the total acres and amount of square footage of warehousing proposed by the project. Taking into account the proposed water xeriscape landscaping plan, it is likely that actual water use for development within the WLC Specific Plan would be substantially less than the worst-case EMWD estimate. As identified in Table 4.16.A of the FEIR, anticipated water supplies in the EMWD total 213,900 and 302,200 AFY in 2015 and 2035, respectively. The water demand required for the proposed project would total 0.93 and 0.66 percent of the EMWD's 2015 and 2035 supplies under worst-case conditions. The demand estimated for this project is substantially less and therefore still within the limit of growth projected in the 2015 UWMP.

Existing and future development within the EMWD's service area would demand additional quantities of water. The project, along with any projects in the cumulative scenario, would be required to provide availability and commitment letters demonstrating sufficient water resources and access to available water facilities prior to building permit issuance. The 2015 UWMP addresses the water supply sources, projected demand, and supply reliability for Eastern EMWD service area. The 2015 UWMP estimates population within the EMWD service area to increase to 1,111,729 persons by the year 2035. Increases in population, square footage, and intensity of uses would contribute to increases in the overall regional water demand. The anticipated conversion of water-intensive uses (e.g., agriculture) and the implementation of existing water conservation measures and recycling programs would reduce the need for increased water supply. Demand projections for EMWD were developed using information about planned development and land use (UWMP 2015) and would include the water demand for the cumulative projects listed in Table 6.16-1. CEQA documents for projects in the cumulative scenario have been reviewed and the findings have been incorporated into the cumulative impact analysis.

Based on the information provided in the 2015 UWMP, EMWD has the ability to meet current and projected water demand through 2040 during normal, historic single-dry and historic multiple-dry year periods using imported water from MWD with existing supply resources. Planned local supplies will supplement imported supplies and improve reliability for EMWD and the region. In addition, adherence to regulations would ensure that cumulative projects would not result in a demand for water that exceeds existing entitlements and resources, or any new or expanded water-related infrastructure would be funded by the respective applicant. Therefore, projects in the cumulative scenario, together with the project, would not cause significant cumulative impacts associated with adequate water service and supplies.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures are required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.16.3.3 Storm Water Drainage Requirements

Impact: *The project's incremental contribution to environmental effects from the construction of new storm water drainage facilities or expansion of existing facilities would not cause or contribute to a significant cumulative effect.*

---

[1] *Water Supply Assessment Report for the World Logistics Center Specific Plan in Moreno Valley,* Eastern Municipal Water District, March 21, 2012.

Threshold:	Would the proposed WLC project result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Cumulative Impact Analysis

The cumulative impact geographic area for storm water drainage facilities is the watershed the project site is located in. The Final EIR, Section 4.16 analyzes the storm water drainage facilities necessary to serve the project site. To reduce flows to below or equal to pre-development conditions, the on-site storm water flows would be routed to a series of on-site detention and infiltration basins[2] by phase before flows are routed off site. While the increase in impervious surfaces attributable to the proposed WLC project would contribute to a greater volume and higher velocity of storm water flows, the proposed WLC project's detention and infiltration basins would accept and accommodate runoff that would result from project construction at pre-project conditions.

Potential significant environmental impacts associated with such construction include air quality, traffic, biological resources, cultural resources, noise, hydrology, water quality, and other impacts as identified and analyzed in Chapters 4.0, 5.0 and 6.0 of this FEIR. None of those sections identified construction or operation of the project's new storm water drainage facilities as resulting in significant impacts apart from those already analyzed in this FEIR. All new storm water drainage facilities proposed or necessitated by cumulative projects would be subject to applicable CEQA review, and would be required to comply with all applicable laws and regulations protecting environmental resources. CEQA documents prepared for projects in the cumulative scenario have been reviewed and the findings have been incorporated into this analysis.

Based on the above considerations, the impacts of the project would not combine with the impacts of other projects in the cumulative scenario to cause or contribute to significant cumulative impacts resulting from construction of storm water drainage facilities. As such, cumulative impacts to storm water drainage facilities would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.16.3.4 Wastewater Services

6.16.3.5 Wastewater Treatment Requirements

Impact: *The project's incremental contribution would not cause or contribute to any significant cumulative impact resulting from exceedance of wastewater treatment requirements of the Santa Ana Regional Water Quality Control Board.*

Threshold:	Would the proposed WLC project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Cumulative Impact Analysis

The cumulative area for wastewater-related issues is the MVRWRF service area. Cumulative population increases and development within the area serviced by the MVRWRF would increase the

---

[2] A detention basin is an area where excess storm water is stored or held temporarily and then slowly drains when water levels in the receiving channel recede. In essence, the water in a detention basin is temporarily detained until additional room becomes available in the receiving channel.

overall regional demand for wastewater treatment service. The previous treatment capacity at the MVRWRF was 16 mgd. Improvements to this facility have increased capacity at this facility to 21 mgd. Ultimate expansion of this facility is expected to be 41 mgd. The MVRWRF is expected to have adequate capacity to service the City's wastewater needs through 2030. Any proposed changes to capacity of the MVRWRF or any facility maintained by EMWD are reviewed throughout the year. EMWD has a funding and construction mechanism in place that ensures improvements to EMWD facilities occurs in a timely manner. This funding mechanism is referred to as EMWD's Sewer Financial Participation Charge Program. For all new development within the EMWD service area, the Sewer Financial Participation Charge is allocated to assist in the financing of any future collection and disposal facilities and any future sewer treatment plant facilities. Cumulative development would not exceed the capacity of the wastewater treatment system because the MVRWRF would expand as growth occurred. CEQA documents for other projects in the cumulative scenario have been reviewed and the findings have been incorporated into this analysis.

The proposed project would not require the expansion of existing wastewater infrastructure: only connections to existing infrastructure would be required by the project. By adhering to the wastewater treatment requirements established by the Santa Ana RWQCB through the NPDES permit, wastewater from the project site that is processed through the MVRWRF would meet established standards. As the wastewater from all development within the service area of the MVRWRF would be similarly treated under the NPDES, no cumulatively significant exceedance of wastewater treatment requirements would occur.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.16.3.6 Wastewater Treatment Capacity and/or New or Expanded Wastewater Treatment Facilities

Impact: *The project's incremental contribution to impacts on wastewater treatment capacity would not cause or contribute to a significant cumulative effect.*

The project's contribution to environmental effects from the construction of new wastewater treatment facilities or expansion of existing facilities would be less than cumulatively considerable.

Threshold:	Would the proposed WLC project result in a determination by the wastewater treatment provider, which serves or may serve the project, that it lacks adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? Would the proposed WLC project require the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Cumulative Impact Analysis

The cumulative area for wastewater-related issues is the MVRWRF service area. Cumulative population increases and development within the area serviced by the MVRWRF would increase the overall regional demand for wastewater treatment service. The previous treatment capacity at the MVRWRF was 16 mgd. Improvements to this facility have increased capacity at this facility to 21 mgd. Ultimate expansion of this facility is expected to be 41 mgd. The MVRWRF is expected to have adequate capacity to service the City's wastewater needs through 2030. Any proposed changes to capacity of the MVRWRF or any facility maintained by EMWD are reviewed throughout the year. EMWD has a funding and construction mechanism in place that ensures improvements to EMWD facilities occurs in a timely manner. This funding mechanism is referred to as EMWD's Sewer Financial Participation Charge Program. For all new development within the EMWD service area, the Sewer Financial Participation Charge is allocated to assist in the financing of any future collection and disposal facilities and any future sewer treatment plant facilities. Cumulative development would not exceed the capacity of the wastewater treatment system because the MVRWRF would expand as growth occurred.

The proposed project would not cause or contribute to a cumulatively significant impact on wastewater infrastructure because the proposed project would not combine with the demands of other projects in the cumulative scenario to require the expansion of existing infrastructure. The project would require only connections to existing infrastructure. Potential significant environmental impacts associated with such construction include air quality, traffic, biological resources, cultural resources, noise, hydrology, water quality, and other impacts as identified and analyzed in Chapters 4.0 and 6.0 of this FEIR. None of those sections identified construction or operation of the project's new or expanded wastewater infrastructure as resulting in significant impacts apart from those already analyzed in this FEIR. CEQA documents for other projects in the cumulative scenario have been reviewed and the findings have been considered in this analysis.

By adhering to the wastewater treatment requirements established by the Santa Ana RWQCB through the NPDES permit, wastewater from the project site that is processed through the MVRWRF would meet established standards. As the wastewater from all development within the service area of the MVRWRF would be similarly treated under the NPDES, no cumulatively significant exceedance of Santa Ana RWQCB wastewater treatment requirements would occur. As such, cumulative impacts to wastewater treatment facilities would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.16.3.7 Solid Waste Services

6.16.3.8 Solid Waste Facilities

Impact: *The project's incremental contribution to landfill impacts would not cause or contribute to a significant cumulative effec.*

Threshold:	Would the proposed WLC project be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs?

Cumulative Impact Analysis

The cumulative impact geographic area for solid waste services is the City of Moreno Valley. Solid waste disposal and recycling services for the proposed project site would be provided by Waste Management of the Inland Empire. [3] Waste Management of the Inland Empire separates and markets recyclable materials collected within its service area. The project, in combination with other cumulative projects, would increase the amount of solid waste being transferred to landfills within the City. The volume of solid waste generated by the proposed WLC project per day represents 2.6 percent of the current permitted throughput and 4.5 percent of the current surplus capacity at the Badlands Sanitary Landfill. As adequate daily surplus capacity exists at the receiving landfill, development of the proposed project would not significantly affect current operations or the expected lifetime of the landfill serving

---

[3] Trash service in the City of Moreno Valley is mandatory and Waste Management of Inland Valley is the only solid waste service provider.

the project area. CEQA documents for other projects in the cumulative scenario have been reviewed and the findings have been considered in this analysis.

AB 939 mandates the reduction of solid waste disposal in landfills. While the Badlands Sanitary Landfill has an estimated closure date of 2024, as previously identified, the City's waste hauler will also use other County landfills in the area (e.g., Lamb Canyon Landfill and El Sobrante Landfill). The estimated closure date of the Lamb Canyon Landfill is 2023 and the estimated closure date of the El Sobrante Landfill is 2030. With planned expansion activities of landfills in the project vicinity and projected growth rates contained in the City's General Plan EIR, sufficient landfill capacity would exist to accommodate future disposal needs through City buildout in 2030. Buildout of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County's waste management system. Therefore, although the project and cumulative projects would result in an increase in the amount of solid waste sent to landfills, compliance with state and local waste diversion requirements would contribute to the longevity of existing and proposed landfills that would serve the projects and ensure that cumulative impacts would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.16.3.9 Solid Waste Reduction

Impact: *The project's incremental contribution to cumulative solid waste regulation impacts would not cause or contribute to a significant cumulative impact.*

Threshold:	Would the proposed WLC project fail to comply with applicable federal, state, and local statutes and regulations related to solid waste?

Cumulative Impact Analysis

The project, in combination with other cumulative projects, would increase the amount of solid waste being transferred to landfills within the City. Federal, State and local governments have enacted a variety of laws and established programs to deal with the transport, use, storage, and disposal of hazardous materials to reduce the risks to public health and the environment. AB 939 and SB 1016 mandates the reduction of solid waste disposal in landfills. While the Badlands Sanitary Landfill has an estimated closure date of 2024, as previously identified, the City's waste hauler will also use other County landfills in the area (e.g., Lamb Canyon Landfill and El Sobrante Landfill). Additionally, the proposed project would be required to comply with applicable elements of AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, State, and Federal solid waste disposal standards. CEQA documents for other projects in the cumulative scenario have been reviewed and the findings have been considered in this analysis. The estimated closure date of the Lamb Canyon Landfill is 2023 and the estimated closure date of the El Sobrante Landfill is 2030. With planned expansion activities of landfills in the project vicinity and projected growth rates contained in the City's General Plan EIR, sufficient landfill capacity would exist to accommodate future disposal needs through City buildout in 2030. Buildout of the City General Plan would not create demands for solid waste services that would exceed the capabilities of the County's waste management system. Therefore, although the project and cumulative projects would result in an increase in the amount of solid waste sent to landfills, compliance with state and local waste diversion requirements would contribute to the longevity of existing and proposed landfills that would serve the projects and ensure that cumulative impacts would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures required.

Significance Level After Mitigation: Less than significant cumulative impact.

6.17 Energy

Cumulative effects to energy are described in this section. A summary of the project's incremental contribution to potential cumulative impacts to energy issues is provided in Section 4.17.1. The geographic and temporal scopes of the cumulative analysis are described in Section 4.17.2. The potential cumulative impacts and the project's contribution to cumulative impacts to each of the energy issues are discussed in Section 6.17.3. In addition, a brief summary of the impact significance of the project's contribution to cumulative impacts for each issue is also provided in Section 4.17.3 as well as applicable mitigation measures and significance determination after mitigation.

The land use assumptions for the identified cumulative projects were taken from either the project-specific information contained in the associated cumulative project CEQA documents, the City of Moreno Valley General Plan, and/or the SCAG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) 2040 regional population and employment forecasts for all areas outside of the City of Moreno Valley. Where project-specific information was available for the cumulative projects, it was incorporated into the cumulative impact analysis. Where project-specific information was not available, the underlying General Plan or SCAG RTP/SCS land use designations were used. Where project-specific and planned cumulative project land uses were inconsistent, the more intense land use was utilized. Within Moreno Valley, the cumulative analysis assumed build-out of the City's General Plan except for locations where other past, present, and reasonably foreseeable projects were identified, in which case those were used instead. Because it is unlikely that the City will fully build out by 2040, the cumulative impact analysis assumes a more intense level of cumulative development than is likely to occur and is therefore conservative in the sense that it would over-state cumulative impacts.

The cumulative projects identified in Table 6.17-1 and their respective CEQA documents have been reviewed and evaluated in conjunction with the project to determine if they could contribute to a cumulatively considerable impact to energy. These potentially cumulative impacts are documented in the following section.

6.17.1 Project Impact Findings

Appendix G of the State CEQA Guidelines does not provide specific thresholds for the evaluation of impacts related to energy resources. Appendix F of the CEQA Guidelines was prepared in response to the requirement in Public Resources Code Section 21100(b)(3), which states that an EIR shall include a detailed statement setting forth "[m]itigation measures proposed to minimize significant effects of the environment, including, but not limited to, measures to reduce the wasteful, inefficient, and unnecessary consumption of energy."

- A project would result in significant impacts with regard to energy use and consumption if it would cause wasteful, inefficient, and unnecessary consumption of energy. In accordance with Appendix F, the following criteria will be considered in determining whether this threshold of significance is met:
    1) The project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the project including construction, operation, maintenance and/or removal. If appropriate, the energy intensiveness of materials may be discussed (Appendix F Section II C-1).

    2) The effects of the project on local and regional energy supplies and on requirements for additional capacity (Appendix F Section II C-2).

    3) The effects of the project on peak and base period demands for electricity and other forms of energy (Appendix F Section II C-3).

    4) The effects of the project on energy resources (Appendix F Section II C-5).

5) The project's projected transportation energy use requirements and its overall use of efficient transportation alternatives (Appendix F Section II C-6).

- A project would result in significant impacts with regard to energy use and consumption if it would require the construction of new electrical and/or natural gas facilities or expansion of existing facilities, the construction of which would cause significant environmental effects.
- A project would result in significant impacts with regard to energy use and consumption if it would conflict with or obstruct a state or local plan for renewable energy or energy efficiency. In accordance with Appendix F, the following criteria will be considered in determining whether this threshold of significance is met:
  1) The degree to which the project complies with existing energy standards (Appendix F Section II C-4).

The following project-level conclusions are presented in Section 4.17, regarding whether the project would:

- Result in energy use and consumption that would cause wasteful, inefficient, and unnecessary consumption of energy; **Less than Significan**t.
- Require the construction of new electrical and/or natural gas facilities or expansion of existing facilities, the construction of which would cause significant environmental effects; **Less than Significant.**
- Comply with existing energy standards: **Less than Significant**

6.17.2 Geographic and Temporal Scope

The geographic area for evaluating potential cumulative energy impacts is the Moreno Valley Electric Utility (MVU) service area for electricity, and the State for natural gas and transportation fuel use, shown on Figure 6.17-1 and in the cumulative discussion below. Cumulative impacts to energy could result from the project in conjunction with other past, present and future projects located within the applicable service area for each energy sector. The MVU service area covers over half of the City of Moreno Valley and follows the southern, eastern, and portions of the northern city boundary and is generally south of Alessandro Boulevard and easterly of Nason Street. The MVU service boundary is the appropriate cumulative project area boundary for electricity as the project is located within the MVU service area. Cumulative projects within the identified MVU area will be evaluated with the project to determine if any cumulative electricity impact would occur. The projects located within the cumulative electricity impact area are listed in Table 6.17-1. The project would contribute to cumulative impacts to energy starting when the project begins to demand energy resources and would last for the duration of the project. Very few of the cumulative project CEQA documents identified in Table 6.17-1 quantify the energy use associated with the specific project. As such, Table 6.17-1 only includes the energy use for the projects that were quantified in the respective CEQA document.

6.17.3 Cumulative Impact Evaluation

6.17.3.1 Energy Consumption, Supply, Standards and Facilities

Impact: *The Project would not result in environmental impacts related to energy consumption, supply, energy standards and expansion of facilities.*

Threshold: Would the project result in energy use and consumption that would cause wasteful, inefficient, and unnecessary consumption of energy?

Would the project require the construction of new electrical and/or natural gas facilities or expansion of existing facilities, the construction of which would cause significant environmental effects?

Would the project comply with Existing Energy Standards?

Cumulative Impact Analysis

Electricity
The geographic context for the cumulative analysis of electricity is MVU’s service area. Growth within this geography is anticipated to increase the demand for electricity and the need for infrastructure, such as new or expanded facilities.

Buildout of the Project, the cumulative projects, and additional growth forecasted to occur in the City would increase electricity consumption during Project construction and operation, and may cumulatively increase the need for electricity supplies. MVU forecasts that its peak demand in 2024, the latest available forecast from the IRP, would be approximately 352,044 MWh/year. The Project’s estimated net new electrical consumption would account for between 47 to 73 percent of MVU’s projected electricity sales in 2025 depending on the EV scenario. As stated in Section 4.17, *Energy*, since the

2015 IRP only forecasts out to 2024, projecting electricity use and supply for the full buildout 2040 Scenarios would also be highly speculative. The utility has a considerable amount of time to procure energy resources in anticipation of the Project's development, and has committed to taking the WLCSP needs into consideration in future IRP development.

As the utility provider for the Project and cumulative projects, MVU has determined that the increased electricity demand would be minor compared to existing supply and infrastructure within its service area and would be consistent with growth expectations for its service area. MVU's 2015 IRP predicts an increase in electricity demand over a 10-year period that is planned to be met by increasing solar, wind, and geothermal power, and supplementing with natural gas as needed. MVU's IRP specifically mentions World Logistics Center and states that, "a portion of the anticipated demand [of the Project] is incorporated in MVU's load forecast. MVU will monitor development progress at the World Logistics Center and other local projects to determine potential impacts to customer energy requirements".[1] MVU forecasts projected growth in the region and with its 2015 IRP already has plans in place that account for future development including the Project and cumulative projects. Many of the identified cumulative project CEQA documents, including MV 2 and MV 3, evaluated the cumulative energy impacts, and that analysis has been incorporated into this assessment.

Furthermore, like the Project, other future development projects would be expected to incorporate energy conservation features, comply with applicable regulations including CALGreen and State energy standards under Title 24, and incorporate mitigation measures, as necessary. Although the phrase "rolling blackouts" is a household phrase and heat waves in 2017 registered record-setting elevated temperatures, the electrical grid largely holds strong. As discussed above and based on evidence from MVU, the Project would not have a cumulatively considerable impact on existing energy resources either individually or incrementally when considering the anticipated growth in the service area. Accordingly, the impacts related to electricity consumption would not be cumulatively considerable, and thus would be less than significant.

Natural Gas

The geographic context for the cumulative analysis of natural gas is the State. Growth within this geography is not anticipated to increase the demand for natural gas and the need for infrastructure, such as new or expanded facilities.

Though electricity usage is predicted to rise, natural gas demand is expected to decline overall from 2016-2035 accounting for population and economic growth as well as efficiency improvements and the State's transition away from fossil fuel-generated electricity to increased renewable energy. SoCalGas predicts a decline in every sector (residential, industrial, commercial, electricity generation, and vehicular), with the exception of wholesale and international gas sales to Mexico. The 2016 California Gas Report states, "SoCalGas projects total gas demand to decline at an annual rate of 0.6% from 2016 to 2035. The decline in throughput demand is due to modest economic growth, CPUC-mandated energy efficiency (EE) standards and programs, renewable electricity goals, the decline in commercial and industrial demand, and conservation savings linked to Advanced Metering Infrastructure (AMI)."[2] Buildout of the Project and cumulative projects in the Statewide service area is not expected to increase natural gas consumption and the need for natural gas supplies from building energy.

Natural gas consumption from the Project was compared to Statewide natural gas fuel consumption since natural gas as a fuel can be procured from anywhere and is not limited to the service provider's resources. Natural gas consumption would primarily be from operation of on-site equipment and the planned CNG/LNG fueling station which will be publicly accessible. The combined annual natural gas use would represent 0.003 percent of the State's total natural gas use.

---

[1] Moreno Valley Utility, Integrated Resource Plan (2015).

[2] California Gas and Electric Utilities, *2016 California Gas Report.* https://www.socalgas.com/regulatory/documents/cgr/2016-cgr.pdf. Accessed May 2018.

Although future development projects would result in use of nonrenewable natural gas resources which could limit future availability, the use of such resources would be on a relatively small scale and would be consistent with regional and local growth expectations for SoCal Gas's service area and would not strain Statewide natural gas resources. Further, like the Project, other future development projects would be expected to incorporate energy conservation features, comply with applicable regulations including CALGreen and State energy standards in Title 24, and incorporate mitigation measures, as necessary. While initially the Project and cumulative projects could result in increased natural gas demand compared to existing uses on each specific project site, the overall demand for natural gas over time is expected to decline due to increases in regional natural gas efficiencies and the transition to renewable energy on a statewide basis displacing fossil fuels including natural gas. Therefore, the Project would not have a cumulatively considerable impact related to natural gas consumption, and impacts would be less than significant.

Transportation Energy

Buildout of the Project and cumulative projects in the region would be expected to increase overall VMT; however, the effect on transportation fuel demand would be minimized by future improvements to vehicle fuel economy pursuant to federal and state regulations. By 2025, vehicles are required to achieve 54.5 mpg (based on USEPA measurements), which is a 54 percent increase from the 2012-2016 standard of 35.5 mpg. As discussed in detail in Section 4.07, *Greenhous Gas Emissions*, the Project would be consistent with the 2016 RTP/SCS for the region. Cumulative projects would need to demonstrate consistency with the goals in the 2016 RTP/SCS and incorporate project design features or mitigation measures as required under CEQA, which would also ensure cumulative projects contribute to transportation energy efficiency.

Furthermore, according to the USEIA's International Energy Outlook 2016, the global supply of crude oil, other liquid hydrocarbons, and biofuels is expected to be adequate to meet the world's demand for liquid fuels through 2040.[3] CARB's analyses and the State's 2017 Climate Change Scoping Plan show a 45 percent decrease in fossil fuel demand by 2030.[4] The State's Mobile Source Strategy aims to displace fossil fuel reliant vehicles with 1.5 million zero emission vehicles (ZEVs) by 2025 and 4.2 million ZEVs by 2030.[5] Considering the State's goals of displacing transportation fuels, overall fossil fuel use will decrease and the current refining capacity would be sufficient to support the demand of the Project and cumulative projects. Furthermore, the Project's annual gas and diesel consumption from construction and operation would represent approximately 0.04 percent of Statewide diesel sales and 0.0004 percent of Statewide gasoline sales in both 2025 and 2040.[6][7] Therefore, as the Project would incorporate land use characteristics consistent with state goals for reducing VMT and would represent a small fraction of State transportation sales, the Project would not have a cumulatively considerable impact related to transportation energy, and impacts would be less than significant.

Conclusion

The cumulative condition related to the wasteful, inefficient, and unnecessary consumption of energy during construction or operation does not reflect a significant adverse cumulative impact. As detailed above, the project's incremental contribution to the cumulative condition would not cause or contribute to a significant impact. Accordingly, the Project would not result in cumulative environmental impacts related to energy consumption, supply, energy standards and expansion of facilities, and the cumulative energy impacts would be less than significant.

Significance Level Before Mitigation: Less than significant impact.

Mitigation Measures: No mitigation measures required.

Significant Level After Mitigation: Less than significant impact.

NOTE TO READERS: The Revised Sections of the Final EIR (FEIR) sets forth those portions of Section 7.0 that have been revised. The absence of any reference to a portion of Section 7.0 means that the corresponding portion of Section 7.0 in the FEIR remains unchanged or has been deleted. However, where appropriate, unrevised portions of the FEIR have been included for ease of understanding.

7.0 ALTERNATIVES TO THE PROPOSED PROJECT

8.0 REFERENCES

NOTE TO READERS: This portion of the Revised Sections of the FEIR sets forth those portions of each section within Section 7.0 of the 2015 FEIR which has been revised. The revised cumulative analysis can be found in Section 8.0 of this Revised Sections of the FEIR. The absence of any reference to a portion of Section 7.0 of the 2015 FEIR means that the corresponding portion of Section 7.0 in the FEIR remains unchanged or has been deleted.

8.2 Acronyms and Abbreviations

§	Section
§§	Subsection
°C	degrees Celsius
°F	degrees Fahrenheit
$\mu g/m^3$	Micrograms per cubic meter
AAQS	Ambient Air Quality Standards
AB	Assembly Bill
ACC	Andrew Chang and Company
ACM	Asbestos-Containing Material
AF	acre-feet
AFRES	Air Force Reserve
AFV	Alternative Fuel Vehicle
AFY	acre feet per year
AICUZ	Air Installation Compatible Use Zone
ALUC	Airport Land Use Commission
ALUP	Airport Land Use Plan
amsl	above mean sea level
A-P Act	*Alquist-Priolo Earthquake Fault Zoning Act*
APN	Assessor’s Parcel Number
AQMP	Air Quality Management Plan
AST	Aboveground Storage Tank
Basin	South Coast Air Basin
BAU	Business As Usual
BDCP	Bay Delta Conservation Plan
BMP	Best Management Practice
BP	Business Park
BV&A	Bear Valley and Alessandro Development Company
BVIC	Bear Valley Irrigation Company
BVLWC	Bear Valley Land and Water Company
CAA	Federal Clean Air Act
CAAQS	California Ambient Air Quality Standards
CAFE	Corporate Average Fuel Economy
CalEEMod	California Emissions Estimator Model
CalEPA	California Environmental Protection Agency

CalFire	California Department of Forestry and Fire Protection
CALGreen Code	California Green Building Standards Code
California Register	California Register of Historic Resources
Caltrans	California Department of Transportation
CAPSSA	Criteria Area Plant Species Survey Area
CARB	California Air Resources Board
CASQA	California Stormwater Quality Association
CASSA	Criteria Area Species Survey Area
CAT	California Climate Action Team
CBC	California Building Code
CBOC	California Burrowing Owl Consortium
CBSC	California Building Standards Commission
CCAA	California Clean Air Act
CCR	California Code of Regulations
CDFG	California Department of Fish and Game, former name of the California Department of Fish and Wildlife
CDFW	California Department of Fish and Wildlife, formerly known as the California Department of Fish and Game
CDGB	Community Development Block Grant
CDMG	California Department of Mines and Geology
CEC	California Energy Commission
CEQA	California Environmental Quality Act
CERCLA	Comprehensive Environmental Response Compensation Liability Act
CESA	California Endangered Species Act
CFCs	chlorofluorocarbons
CFR	Code of Federal Regulations
CFS	calls for service
cfs	cubic feet per second
CGP	Construction General Permit
CGS	California Geological Survey
CH_4	Methane
CHP	California Highway Patrol
CIP	Capital Improvement Plan
CIWMB	California Integrated Waste Management Board
CLUP	Comprehensive Land Use Plan

CNDDB	California Natural Diversity Data Base
CNEL	Community Noise Equivalent Level
CNG	Compressed Natural Gas
CNPS	California Native Plant Society
CO	Carbon Monoxide
CO_2	Carbon Dioxide
CO_2e	Carbon Dioxide Equivalent
COA	Coordinated Operations Agreement
CPD	(HUD Office of) Community Planning and Development
CPUC	California Public Utilities Commission
CRA	California Resource Agency
CRA	Cultural Resource Assessment
CSC	California Species of Concern
CUPA	Certified Unified Program Agency
CUWCC	California Urban Water Conservation Council
CVC	California Vehicle Code
CVP	Central Valley Project
CWA	(Federal) Clean Water Act
CWC	California Water Code
DAMP	Drainage Area Management Plan
dB	decibel
dBA	decibel on the A-weighted scale
DBESP	Determination of a Biologically Equivalent or Superior Preservation
DCIA	Directly Connected Impervious Area
DE	Diesel Emissions
DEH	Department of Environmental Health
DHS	(California) Department of Health Services
DIF	Development Impact Fee
DMM	Demand Management Measure
DMP	Drainage Master Plan
DOC	(California) Department of Conservation
DOF	(California) Department of Finance
DTA	David Taussig & Associates, Inc.
DTSC	(California) Department of Toxic Substance Control
DWR	(California) Department of Water Resources

e.g.	*exemplī grātiā*, for example
ECSD	Edgemont Community Services District
EDR	Environmental Data Resources
EIC	Eastern Information Center
EIR	Environmental Impact Report
EIS	Environmental Impact Statement
EMWD	Eastern Municipal Water District
EPA	U.S. Environmental Protection Agency
EPAct	Energy Policy Act
ESA	Environmental Site Assessment
ESG	Emergency Solutions Grant
FAA	Federal Aviation Administration
FAR	Floor Area Ratio
FEMA	Federal Emergency Management Agency
FESA	Federal Endangered Species Act
FHWA	Federal Highway Administration
FIRM	Flood Insurance Rate Map
FMMP	Farmland Mapping and Monitoring Program
ft	foot/feet
FTA	Federal Transit Administration
FTE	full-time equivalent
GCC	Global Climate Change
GHG	Greenhouse gas
GIS	Geographic Information Systems
GPA	General Plan Amendment
gpd	gallons per day
gpf	gallons per flush
GWP	Global Warming Potential
HANS	Habitat Evaluation and Acquisition Negotiation Strategy
HCD	(California) Department of Housing and Community Development
HCM	*Highway Capacity Manual*
HCP	Habitat Conservation Plan
HFCP	Highland Fairview Corporate Park
HHWE	Household Hazardous Waste Element
HI	Hazard Indices

HMB	Hazardous Materials Branch
HMBEP	Hazardous Materials Business Emergency Plan
HMMA	Hazardous Materials Management Act
HMMP	Habitat Mitigation and Monitoring Plan
HNL	Hourly Noise Level
HOME	HOME Investment Partnership
HOPWA	Housing Opportunities for Persons with AIDS
hp	horsepower
HRA	Health Risk Assessment
HSA	Hydrologic Subarea
HSC	Health and Safety Code
HUD	Housing and Urban Development
HVAC	Heating, Ventilating, and Air Conditioning
HWCL	Hazardous Waste Control Law
Hz	hertz
i.e.	*id est*, that is
IMPLAN	Impact Analysis for Planning
IPCC	United Nations Intergovernmental Panel on Climate Change
IRP	Integrated Resources Plan
IS	Initial Study
ITE	Institute of Transportation Engineers
kV	kilovolt
LAFCO	Local Agency Formation Commission
LAPM	Los Angeles pocket mouse
LBP	Lead-Based Paint
LBRMP	Logistic Building Runoff Management Plan
lbs	pounds
LCC	Land Capability Classification
LD	Logistics Development
L_{dn}	day-night average noise
LE	Land Evaluation
LEED	Leadership in Energy and Environmental Design
L_{eq}	Equivalent continuous sound level (L_{eq})
LESA	(California) Land Evaluation and Site Assessment
LHMP	Local Hazard Mitigation Plan

LI	Light Industrial
LID	Low Impact Development
LL	Light Logistics
L_{max}	maximum noise level
LNG	Liquefied Natural Gas
LNG/CNG	liquefied natural gas/compressed natural gas
LOS	Level of Service
~~LS~~	~~Logistics Support~~
LSA	LSA Associates, Inc.
LST	Local Significance Threshold
MARB	March Air Reserve Base
MATES	Multiple Air Toxics Exposure Study
MBA	Michael Brandman Associates
MBTA	Migratory Bird Treaty Act
MC	Municipal Code
Metropolitan	Metropolitan Water District of Southern California
mgd	million gallons per day
MHSP	Moreno Highlands Specific Plan
MICR	maximum individual cancer risk
MIP	March Inland Port
MJPA	March Joint Powers Authority
mm/yr	millimeters per year
MMDP	Moreno Master Drainage Plan
MMRP	Mitigation Monitoring and Reporting Program
mmt	million metric tons
MOU	Memorandum of Understanding
mpg	miles per gallon
mph	miles per hour
MPO	Metropolitan Planning Organization
MPOA	Master Property Owners Association
MPT	Master Plan of Trails
MRZ	Mineral Resource Zone
MS4	Municipal Separate Storm Sewer Systems
MSHCP	(Western Riverside County) Multiple Species Habitat Conservation Plan
mt	metric tons

mty	metric tons per year
MVEU	Moreno Valley Electric Utility
MVFD	Moreno Valley Fire Department
MVHS	Moreno Valley Historical Society
MVPD	Moreno Valley Police Department
MVRWRF	Moreno Valley Regional Water Reclamation Facility
MVUSD	Moreno Valley Unified School District
MW	megawatt
MWh	megawatt-hours
N_2O	nitrous oxide
NA	Native American
NAAQS	National Ambient Air Quality Standards
NAHC	Native American Heritage Commission
NAIOP	National Association of Industrial and Office Properties
National Register	National Register of Historic Places
NCCP	Natural Communities Conservation Plan
NDDB	Natural Diversity Data Base
NDFE	Nondisposal Facility Element
NEPA	National Environmental Policy Act
NEPSSA	Narrow Endemic Plant Species Survey Area
NFIP	National Flood Insurance Program
NFPA	National Fire Protection Association
NHPA	National Historic Preservation Act
NHTSA	Highway Traffic and Safety Administration
NMFS	National Marine Fisheries Service
NO_2	Nitrogen Dioxide
NOI	Notice of Intent
NOP	Notice of Preparation
NO_X	Oxides of Nitrogen
NPDES	National Pollutant Discharge Elimination System
NRCP	Noise Reduction Compliance Plan
NRCS	Natural Resource Conservation Service
O_3	Ozone
OEHHA	Office of Environmental Health Hazard Assessment
OHP	Office of Historic Preservation

OHWM	Ordinary High Water Mark
OMB	(White House) Office of Management and Budget
OPR	Office of Planning and Research
OS	Open Space
PAH	Polycyclic Aromatic Hydrocarbon
Pb	Lead
PCBs	polychlorinated biphenyls
PEA	Preliminary Environmental Assessment
PM_{10}	Particulate Matter with a Diameter of 10 Microns or Less
$PM_{2.5}$	Particulate Matter with a Diameter of 2.5 Microns or Less
POTWs	Publicly Owned Treatment Works
POU	Publically Owned Utility
ppb	parts per billion
ppm	parts per million
PSB	Public Safety Building
PUC	Public Utilities Commission
PVC	Polyvinyl Chloride
PVCCSP	Perris Valley Commerce Center Specific Plan
PVSC	Perris Valley Storm Channel
PWC	Public Works Committee
PWQMP	Preliminary Water Quality Management Plan
PZ	Pressure Zone
q.v.	*quod vidē*, which see (presented elsewhere in the document)
RCA	Resource Conservation Agency
RCB	reinforced concrete box
RCC	Riverside Community College
RCFCWCD	Riverside County Flood Control and Water Conservation District
RCFD	Riverside County Fire Department
RCIP	Riverside County Integrated Project
RCIWMP	Riverside Countywide Integrated Waste Management Plan
RCP	Regional Comprehensive Plan
RCRA	Resource Conservation and Recovery Act
RCSD	Riverside County Sheriff’s Department
RCTC	Riverside County Transportation Commission
RHNA	Regional Housing Needs Assessment

RivTAM	Riverside County Traffic Analysis Model
ROG	Reactive Organic Gas
RPR	(California) Rare Plant Ranking
RPS	Renewables Portfolio Standard
RPW	Relatively Permanent Water
RSHA	Regional System of Highways and Arterials
RTA	Riverside Transit Agency
RTIP	Regional Transportation Improvement Plan
RTP	Regional Transportation Plan
RUWMP	Regional Urban Water Management Plan
RWQCB	Regional Water Quality Control Board
SA	Site Assessment
SARA	Superfund Amendments and Reauthorization Act
SB	Senate Bill
SCAG	Southern California Association of Governments
SCAQMD	South Coast Air Quality Management District
SCE	Southern California Edison
SCGC	Southern California Gas Company
SCS	Sustainable Communities Strategy
SDG&E	San Diego Gas and Electric
SEDAB	Southeast Desert Air Basin
sf	square foot/feet
SF_6	Sulfur Hexafluoride
SHMA	Seismic Hazards Mapping Act
SHPO	State Historic Preservation Office
SIP	State Implementation Plan
SJUSD	San Jacinto Unified School District
SJWA	San Jacinto Wildlife Area
SKR	Stephens' kangaroo rat
SKR HCP	Stephens' Kangaroo Rat Habitat Conservation Plan

8.3 Glossary of General Terms

Acre-Foot. An acre-foot is the quantity of volume of water that covers one acre to a depth of one foot; equal to 43,560 cubic feet or 325,851 gallons.

Aesthetics. The perception of artistic elements, or elements in the natural or human-made environment that are pleasing to the eye.

Air Quality Criteria. Air quality criteria are the levels of pollution and length of exposure at which adverse effects on health and welfare occur.

Air Quality Standards. Air quality standards are the prescribed level of pollutants in the outside air that cannot be exceeded legally during a specified time in a specified geographical area.

Ambient Noise. Ambient noise is the composite of noise from all sources near and far. The ambient noise level constitutes the normal or existing level of environmental noise at a given location.

Applicant. An applicant is a person who proposes to carry out a project that needs a lease, permit, license, certificate, or other entitlement, for use or financial assistance from one or more public agencies.

Arterial. An arterial is a major street carrying the traffic of local and collector streets to and from freeways and other major streets, with controlled intersections and generally providing direct access to non-residential properties.

Attainment. Attainment means that there is compliance with State and Federal ambient air quality standards within an air basin.

A-Weighted Decibel (dBA). The dB on the A-weighted scale is the sound level obtained by use of A-weighting. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.

California Environmental Quality Act (CEQA). Enacted in 1970, CEQA requires State and local agencies to estimate and evaluate the environmental implications of their actions. It aims to prevent environmental effects of the agency actions by requiring agencies, when feasible, to avoid or reduce the significant environmental impacts of their decisions. If a proposed activity has the potential for a significant adverse environmental impact, an environmental impact report (EIR) must be prepared and certified as to its adequacy before taking action on the proposed project (*California Public Resources Code* §§21000 et seq.)

Capacity. The maximum rate of flow at which vehicles can be reasonably expected to traverse a point or uniform segment of a lane or roadway during a specified time period under prevailing roadway, traffic, and control conditions.

Collector. Relatively low-speed, low-volume street that provides circulation within and between neighborhoods. Collectors usually serve short trips and are intended for collecting trips from local streets and distributing them to the arterial network.

Community Noise Equivalent Level (CNEL). A 24-hour energy equivalent level derived from a variety of single-noise events, with weighting factors of 5 and 10 dBA applied to the evening (7 p.m. to 10 p.m.) and nighttime (10 p.m. to 7 a.m.) periods, respectively, to allow for greater sensitivity to noise during these hours.

Congestion Management Plan (CMP). A mechanism employing growth management techniques, including traffic level of service requirements, standards for public transit, trip reduction programs involving transportation systems management and jobs/housing balance strategies, and capital improvement programming, for the purpose of controlling and/or reducing the cumulative regional traffic impacts of development.

Cumulative Impact. As used in CEQA, the total impact resulting from the accumulated impacts of individual projects or programs over time.

Day-Night Average Level (L_{dn}). The average equivalent A-weighted sound level during a 24-hour day, obtained after the addition of 10 decibels to sound levels in the night after 10 p.m. and before 7 a.m. (Note: CNEL and L_{dn} represent daily levels of noise exposure averaged on an annual or daily basis, while L_{eq} represents the equivalent energy noise exposure for a shorter time period, typically one hour.)

Decibel (dB). The decibel (dB) is the unit of level that denotes the ratio between two quantities that are proportional to power; the number of decibels is 10 times the logarithm (to the base 10) of this ratio.

Emission Standard. The maximum amount of pollutant legally permitted to be discharged from a single source, either mobile or stationary.

Environment. In CEQA, the environment are "the physical conditions which exist within the area which will be affected by a proposed project, including land, air, water, mineral, flora, fauna, noise, and objects of historic or aesthetic significance."

Environmental Impact Report (EIR). A report required pursuant to the California Environmental Quality Act that assesses all the environmental characteristics of an area, determines what effects or impacts will result if the area is altered or disturbed by a proposed action, and identifies alternatives or other measures to avoid or reduce those impacts.

Equivalent Energy Level (L_{eq}). L_{eq} is the sound level corresponding to a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. L_{eq} is typically computed over 1-hour, 8-hour, and 24-hour sample periods.

Feasible. To be feasible, according to CEQA, means to be capable of being accomplished in a successful manner within a reasonable time taking into account economic, environmental, social, and technological factors.

Findings. Findings required by CEQA are the conclusions made regarding the significance of a project in light of its environmental impacts. A Statement of Overriding Considerations does not obviate the need to make other required CEQA findings.

Floor Area Ratio (FAR). The FAR is the gross floor area permitted on a site divided by the total net area of the site, expressed in decimals to one or two places. For example, on a site with 10,000 net square feet of land area, a floor area ratio of 1.0 will allow a maximum of 10,000 gross square feet of building floor area to be built. On the same site, an FAR of 1.5 would allow 15,000 square feet of floor area; an FAR of 2.0 would allow 20,000 square feet; and an FAR of 0.5 would allow 5,000 square feet. Also commonly used in zoning, FARs typically are applied on a parcel-by-parcel basis as opposed to an average FAR for an entire land use or zoning district.

Floor Area, Gross. The sum of the horizontal areas of the several floors of a building measured from the exterior face of exterior walls, or from the centerline of a wall separating two buildings, but not including any space where the floor-to-ceiling height is less than six feet. Some cities exclude specific kinds of space (e.g., elevator shafts and parking decks) from the calculation of gross floor area.

Freeway. A freeway is a high-speed, high-capacity, limited-access road serving regional and countywide travel. Such roads are free of tolls, as contrasted with turnpikes or other toll roads. Freeways generally are used for long trips between major land use generators. Major streets cross at a different grade level.

Incorporation by Reference. "Incorporation by reference" is a CEQA term meaning reliance on a previous environmental document for some portion of the environmental analysis of a project. See *CEQA Guidelines* §15150.

Initial Study. An Initial Study is a preliminary CEQA analysis that can be prepared by a Lead Agency to determine whether an EIR or Negative Declaration must be prepared, and identifying the significant environmental effects to be analyzed in an EIR.

Land Use. Any land use is the determination by a governing authority of the use to which land within its jurisdiction may be put so as to promote the most advantageous development of the community.

Lead Agency. The lead agency is the public agency that has the principal responsibility for carrying out or approving a project. The Lead Agency decides whether an EIR or Negative Declaration is required for a project, and causes the appropriate document to be prepared.

Level of Service (LOS). LOS is a qualitative measure describing operational conditions within a traffic stream and how motorists and/or passengers perceive them.

Maximum Noise Level (L_{max}). The maximum A-weighted sound levels measured on a sound level meter, during a designated time interval, using fast time averaging.

Mitigation Measure. A mitigation measure is a change in a project designed to avoid, minimize, rectify, reduce, or compensate for a significant environmental impact.

Mitigation Monitoring and Reporting Program (MMRP). When a lead agency adopts a mitigated negative declaration or an EIR, it must adopt a program of monitoring or reporting which will ensure that mitigation measures are implemented. (See CEQA Statute §21081.6(a) and *CEQA Guidelines* §§15091(d) and 15097.)

Noise. Noise is any sound that is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing, or is otherwise annoying (unwanted sound).

Noise Contours. Noise contours are lines drawn about a noise source indicating equal levels of noise exposure.

Notice of Determination (NOD). An NOD is a brief notice filed with the State Clearinghouse to document project approval. The filing of the NOD starts the statute of limitations period. (See *CEQA Guidelines* §15373.)

Notice of Preparation (NOP). An NOP is a brief notice to notify the public, Responsible and Trustee Agencies that an EIR is being prepared for a project. The notice serves to solicit guidance from those agencies and the public about the scope and content of the environmental information to be included in the EIR. (See *CEQA Guidelines* §15375.)

Peak Hour. The hour of highest traffic volume on a given section of roadway between 7:00 a.m. and 9:00 a.m. or between 4:00 p.m. and 6:00 p.m.

Programmatic EIR. A programmatic EIR is an EIR that examines the impacts that would result from a conceptual plan or policy action envisioned by the lead agency, which is carried out at a more general level of analysis based upon the development information available. (See C*EQA Guidelines* §15161.)

Project. According to CEQA, a project is the whole of an action that has the potential to result in significant environmental change in the environment, directly or ultimately. (See *CEQA Guidelines* §15378.)

Project Description. A project description describes the basic characteristics of the project including location, need for the project, project objectives, technical and environmental characteristics, project size and design, project phasing and required permits. The level of detail provided in the project description varies according to the type of environmental document prepared.

Project EIR. A project EIR is an EIR that examines the impacts that would result from development of a specific project. (See C*EQA Guidelines* §15161.)

Public Hearing. A public hearing is a mechanism for providing the public an opportunity to comment on and present evidence relating to a proposed project and its Draft EIR.

Responsible Agencies. According to CEQA, responsible agencies are all public agencies other than the Lead Agency that have discretionary approval power over the project. (See *CEQA Guidelines* §15381.)

Reviewing Agencies. Reviewing agencies are local, State, and Federal agencies with jurisdiction over the project area or resources potentially affected by the project. Cities and counties are also considered reviewing agencies.

Scoping Meeting. A scoping meeting is an optional meeting pursuant to CEQA in which the lead agency meets with members of the public or agency representatives after the Notice of Preparation has been issued to discuss environmental issues related to a project. Scoping sessions provide the opportunity to discuss environmental issues, project alternatives and potential mitigation measures that may warrant in-depth analysis in the environmental review process.

Sensitive Receptors. Sensitive receptors are people or institutions with people that are particularly susceptible to illness from environmental pollution, such as the elderly, very young children, people already weakened by illness (e.g., asthmatics), and persons engaged in strenuous exercise.

Significant Effect on the Environment. A significant effect on the environment means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance (*CEQA Guidelines* §15382).

Thresholds of Significance. Thresholds of significance are criteria for each environmental issue area to assist with determinations of significance of project impacts. They are based on *CEQA Guidelines* Appendix G.

Trustee Agency. According to CEQA, a Trustee agency is a State agency that has jurisdiction by law over natural resources affected by a project which are held in trust for the people of the State of California. (See *CEQA Guidelines* §15386.)

Volume (Transportation). The volume of traffic is the total number of vehicles that pass over a given point or section of a roadway during a given time interval. Volumes may be expressed in terms of annual, daily, hourly, or sub-hourly periods.

Wastewater. Wastewater is water carrying dissolved or suspended solids from homes, farms, businesses, and industries. The wastewater treatment process includes any process that modifies characteristics of the wastewater, usually for the purpose of meeting effluent standards.

Zoning. Regulation by zone districts of the height, use, and area of structures, the use of land, and the density of population and intensity of allowable uses.

8.4 Glossary of Project-Specific Definitions

The following definitions are excerpts from Section 3.4, *Project Description*.

Annexation Area: This term refers to an 85-acre parcel located adjacent to Gilman Springs Road that is to be annexed into the City of Moreno Valley. The parcel is already within the City's adopted Sphere of Influence adopted on November 21, 1985.

CDFW Conservation Buffer Area: This term refers to a 910-acre parcel owned by the State of California as part of the San Jacinto Wildlife Area (SJWA). This land is within the City of Moreno Valley and is included in the approved Moreno Highlands Specific Plan. That plan designates this property for a broad mix of urban uses including suburban residential, schools, parks, and roads. This land was purchased by the State in 1991 to act as a buffer between the sensitive biological resources of the SJWA and the future urban development under the Moreno Highlands Specific Plan. This land has been actively farmed for many decades and most of it remains in active production. The southwestern portion contains areas of non-native grasslands, although aerial photographs show that this area has been intermittently tilled over the last 80 years. This property is included in the General Plan Amendment and the Zone Change to replace the current urban land uses that are permitted and replace them with Open Space and Public Facility designations. This property is not within the proposed World Logistics Center Specific Plan. This Buffer Area is a large part of the "Other Project Areas" described herein.

General Plan Amendment: One of the proposed entitlements is a General Plan Amendment (GPA) that will permit the establishment of logistics land uses on the 3,714-acre property located east of Redlands and south of SR-60. The following General Plan Elements will be amended: Community

Development; Circulation; Parks, Recreation, and Open Space; Safety; Conservation; and General Plan Goals and Objectives. The GPA will replace the current Moreno Highland Specific Plan/General Plan Designations with the following land use designations: (a) 2,610 acres for high cube logistics development; (b) 1,084 acres of Open Space; and (c) 20 acres for Public Facilities.

Moreno Highlands Specific Plan: This term refers to the currently approved Specific Plan that covers 3,038 acres of the project area. This Specific Plan permits the development of a master planned, mixed-use community consisting of up to 7,763 residential dwelling units and approximately 603 acres of business, retail, institutional, and other uses. This development will be replaced with the World Logistics Center Specific Plan and 1,104 acres of Open Space and Public Facilities uses.

Off-site Analysis Zone: This term refers to an approximately 1,000-foot wide zone adjacent to the south and east boundaries of the Specific Plan area that was studied by Michael Brandman Associates (MBA) as part of the assessment of potential impacts on biological resources. It covers approximately 1,637.5 acres.

Off-site Improvement Areas: Development under the Specific Plan will require construction of a number of offsite infrastructure improvements covering approximately 104 acres of land adjacent to the Specific Plan Site including, but not limited to the following facilities (see Figure 3.7):

Debris Basins easterly of Gilman Springs Road;

Water reservoirs and access roads located northeast, north, and west of the project site;

SR-60 interchange improvements; and

Roadway, water, sewer, drainage, and utility improvements extending north and west from the project.

Other Project Areas: The San Diego Gas & Electric Company (SDG&E) and the Southern California Gas Company (SCGC) own a total of 194 acres of land immediately south of the Specific Plan site. These properties are included in the proposed General Plan Amendment and the Zone Change to designate them for Open Space and Public Facilities uses. These designations are consistent with present uses. These properties are not within the proposed World Logistics Specific Plan. Approximately 174 acres of the land owned by SDG&E will be designated as Open Space. Nineteen acres of SDG&E land and one acre of SCGC land will be designated as Public Facilities.

Project Site or Project Area: This term refers to the entire 3,818-acre area covered by the EIR encompassed by: (a) the Specific Plan Area (2,610 acres); (b) the CDFW Conservation Buffer Area (910 acres); c) the Public Facilities Lands area (194 aces); and (d) the Off-site Improvement Area on 104 acres.

Proposed Project or World Logistics Center Project: General term applied to all of the entitlements outlined above that are addressed in this EIR, including:

WLC Specific Plan	2,610 acres
General Plan Amendment	3,714 acres
Zone Change	3,714 acres
Tentative Parcel Map	1,539 acres
Annexation	85 acres
Off-site improvements	104 acres

Specific Plan Site: Approximately 2,610 acres of the project area are included in the proposed World Logistics Center (WLC) Specific Plan, located generally south of the SR-60 Freeway, east of Redlands Boulevard, west of Gilman Springs Road, and north of the San Jacinto Wildlife Area.

State Lands: Refers to lands owned by the State of California and includes the San Jacinto Wildlife Area (SJWA) located south of the Specific Plan Site, and the Lake Perris State Recreation Area (LPSRA) located southwesterly of the Specific Plan Site.

Tentative Parcel Map Area: A Tentative Parcel Map is being processed to subdivide 1,539 acres of the project for financing purposes only. This property is owned by the project applicant. Approval of the map will confer no development rights to the property.

WLC Specific Plan: The WLC Specific Plan proposes a master-planned logistics campus to include up to 40.4 million square feet of high-cube logistics warehousing, up to 200,000 square feet of light logistics uses, a site for logistics support uses (LS designation) and 74.3 acres of Open Space in the southwest corner of the site. The Specific Plan includes extensive development standards, design guidelines and review procedures for all development within the project.

World Logistics Center Project: The term refers to all related development and planning activities currently proposed by Highland Fairview in the Rancho Belago area of the eastern end of the City of Moreno Valley. The WLC property is generally located south of the State Route 60 freeway, east of Redlands Boulevard, west of Gilman Springs Road, and north of Mystic Lake and the San Jacinto Wildlife Area.

Zone Change: The project includes a Zone Change covering 3,714 acres which will designate 1,084 acres of land for Open Space (CDFW and SDG&E properties), 20 acres for Public Facilities (SDG&E, SCGC properties) and 2,610 acres for the World Logistics Center Specific Plan.

Table of Contents

NOTE TO READERS: The Revised Sections of the Final EIR (FEIR) sets forth those portions of Section 1.0 that have been revised. Revisions to, and deletions from, the FEIR have been identified in a separate document, available for review at the City of Moreno Valley. The absence of any reference to a portion of Section 1.0 means that the corresponding portion of Section 1.0 in the FEIR remains unchanged. However, where appropriate, unrevised portions of the FEIR have been included for ease of understanding. The absence of reference to a portion of Section 1.0 means that the corresponding portion of Section 1.0 in the FEIR remains unchanged or has been deleted.

1.0 EXECUTIVE SUMMARY

In August, 2015, the City Council of the City of Moreno Valley certified a Final Environmental Impact Report (the "FEIR") as complying with the California Environmental Quality Act (CEQA). The FEIR had been prepared to analyze the environmental impacts that could result from the construction and operation of the World Logistics Center. Several lawsuits were filed challenging the adequacy of the FEIR.

In February, 2018, a judge of the Riverside County Superior County issued a ruling which identified five deficiencies in the FEIR. In June, 2018, a judgement was entered and a writ issued which ordered the City to set aside the certification of the FEIR. This document, referred to as the Revised Sections of the FEIR, has been prepared to correct the deficiencies identified in the February ruling. The Revised Sections of the FEIR will be circulated for public comment. Those portions of the FEIR which were found to be have been in compliance with CEQA will not be circulated and no further comments on them will be sought. Responses to comments on the Revised Sections of the FEIR will be prepared. A revised FEIR, consisting of the Revised Sections of the FEIR, the comments and responses and portions of the FEIR which were found to have been in compliance with CEQA, will then be considered by the City to determine if the Revised FEIR should be certified as complying with CEQA.

The development of the World Logistics Center is subject to the regulations and development standards contained in the existing World Logistics Center Specific Plan which authorizes the construction of 40,600,000 square feet of logistics facilities and associated infrastructure. The Revised FEIR, once certified, will be used in conjunction with the discretionary approvals required for the development of the World Logistics Center, including, but not limited to, subdivision maps, plot plan approvals, and annexation of land, currently in unincorporated Riverside County, into the City.

The Revised Sections of the FEIR have been prepared to address each of the deficiencies identified in the court's ruling, summarized as follows:

- **Energy Impacts**: "The FEIR must provide a comparison of feasible, cost-effective renewable energy technologies in the Energy Impacts analysis".
- **Biological Impacts**: "The FEIR should remove all references to and consideration of the 910 acres of SJWA and MSHCP lands as "buffer zone" or "CDFW Conservation Buffer Area" in the Biological Resources and Habitat Impacts analysis".
- **Noise Impacts**: "The FEIR must provide an analysis of construction noise over ambient levels; provide adequate analysis on construction noise impacts on nearby homes; address the inadequacy of mitigation measures, which fail to include performance standards or ways to reduce construction noise".
- **Agricultural Impacts**: "The FEIR and the resolution certifying the FEIR require clarification as to whether loss of locally important farmland will have a significant direct or cumulative impact on agriculture and, if significant, the FEIR must either explain how proposed mitigation will reduce the impact or why other mitigation is not feasible".

- **Cumulative Impacts**: "The FEIR should include consideration of recently constructed and proposed large warehouse projects in the summary of projections method, and should analyze whether individually significant impacts may be cumulative considerable".

The Revised Sections of the FEIR responds to the deficiencies as follows:

- **Energy Impacts**: A new Energy Impact Assessment technical report has been prepared, and a new Energy section added, to provide a comparison of cost- effective renewable energy technologies and associated energy conservation features. This includes an evaluation of all potential renewable energy source options, the feasibility of incorporating these options into the project to reduce overall energy consumptions and to reduce greenhouse gas emissions.
- **Biological Impacts**: A new Biological Resource technical memo has been prepared to document current biological resources on the World Logistics Center site. The Biological Resource section has been updated to remove any reference to the 910-acre "buffer" and "CDFW Conservation Buffer". The entire project site has been resurveyed to document existing biological resources, sensitive species and to update the biological Resource Technical Report.
- **Noise Impacts**: The Noise technical report and section have been updated to include an updated analysis of construction impacts and mitigation measures focused on the onsite and adjacent residential land uses. In addition, overall noise operational mobile and stationary source noise impacts and mitigation measures have been updated.
- **Agricultural Impacts**: The Agricultural section has been updated to accurately reflect the status of the agricultural resources found on the World Logistics Center site.
- **Cumulative Impacts**: The cumulative impact sections of the FEIR have been updated to function as a stand-alone section and to add recently constructed and proposed warehouse facilities to the summary of projections and list method to determine cumulative impacts. In order to complete the updated cumulative impact assessment, certain project level analysis (air quality/greenhouse gases, traffic) was completed to form the basis for the cumulative impact analysis. The project level analysis is included in the body of this Revised Sections of the FEIR and associated technical studies are included in the appendices for reference. Extensive research has been completed to identify 361 cumulative projects in the City of Moreno Valley and surrounding jurisdictions, including the Cities of Riverside, Perris, Hemet, San Jacinto, Redlands Beaumont, as well as the Counties of Riverside and San Bernardino, and the March Joint Powers Authority (JPA). These identified projects form the basis of the cumulative project list to be evaluated in Section 6.0.

In addition, although not required by the court ruling, the following analysis has been updated or newly prepared to assist in the response to the deficiencies identified by the court:

- The Air Quality assessment has been updated based upon the updated traffic study to provide the current baseline for the updated cumulative impact analysis.
- The Greenhouse Gas / Climate Change Assessment has been updated based upon the updated traffic study to provide the current baseline for the updated cumulative impact analysis
- The Traffic Impact assessment has been updated to provide the current baseline traffic conditions for the updated air quality, greenhouse gas/climate change, noise, and cumulative impact analysis.

Only the above outlined revised information is contained in this Revised Sections of the FEIR, all other sections of the FEIR and technical studies remain valid, and are available for review at the City of Moreno Valley. A highlight/strikeout version of the Revised Sections of the FEIR is available for review at the City of Moreno Valley, which shows all changes made to the document.

The following Sections of the FEIR remain valid and are not included in the Revised Sections of the FEIR, except for the cumulative impact chapter: Aesthetics, Cultural Resources, Geology and Soils, Hazard and Hazardous Materials, Hydrology, Land Use and Planning, Mineral Resources, Population and Housing, and Public Services and Utilities.

Portions of the following Sections of the FEIR have been revised and are included in the Revised Sections of the FEIR: Agriculture and Forestry Resources, Air Quality, Greenhouse Gas/Climate Change/Sustainability, Land Use and Planning, Noise, and Traffic and Circulation.

The following Sections of the FEIR have been entirely replaced with new sections in the Revised Sections of the FEIR: Biological Resources and Energy (new stand-alone sections).

The Revised Sections of the Final EIR are being circulated for additional public review. The 45-day public review period is from July 25, 2018 through September 7 ,2018. All comments received on the Revised Sections of the FEIR will be responded to and incorporated into a response to comments document, which will be considered by the City at a public hearing to certify that the Revised Sections of the FEIR is in compliance with CEQA. The Revised Sections of the FEIR is also available for review on the City of Moreno Valley's website (www.moval.org).

Please submit comments on the Revised Sections of the FEIR no later than 5:00 PM, September 7, 2018 to:

Albert Armijo
Interim Planning Manager
City of Moreno Valley
14177 Frederick Street
P.O. Box 88055
Moreno Valley, CA 92552-0805
alberta@moval.org

Table 1.1-1 summarizes the mitigation measures from the FEIR and the Revised Sections of the FEIR, and identifies project impacts, mitigation measures and level of significance with mitigation for each of the seventeen environmental factors evaluated in the FEIR and Revised Sections of the FEIR.

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	**Mitigation Measures**	**Level of Significance**
4.1 Aesthetics		
LESS THAN SIGNIFICANT IMPACTS		
None	Not applicable	Not applicable
SIGNIFICANT IMPACTS		
Impact 4.1.6.1 Scenic Vistas		
The WLC project will significantly impact viewsheds in the area, including views of the Mt. Russell Range and the Badlands.	**4.1.6.1A** Each Plot Plan application for development along the western, southwestern, and eastern boundaries of the project (i.e., adjacent to existing or planned residential zoned uses) shall include a minimum 250-foot setback measured from the City/County zoning boundary line and any building or truck parking/access area within the project. The setback area shall include landscaping, berms, and walls to provide visual screening between the new development and existing residential areas upon maturity of the landscaping materials. The existing olive trees along Redlands Blvd. shall remain in place as long as practical to help screen views of the project site. This measure shall be implemented to the satisfaction of the Planning Official. **4.1.6.1B** Each Plot Plan application for development adjacent to Redlands Boulevard, Bay Avenue, or Merwin Street, shall include a plot plan, landscaping plan, and visual rendering(s) illustrating the appearance of the proposed development. The renderings shall demonstrate that views of proposed buildings and trucks can be reasonably screened from view from existing residents upon maturity of planned landscaping and to ensure consistency with the General Plan Objective 7.7. "Effective" screening shall mean that no more than the upper quarter (25%) of a building is visible from existing residences, which shall be achieved through a combination of landscaping, berms, fencing, etc. The location and number of view presentations shall be at the discretion of the Planning Division. **4.1.6.1C** Prior to the issuance of a certificate of occupancy for buildings adjacent to the western, southwestern, and eastern boundaries of the project (i.e., adjacent to existing residences at the time of application) the screening required in Mitigation Measure 4.1.6.1A shall be installed in substantial conformance with the approved plans to the satisfaction of the Planning Official.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	4.1.6.1D Prior to the issuance of permits for any development activity adjacent to Planning Area 30 (74.3 acres in the southwest portion of the Specific Plan), the entirety of Planning Area 30 shall be offered to the State of California for open space purposes. In the event that the State does not accept the dedication, the property shall be offered to Western Riverside County Regional Conservation Authority or an established non-profit land conservancy for open space purposes. In the event that none of these organizations accepts the dedication, the property may be dedicated to a property owner's association or may remain in private ownership and may be fenced and access prohibited.	
Impact 4.1.6.2 Scenic Resources and Scenic Highways		
The WLC project will significantly impact existing viewsheds from SR-60 which is a locally designated scenic route.	Previously referenced Mitigation Measures 4.1.1.6A through 4.1.16D	Significant and Unavoidable
Impact 4.1.6.3 Existing Visual Character and its Surroundings		
The WLC project will fundamentally change views of the area from agriculture to large warehouses.	**4.1.6.3A** Each Plot Plan application for development shall include plans and visual rendering(s) illustrating any changes in views of Mount Russell and/or the Badlands, for travelers along SR-60, as determined necessary by the Planning Official. The plans and renderings shall illustrate typical views based on project plans, with the location and number of view presentations to be determined by the Planning Official. These views shall be simulated from a height of six feet from the edge of the roadway travel lane closest to the visual resource. The renderings must demonstrate that the development will preserve at least the upper two thirds (67%) of the vertical view of Mt. Russell from SR-60.	Significant and Unavoidable
Impact 4.1.6.4 Light and Glare		
The WLC project will significantly impact the area by substantially increasing lighting and glare in the area.	**4.1.6.4A** Each Plot Plan application for development adjacent to residential development shall include a photometric plot of all proposed exterior lighting demonstrating that the project is consistent with the requirements of Section 9.08.100 of the City Municipal Code. The lighting study shall indicate the expected increase in light levels at the property lines of adjacent residential uses. The study shall	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	demonstrate that the proposed lighting fixtures and/or visual screening meet or exceed City standards regarding light impacts. **4.1.6.4B** Each Plot Plan application for development shall include an analysis of all proposed solar panels demonstrating that glare from panels will not negatively affect adjacent residential uses or negatively affect motorists along perimeter roadways. Design details to meet these requirements shall be implemented to the satisfaction of the Planning Official.	
Cumulative Aesthetic Impacts		
The cumulative effect of development in the region will continue to modify existing viewsheds, especially along SR-60. Cumulative impacts would remain significant and unavoidable.	Previously referenced Mitigation Measures 4.1.6.1A through 4.1.6.1D, 4.1.6.4A and 4.1.6.4B	Significant and Unavoidable
4.2 Agriculture		
LESS THAN SIGNIFICANT IMPACTS		
Forest Land Zoning		
There are no significant impacts because there are no areas designated as forest land or timberland on the project site.	No mitigation is required.	No Impact
Loss or Conversion of Forest Land		
There are no forest lands on the project site or in the surrounding area.	No mitigation is required.	No Impact
Existing Zoning and Williamson Act		
There are no Williamson Act Contracts on or adjacent to the project site.	No mitigation is required.	No Impact

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Farmland Conversion		
The project will not convert Unique Farmland by the state to urban uses.	No mitigation is required.	No Impact
Impact 4.2.6.2 Conversion of Farmland to Non-Agricultural Uses		
The project will convert 2,610 acres of Farmland of Local Importance to urban uses.	No mitigation is required.	Less than Significant
SIGNIFICANT IMPACTS		
None		No Impact
Cumulative Agricultural Impacts		
As urban development continues in the City and surrounding areas, there will be a cumulative loss of agricultural land through conversion to urban uses. This conversion is a long-established historical process based on local and regional economic conditions, resulting in the eventual relocation of farming to more rural and outlying areas (e.g., Coachella Valley, Kern County, etc.).	**6.2.1:** Prior to the issuance of any grading permit affecting land designated as "Farmland of Local importance" (Figure 4.2.2 in the World Logistics Center Environmental Impact Report), an Agricultural Conservation Easement shall be recorded over land of equivalent or better agricultural economic productivity of the offsite easement property compared to the World Logistics Center property. The analysis shall include a comparison of the project's "Farmland of Local Significance" considering its relative economic potential as the best measure of productivity (i.e., net profitability per acre or potential net rental income per acre). It shall include a consideration of various important physical factors including location and accessibility, soils and topography, micro and macro climatic conditions, water availability and quality, as well as local practices, good farm management and cultural (growing) costs. The form and content of this easement, as well as the estimates of agricultural productivity, shall be reviewed and approved in advance by the Planning Official.	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
4.3 Air Quality		
LESS THAN SIGNIFICANT IMPACTS		
Odors		
The project involves large warehouses and no uses that would generate substantial odors. The natural gas facilities on site sometimes generate temporary odors from natural gas blow-offs, but these are not considered significant impacts.	No mitigation is required.	Less than Significant
Long-Term Microscale (CO Hot Spot) Emissions		
The project air quality study determined that project-related traffic would not create any CO hot spots on local roadways through project buildout.	No mitigation is required.	Less than Significant
SIGNIFICANT IMPACTS		
Impact 4.3.6.1 Air Quality Management Plan Consistency		
The land uses of the project are not consistent with those used to prepare the most current AQMP. Although the project would substantially improve the jobs/housing balance of the City by introducing more employment-generating uses than new housing, it would exceed applicable thresholds for all criteria pollutants, with the exception of SO_X. Despite the implementation of mitigation measures for both construction and operation, emissions associated with the project cannot be reduced below applicable SCAQMD thresholds.	Implementation of Mitigation Measures 4.3.6.2A through 4.3.6.2D, 4.3.6.3A through 4.3.6.3D, and 4.3.6.4A, will help reduce air pollutant emissions of the project, but it will still be inconsistent with the AQMP.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Impact 4.3.6.2 Construction Equipment Exhaust Emissions		
Future development within the WLCSP will exceed daily air pollutant significance criteria established by the SCAMQD for construction-related activities.	**4.3.6.2A** Construction equipment maintenance records (including the emission control tier of the equipment) shall be kept on site during construction and shall be available for inspection by the City of Moreno Valley. a) Off-road diesel-powered construction equipment greater than 50 horsepower shall meet United States Environmental Protection Agency Tier 4 off-road emissions standards. A copy of each unit's certified tier specification shall be available for inspection by the City at the time of mobilization of each applicable unit of equipment. b) During all construction activities, off-road diesel-powered equipment may be in the "on" position not more than 10 hours per day. c) Construction equipment shall be properly maintained according to manufacturer specifications. d) All diesel powered construction equipment, delivery vehicles, and delivery trucks shall be turned off when not in use. On-site idling shall be limited to three minutes in any one hour. e) Electrical hook ups to the power grid shall be provided for electric construction tools including saws, drills and compressors, where feasible, to reduce the need for diesel-powered electric generators. Where feasible and available, electric tools shall be used f) The project shall demonstrate compliance with South Coast Air Quality Management District Rule 403 concerning fugitive dust and provide appropriate documentation to the City of Moreno Valley. g) All construction contractors shall be provided information on the South Coast Air Quality Management District Surplus Off-road Opt-In "SOON" funds which provides funds to accelerate cleanup of off-road diesel vehicles. h) Construction on-road haul trucks shall be model year 2010 or newer if diesel fueled. i) Information on ridesharing programs shall be made available to construction employees.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	j) During construction, lunch options shall be provided onsite. k) A publicly visible sign shall be posted with the telephone number and person to contact regarding dust complaints per AQMD Standards. l) Off-site construction shall be limited to the hours between 6 a.m. to 8 p.m. on weekdays only. Construction during City holidays shall not be permitted. **4.3.6.2B** Prior to issuance of any grading permits, a traffic control plan shall be submitted to and approved by the City of Moreno Valley that describes in detail the location of equipment staging areas, stockpiling/storage areas, construction parking areas, safe detours around the project construction site, as well as provide temporary traffic control (e.g., flag person) during construction-related truck hauling activities. Construction trucks shall be rerouted away from sensitive receptor areas. Trucks shall use State Route 60 using World Logistics Center Parkway (formerly Theodore Street), Redlands Boulevard (north of Eucalyptus Avenue), and Gilman Springs Road. In addition to its traffic safety purpose, the traffic control plan can minimize traffic congestion and delays that increase idling emissions. A copy of the approved Traffic Control Plan shall be retained on site in the construction trailer. **4.3.6.2C** The following measures shall be applied during construction of the project to reduce volatile organic compounds (VOC): a) Non-VOC containing paints, sealants, adhesives, solvents, asphalt primer, and architectural coatings (where used), or pre-fabricated architectural panels shall be used in the construction of the project to the maximum extent practicable. If such products are not commercially available, products with a VOC content of 100 grams per liter or lower for both interior and exterior surfaces shall be used. b) Leftover paint shall be taken to a designated hazardous waste center. c) Paint containers shall be closed when not in use. d) Low VOC cleaning solvents shall be used to clean paint application equipment. e) Paint and solvent-laden rags shall be kept in sealed containers.	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	4.3.6.2D No grading shall occur on days with an Air Quality Index forecast greater than 150 for particulates or ozone as forecasted for the project area (Source Receptor Area 24).	
Impact 4.3.6.3 Localized Construction and Operation Emissions		
Future development within the WLCSP will exceed local significance thresholds of the SCAMQD for trucks and other operational activities.	**4.3.6.3A** Prior to issuance of occupancy permits for each warehouse building within the WLCSP, the developer shall demonstrate to the City that vehicles can access the building using paved roads and parking lots. **4.3.6.3B** The following shall be implemented as indicated: **Prior to Issuance of a Certificate of Occupancy** a) Signs shall be prominently displayed informing truck drivers about the California Air Resources Board diesel idling regulations and the prohibition of parking in residential areas. b) Signs shall be prominently displayed in all dock and delivery areas advising of the following: engines shall be turned off when not in use; trucks shall not idle for more than three consecutive minutes; telephone numbers of the building facilities manager and the California Air Resources Board to report air quality violations. c) Signs shall be installed at each exit driveway providing directional information to the City's truck route. Text on the sign shall read "To Truck Route" with a directional arrow. Truck routes shall be clearly marked per the City Municipal Code. **On an Ongoing Basis** d) Tenants shall maintain records on fleet equipment and vehicle engine maintenance to ensure that equipment and vehicles are maintained pursuant to manufacturer's specifications. The records shall be maintained on site and be made available for inspection by the City. e) Tenant's staff in charge of keeping vehicle records shall be trained/certified in diesel technologies, by attending California Air Resources Board approved courses (such as the free, one-day Course #512). Documentation of said training shall be maintained on-site and be available for inspection by the City.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	f) Tenants shall be encouraged to become a SmartWay Partner. g) Tenants shall be encouraged to utilize SmartWay 1.0 or greater carriers. h) Tenants' fleets shall be in compliance with all current air quality regulations for on-road trucks including but not limited to California Air Resources Board's Heavy-Duty Greenhouse Gas Regulation and Truck and Bus Regulation. i) Information shall be posted in a prominent location available to truck drivers regarding alternative fueling technologies and the availability of such fuels in the immediate area of the World Logistics Center. j) Tenants shall be encouraged to apply for incentive funding (such as the Voucher Incentive Program [VIP], Carl Moyer, etc.) to upgrade their fleet. k) All yard trucks (yard dogs/yard goats/yard jockeys/yard hostlers) shall be powered by electricity, natural gas, propane, or an equivalent non-diesel fuel. Any off-road engines in the yard trucks shall have emissions standards equal to Tier 4 Interim or greater. Any on-road engines in the yard trucks shall have emissions standards that meet or exceed 2010 engine emission standards specified in California Code of Regulations Title 13, Article 4.5, Chapter 1, Section 2025. l) All diesel trucks entering logistics sites shall meet or exceed 2010 engine emission standards specified in California Code of Regulations Title 13, Article 4.5, Chapter 1, Section 2025 or be powered by natural gas, electricity, or other diesel alternative. Facility operators shall maintain a log of all trucks entering the facility to document that the truck usage meets these emission standards. This log shall be available for inspection by City staff at any time. m) All standby emergency generators shall be fueled by natural gas, propane, or any non-diesel fuel. n) Truck and vehicle idling shall be limited to three (3) minutes. **4.3.6.3C** Prior to the issuance of building permits for more than 25 million square feet of logistics warehousing within the Specific Plan area, a publically-accessible fueling station shall be operational within the Specific Plan area offering alternative fuels (natural gas, electricity, etc.) for purchase by the motoring public. Any fueling station shall be placed a minimum of 1000 feet from any	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	off-site sensitive receptors or off-site zoned sensitive uses. This facility may be established in connection with the convenience store required in Mitigation Measure 4.3.6.3D. **4.3.6.3D** Prior to the issuance of building permits for more than 25 million square feet of logistics warehousing within the Specific Plan area a site shall be operational within the Specific Plan area offering food and convenience items for purchase by the motoring public. This facility may be established in connection with the fueling station required in Mitigation Measure 4.3.6.3C. **4.3.6.3E** Refrigerated warehouse space is prohibited unless it can be demonstrated that the environmental impacts resulting from the inclusion of refrigerated space and its associated facilities, including, but not limited to, refrigeration units in vehicles serving the logistics warehouse, do not exceed any environmental impact for the entire World Logistics Center identified in the Revised Sections of the FEIR. Such environmental analysis shall be provided with any warehouse plot plan proposing refrigerated space. Any such proposal shall include electrical hookups at dock doors to provide power for vehicles equipped with Transportation Refrigeration Units (TRUs).	
Impact 4.3.6.4 Long-Term Operational Emissions		
Future development within the WLCSP will exceed daily air pollutant significance criteria established by the SCAMQD for trucks and other operational activities.	**4.3.6.4A** The following measures shall be incorporated as conditions to any Plot Plan approval within the Specific Plan: a) All tenants shall be required to participate in Riverside County's Rideshare Program. b) Storage lockers shall be provided in each building for a minimum of three percent of the full-time equivalent employees based on a ratio of 0.50 employees per 1,000 square feet of building area. Lockers shall be located in proximity to required bicycle storage facilities. c) Class II bike lanes shall be incorporated into the design for all project streets. d) The project shall incorporate pedestrian pathways between on-site uses. e) Site design and building placement shall provide pedestrian connections between internal and external facilities.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	f) The project shall provide pedestrian connections to residential uses within 0.25 mile from the project site. g) A minimum of two electric vehicle-charging stations for automobiles or light-duty trucks shall be provided at each building. In addition, parking facilities with 100 parking spaces or more shall be designed and constructed so that at least three percent of the total parking spaces are capable of supporting future electric vehicle supply equipment (EVSE) charging locations. Only sufficient sizing of conduit and service capacity to install Level 2 Electric Vehicle Supply Equipment (EVSE) or greater are required to be installed at the time of construction. h) Each building shall provide indoor and/or outdoor - bicycle storage space consistent with the City Municipal Code and the California Green Building Standards Code.- Each building shall provide a minimum of two shower and changing facilities for employees. i) Each building shall provide preferred and designated parking for any combination of low-emitting, fuel-efficient, and carpool/vanpool vehicles equivalent to the number identified in California Green Building Standards Code Section 5.106.5.2 or the Moreno Valley Municipal Code whichever requires the higher number of carpool/vanpool stalls. j) The following information shall be provided to tenants: onsite electric vehicle charging locations and instructions, bicycle parking, shower facilities, transit availability and the schedules, telecommunicating benefits, alternative work schedule benefits, and energy efficiency.	
Impact 4.3.6.5 Impacts to Sensitive Receptors		
The construction and operation of the project would result in the emissions of several toxic air contaminants, the most ubiquitous being diesel particulate matter (diesel PM). The projects estimated cancer risk for sensitive receptors onsite would exceed the maximum cancer risk thresholds.	**4.3.6.5A** Prior to the issuance of grading permits, the Applicant shall arrange for MERV 13 air filters to be installed at the residence located at 13241 World Logistics Center Parkway (formerly Theodore Street). Implementation of the previously identified Mitigation Measures 4.1.6.1A, 4.3.6.2A through 4.3.6.2D, and 4.3.6.3A through 4.3.6.3E will help reduce short- and long-term project emissions and health risks to sensitive receptors, but not to less than significant levels.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Cumulative Air Quality Impacts		
The project will increase short-term local and long-term regional air pollutant emissions and chronic health risks.	Implementation of the previously identified Mitigation Measures 4.3.6.2A through 4.3.6.2D, 4.3.6.3A through 4.3.6.3E, and 4.3.6.4A and 4.3.6.5A will help reduce short- and long-term project emissions and health risks, but not to less than significant levels.	Significant and Unavoidable
4.4 Biological Resources		
LESS THAN SIGNIFICANT IMPACTS		
Adopted Policies and/or Ordinances		
There are no local policies or ordinances regarding the protection of biological resources.	No mitigation required	No Impact
The project would not conflict with an adopted HCP, NCCP or local. regional or state habitat conservation plan.	**4.4.5.2A** Each Plot Plan application shall include a focused plant survey of the proposed development site prepared by a qualified biologist to identify if any of the following sensitive plants (i.e., Coulter's goldfields, smooth tarplant, Plummer's mariposa lily, or thread-leaved brodiaea) are present. If any of the listed plants are found, they may be relocated to the 250-foot setback area outlined in the Specific Plan and discussed in Mitigation Measure 4.4.6.1A. Alternatively, at the applicant's discretion, an impact fee may be paid to the Western Riverside County Regional Conservation Authority (RCA) or other appropriate conservation organizations to offset for the loss of these species. This measure shall be implemented to the satisfaction of the Planning Official. **4.4.5.2B** Prior to the approval of any tentative maps for development including or adjacent to any Criteria Cells identified in the Western Riverside County Multiple Species Habitat Conservation Plan, the applicant shall prepare and process a Joint Project Review (JPR) with the Western Riverside County Regional Conservation Agency (RCA). All criteria cells shall be identified on all such tentative maps. This measure shall be implemented to the satisfaction of the City Planning Division and Western Riverside County Regional Conservation Authority ("RCA").	Less than significant with mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	**Mitigation Measures**	**Level of Significance**
	In addition, the **Mitigation Measures 4.4.6.1A and 4.4.6.1B** described below will also help reduce potential direct and indirect impacts to biological resources covered by the MSHCP. Potential impacts related to MSHCP consistency will be less than significant. With implementation of **Mitigation Measures 4.4.6.1A, 4.4.6.1B, 4.4.6.2B, 4.4.5.2A,** and **4.4.5.2B,** the less than significant impacts related to MSHCP consistency will be further reduced.	
Habitat Fragmentation/Wildlife Movement		
The project will not restrict the movement of wildlife to and from the Badlands and the SJWA/Mystic Lake area, and will protect Drainage 9 through the project area as a natural drainage channel.	No mitigation required	Less than Significant
Impact 4.4.6.1 Endangered and Threatened Species		
There are 17 plant and animal species designated as endangered or threatened by state and/or federal authorizes that have the potential to occur within the general vicinity of the WLC project area. Development will remove agricultural land which provides minimal habitat value for most species present.	**4.4.6.1A** All Plot Plan applications within Planning Areas 10 and 12 (i.e. adjacent to the San Jacinto Wildlife Area as shown in Final EIR Volume 2 Figure 4.1.6B) shall provide a 250-foot setback from the southerly property line. Permitted uses within this setback area include landscaping, drainage and water quality facilities, fences and walls, utilities and utility structures, maintenance access drives, and similar related uses. No logistics buildings or truck access/parking/maneuvering facilities are permitted in this setback area. In addition, logistics buildings within Planning Areas 10 and 12 may not be located within 400 feet of the southerly property line. All development proposals in Planning Areas 10 and 12 shall include a minimum six-foot tall chain link fence or similar barrier to separate warehouse activity from the setback area. This fence/barrier shall have metal mesh installed below and above ground level to prevent animals from moving between the development area and the setback area.	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	Within Planning Areas 10 and 12, all truck activity areas adjacent to the 250-foot buffer area along the southern property line shall be enclosed by minimum 11-foot tall solid walls to reduce noise and lighting impacts on the adjacent property. This measure shall be implemented to the satisfaction of the Planning Official. A preliminary landscape plan for the 250-foot setback area shall be submitted with all Plot Plan applications for lots adjacent to the California Department of Fish and Wildlife property. Precise landscape plans shall be submitted with any grading permit for said lots and must be approved prior to the issuance of any building permit on said lots. The landscape plan shall be prepared by a licensed landscape architect in consultation with a qualified biologist and shall be consistent with the design standards contained in the World Logistics Center Specific Plan. No plant species listed in Section 6.1.4 of the Western Riverside County Multiple Species Habitat Conservation Plan shall be installed within the setback area. Cottonwood trees shall be planted within the setback area consistent with the World Logistics Center Specific Plan. This measure shall be implemented to the satisfaction of the Land Development Division Manager. **4.4.6.1B** Each Plot Plan application in Planning Areas 10 and 12 shall provide runoff management and water quality facilities adequate to minimize downstream erosion, maintain water quality standards and retain pre-development flows in a manner meeting the approval of the City of Moreno Valley and RWQCB requirements. All drainage improvements shall be designed to minimize runoff and erosional impacts on adjacent property. This measure shall be implemented to the satisfaction of the Land Development Division Manager of Public Works.	
Impact 4.4.6.2 Jurisdictional Delineation, Riparian Habitat or Other Sensitive Natural Communities		
Drainage Features 7, 8, 9, 12, and 15 within the project area are considered riparian/riverine areas.	**4.4.6.2A** Prior to the issuance of grading permits the applicant shall secure a jurisdictional determination from the United States Army Corps of Engineers (USACE) and confirm with the Regional Water Quality Control Board (RWQCB) and California Department of Fish and Wildlife (CDFW) if drainage features mapped on the property to be developed are subject to jurisdictional authority. If the features are subject to regulatory protection, the applicant shall secure	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	permit approvals with the appropriate agencies prior to initiation of construction. Compensatory riparian habitat mitigation shall be provided at a minimum ratio of 1:1 (replacement riparian habitat to impacted riparian habitat) to ensure no net loss of riparian habitat or aquatic resources. It should be noted that this is a minimum recommended ratio but the actual permitting ratio may be higher. These detention basins shall be oversized to accommodate the provision of areas of riparian habitat. Maintenance of the basins shall be limited to that necessary to ensure their drainage and water quality functions while encouraging habitat growth. Riparian habitat mitigation shall be provided concurrent to or prior to impacts. A Compensatory Mitigation Plan shall be prepared for all unavoidable impacts and shall be consistent with the United States Army Corps of Engineers (USACE)/United States Environmental Protection Agency's Compensatory Mitigation for Losses of Aquatic Resources; Final Rule and the United States Army Corps of Engineers Standard Operating Procedure for Determination of Mitigation Ratios. The applicant shall consult with United States Army Corps of Engineers, California Department of Fish and Wildlife, and Regional Water Quality Control Board to establish the need for permits based on the results of a recent jurisdictional delineation and final design plans for each of the proposed the facilities. Consultation with the three agencies shall take place and appropriate permits obtained for project-level development. Compensation for losses associated with the altering of drainages on site shall be in agreement with the permit conditions and in coordination with compensation outlined below. Mitigation shall consist of onsite creation, offsite creation, or purchase of mitigation credits from an approved mitigation bank. As outlined in the WLC programmatic DBESP report, onsite riparian habitat shall be created at a minimum 1:1 ratio due to the poor quality of onsite habitat. New habitat shall be created within the onsite detention/infiltration basins to the extent allowed by the resource agencies to reduce storm flows, improve water quality, and reduce sediment transport. Habitat creation shall include the installation of mule fat scrub or similar riparian scrub habitat to promote higher quality riparian habitat, but still maintain the basins for their primary role as detention facilities. The use of these areas as conservation areas would require consent from CDFW and the City of Moreno Valley (MM BIO-2b and MM DBESP 1 through 3).	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	4.4.6.2B As required by the Resource Conservation Agency (RCA), a program-level Determination of a Biological Equivalent or Superior Preservation (DBESP) for impacts to Riverine/Riparian habitat has been prepared and shall be approved by the Resource Conservation Agency prior to project grading permit approval. The Determination of a Biological Equivalent or Superior Preservation includes a general discussion of mitigation options for impacts to riverine/riparian areas as well as general location and size of the mitigation area and includes a monitoring program. If impacts to riparian habitat within the WLC Specific Plan (WLCSP) cannot be avoided at the time of specific development, then a separate project-level Determination of Biologically Equivalent or Superior Preservation (DBESP) shall be prepared to identify project-specific impacts to riparian habitat and incorporate mitigation options identified in Mitigation Measure 4.4.6.2A. A project-level Determination of a Biological Equivalent or Superior Preservation for each specific development shall be prepared to document measures to reduce impacts to riparian/riverine habitats in accordance with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The project-level Determination of a Biological Equivalent or Superior Preservation shall include specific measures to reduce impacts to riparian areas and provide mitigation in the form of on-site preservation of riparian areas and/or a combination of compensation through purchase and placement of lands with riparian/riverine habitat into permanent conservation through a conservation easement and/or restoration or enhancement efforts at offsite or onsite locations. Mitigation required for compensation for impacts to riparian/ riverine areas shall require a minimum of 1:1 mitigation ratio of riparian/riverine mitigation land. As outlined in the WLC programmatic DBESP, erosion control improvements shall be installed within Drainage 9 to reduce sediment transport, and additional riparian habitat shall be enhanced within this drainage following the installation of the erosion control improvements (MM DBESP 4 and 5).	
	4.4.6.2C Prior to issuance of any grading permit for any offsite improvements that support development within the WLC site, the developer shall retain a qualified biologist to prepare a jurisdictional delineation (JD) for any drainage channels affected by construction of the offsite improvements. This jurisdictional	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures		Level of Significance
		delineation shall be submitted to the U.S. Army Corps of Engineers (USACE) and California Department of Fish and Wildlife (CDFW) for review and concurrence. If the offsite improvements will not affect any identified jurisdictional areas, no United States Army Corps of Engineers permitting is required. However, permitting through the Regional Water Quality Control Board (RWQCB) and California Department of Fish and Wildlife (i.e., Streambed Alternation Agreement) may still be required for these improvements. The applicant shall consult with United States Army Corps of Engineers, California Department of Fish and Wildlife and Regional Water Quality Control Board to establish the need for permits based on the results of the 2013 jurisdictional delineation and final design plans for each of the proposed the facilities. Consultation with the three agencies shall take place and appropriate permits obtained. Compensation for losses associated with any altered offsite drainages shall be in agreement with the permit conditions with a minimum1:1 mitigation ratio. Any landscaping associated with these offsite improvements shall use only native species to help protect biological resources residing within or traveling through these drainages per Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Table 6.1.2. This measure shall be implemented to the satisfaction of the City Planning Division in consultation with the U.S. Fish and Wildlife Service, U.S. Army Corps of Engineers, and the California Department of Fish and Wildlife.	
Impact 4.4.6.3 Candidate, Non-listed Sensitive, or Special-Status Species			
The project area contains suitable habitat for sensitive species, including a variety of nesting birds, including burrowing owl, and Los Angeles pocket mouse.	**4.4.6.3A**	Pursuant to the Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code (CFGC), site preparation activities (removal of trees and vegetation) shall be avoided during the nesting season of potentially occurring native and migratory bird species (generally February 1 to August 31). If site preparation activities must occur during the nesting season, a pre-activity field survey shall be conducted by a qualified biologist prior to issuance of grading permits for such development. The survey shall determine if active nests of species protected by the Migratory Bird Treaty Act or California Fish and Game Code are present in the construction zone. If active nests of these species are found, the developer shall establish an appropriate buffer zone with no grading or heavy equipment activity within of 500 feet from an active listed species or raptor nest,	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	300 feet from other sensitive or protected bird nests (non-listed), 250 feet from passerine birds, or 100 feet for sensitive or protected songbird nests. All construction activity within the vicinity of active nests must be conducted in the presence of a qualified biological monitor. Construction activity may encroach into the buffer area at the discretion of the biological monitor in consultation with CDFW. In the event no special status avian species are identified within the limits of disturbance, no further mitigation is required. In the event such species are identified within the limits of ground disturbance, mitigation measure 4.4.6.3B shall also apply. This measure shall be implemented to the satisfaction of the City Planning Division. **4.4.6.3B** If it is determined that project-related grading or construction will affect nesting migratory bird species, no grading or heavy equipment activity shall take place within the limits established in Mitigation Measure 4.4.6.3A until it has been determined by a qualified biologist that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow. This measure shall be implemented to the satisfaction of the City Planning Division. **4.4.6.3C** The loss of foraging habitat for golden eagle and white-tailed kite will be mitigated by payment of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) fee and the creation of a landscaped buffer area adjacent to the San Jacinto Wildlife Area property (SJWA). First, the payment of the Western Riverside County Multiple Species Habitat Conservation Plan fee shall be required on a project-by-project basis. Second, a 250-foot setback as described in Mitigation Measure 4.4.6.1A shall be established within the WLC site. This area will reduce impacts to raptor species foraging in the adjacent San Jacinto Wildlife Area open space areas. ***Burrowing Owl*** **4.4.6.3D**A pre-construction clearance survey for burrowing owl shall be conducted by a qualified biologist no more than thirty (30) days prior to any grading or ground disturbing activities within the WLC site. In the event no burrowing owls are observed within the limits of ground disturbance, no further mitigation is required. If construction is to be initiated during the breeding season (February 1 through August 31) and burrowing owl is determined to occupy any portion of the disturbance area during the 30-day pre-construction survey, construction	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	activity shall maintain a 500foot buffer area around any active nest/burrow until it has been determined that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow. If this avoidance buffer cannot be maintained, consultation with the California Department of Fish and Wildlife (CDFW) shall take place and an appropriate avoidance distance established. No disturbance to active burrows shall occur without appropriate permitting through the Migratory Bird Treaty Act and/or California Department of Fish and Wildlife. If active burrowing owl burrows are detected outside the breeding season (September through January), or within the breeding season but owls are not nesting or in the process of nesting, active and/or passive relocation may be conducted following consultation with the California Department of Fish and Wildlife. A relocation plan may be required by California Department of Fish and Wildlife if active and/or passive relocation is necessary. The relocation plan shall outline the basic process and provides options for avoidance. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor in consultation with CDFW. A relocation plan may be required by California Department of Fish and Wildlife if active or passive relocation is necessary. Artificial burrows may be constructed within appropriate burrowing owl habitat within the proposed open space/conservation area (Planning Area 30), a 74.3-acre area in the southwest portion of the Specific Plan. This area abuts the Lake Perris State Recreation Area (LPSRA) which is already in conservation. If suitable habitat is not present in Planning Area 30, owls may be relocated to the SJWA, the 250-foot buffer area or other suitable on-site or off-site areas. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor. ***Los Angeles Pocket Mouse*** **4.4.6.3E** Prior to the approval of any Plot Plans proposing the development of land including or adjacent to Drainage 9, a protocol survey for the Los Angeles Pocket Mouse (LAPM), including 100 feet upstream and downstream of the affected reach shall be prepared by a qualified biologist and submitted to the City. If the affected drainage is not occupied, the area is considered not to be occupied and development can continue without further action. If the species is found within the specific survey area, no development shall occur until an appropriate mitigation fee is paid or appropriate amount of land set aside on the WLC site	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	or off site to compensate for any loss of occupied Los Angeles Pocket Mouse habitat. Alternatively, individuals may be relocated to the 250-foot setback zone along the southern boundary of the property identified in Mitigation Measure 4.4.6.1A, or other appropriate areas as determined by the United States Fish and Wildlife Service. If necessary, this measure shall also be coordinated with Mitigation Measure 4.4.6.2B regarding preparation and processing of a Determination of a Biological Equivalent or Superior Preservation report. This measure shall be implemented to the satisfaction of the City Planning Division. ***Resource Management*** **4.4.6.3F** Prior to approval of any discretionary permits for development within Planning Areas 10 and 12, a Biological Resource Management Plan (BRMP) shall be prepared to prescribe how the 250-foot setback area outlined in Mitigation Measure 4.4.6.1A will be developed and maintained This plan will identify frequent and infrequent vegetation management requirements (i.e., removal of invasive plants) and the planting and maintaining trees to provide roosting and nesting opportunities for raptors and other birds. The Biological Resource Management Plan shall also describe how relocation of listed or sensitive species will occur from other locations as outlined in Mitigation Measures 4.4.5.2A, 4.4.6.3D, and 4.4.6.3E. The Biological Resource Management Plan shall be reviewed and approved by the Planning Official in consultation with the San Jacinto Wildlife Area Manager. The Biological Resource Management Plan shall cover all the land within the 250-foot setback zone within Planning Areas 10 and 12 Implementation of the plan shall be supervised by a qualified biologist, to the satisfaction of the City Planning Division. **4.4.6.3G** Mitigation Measure 4.4.6.1A specifies that a landscape plan shall be submitted with any development proposal for lots adjacent to the California Department of Fish and Wildlife (CDFW) San Jacinto Wildlife Area (SJWA) property prior to issuance of a precise grading permit. The landscape plan shall be prepared by a licensed landscape architect in consultation with a qualified biologist and shall be consistent with the design standards contained in the Specific Plan. No plant species listed in Section 6.1.4 or Table 6.2 of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) shall be installed within the setback area. In conjunction with development adjacent to the San Jacinto	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	Wildlife Area (SJWA), cottonwood trees shall be planted within the 250-foot setback area, consistent with the World Logistics Center Specific Plan plant palette (per DBESP MM 8). During construction, the runoff leaving construction areas shall be directed to onsite detention basins and away from downstream drainage features located offsite. All projects within the WLCSP will be required to prepare a Storm Water Pollution Prevention Plan (as outlined in MM 4.9.6.2B). Regarding the 250-foot setback area, pedestrian and vehicular access to areas of riparian/riverine habitat will be prohibited except for controlled maintenance access. Finally, no grading shall be permitted within conserved riparian/riverine habitat areas except for grading necessary to established or enhance habitat areas (DBESP MM 6, 7, 9, and 10). **4.4.6.3H** As outlined in Mitigation Measure 4.4.6.1A, development adjacent to the 250-foot open space setback shall have a six-foot chain link fence or similar barrier to help separate human activity and the buffer area. Any chain link fencing installed on any properties adjacent to the 250-foot buffer area shall have metal mesh installed below and above ground level to prevent animals from accessing new development areas. **4.4.6.3I** The individual property owner and/or Property Owners Association (POA) as appropriate shall be responsible for maintaining the various onsite landscaped areas, open improved or natural drainage channels, and detention or flood control basins in a manner that provide for fuel management and vector control pursuant to standards maintained by the City Fire Marshall and County Department of Environmental Health- Vector Control Group. This measure requires the individual owner or Property Owners Association (POA) to manage vegetation in and around these areas or improvements so as to not represent a fire hazard as defined by the City Fire Department through the substantial buildup of combustible materials. This measure also requires the individual owner or Property Owners Association to manage vegetation and standing water in drainage channels and basins such that they do not encourage or allow vectors to occur (primarily rats and mosquitoes). Runoff shall not be allowed to stand in channels or basins for more than 72 hours without treatment or maintenance to prevent establishment of mosquitoes per published County vector control guidelines and "Best Management Practices for Mosquito Control on California State Properties" which is available from the California West Nile Virus website	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	at http://www.westnile.ca.gov/resources. This measure shall be implemented by the Property Owners Association in consultation with the City Fire Department and Riverside County Department of Environmental Health – Vector Control Group. **4.4.6.3J** A Fuel Management Plan shall be prepared on a project-by-project basis for those Planning Areas adjacent to the south and east boundary of the WLC site adjacent to Western Riverside County Multiple Species Habitat Conservation Plan Conservation Areas. The Fuel Management Plan shall be prepared by the project proponent and submitted for approval to the prior to plot plan approval for those projects on the southern and eastern Western Riverside County Multiple Species Habitat Conservation Plan boundary. Per the Western Riverside County Multiple Species Habitat Conservation Plan guidelines, the Fuel Management Plan shall include the following: • A plant palette of adequate plant species that may be planted within the Fuel Management Area, which will be approved by a biologist familiar with the plant requirements of the area. • A list of non-native invasive plants that are prohibited from installation. • Maintenance activities and a maintenance schedule. Fuel modification zones shall be mapped and include an impact assessment as required under California Environmental Quality Act guidelines for a project-level analysis. The plan shall demonstrate that the adjacent Western Riverside County Multiple Species Habitat Conservation Plan Areas are adequately protected from expected fire risks. **4.4.6.3K** Prior to approval of any plot plans for development adjacent to the SJWA, the applicant shall demonstrate that direct light rays have been contained within the development area, per requirements of the MSHCP Section 6.0 which states, "Night lighting shall be directed away from the MSHCP Conservation Area to protect species within the MSHCP Conservation Area from direct night lighting." This measure shall be implemented to the satisfaction of the City Planning Division.	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Cumulative Biological Impacts		
With implementation of the stated project-specific mitigation and payment of required MSHCP fees, no significant cumulative effect on biological resources would result from development of the WLC project.	Previously referenced Mitigation Measures 4.4.6.1A through 4.4.6.1C, 4.4.6.2A through 4.4.6.2C, 4.4.6.3A through 4.4.6.3C, and 4.4.6.3A through 4.4.6.3K.	Less than Significant
4.5 Cultural Resources		
LESS THAN SIGNIFICANT IMPACTS		
Human Remains		
There is no evidence that the site has been utilized for human burials, and there is state law dealing with human remains that are found during grading or excavation.	No mitigation required.	Less than Significant
SIGNIFICANT IMPACTS		
Impact 4.5.6.1 Archaeological Resources		
Most of the site has been previously surveyed, and previously identified resources have been surveyed and retrieved according to required protocols. Nine on-site rural residential properties (designated “Light Logistics”) have not been previously surveyed and would need to be surveyed prior to development. The City has conducted SB 18 Consultation with local Native American tribes and the Pechanga and Soboba tribes have expressed a desire to consult.	**4.5.6.1A** Prior to the approval of any grading permit for any of the “Light Logistics” parcels, the parcels shall be evaluated for significance by a qualified archaeologist. A Phase 1 Cultural Resources Assessment shall be conducted by the project archaeologist and an appropriate tribal representative(s) on each of the “Light Logistics” parcel to determine if significant archaeological or historical resources are present. A Phase 2 significance evaluation shall be completed for any of these sites in order to determine if they contain significant archaeological or historical resources. Cultural resources include but are not limited to stone artifacts, bone, wood, shell, or features, including hearths, structural remains, or historic dumpsites. All resources determined to be prehistoric or historic shall be documented using DPR523 forms for archival research/storage in the Eastern Information Center (EIC). If the particular resource is determined to be not significant, no further documentation is required. If prehistoric resources are	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	determined to be significant, they shall be considered for relocation or archival documentation. If any resource is determined to be significant, a Phase 3 recovery study shall be conducted to recover remaining significant cultural artifacts. If prehistoric archaeological/cultural resources are discovered during the Phase 1 survey and it is determined that they cannot be avoided through site design, they shall be subject to a Phase 2 testing program. The project archaeologist in consultation with appropriate tribal group(s) shall determine the significance of the resource(s) and determine the most appropriate disposition of the resource(s) in accordance with applicable laws, regulations and professional practices (per Cultural Report MM CR-1, MM CR-2, MM CR-7 Table 3, pg. 74). **4.5.6.1B** Prior to the issuance of any grading or ground-disturbing permit for construction of off-site improvements a qualified archaeologist shall be retained to prepare a Phase I cultural resource assessment (CRA) of the project site if an up to date Phase I cultural resource assessment is not available for the site at the time of development per Cultural Report MM CR-5, Table 3, pg. 74). Appropriate tribal representatives as identified by the City shall be invited by the Project Archeologist to participate in this assessment. If archaeological resources are discovered during construction activities, no further excavation or disturbance of the area where the resources were found shall occur until a qualified archaeologist evaluates the find. If the find is determined to be a unique archaeological resource, appropriate action shall be taken to (a) plan construction to avoid the archeological sites (the preferred alternative); (b) cap or cover archeological sites with a layer of soil before building on the affected project location; or (c) excavate the site to adequately recover the scientifically consequential information from and about the resource. At the discretion of the project archaeologist, work may continue on other parts of the project site while the unique archaeological resource mitigation takes place. This measure shall be implemented to the satisfaction of the Planning Official. If the project archaeologist, in consultation with the monitoring Tribe(s), determines that the find is a unique archaeological resource, the resource site shall be evaluated and recorded in accordance with requirements of the State Office of Historic Preservation (OHP). If the resource is determined to be	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	significant, data shall be collected by the qualified archaeologist and the findings of the report shall be submitted to the City. If the find is determined to be not significant no mitigation is necessary. Should a future project-level analysis show that cultural resource site CA-RIV-3346 will be directly or partially impacted by project-level construction, an Addendum cultural resource report must be prepared and include an analysis of the alternatives associated with mitigation for impacts to this resource following CEQA Guidelines Section 15126.4(b)(3). This information must be included in any project-level CEQA compliance documentation. It should be noted that Phase 3 data recovery is an acceptable mitigation action under CEQA Guidelines Section 15126.4(b)(3)(C) (per Cultural Report MM CR-3, Table 3, pg. 74). Should it be determined through a future project-level EIR analysis that prehistoric cultural resource sites CA-RIV-2993 and/or CA-RIV-3347 shall be directly impacted by future construction, these sites must be Phase 2 tested for significance (per Cultural Report MM CR-4, Table 3, pg. 74). **4.5.6.1C** Prior to the issuance of any grading permits a qualified archaeologist shall be retained to monitor all grading and shall invite tribal groups to participate in the monitoring. Project-related archaeological monitoring shall include the following requirements per Cultural Report MM CR-6, MM CR-8, Table 3, pg. 74): 1. All earthmoving shall be monitored to a depth of ten (10) feet below grade by the Project Archaeologist or his/her designated representative. Once all areas of the development project that have been cut to 10 feet below existing grade have been inspected by the monitor, the Project Archaeologist may, at his or her discretion, terminate monitoring if and only if no buried cultural resources have been detected; 2. If buried cultural resources are detected, monitoring shall continue until 100 percent of virgin earth within the specific project area has been disturbed and inspected by the Project Archaeologist or his/her designated representative. 3. Grading shall cease in the area of a cultural artifact or potential cultural artifact as delineated by the Project Archaeologist or his/her designated representative. A buffer of at a minimum 25 feet around the cultural item	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	shall be established to allow for assessment of the resource. Grading may continue in other areas of the site while the particular find are investigated; and 4. If prehistoric cultural resources are uncovered during grading, they shall be Phase 2 tested by the Project Archaeologist, and evaluated for significance in accordance with §15064.5(f) of the CEQA Guidelines. Appropriate actions for significant resources as determined by the Phase 2 testing include but are not limited to avoidance or capping, incorporation of the site in green space, parks, or delineation into open space. If such measures are not feasible, Phase 3 data recovery of the significant resource will be required, and curation of recovered artifacts and/or reburial, shall be required. A report associated with Phase 2 testing or Phase 3 data recovery must be delivered to the City and, if necessary, the museum where any recovered artifacts have been curated. 5. No further grading shall occur in the area of the discovery until the City approves specific actions to protect identified resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the City where they would be afforded long-term preservation to allow future scientific study. 6. The developer shall make reasonable efforts to avoid, minimize, or mitigate significant adverse impacts on cultural resources The State Historic Preservation Office (SHPO) and local Native American tribes will be consulted and the Advisory Council on Historic Preservation will be notified within 48 hours of the find in compliance with 36 CFR 800.13(b)(3). This measure shall be implemented to the satisfaction of the Planning Official. **4.5.6.1D** Prior to the issuance of any grading permit the project archaeologist shall invite interested Tribal Group(s) representatives to monitor grading activities. Qualified representatives of the Tribal Group(s) shall be granted access to the project site to monitor grading as long as they provide 48-hour notice to the developer of their desire to monitor, so the developer can make appropriate safety arrangements on the site. This measure shall be implemented to the satisfaction of the Planning Official.	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	4.5.6.1E It is possible that ground-disturbing activities during construction may uncover previously unknown, buried cultural resources (archaeological or historical). In the event that buried cultural resources are discovered during grading and no Project Archaeologist or Historian is present, grading operations shall stop in the immediate vicinity of the find and a qualified archaeologist shall be retained to determine the most appropriate course of action regarding the resource. The Archeologist shall make recommendations to the City on the actions that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with §15064.5 of the *CEQA Guidelines*. Cultural resources could consist of, but are not limited to, stone artifacts, bone, wood, shell, or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area shall be recorded on appropriate California Department of Parks and Recreation forms and evaluated for significance in terms of CEQA criteria. If the resources are determined to be unique historic resources as defined under §15064.5 of the *CEQA Guidelines*, appropriate protective actions for significant resources such as avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds shall be implemented by the project archaeologist and the City. No further grading shall occur in the area of the discovery until the City and project archaeologist approve the measures to address these resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the City where they would be afforded long-term preservation to allow future scientific study.	
Impact 4.5.6.2 Historic Resources		
Seven on-site rural residential properties (designated "Light Logistics") have not been previously surveyed for historical resources, and would need to be surveyed prior to development. Juan Bautista de Anza crossed the southern portion of the site while exploring California in 1774.	**4.5.6.2A** If any historic resources are found during implementation of Mitigation Measure 4.5.6.1A, the Project Archaeologist or Historian (as appropriate) shall offer any artifacts or resources to the Moreno Valley Historical Society (MVHS) or the Eastern Information Center/County Museum or the Western Science Center in Hemet as appropriate for archival storage. From the time any artifacts are turned over to the Moreno Valley Historical Society or other appropriate historical	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	group, the developer shall have no further responsibility for their management or maintenance. In addition, the following measure is proposed to acknowledge the route of Juan Bautista de Anza through the project area as an important historical event: **4.5.6.2B** As part of construction of the trail segment connecting Redlands Boulevard to the California Department of Fish and Wildlife property, the developer shall contribute $5,000 to the City for the installation of a historical marker acknowledging the passing of Juan Bautista de Anza through this area during his exploration of California. This measure shall be incorporated into trail plans for this segment which will be subject to review and approval by the City Park and Recreation Department in consultation with the Moreno Valley Historical Society. **4.5.6.2C** Streets C and E shall follow the historical alignment of Alessandro Boulevard and shall be named Alessandro Boulevard.	
Impact 4.5.6.3 Paleontological Resources		
The project area is considered moderately sensitive regarding paleontological resources, and fossiliferous materials have been found in the surrounding region in the past.	**4.5.6.3A** Prior to the issuance of any grading permits, a City-approved Paleontologist shall be retained to conduct paleontological monitoring as needed for all grading related to development. Development monitoring shall include the following actions: 1. Monitoring must occur in areas where excavations are expected to exceed twenty (20) feet in depth, in areas where fossil-bearing formations are found during grading, and in all areas found to contain, or are suspected of containing, fossil-bearing formations. 2. To avoid construction delays, paleontological monitors shall be equipped to salvage fossils and remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates if they are unearthed. 3. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of specimens. 4. Monitoring may be reduced if the potentially fossiliferous units described herein are not present, or, if present, are determined upon exposure and examination by the Project Paleontologist to have low potential to contain	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	fossil resources. This measure shall be implemented to the satisfaction of the Planning Official. The Project Paleontologist and the Project Archaeologist described in Mitigation Measure 4.5.6.1C may be the same person if he/she meets the qualifications of both positions per Cultural Report MM PR-1, Table 4, pg. 76). **4.5.6.3B** Prior to the issuance of any permits for the construction of off-site improvements, a qualified paleontologist shall conduct an assessment for paleontological resources on each off-site improvement location. If any site is determined to have a potential for exposing paleontological resources, the project paleontologist shall monitor off-site grading/excavation, subject to coordination with the City. Development monitoring shall include the following mitigation measures: 1. Monitoring must occur in areas where excavations are expected to reach fossil-bearing formations during grading. This monitoring must be conducted by the Project Paleontologist in all areas found to or suspected of containing fossil-bearing formations. 2. To avoid construction delays, the Project Paleontologist shall be equipped to salvage fossils and remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates as they are unearthed. 3. The Project Paleontologist shall be empowered to temporarily halt or divert equipment to allow removal of specimens. 4. Monitoring may be reduced if the potentially fossiliferous units described herein are not present, or, if present, are determined upon exposure and examination by the Project Paleontologist to have low potential to contain fossil resources.	
Cumulative Cultural Impacts		
The project site and surrounding area, especially the uplands associated with Mt. Russell, have yielded cultural resources in the past. As this area develops, there is a potential for impacts to or loss of archaeological, historical, or paleontological resources.	Previously referenced Mitigation Measures 4.5.6.1A through 4.5.6.1E, 4.5.6.2A through 4.5.6.2C, and 4.5.6.3A and 4.4.6.3B.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
4.6 Geology and Soils		
LESS THAN SIGNIFICANT IMPACTS		
Landslides or Rockfalls		
A large older landslide has been mapped primarily off site on the north easterly flanks of Mount Russell, near the southwest portion of the property. The Specific Plan designates 74.3 acres in the southwest corner of the site as open space.	No development will occur in the potential landslide zone, so no mitigation is needed.	Less than Significant
Soil Erosion or Loss of Topsoil		
On-site soils have a slight erosion hazard, and uncontrolled runoff could result in erosion or loss of topsoil.	The project would be required to adhere to the City's Grading Ordinance, obtain an NPDES Permit, prepare an SWPPP and a WQMP, construction and operational impacts associated with soil erosion hazards are considered to be less than significant, and no mitigation is required.	Less than Significant
Septic Tanks		
The project would not involve the installation of septic tanks or alternative wastewater disposal systems, no impacts would occur.	No mitigation is required.	No Impact
Seismic-Related Ground Failure		
The City's General Plan and project geotechnical report indicates the site has little or no potential for seismically-induced failure or liquefaction.	No mitigation is required.	Less than Significant
SIGNIFICANT IMPACTS		
Impact 4.6.6.1 Fault Rupture		
The eastern portion of the site contains one or more splays of the San Jacinto Fault, and the Casa Loma Fault	**4.6.6.1A** Prior to approval of any projects for development between Redlands Boulevard and Theodore Street, south of Dracaea Avenue (projected east from Redlands	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
may be in in the general vicinity of the western portion of the site.	Boulevard), and the area south of Alessandro from the western boundary along the Mount Russell toe of slope easterly into the site 1,500 feet, the City shall determine if a detailed fault study of the Casa Loma Fault Zone area is required based on available evidence. If necessary, any additional geotechnical investigations shall be prepared by a qualified geologist and determine if structural setbacks are needed, and shall identify specific remedial earthwork and/or foundation recommendations. Project plans for foundation design, earthwork, and site preparation shall incorporate all of the mitigations in the site-specific geotechnical investigations. In addition, the project structural engineer shall review the site specific investigations, provide any additional necessary mitigation to meet the California Building Code requirements, and incorporate all applicable mitigations from the investigation into the structural design plans and shall ensure that all structural plans for the project meet current Building Code requirements. Additionally, a registered geotechnical engineer shall review each site-specific geotechnical investigation, approve the final report, and require compliance with all geotechnical mitigations contained in the investigation in the plans submitted for the grading, foundation, structural, infrastructure, and all other relevant construction permits. The City Building Division shall review and approve plans to confirm that the siting, design and construction of all structures and facilities are in accordance with the regulations established in the California Building Code (California Code of Regulations, Title 24), and/or professional engineering standards appropriate for the seismic zone in which such construction may occur. Structures intended for human occupancy shall not be located within any structural setback zone as determined by those studies. This measure shall be implemented to the satisfaction of the City Engineer in consultation with the Project Geologist. **4.6.6.1B** Prior to approval of any projects for development within or adjacent to the San Jacinto Alquist-Priolo Earthquake Fault Zone, the City shall review and approve a geotechnical fault study prepared by a qualified geologist to confirm the alignment and size of any required building setbacks related to the fault zone. If necessary, this study shall identify a "special foundation or grading remediation zone" for the areas supporting structures intended for human occupancy where coseismic deformation (fractures) is observed. This zone shall be determined after subsurface evaluation based on proposed building locations. Specific remedial earthwork and foundation recommendations shall be evaluated as	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	necessary based on proposed building locations. Project plans for foundation design, earthwork, and site preparation shall incorporate all of the mitigations in the site-specific geotechnical investigations. In addition, the project structural engineer shall review the site specific investigations, provide any additional necessary mitigation to meet the California Building Code requirements, and incorporate all applicable mitigations from the investigation into the structural design plans and shall ensure that all structural plans for the project meet current Building Code requirements. Additionally, a registered geotechnical engineer shall review each site-specific geotechnical investigation, approve the final report, and require compliance with all geotechnical mitigations contained in the investigation in the plans submitted for the grading, foundation, structural, infrastructure, and all other relevant construction permits. The City Building Division shall review and approve plans to confirm that the siting, design and construction of all structures and facilities are in accordance with the regulations established in the California Building Code (California Code of Regulations, Title 24), and/or professional engineering standards appropriate for the seismic zone in which such construction may occur. This study may involve trenching to adequately identify the location of the Claremont segment of the San Jacinto Fault Zone that crosses the eastern portion of the World Logistics Center Specific Plan property. This measure shall be implemented to the satisfaction of the City Engineer in consultation with the Project Geologist. **4.6.6.1C** Prior to the approval of grading permits, or permits for construction of off-site improvements, the City shall review and approve plans confirming that the project has been designed to withstand anticipated ground shaking and other geotechnical and soil constraints (e.g., settlement). The project proponent shall submit plans to the City as appropriate for review and approval prior to issuance of grading permits or issuance of permits for the construction of any offsite improvements. This measure shall be implemented to the satisfaction of the City Engineer.	
Impact 4.6.6.2 Ground Shaking		
Southern California is located in a seismically active area and will continue to be subject to ground shaking	**4.6.6.2A** Prior to issuance of building permits for any portion of the project site, a site-specific, design level geotechnical investigation for each parcel shall be	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
resulting from seismic activity on regional and local faults.	submitted to the City, which would comply with all applicable state and local code requirements, and includes an analysis of the expected ground motions at the site from known active faults using accepted methodologies. The report shall determine structural design requirements as prescribed by the most current version of the California Building Code, including applicable City amendments, to ensure that structures can withstand ground accelerations expected from known active faults. The report shall also determine final design parameters for walls, foundations, foundation slabs, utilities, roadways, parking lots, sidewalks, and other surrounding related improvements. Project plans for foundation design, earthwork, and site preparation shall incorporate all of the mitigations in the site-specific geotechnical investigations. In addition, the project structural engineer shall review the site specific investigations, provide any additional necessary mitigation to meet the California Building Code requirements, and incorporate all applicable mitigations from the investigation into the structural design plans and shall ensure that all structural plans for the project meet current Building Code requirements. Additionally, a registered geotechnical engineer shall review each site-specific geotechnical investigation, approve the final report, and require compliance with all geotechnical mitigations contained in the investigation in the plans submitted for the grading, foundation, structural, infrastructure, and all other relevant construction permits. The City Building Division shall review and approve plans to confirm that the siting, design and construction of all structures and facilities are in accordance with the regulations established in the California Building Code (California Code of Regulations, Title 24), and/or professional engineering standards appropriate for the seismic zone in which such construction may occur.	
Impact 4.6.6.3 Unstable Soils		
On-site soils have a moderate to low shrink-swell potential, and there are some moderately expansive soils on site as well.	**4.6.6.3A** Each Plot Plan application for development shall include a site-specific, design level geotechnical investigation for each parcel, in compliance with all applicable state and local code requirements, and including an analysis of the expected soil hazards at the site. The report shall determine: 1. Structural design requirements as prescribed by the most current version of the California Building Code, including applicable City amendments, to	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	ensure that structures can withstand ground accelerations expected from known active faults. 2. The final design parameters for walls, foundations, foundation slabs, utilities, roadways, parking lots, sidewalks, and other surrounding related improvements. Project plans for foundation design, earthwork, and site preparation shall incorporate all of the mitigations in the site-specific geotechnical investigations. In addition, the project structural engineer shall review the site specific investigations, provide any additional necessary mitigation to meet the California Building Code requirements, and incorporate all applicable mitigations from the investigation into the structural design plans and shall ensure that all structural plans for the project meet current Building Code requirements. These investigations shall identify any site-specific impacts from compressible and expansive soils based on the actual location of individual pads proposed in the future, so that differential movement can be further verified or evaluated in view of the actual foundation plan and imposed fill or structural loads. Additionally, a registered geotechnical engineer shall review each site-specific geotechnical investigation, approve the final report, and require compliance with all geotechnical mitigations contained in the investigation in the plans submitted for the grading, foundation, structural, infrastructure, and all other relevant construction permits. The City Building Division shall review and approve plans to confirm that the siting, design and construction of all structures and facilities are in accordance with the regulations established in the California Building Code (California Code of Regulations, Title 24), and/or professional engineering standards appropriate for the seismic zone in which such construction may occur. Compliance with this measure will ensure that future buildings are designed to protect the structure and occupants from on-site soil limitations, consistent with State Building Code requirements. This measure shall be implemented to the satisfaction of the City Engineer.	
	4.6.6.3B Any cut slopes in excess of five (5) feet in vertical height shall be constructed as “replacement fill slopes” per the project geotechnical report, due to the variable nature of the onsite alluvial soils. This measure shall be implemented	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	to the satisfaction of the City Land Development Division and the City Engineer in consultation with the Project Geologist. **4.6.6.3C** During all grading activities, a geotechnical engineer shall monitor site preparation, removal of unsuitable soils, mapping of all earthwork excavations, approval of imported earth materials, fill placement, foundation installation, and other geotechnical operations. Laboratory testing of subsurface materials to confirm compacted dry density and moisture content, consolidation potential, corrosion potential, expansion potential, and resistance value (R-value) shall be performed prior to and during grading as appropriate. This measure shall be implemented to the satisfaction of the City Engineer in consultation with the Project Geologist.	
Cumulative Geology and Soils Impacts		
It is reasonable to conclude that all development within this seismically active area will be required to adhere to applicable State regulations, CBC standards, and the design and siting standards required by local agencies.	Previously referenced Mitigation Measures 4.6.6.1A through 4.6.6.1C, 4.6.6.2A, and 4.6.6.3A through 4.6.6.3C.	Less than Significant
4.7 Greenhouse Gases and Global Climate Change		
LESS THAN SIGNIFICANT IMPACTS		
None	Not applicable	Not applicable
SIGNIFICANT IMPACTS		
Impact 4.7.6.1 Greenhouse Gas Emissions		
The project will emit substantial quantities of greenhouse gases during construction and operation, mainly related to truck emissions, that will exceed recommended SCAQMD thresholds for greenhouse gases. These emissions, while generated by this project, are nonetheless considered cumulative impacts (see below).	**4.7.6.1A** The World Logistic Center project shall implement the following requirements to reduce solid waste and greenhouse gas emissions from construction and operation of project development: a) Prior to January 1, 2020, divert a minimum of 50 percent of landfill waste generated by operation of the project. After January 1, 2020, development shall divert a minimum of 75 percent of landfill waste. In January of each	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	calendar year after project approval the developer and/or Property Owners Association shall certify the percentage of landfill waste diverted on an annual basis. b) Prior to January 1, 2020, recycle and/or salvage at least 50 percent of non-hazardous construction and demolition debris. After January 1, 2020, recycle and/or salvage at least 75 percent of non-hazardous construction and demolition debris. In January of each calendar year after project approval the developer and/or Property Owners Association shall certify the percentage of landfill waste diverted on an annual basis. Develop and implement a construction waste management plan that, at a minimum, identifies the materials to be diverted from disposal and whether the materials will be sorted on-site or co-mingled. Calculations can be done by weight or volume, but must be consistent throughout. c) The applicant shall submit a Recyclables Collection and Loading Area Plan for construction related materials prior to issuance of a building permit with the Building Division and for operational aspects of the project prior to the issuance of the occupancy permit to the Public Works Department. The plan shall conform to the Riverside County Waste Management Department's Design Guidelines for Recyclable Collection and Loading Areas. d) Prior to issuance of certificate of occupancy, the recyclables collection and loading area shall be constructed in compliance with the Recyclables Collection and Loading Area plan. e) Prior to issuance of certificate of occupancy, documentation shall be provided to the City confirming that recycling is available for each building. f) Within six months after occupancy of a building, the City shall confirm that all tenants have recycling procedures set in place to recycle all items that are recyclable, including but not limited to paper, cardboard, glass, plastics, and metals. g) The property owner shall advise all tenants of the availability of community recycling and composting services.	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	h) Existing onsite street material shall be recycled for new project streets to the extent feasible. **4.7.6.1B** (Previously Included as Utilities Mitigation Measure 4.16.4.6.1A for building energy). Each application for a building permit shall include energy calculations to demonstrate compliance with California Energy Efficiency Standards (Title 24, Part 6). Plans shall show the following: - Energy-efficient roofing systems, such as “cool” roofs, that reduce roof temperatures significantly during the summer and therefore reduce the energy requirement for air conditioning. - Cool pavement materials such as lighter-colored pavement materials, porous materials, or permeable or porous pavement, for all roadways and walkways not within the public right-of-way, to minimize the absorption of solar heat and subsequent transfer of heat to its surrounding environment. - Energy-efficient appliances that achieve the 2016 California Appliance Energy Efficiency Standards (e.g. EnergyStar® Appliances) and use of sunlight-filtering window coatings or double-paned windows **4.7.6.1C** (Previously Included as Utilities Mitigation Measure 4.16.4.6.1B building energy). Prior to the issuance of any building permits within the WLC site, each project developer shall submit energy calculations used to demonstrate compliance with the performance approach to the California Energy Efficiency Standards, for each new structure. Plans may include but are not necessarily limited to implementing the following as appropriate:	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	- High-efficiency air-conditioning with electronic management system (computer) control. - Isolated High-efficiency air-conditioning zone control by floors/separable activity areas. - Use of Energy Star ® exit lighting or exit signage. **4.7.6.1D** (Previously Included as Utilities Mitigation Measure 4.16.4.6.1C building energy; now modified). Prior to the issuance of a building permit, new development shall demonstrate that each building has implemented the following: - Install solar panels with a capacity equal to the peak daily demand for the ancillary office uses in each warehouse building or up to the limit allowed by MVU's restriction on distributed solar PV connecting to their grid, whichever is greater; - Increase efficiency for buildings by implementing either 10 percent over the 2008 Title 24's energy saving requirements or the Title 24 requirements in place at the time the building permit is approved, whichever is more strict; and - Require the equivalent of "Leadership in Energy and Environmental Design Certified" for the buildings constructed at the World Logistics Center based on Leadership in Energy and Environmental Design Certified standards in effect at the time of project approval.	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Impact 4.7.6.2 Greenhouse Gas Plan, Policy, Regulation Consistency		
The project could be potentially inconsistent with established Greenhouse Gas plans, policies, or regulations.	Implementation of previously referenced Mitigation Measures 4.3.6.2A, 4.3.6.3B, 4.3.6.4A, 4.3.6.3C, 4.3.6.3D, 4.7.6.1A through 4.7.6.1D, 4.16.1.6.1A, 4.16.1.6.1B, and 4.16.1.6.1C, will help reduce project-related GHG emissions	Less than Significant with Mitigation
Cumulative Greenhouse Gas Impacts		
The project will emit substantial quantities of greenhouse gases during project operation, mainly related to truck emissions, that will exceed recommended SCAQMD thresholds for greenhouse gases. These emissions are considered cumulative in terms of global climate change.	Project-specific energy conservation, air quality, and greenhouse gas Mitigation Measure 4.7.6.1A through 4.7.6.1D will help reduce project greenhouse gas emissions, the project will not make a significant cumulative contribution to greenhouse gas emissions.	Less than Significant with Mitigation
4.8 Hazards and Hazardous Materials		
LESS THAN SIGNIFICANT IMPACTS		
Within Two Miles of a Private Airport, Airport Land Use Plan, or Public Airport		
The nearest airport is 7 miles away so, the development of the WLC project area as proposed would not result in airport safety hazards for people working in the WLC project area.	No mitigation is required.	No Impact
Existing or Proposed School		
There are no existing planned schools on or within a quarter mile of the project site.	No mitigation is required.	Less than Significant
Routine Transport, Use, or Disposal of Hazardous Materials and Reasonable Foreseeable Upset and Accident Conditions		
The transport, use, handling, or disposal of hazardous materials is regulated by various local, state, and federal standards, ordinances, and regulations that would ensure that potential impacts associated with environmental and	No mitigation is required.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
health hazards related to an accidental release of hazardous materials are less than significant, and no mitigation is required. Compliance with established safety laws and regulations regarding natural gas plants is expected to reduce this potential impact to a less than significant level, and no mitigation is required. Local soils would be extensively disturbed during grading, and would employ relatively stringent dust control measures including regular watering, and revegetation as soon as possible after grading. Under these conditions, it is unlikely that *Coccidioides immitis* spores (“Valley Fever”) would survive in the soil. This potential impact appears minimal and no mitigation is recommended.		
Located on a List of Hazardous Materials Sites		
The project site and surrounding areas are not on any list of the hazardous materials sites as defined by Government Code Section 65962.5. In addition, a number of Phase 1 Environmental Site Assessments (ESAs) prepared for various portions of the site indicate that the site does not contain pesticides or other hazardous materials.	No mitigation is required.	Less than Significant
Conflict with Emergency Response Plans		
Compliance with existing regulations for emergency access and evacuation would ensure that impacts related to this issue are less than significant, and no mitigation is required.	No mitigation is required.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Wildlands Fire Risk		
The Badlands to the east, across Gilman Springs Road, is considered a Very High Fire Hazard Area. The project allows the construction of warehouse buildings which have a low fire potential, and the project will add a new roadway network to facilitate access for fire protection vehicles and services. Fire Station #58 is relatively close to the project site, but future development will generate a need for an additional fire station on the site. New structures will have to comply with current Fire and Building Code regulations.	The WLC Specific Plan identifies a new on-site fire station, and payment of DIF and increased property taxes will fund future fire services. No other mitigation is required.	Less than Significant
SIGNIFICANT IMPACTS		
On-site Conditions Involving Hazardous Materials		
A number of Phase 1 Environmental Site Assessments (ESAs) prepared for various portions of the site indicate that the site does not contain pesticides or other hazardous materials. However, the existing rural residences on site have not been surveyed as yet for hazardous materials.	**4.8.6.1A** Prior to demolition of any existing structures on the project site, a qualified contractor shall be retained to determine if asbestos-containing materials (ACMs) and/or lead-based paint (LBP) are present. If asbestos-containing materials and/or lead-based paint are present, prior to commencement of demolition, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. In addition, onsite soils shall be tested for contamination by agricultural chemicals. If present, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. This measure shall be implemented to the satisfaction of the Building Division including written documentation of the disposal of any asbestos-containing materials, lead-based paint, or agricultural chemical residue in conformance with all applicable regulations. **4.8.6.1B** Prior to the issuance of any discretionary permits associated with the proposed fueling facility ("logistic support" site in the LD zone), a risk assessment or safety study that identifies the potential public health and safety risks from accidents at the facility (e.g., fire, tank rupture, boiling liquid, or expanding vapor explosion) shall be submitted to the City for review and approval This	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	study shall be prepared to industry standards and demonstrate that the facility will not create any significant public health or safety impacts or risks, to the satisfaction of the City Building and Safety Division and the Fire Prevention Bureau. **4.8.6.1C** Prior to grading for any discretionary permits for development in Planning Areas 9-12 adjacent to the natural gas compressor plant, the applicant shall prepare a risk assessment report analyzing safety conditions relative to the existing compressor plant and planned development. The report must be based on appropriate industry standards and identify the potential hazards from the compressor plant (e.g., fire, explosion) and determine that the distance from the plant to the closest planned buildings in Planning Areas 9-12 is sufficient to protect the safety of workers from accidents that could occur (see Final EIR Volume 2 Figure 4.1.6B) at the compressor plant. This measure shall be implemented to the satisfaction of the City Building and Safety Division and the Fire Prevention Bureau. **4.8.6.1D** Prior to the issuance of any grading permit, the developer shall inform the City of any existing solid waste materials within the development area. In conjunction with grading activities, all solid waste matter within the development area shall be removed by a licensed contractor and disposed of in an approved landfill. A record of the removal and disposal of any waste materials, in compliance with applicable laws and regulations, shall be submitted to the City prior to the issuance of any building permits.	
Cumulative Hazards and Hazmat Impacts		
The risk to each future project is based on the location and interface between urbanized area and wildland areas. Potential risks associated with development in this area can be effectively reduced through conformance with Fire and Building Code regulations.	The WLC Specific Plan identifies a new on-site fire station, and increased property taxes will fund future police and fire services. Project specific mitigation measures 4.8.6.1A, 4.8.6.1B, 4.8.6.1C, and 4.8.6.1D are required and would ensure no significant cumulative impacts would result.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
4.9 Hydrology and Water Quality		
LESS THAN SIGNIFICANT IMPACTS		
Seismic Flooding-Related Impacts		
The WLC project area is not identified as being located within the City's mapped inundation area.	No mitigation required	Less than Significant
Seismic-Related Impacts		
The southwest corner of the site has slopes associated with Mt. Russell, but this area is designated as open space and the rest of the WLC area gently sloping and landslides or mudslides would not occur here.	No mitigation is required	Less than Significant
Groundwater		
The proposed WLC project would not interfere with groundwater recharge as the project site is not identified as a groundwater recharge area and it will utilize water supplies from EMWD.	No mitigation is required	Less than Significant
100-Year Flooding-Related Impacts		
The project site does not lie within a 100-year floodplain and does not include housing, so impacts related to this issue are less than significant.	No mitigation is required	Less than Significant
SIGNIFICANT IMPACTS		
Impact 4.9.6.1 Drainage Pattern and Capacity-Related Impacts		
The project will modify local drainage patterns, increase impervious surfaces (roofs, hardscape, etc.), and add landscaped areas with irrigation.	**4.9.6.1A** Prior to issuance of any building permit within the Specific Plan area, the developer shall construct storm drain pipes and conveyances, as well as, combined detention and infiltration basin(s), bioretention area(s), and spreading	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	area(s) within each proposed watershed, as outlined in the project hydrology plan, to mitigate the impacts of increased peak flow rate, velocity, flow volume and reduce the time of concentration by storing and infiltrating increased runoff for a limited period of time and release the outflow at a rate that does not exceed the pre-development peak flows and velocities for the 2, 5, 10, 25, and 100-year storms and volumes as assessed in the water balance model for historical conditions. For the purpose of this mitigation measure, the term "construct" shall mean to substantially complete construction so as to function for its intended purpose during construction with complete construction prior to occupancy. Field investigations will be conducted to determine the infiltration rate of soils underlying the proposed locations of bioretention areas and detention basins. The infiltration rate of the underlying soils will be used to properly size the bioretention areas and detention basins/infiltration basins to ensure that adequate volumes of runoff, in cumulative total for all bioretention areas and detention basins, are captured and infiltrated. The water balance model will be updated and rerun for the site-specific conditions encountered to confirm the water balance. This measure shall be implemented to the satisfaction of the City Engineer. Energy dissipaters shall be used as the spillways of basins to reduce the runoff velocity and dissipate the flow energy. Drainage weir structures shall be constructed at the downstream end of the watersheds flowing to the San Jacinto Wildlife Area to control the runoff and spread the flow such that the flows exiting the project boundary will return to the sheet flow pattern similar to the existing condition. Detention basins and spreading areas shall be designed to account for the amount of the sediment transported through the project boundary so that the existing sediment carrying capacity is maintained. **4.9.6.1B** The bioretention areas and detention/infiltration basins shall be designed to assure infiltrations rates. The monitoring plan will follow the guidelines presented by the California Storm Water Quality Association (CASQA) in the California Storm Water Best Management Program (BMP) Handbook, Municipal, January 2003 Section 4, Treatment Control Best Management Programs Fact Sheets TC-11 Infiltration Basin and TC-30 Vegetated Swale). For the Bioretention areas, as needed maintenance activities shall be conducted to remove accumulated sediment that may obstruct flow through the swale. Bioretention areas shall be monitored at the beginning and end of each wet season to assess any degradation in infiltration rates. The maintenance activities	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	should occur when sediment on channels and culverts builds up to more than 3 inches (CASQA 2003). The swales will need to be cultivated or rototilled if drawdown takes more than 72 hours. For the Detention/infiltration Basins, a 3-5 year maintenance program shall be implemented mainly to keep infiltration rates close to original values since sediment accumulation could reduce original infiltration rate by 25-50%. Infiltration rates in detention basins will be monitored at the beginning and end of each wet season to assess any degradation in infiltration rates. If cumulative infiltration rates of all detention basins drops below the minimum required rates, then the detention basins will be reconditioned to improve infiltration capacity by scraping the bottom of the detention basin, seed or sod to restore groundcover, aerate bottom and dethatch basin bottom (CASQA 2003).	
Impact 4.9.6.2 Construction-Related Water Quality		
The construction and grading phases of the WLC Specific Plan area would temporarily disturb surface soils and removal of vegetative cover, which could potentially result in erosion and sedimentation within the WLCSP area.	**4.9.6.2A** Prior to issuance of any grading permit for development in the World Logistics Center Specific Plan, the project developer shall file a Notice of Intent (NOI) with the Santa Ana Regional Water Quality Control Board to be covered under the National Pollutant Discharge Elimination System (NPDES) General Construction Permit for discharge of storm water associated with construction activities. The project developer shall submit to the City the Waste Discharge Identification Number issued by the State Water Quality Control Board (SWQCB) as proof that the project's Notice of Intent is to be covered by the General Construction Permit has been filed with the State Water Quality Control Board. This measure shall be implemented to the satisfaction of the City Engineer. **4.9.6.2B** Prior to issuance of any grading permit for development in the World Logistics Center Specific Plan, the project developer shall submit to the State Water Quality Control Board (SWQCB) a project-specific Storm Water Pollution Prevention Plan (SWPPP). The Storm Water Pollution Prevention Plan shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. In addition, the Storm Water Pollution Prevention Plan shall emphasize structural and nonstructural best management practices (BMPs) to control sediment and non-visible discharges from the site. Best Management	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	Practices to be implemented may include (but shall not be limited to) the following: • Sediment discharges from the site may be controlled by the following: sandbags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the Best Management Practices are to be periodically inspected by the Regional Water Quality Control Board during construction, and repairs would be made as required. • Materials that have the potential to contribute non-visible pollutants to storm water must not be placed in drainage ways and must be placed in temporary storage containment areas. • All loose soil, silt, clay, sand, debris, and other earthen material shall be controlled to eliminate discharge from the site. Temporary soil stabilization measures to be considered include: covering disturbed areas with mulch, temporary seeding, soil stabilizing binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. Stockpiles shall be surrounded by silt fences and covered with plastic tarps. • The Storm Water Pollution Prevention Plan shall include inspection forms for routine monitoring of the site during the construction phase. • Additional required Best Management Practices and erosion control measures shall be documented in the Storm Water Pollution Prevention Plan. • The Storm Water Pollution Prevention Plan would be kept on site for the duration of project construction and shall be available to the local Regional Water Quality Control Board for inspection at any time. The developer and/or construction contractor for each development area shall be responsible for performing and documenting the application of Best Management Practices identified in the project-specific Storm Water Pollution Prevention Plan. Regular inspections shall be performed on sediment control measures called for in the Storm Water Pollution Prevention Plan. Monthly reports shall be maintained and available for City inspection. An inspection log shall be maintained for the project and shall be available at the site for review by the City of Moreno Valley and the Regional Water Quality Control Board.	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Impact 4.9.6.3 Operational-Related Water Quality		
During the operational phase of the WLC the major source of pollution in storm water runoff would be contaminants such as, a variety of pollutants such as sediment, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser extent) trace metals such as zinc, copper, lead, cadmium, and iron that have accumulated on the land surface over which runoff passes. These contaminants may lead to the degradation of storm water in downstream channels and require mitigation to reduce impacts to less than significant.	**4.9.6.3A** Prior to discretionary permit approval for individual plot plans, a site-specific Water Quality Management Plan (WQMP) shall be submitted to the City Land Development Division for review and approval. The Water Quality Management Plan shall specifically identify site design, source control, and treatment control Best Management Practices that shall be used on site to control pollutant runoff and to reduce impacts to water quality to the maximum extent practicable. The Water Quality Management Plan shall be consistent with the Water Quality Management Plan approved for the overall World Logistics Center Specific Plan project. At a minimum, the site developer shall implement the following site design, source control, and treatment control Best Management Practices as appropriate: **Site Design Best Management Practices** (a) Minimize urban runoff. (b) Maximize the permeable area. (c) Incorporate landscaped buffer areas between sidewalks and streets. (d) Maximize canopy interception and water conservation by planting native or drought-tolerant trees and large shrubs. (e) Use natural drainage systems. (f) Where soil conditions are suitable, use perforated pipe or gravel filtration pits for low flow infiltration. (g) Construct on-site ponding areas or retention facilities to increase opportunities for infiltration consistent with vector control objectives. (h) Minimize impervious footprint. (i) Construct streets, sidewalks and parking lot aisles to the minimum widths necessary, provided that public safety and a walkable environment for pedestrians are not compromised. (j) Reduce widths of street where off-street parking is available. (k) Minimize the use of impervious surfaces such as decorative concrete, in the landscape design.	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	(l) Conserve natural areas. (m) Minimize Directly Connected Impervious Areas (DCIAs). (n) Runoff from impervious areas will sheet flow or be directed to treatment control Best Management Practices. (o) Streets, sidewalks, and parking lots will sheet flow to landscaping/ bioretention areas that are planted with native or drought tolerant trees and large shrubs. **Source Control Best Management Practices** Source control Best Management Practices are implemented to eliminate the presence of pollutants through prevention. Such measures can be both non-structural and structural. Non-structural source control Best Management Practices include: (a) Education for property owners, operator, tenants, occupants, or employees; (b) Activity restrictions; (c) Irrigation system and landscape maintenance; (d) Common area litter control; (e) Street sweeping private streets and parking lots; and (f) Drainage facility inspection and maintenance. Structural source control Best Management Practices include: (g) MS4 stenciling and signage; (h) Landscape and irrigation system design; (i) Protect slopes and channels; and (j) Properly design fueling areas, trash storage areas, loading docks, and outdoor material storage areas. **Treatment Control Best Management Practices** Treatment control Best Management Practices supplement the pollution prevention and source control measures by treating the water to remove pollutants before it is released from the project site. The treatment control Best Management Practice strategy for the project is to select Low Impact	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	Development (LID) Best Management Practices that promote infiltration and evapotranspiration, including the construction of infiltration basins, bioretention facilities, and extended detention basins. Where infiltration Best Management Practices are not appropriate, bioretention and/or biotreatment Best Management Practices (including extended detention basins, bioswales, and constructed wetlands) that provide opportunity for evapotranspiration and incidental infiltration may be utilized. Harvest and Reuse Best Management Practice will be used to store runoff for later non-potable uses. Site-specific Water Quality Management Plans have not been prepared at this time as no site-specific development project has been submitted to the City for approval. When specific projects within the project are developed, Best Management Practices will be implemented consistent with the goals contained in the Master Water Quality Management Plan. All development within the project will be required to incorporate on-site water quality features to meet or exceed the approved Master Water Quality Management Plan's water quality requirements identified previously. **4.9.6.3B** The Property Owners Association (POA) and all property owners shall be responsible to maintain all onsite water quality basins according to requirements in the guidance Water Quality Management Plan and/or subsequent site-specific Water Quality Management Plans, and established guidelines of the Regional Water Quality Control Board. Failure to properly maintain such basins shall be grounds for suspension or revocation of discretionary operating permits, and/or referral to the Regional Water Quality Control Board for review and possible action. This measure shall be implemented to the satisfaction of the City Land Development Division, in consultation with the City Engineer, and Regional Water Quality Control Board. **4.9.6.3C** Prior to issuance of future discretionary permits for any development along the southern boundary of the World Logistics Center Specific Plan (WLCSP), the project developer of such sites, in cooperation with the Property Owners Association (POA), shall establish and annually fund a Water Quality Mitigation Monitoring Plan (WQMMP) to confirm that project runoff will not have deleterious effects on the adjacent San Jacinto Wildlife Area (SJWA). This program shall include at least quarterly sampling along the southern boundary of the site (i.e., at the identified outlet structures of the project detention basins) during wet season flows and/or when water is present, as well as sampling of	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	any dry-season flows that are observed entering the San Jacinto Wildlife Area property from the project property, including Drainage 9, which is planned to convey only clean off-site flows from north of the World Logistics Center Specific Plan site across Gilman Springs Road. The program shall also include at least twice yearly sampling after completion of construction, and a pre-construction survey must be completed to determine general water quality baseline conditions prior to and during development of the southern portion of the World Logistics Center Specific Plan. This sampling shall be consistent with and/or comply with the requirements of applicable Storm Water Pollution Prevention Plans (SWPPPs) for the development site. The project developer of sites along the southern border of the World Logistics Center Specific Plan shall be responsible for preventing or eliminating any toxic pollutant (not including sediment) found to exceed applicable established public health standards. In addition, the discharge from the project shall not cause or contribute to an exceedance of Receiving Water Quality Objectives for the potential pollutants associated with the project as identified in Table 4.9.J. Once development is complete, the developer shall retain qualified personnel to conduct regular (i.e., at least quarterly) water sampling/testing of any basins and their outfalls to ensure the San Jacinto Wildlife Area will not be affected by water pollution from the project site. This measure shall be implemented to the satisfaction of the City Land Development Division Manager based on consultation with the project developer, Eastern Municipal Water District, the Regional Water Quality Control Board-Santa Ana Region, and the Mystic Lake Manager.	
Cumulative Hydrology and Water Quality		
The drainage system for the proposed WLC project would maintain post-development runoff at pre-development levels for off-site downstream properties. Therefore, the proposed WLC project will not make a significant contribution to any cumulatively considerable impacts related to drainage or water quality.	Previously referenced Mitigation Measures 4.9.6.1A, 4.9.6.1B, and 4.9.6.3A through 4.9.6.3C. No additional mitigation is required.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
4.10 Land Use and Planning		
LESS THAN SIGNIFICANT IMPACTS		
Conflict with Applicable Land Use Plans, Policies, or Regulations		
The land uses per se of the project are not consistent with SCAG growth projections and some Compass Plan policies because they are not residential in nature. However, the project will substantially improve the City's job/housing balance which is consistent with these regional plans. The WLC project is consistent with the City General Plan upon approval of the requested General Plan Amendment. The project is consistent with the City's Housing Element. Therefore, the project is consistent with both regional and local land use plans, policies, and regulations.	No mitigation is required.	Less than Significant
Conflict with any Applicable Habitat or Natural Community Conservation Plan		
The project will be required to comply with the requirements of the County's MSHCP and pay its development impact fee.	Previously referenced Mitigation Measures 4.4.6.1A through 4.4.6.1C, 4.4.6.2A and 4.4.6.2B, 4.4.6.3A and 4.4.6.3B, and 4.4.6.4A through 4.4.6.4F related to Biological Resources will be implemented, and no additional mitigation is required.	Less than Significant
Cumulative Land Use and Planning Impacts		
The WLC project would not have significant project-related impacts related to dividing an established community, conflicting with applicable land use plans, policies, or regulations, or conflicting with an approved habitat conservation plan. While the WLC project would represent a shift in land use policy, this policy shift does not represent a significant CEQA impact.	No mitigation is required.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
SIGNIFICANT IMPACTS		
Physically Divide an Established Community		
The WLC is located in the eastern end of the City, so its development would not physically divide an established community. However, development could adversely affect seven existing rural residences onsite, and the land plan cannot accommodate residences within logistics warehousing areas.	No feasible mitigation is available.	Significant and Unavoidable
4.11 Mineral Resources		
LESS THAN SIGNIFICANT IMPACTS		
Loss of Statewide, Regional, or Locally Important Mineral Resources		
The project site and surrounding area do not contain any identified regional or local mineral resources, nor are there any ongoing mineral resource extraction activities in the project area.	No mitigation is required.	No impact
Cumulative Mineral Resources		
The WLC project site does not contain significant forest resources, so it will not make a significant contribution to cumulatively considerable impacts relative to any forest resources.	No mitigation is required.	Less than Significant
SIGNIFICANT IMPACTS		
None	Not applicable	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
4.12 Noise		
LESS THAN SIGNIFICANT IMPACTS		
Groundborne Vibration		
Project-related earthwork will create groundborne vibration, but the project noise study determined it would not exceed significance criteria for adjacent residential uses.	No mitigation is required.	Less than Significant
Airport Noise		
There are no public airports or private airstrips within two miles of the project site, so there will be no significant airport-related noise.	No mitigation is required.	No Impact
SIGNIFICANT IMPACTS		
Impact 4.12.6.1 Short-Term Construction Noise		
Project construction will create significant noise levels for on-site uses and off site away from the project site due to construction vehicle travel.	**4.12.6.1A** Prior to issuance of any discretionary project approvals, a Noise Reduction Compliance Plan (NRCP) shall be submitted to and approved by the City. The NRCP shall be prepared by a qualified acoustical consultant describing how noise reduction measures shall be implemented to reduce the noise exposure on sensitive receptors adjacent to onsite and offsite construction areas. The noise reduction measures shall be implemented so that construction activities do not exceed the City's daytime and nighttime average hourly noise standard of 60 dBA L_{eq} and 55 dBA L_{eq}, respectively. The construction noise reduction measures shall include, but not be limited to, the following measures:	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	• All construction equipment, fixed or mobile, shall be equipped with operating and maintained mufflers consistent with manufacturers' standards. • Construction vehicles shall be prohibited from using Redlands Boulevard south of Eucalyptus Avenue to access on-site construction for all phases of development of the project. • No construction activity shall occur within 800 feet of residences between 8 p.m. and 7 a.m. on weekdays and weekends. • A 12-foot tall temporary construction sound barrier blocking the line-of-sight of construction activity to any residential receptor located within 800 feet of active construction areas shall be installed prior to commencement of any construction activity. The temporary sound barrier shall be constructed of plywood with a total thickness of 1.5 inches, or a sound blanket wall may be used. If sound blankets are used, they must have a Sound Transmission Class (STC) rating of 27 or greater. • Distribute to the potentially affected residences and other sensitive receptors within 500 feet of project construction boundary a "hotline" telephone number, which shall be attended during active construction working hours, for use by the public to register complaints. The distribution shall identify a noise disturbance coordinator who would be responsible for responding to any local complaints about construction noise. The disturbance coordinator would determine the cause of the noise complaints and institute feasible actions warranted to correct the problem. All complaints shall be logged noting date, time, complainant's name, nature of complaint, and any	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	corrective action taken. The distribution shall also notify residents adjacent to the project site of the construction schedule. Records of any complaints and corrective action shall be stored at the site and available to the City upon request.	
Impact 4.12.6.2 Long-Term Traffic Noise		
Project operations will create significant long-term noise impacts on site and along a number of off-site roadways. Not all off-site impacts can be mitigated to less than significant levels by installing sound-attenuation improvements.	**4.12.6.2A** When processing future individual buildings under the World Logistics Center Specific Plan, as part of the City's approval process, the City shall require the Applicant to take the following three actions for each building prior to approval of discretionary permits for individual plot plans for the requested development: Action 1: Perform a building-specific noise study to ensure that the assumptions set forth in the Revised Sections of the FEIR remain valid. These procedures used to conduct these noise analyses shall be consistent with the noise analysis conducted in the Revised Sections of the FEIR and shall be used to impose building-specific mitigation on the individually-proposed buildings. Action 2: If the building-specific analyses identify that the proposed development triggers the need for mitigation from the proposed building, including all preceding developments in the World Logistics Center site, the Applicant shall implement the appropriate level of mitigation, identified in the Revised Sections of the FEIR to reduce the identified impacts to comply with the Moreno Valley Municipal Code, which sets maximum sound levels reaching residential uses at 60 dBA during the daytime hours (8:00 a.m. – 10:00 p.m.) and 55 dBA during nighttime hours (10:01 p.m. – 7:59 a.m.). Prior to implementing the mitigation, the Applicant shall send letters by registered mail to all property owners and non-owner occupants of properties that would benefit from the proposed mitigation asking them to provide a position either in favor of or in opposition to the proposed noise abatement mitigation within 45 days. Each property shall be entitled to one vote on behalf of owners and one vote per dwelling on behalf of non-owner occupants.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	If more than 50% of the votes from responding benefited receptors oppose the abatement, the abatement will not be considered reasonable. Additionally, for noise abatement to be located on private property, 100% of owners of property upon which the abatement is to be placed must support the proposed abatement. In the case of proposed noise abatement on private property, no response from a property owner, after three attempts by registered mail, is considered a *no* vote. At the completion of the vote at the end of the 45-day period, the Applicant shall provide the tentative results of the vote to all property owners by registered mail. During the next 15 calendar days following the date of the mailing, property owners may change their vote. Following the 15-day period, the results of the vote will be finalized and made public. Action 3: Upon consent from benefited receptors and property owners, the Applicant shall post a bond for the cost of the construction of the necessary mitigation as estimated by the City Engineer to ensure completion of the mitigation. The certificate of occupancy permits shall be issued upon posting of the bond or demonstration that 50% of the votes from responding benefited receptors oppose the abatement or, if the abatement is located on private property, any property owners oppose the abatement. **4.12.6.2B** Prior to issuance/approval of any building permits, the centerline of Cactus Avenue Extension will be located no closer than 49 feet to the residential property lines along Merwin Street. An alternative is to locate the roadway closer to the residences and provide a soundwall along Cactus Avenue Extension. The soundwall location and height should be determined by a Registered Engineer, and the soundwall shall be designed to reduce noise levels to less than 65 CNEL at the residences. The Engineer shall provide calculations and supporting information in a report that will be required to be submitted to and approved by the City prior to issuing permits to construct the road. **4.12.6.2C** Prior to the approval of any discretionary permits, cumulative impact areas shown in the WLC EIR Noise Study shall be included in the soundwall mitigation program outlined in Mitigation Measures 4.12.6.2A and 4.12.6.2D. **4.12.6.2D** Prior to issuance of a building permit, the applicant shall demonstrate that the development maintains a buffer with soundwall for noise attenuation at	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	residential/warehousing interface (i.e., western and southwestern boundaries of the project site). To keep the noise levels at nearby residential areas less than typical ambient conditions, the warehousing property line shall be located a minimum of 250 feet from the residential zone boundary, and a 12-foot noise barrier shall be located along the perimeter of the property that faces any residential areas. The 12-foot noise barrier may be a soundwall, berm, or combination of the two. The height shall be measured relative to the pad of the warehouse. This requirement shall be implemented anytime residential areas are within 600 feet of the warehousing property line to insure that a noise level of 45 dBA (Leq) will not be exceeded at the residential zone. This requirement is consistent with Item 10 of Municipal Code Section 9.16.160 Business park/industrial that states, "All manufacturing and industrial uses adjacent to residential land uses shall include a setback zone and/or noise attenuation wall to reduce outside noise levels"	
Impact 4.12.6.3 Long-Term Operational Noise		
Potential long-term stationary noise impacts would primarily be associated with operations at logistics facilities within the WLCSP area. With implementation of a minimum 250-foot setback from residential uses, potential long-term operational noise impacts would be less than significant.	The project noise assessment determined that operational noise impacts from warehouse activities would not exceed City standards at nearby residential areas with implementation of the 250-foot setback requirement.	Less than Significant with Mitigation
Impact 4.12.6.4 Long-Term Utility Noise		
Noise generated by SCGC blow-down events has the potential to cause permanent hearing loss in persons in the developed area of the project. This is a significant impact and mitigation is required.	**4.12.6.4A** Prior to the issuance of building permits for projects within 1,300 feet of the Southern California Gas Company (SCGC) and San Diego Gas and Electric (SDG&E) blow-down facilities, documentation shall be submitted to the City confirming that sound attenuation devices and/or improvements for the blow-down facilities providing at least a 40 dB reduction in noise levels during blow-down events are available and will be installed for all planned blow-down events. It shall be the responsibility of the developer to fund all sound attenuation improvements to the blow-down facilities required by this measure. It shall also be the responsibility of the developer to coordinate with San Diego Gas and Electric and/or Southern California Gas Company regarding the	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	installation of any sound attenuation devices or improvements on the blow-down facilities at either the San Diego Gas and Electric compressor station or the Southern California Gas Company pipelines. This measure shall be implemented to the satisfaction of the City Land Management Division (per Noise Study MM N-11, pg.65).	
Impact 4.12.6.5 Cumulative Noise Impacts		
Traffic noise level increases from the existing baseline condition and the future (2022 and 2035) time horizons are attributable to the intermingled effects of both the cumulative development projects in the project vicinity and region as well as the project. This is a significant impact and mitigation is required.	Previously referenced Mitigation Measures 4.12.6.1A, 4.12.6.2A through 4.12.6.2C, 4.12.6.3A, and 4.12.6.4A will be implemented, but cumulative noise impacts will still be significant.	Significant and Unavoidable
4.13 Population, Housing, and Employment		
LESS THAN SIGNIFICANT IMPACTS		
Population Growth		
The project proposes to develop logistics warehouses which will result in minimal direct population increase in the City, although some workers may move to the City to work at this project, and some local residents will also work at this project. The project will not necessitate extension of major infrastructure and the project will not remove obstacles that will result in substantial population growth.	No mitigation is required.	Less than Significant
Displace Substantial Housing/People		
The existing seven rural residences on the site will eventually convert to "Light Logistics" uses. The project will eliminate the potential for the site to provide 388 units of affordable housing that were proposed under the	No mitigation required.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	**Mitigation Measures**	**Level of Significance**
Moreno Highlands Specific Plan. However, the City can meet its regional housing goals without these units, and the project is consistent with the City's current Housing Element.		
SIGNIFICANT IMPACTS		
None	Not applicable	Not applicable
Cumulative Population, Housing, and Employment Impacts		
Implementation of the proposed WLC project would improve the City's jobs/housing ratio by creating thousands of new construction and permanent jobs in the City. Therefore, it will not result in cumulatively considerable impacts to population or housing.	No mitigation is required.	Less than Significant
4.14 Public Services and Facilities		
LESS THAN SIGNIFICANT IMPACTS		
Police Protection		
As development under the WLCSP, the need for police services will increase. Future projects will pay applicable development impact fees and contribute property taxes to fund needed police services.	No mitigation is required.	Less than Significant
Fire Protection		
As development under the WLCSP, the need for fire services will increase. Under the WLCSP, a new fire station site will be contributed to the City. Future projects will pay applicable development impact fees and contribute property taxes to fund needed police services.	No mitigation is required.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Schools		
Future industrial development will contribute no new students to local schools. Payment of the school impact fees to the MVUSD and SJUSD will reduce potential impacts to school services and facilities to less than significant levels.	No mitigation is required.	Less than Significant
Parks, Recreation, Trails		
Development under the WLCSP is logistics warehousing which will not generate new City residents who require additional parks and trails. The WLCSP proposes trail connections to Redlands Boulevard, Cactus Avenue, and the State-owned land to the south, plus a loop trail through the WLCSP site.	No mitigation is required.	Less than Significant
New or Physically Altered Recreation and Park Facilities		
Development under the WLCSP is logistics warehousing which will not generate new City residents who require additional or altered parks.	No mitigation is required.	Less than Significant
Cumulative Public Services and Facilities Impacts		
As development occurs, the need for public services will incrementally increase. Anticipated property tax increases and payment of DIF fees to the City will effectively mitigation potential cumulative impacts to public services.	No mitigation is required.	Less than Significant
SIGNIFICANT IMPACTS		
None	Not applicable	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
4.15 Traffic and Circulation		
LESS THAN SIGNIFICANT IMPACTS		
Air Traffic Patterns		
The project site is not within two miles of a public airport or private airstrip, and there are no major air traffic patterns over or in the immediate vicinity of the project site.	No mitigation is required.	Less than Significant
Design Hazard Features		
The project site is currently vacant agricultural land with only two major roadways (Theodore Street and Alessandro Boulevard). Under the WLCSP, a complete arterial circulation network will eventually be constructed that will allow full truck access and minimize road-related hazards.	No mitigation is required.	Less than Significant
Emergency Access		
The project site is currently vacant agricultural land with only two major roadways and minimal need for emergency services. Development under the WLCSP will eventually result in the construction of a complete arterial circulation network which will allow full access for emergency vehicles and services.	No mitigation is required.	Less than Significant
Alternative Transportation Policies, Plans, or Programs		
The project will create a complete roadway circulation network, install a loop trail system, have Class II bikeways and sidewalks on all internal arterial streets, and streets can accommodate bus turnouts when needed by the local transit agency.	Carpooling is required under Air Quality Mitigation Measure 4.3.6.4A. No additional mitigation is required.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
SIGNIFICANT IMPACTS		
Impact 4.15.6.1 Existing (2018) With Phase 1 Conditions Traffic and Level of Service		
Existing baseline (year 2018) with Phase 1 intersection levels of service for the study area intersections include 15 study intersections where Phase 1 of the project would have a significant impact. Twelve of these intersections already exceed the threshold of significance under existing conditions and would therefore be considered cumulative impacts and mitigation is required. Phase 1 of the project would cause a direct project impact at the other three intersections and mitigation is required.	**4.15.7.4A:** A traffic impact analysis ("TIA"), conforming to the guidelines for TIAs adopted by the City shall be submitted in conjunction with each Plot Plan application within the WLCSP. Prior to the approval of Plot Plans, the City shall review the Revised TIA to determine if any of the traffic improvements listed in the above tables need to be implemented as part of the plot plan. The TIA prepared for the Revised Sections of the FEIR are required to be completed prior to the issuance of a certificate of occupancy for each building. If the City determines that any of the improvements within Moreno Valley are required to be constructed in order to ensure that the traffic impacts which will result from the construction and operation of the building will be mitigated into insignificance, then the completion of construction of the improvements prior to the issuance of a Certificate of Occupancy for the building shall be made a Condition of Approval of the Plot Plan. Construction of improvements within the City shall be subject to reimbursement agreement for those costs that exceed the fair share contribution determined for the specific Plot Plan application. If the City determines that any of the improvements outside Moreno Valley are required to be constructed in order to ensure that the traffic impacts which will result from the construction and operation of the building will be mitigated to a less than significant level, then the payment of any necessary fair share contribution as prescribed in MM 4.15.7F prior to the issuance of a Certificate of Occupancy for the building shall be made a Condition of Approval of the Plot Plan. If the City determines that the traffic impacts which will result from the construction or operation of a building will be significantly more adverse than those shown in the Revised TIA, further environmental review shall be conducted prior to the approval of the Plot Plan pursuant to Public Resources Code § 21166 and CEQA Guidelines § 15162 to determine what additional mitigation measures, if any, will be required in order to maintain the appropriate levels of service.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	4.15.7.4B: As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require the dedication of appropriate right-of-way, where feasible, consistent with the Subdivision Map Act for frontage street improvements contained within the World Logistics Center Specific Plan Circulation Map. Required dedications shall be made prior to the issuance of occupancy permits for the requested development. **4.15.7.4C:** As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require the Applicant to construct or to fully fund the transportation measures identified in the development's TIA (see MM4.15.7.4A) as needed to mitigate the transportation impacts within the city of the Plot Plan development. The payment or construction shall be made prior to the issuance of occupancy permits for the requested development. This condition shall apply only to mitigation measures where a mechanism has been established to collect funds from the project and any other funds to needed to complete the improvements. **4.15.7.4D:** As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require each project to pay the requisite Transportation Uniform Mitigation Fee (TUMF) as set forth in Municipal Code Chapter 3.44. Required TUMF payments shall be made prior to the issuance of occupancy permits for the requested development. **4.15.7.4E:** In order to ensure that all of the Project's traffic impacts are mitigated to the greatest extent feasible, the Applicant shall contribute its fair share of the cost of the needed traffic improvements that are not within the City as identified in the Revised Traffic Impact Analysis, i.e., under the jurisdiction of other cities, the County of Riverside or Caltrans, pursuant to MM 4.15.7.4F. As used in this mitigation measure, the Applicant's "fair share" has been determined in compliance with the requirements of the Fee Mitigation Act, Government Code § 66000 et seq., and, pursuant to § 66001(g), does not require that the Applicant be responsible for making	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	up for any existing deficiencies. Mitigation measures are summarized in Tables 4.15-1 to 4.15-13. **4.15.7.4F** The Applicant shall pay its portion of the fair share of the cost of traffic improvements identified in the Transportation Impact Analysis for those significantly impacted road segments and intersections for each warehouse building within the World Logistics Center if the impacted jurisdiction has established a fair share contribution program prior to the approval of a building-specific plot plan. The City shall determine whether a fair share program exists in the impacted jurisdiction and, if one does exist, require that the appropriate fees are paid by the Applicant, consistent with the requirements below, prior to the issuance of a certificate of occupancy for the building in question. If no fair share program exists or if the existing programs are not consistent with the requirements below, then no payment of fees shall be required. The impacts are to be determined on a road segment or intersection basis. Nothing in this condition requires the payment of a traffic impact fee imposed by another jurisdiction which covers improvement to facilities where the Project does not have a significant impact. Fair-share contributions will be determined on a building-by-building basis as a share of the impact of the Project as a whole (for each segment or intersection where the WLC project as a whole has a significant impact identified in the Revised Sections of the FEIR) as determined by the Revised Traffic Impact Analysis and will be due as each certificate of occupancy is issued. The fair share payments for the significantly impacted road segments and intersections identified in the Revised Sections of the FEIR will be required even though the impact resulting from a specific building does not, by itself, cause a significant impact. For example, the intersection of Martin Luther King Blvd. and the I-215 northbound ramps (Intersection IN-85) in the City of Riverside was identified as a place where the WLC contributes to cumulatively significant impacts, and where the fair share contribution of the WLC project as a whole was computed to be 0.6%. If the City of Riverside establishes a fair share contribution program consistent with this MM to improve that intersection, then when a certificate of occupancy is to be	

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

<table>
<tr><th>Issues/Impacts</th><th>Mitigation Measures</th><th>Level of Significance</th></tr>
<tr><td></td><td>
issued for a 2-million sq. ft. high-cube warehouse in the WLC (approximately 5% of the entire WLC project) the amount of the fair share payment due from the Applicant to the City of Riverside would be computed as follows:
<table>
<tr><td>Amount Due</td><td>=</td><td>Total cost of Improvement</td><td>×</td><td>Total World Logistics Center fair share (0.6%) as determined by Traffic Impact Analysis</td><td>×</td><td>% attributable to the building that is subject to the certificate of occupancy (5%)</td></tr>
</table>
<table>
<tr><td>A × B × C = D</td></tr>
<tr><td>A = % attributable to the building that is subject to the certificate of occupancy (5%)
B = Total World Logistics Center fair share (0.6%) as determined by Traffic Impact Analysis
C = Total cost of Improvement
D = Amount Due</td></tr>
</table>
A similar calculation would be done for each subsequent building, with payments for each due at the time of issuance of the certificate of occupancy. As a result, while each building individually would not produce a significant impact, and therefore would not be required to pay any mitigation fees if considered by itself, the total amount of the payments for all of the buildings would be equal to the fair share payment for the entire WLC to the extent that the responsible jurisdiction has chosen to adopt a fair share contribution funding program consistent with MM 4.15.7.4F

4.15.7.4G City shall work directly with WRCOG to request that TUMF funding priorities be shifted to align with the needs of the City, including
</td><td></td></tr>
</table>

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	improvements identified in this TIA. Toward this end, City shall meet regularly with WRCOG.	
Impact 4.15.6.2 Existing (2018) With Project (Buildout) Conditions Traffic and Level of Service Impacts		
When project traffic under buildout conditions is overlaid on existing roadway and freeway conditions, significant project-specific and cumulative traffic impacts will occur. Local and regional roadway and intersection impacts can be effectively mitigated, as outlined in the project TIA and described in the mitigation measures to the right. At this time, there is no effective mitigation for anticipated project impacts on local freeways. In addition, the City cannot control the timing of improvements required at locations outside of the City of Moreno Valley.	Implementation of previously identified Measures 4.15.7.4A through 4.15.7.4G as they apply to development that occurs from project opening until Buildout.	Significant and Unavoidable (see Cumulative Impacts)
Impact 4.15.6.3 Year 2025 with Project (Phase 1) Conditions Traffic and Level of Service Impacts		
The project will contribute significant amounts of traffic onto roadways and at intersections in the City of Moreno Valley and other cities, and area freeways, during Phase 1 development (approx. 2020 to 2025).	Implementation of previously identified Measures 4.15.7.4A through 4.15.7.4G as they apply to development that occurs from project opening until Year 2025 (considered to be Phase 1).	Significant and Unavoidable
Impact 4.15.6.4 Cumulative Impacts - General Plan Buildout (Year 2040) With Project Conditions Traffic and Level of Service Impacts		
The project will contribute significant amounts of traffic onto roadways and at intersections in the City of Moreno Valley and other cities, and area freeways, after completion of development under the WLCSP (i.e., after 2025).	Implementation of previously identified Measures 4.15.7.4A through 4.15.7.4G for development as it occurs during development under the WLCSP.	Significant and Unavoidable

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
4.16 Utilities and Service Systems		
LESS THAN SIGNIFICANT IMPACTS		
Construction or Expansion of Water Treatment Facilities		
The project can connect to the existing water supply and will not require the construction of any new water storage or treatment facilities.	No mitigation is required.	Less than Significant
Cumulative Water Supply		
The EMWD has determined that it will be able to provide adequate water supply to meet the potable water demand for the project area, including existing and future users, when planned groundwater storage improvements are completed.	No mitigation is required.	Less than Significant
Wastewater Treatment Requirements		
Expected wastewater flows from the proposed WLC project will not exceed the capabilities of the serving treatment plant.	No mitigation is required.	No Impact
Wastewater Treatment Capacity and/or New or Expanded Wastewater Facilities		
The proposed WLC project would not require the construction of new wastewater treatment facilities or expansion of existing facilities, which could cause significant environmental effects.	No mitigation is required.	Less than Significant
Cumulative Wastewater Treatment		
The project, in conjunction with planned and future development within the service area, will incrementally increase the need for wastewater treatment over the long-	No mitigation is required.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
term. However, the project itself would not require the construction of new wastewater treatment facilities or expansion of existing facilities.		
Solid Waste Facilities		
Adequate daily surplus capacity exists at the receiving landfill, so project development would not significantly impact current operations or the expected lifetime of the landfill serving the project area.	No mitigation is required.	Less than Significant
Solid Waste Reduction		
The project would be required to comply with applicable elements of AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, state, and federal solid waste disposal standards, thereby ensuring that the solid waste stream to the Badlands Sanitary Landfill is reduced in accordance with existing regulations.	Implementation of previously identified Air Quality Mitigation Measure 4.3.6.4B will help reduce long-term production of solid waste from the site, and no additional mitigation is required.	Less than Significant
Cumulative Solid Waste		
The project, in conjunction with planned development in the surrounding region, will contribute increased volumes of solid waste to local landfills. However, these volumes will not exceed the capabilities of the County's waste management system. Consequently, cumulative impacts associated with solid waste within the City would be considered less than significant.	Implementation of previously identified Air Quality Mitigation Measure 4.3.6.4B will help reduce long-term production of solid waste from the site.	Less than Significant

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
SIGNIFICANT IMPACTS		
Impact 4.16.1.6.1 Adequate Water Supply		
The Water Supply Assessment prepared for the project by Eastern Municipal Water District determined there were sufficient supplies of water to serve the project. However, the supply of water imported from the State is not currently guaranteed, so there may be significant impacts related to long-term water supply.	**4.16.1.6.1A** Prior to approval of a precise grading permit for each plot plan for development within the World Logistics Center Specific Plan (WLCSP), the developer shall submit landscape plans that demonstrate compliance with the World Logistics Center Specific Plan, the State of California Model Water Efficient Landscape Ordinance (AB 1881), and Conservation in Landscaping Act (AB 325). This measure shall be implemented to the satisfaction of the Planning Division. Said landscape plans shall incorporate the following: • Use of xeriscape, drought-tolerant, and water-conserving landscape plant materials wherever feasible and as outlined in Section 6.0 of the World Logistics Center Specific Plan; • Use of vacuums, sweepers, and other “dry” cleaning equipment to reduce the use of water for wash down of exterior areas; • Weather-based automatic irrigation controllers for outdoor irrigation (i.e., use moisture sensors); • Use of irrigation systems primarily at night or early morning, when evaporation rates are lowest; • Use of recirculation systems in any outdoor water features, fountains, etc.; • Use of low-flow sprinkler heads in irrigation system; • Provide information to the public in conspicuous places regarding outdoor water conservation; and • Use of reclaimed water for irrigation if it becomes available. **4.16.1.6.1B** All buildings shall include water-efficient design features outlined in Section 4.0 of the World Logistics Center Specific Plan. This measure shall be implemented to the satisfaction of the Land Development Division/Public Works. These design features shall include, but not be limited to the following: • Instantaneous (flash) or solar water heaters; • Automatic on and off water facets;	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
	• Water-efficient appliances; • Low-flow fittings, fixtures and equipment; • Use of high efficiency toilets (1.28 gallons per flush [gpf] or less); • Use of waterless or very low water use urinals (0.0 gpf to 0.25 gpf); • Use of self-closing valves for drinking fountains; • Infrared sensors on drinking fountains, sinks, toilets and urinals; • Low-flow showerheads; • Water-efficient ice machines, dishwashers, clothes washers, and other water-using appliances; • Cooling tower recirculating system where applicable; • Provide information to the public in conspicuous places regarding indoor water conservation; and • Use of reclaimed water for wash down if it becomes available. **4.16.1.6.1C** Prior to approval of a precise grading permit for each plot plan, irrigation plans shall be submitted to and approved by the City demonstrating that the development will have separate irrigation lines for recycled water. All irrigation systems shall be designed so that they will function properly with recycled water if it becomes available. This measure shall be implemented to the satisfaction of the City Planning Division and Land Development Division/Public Works.	
Impact 4.16.1.6.2 Storm Water Drainage Requirements		
The development of the proposed WLC project would introduce a substantial amount of impervious surfaces on the site, which could result in significant increases in off-site runoff.	**4.16.1.6.2A** Each Plot Plan application for development shall include a concept grading and drainage plan, with supporting engineering calculations. The plans shall be designed such that the existing sediment carrying capacity of the drainage courses exiting the project area is similar to the existing condition. The runoff leaving the project site shall be comparable to the sheet flow of the existing condition to maintain the sediment carrying capacity and amount of available sediment for transport so that no increased erosion will occur downstream. This measure shall be implemented to the satisfaction of the City Land Development Division/Public Works.	Less than Significant with Mitigation

Table 1.1-1: World Logistics Center Project Environmental Impact Summary

Issues/Impacts	Mitigation Measures	Level of Significance
Cumulative Impacts to Water Supply Services		
The proposed WLC project would connect to existing conveyance infrastructure and adequate treatment capacity is available, so the proposed WLC project would not make a significant contribution to any cumulatively considerable impacts on water supply or infrastructure.	Mitigation not required	Less than Significant with Mitigation
4.17 Energy (New Section)		
LESS THAN SIGNIFICANT IMPACTS		
Energy Consumption and Generation		
The project would not result in energy use or consumption that would cause wasteful, inefficient, and unnecessary consumption of energy.	No mitigation is required.	Less than Significant
Cumulative Energy Facilities and Consumption		
The WLC project, in conjunction with planned development in the region, will increase energy consumption as development occurs. The project will adhere to Title 24 and the California Green Building Code, and will exceed Title 24 energy consumption guidelines by at least 10 percent. Therefore, the project will not make a significant contribution to energy facilities or consumption.	No mitigation is required.	Less than Significant

~~1.0 EXECUTIVE SUMMARY~~

~~1.1 INTRODUCTION~~

~~The Draft Environmental Impact Report (EIR) for the World Logistics Center Project (proposed project) has been prepared to inform the decision-makers and the public of the environmental effects associated with implementation of the proposed project.~~

~~The Draft EIR (DEIR) was circulated for public review and comment on February 4, 2013. The comment period on the DEIR closed on April 8, 2013, however the City has continued to receive and accept letters and comments for an additional year through April 2014. The comments and written responses are contained in Volume 1 of this document.~~

~~This EIR is a program EIR. A program EIR is an EIR that may be prepared on a series of actions that can be characterized as one large project, and are related either:~~

~~Geographically,~~

~~As logical parts in the chain of contemplated actions,~~

~~In connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or~~

~~As individual activities carried out under the same authorizing statutory or regulatory authority, and having generally similar environmental effects which can be mitigated in similar ways.~~

~~The use of a program EIR can provide the following advantages. The program EIR can:~~

~~Provide an occasion for a more exhaustive consideration of effects and alternatives than would be practical in an EIR on an individual action,~~

~~Ensure consideration of cumulative impacts that might be slighted in a case-by-case analysis,~~

~~Avoid duplicative reconsideration of basic policy considerations,~~

~~Allow the lead agency to consider broad policy alternatives and program wide mitigation measures at an early time when the agency has greater flexibility to deal with basic problems or cumulative impacts.~~

~~The project is considered regionally significant according to criteria set forth in CEQA Guidelines Section 15206(b). The EIR was prepared in accordance with the California Environmental Quality Act[1] (CEQA) and Sections 15120 through 15131 and 15161 of the *Guidelines for California Environmental Quality Act,*[2] which regulate the preparation of EIRs. The DEIR (State of California Clearinghouse No. 2012021045) has been prepared by LSA Associates, Inc. on behalf of the City of Moreno Valley (City) to: 1) identify the proposed project's impacts on the environment; 2) to discuss alternatives to the proposed project; and 3) to propose mitigation measures that will offset, minimize or otherwise avoid significant environmental impacts. Based on the potential impacts of the proposed project, including cumulative impacts, the City determined that an EIR should be prepared to analyze potential impacts of the proposed project with respect to the following environmental issues. The referenced~~

---

[1] ~~*California Environmental Quality Act*, as of January 1, 2014, §§21000–21189.3, Public Resources Code, State of California.~~

[2] ~~*Guidelines for California Environmental Quality Act*, as of January 1, 2014, §§15000–15387, California Code of Regulations, Title 14, Chapter 3, State of California.~~

~~environmental issues below are individually addressed in the *Environmental Analysis* Section 4.0, of this report:~~

~~Aesthetics;~~

~~Agricultural and Forest Resources;~~

~~Air Quality;~~

~~Biological Resources;~~

~~Cultural Resources;~~

~~Geology and Soils;~~

~~Greenhouse Gas Emissions and Global Climate Change;~~

~~Hazards and Hazardous Materials;~~

~~Hydrology and Water Quality;~~

~~Land Use and Planning;~~

~~Mineral Resources;~~

~~Noise;~~

~~Population, Housing, and Employment;~~

~~Public Services including Recreation;~~

~~Traffic and Circulation; and~~

~~Utilities and Service Systems.~~

~~1.2 PROJECT LOCATION AND SETTING~~

~~1.2.1 Project Site~~

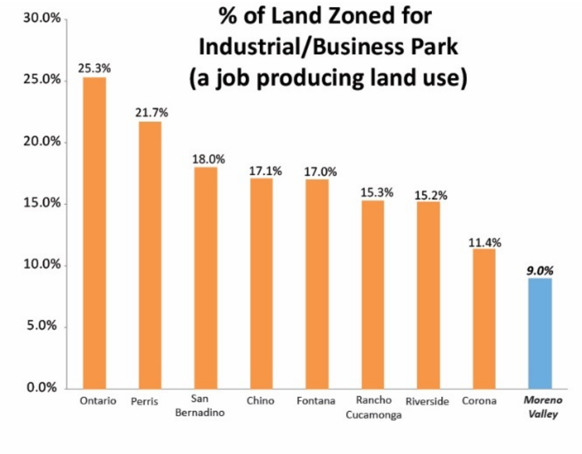
~~The Project site is located in Rancho Belago, the eastern portion of the City of Moreno Valley, in northwestern Riverside County. As shown in Figure 1.1, the project site is immediately south of State Route 60 (SR-60), between Redlands Boulevard and Gilman Springs Road (the easterly city limit), extending to the southerly city limit. The major roads that currently provide access to the project site are Theodore Street, Redlands Boulevard, Alessandro Boulevard, and Gilman Springs Road. The project site slopes gently (approximately 2%) from north to south, with elevations ranging from approximately 1,760 feet above mean sea level (amsl) at the northeast corner to 1,480 feet amsl at the southeast corner.~~

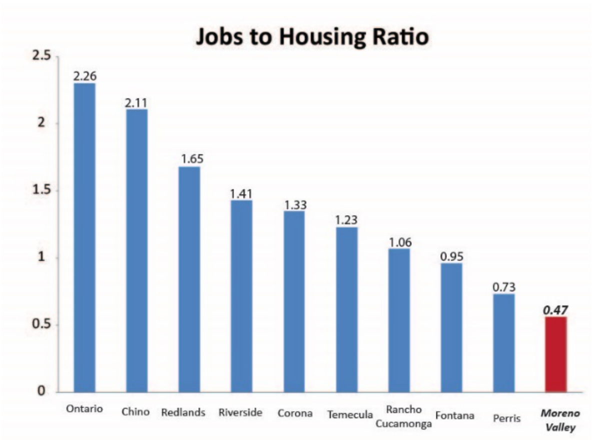
~~1.2.2 City of Moreno Valley~~

~~Moreno Valley is Riverside County's second largest city with a population of nearly 200,000 people encompassing more than 46 square miles. Over the years, Moreno Valley has remained overwhelmingly residential in character with only 9 percent of its land allocated for job-producing land uses. Today, Moreno Valley has one of the lowest jobs-to-housing ratios in the region (0.47), representing about one-third of the rate of its neighboring City of Riverside (1.41). As a result of limited job opportunities in the City, a large number of Moreno Valley's residents commute great distances to jobs outside the City, with an average daily commute of 76 minutes. Long commutes result in more time in traffic, more time breathing polluted air, more stress, less time at home, and less time with families.~~

~~Figure 1.1: Regional and Project Location~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

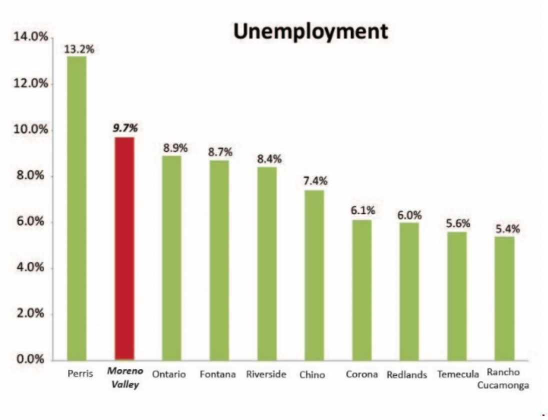


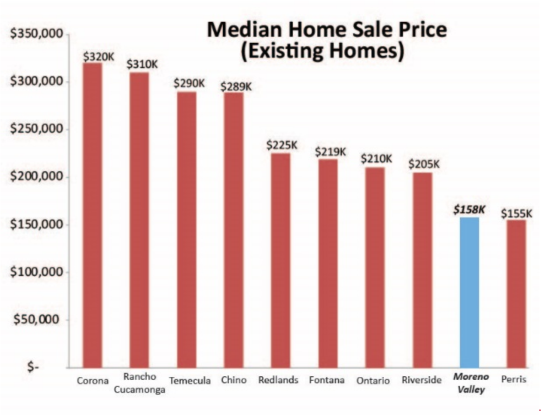


~~Under current municipal financial conditions, residential development does not “pay its way” in that property taxes and other revenues generated by residences do not cover the costs of municipal services for those residences. During times of rapid residential development, the City relied mainly on residential development fees to support its operations. In the early 1990s, when residential development slowed, revenues from development fees declined dramatically. This decline was exacerbated by reduced assessed valuations and property taxes, and Sacramento’s decision to take a greater share of property tax revenues from cities. These factors resulted in the City becoming financially overextended. To provide the funds necessary for the City to continue to meet its obligations, a temporary Utility Users Tax was enacted by the voters in 1991. With no significant improvement to its financial condition, this tax was made permanent in 1996. The City has become dependent on this tax which now represents approximately $16 million or 20 percent of the City’s budgeted revenue. The City does not currently have a sufficient tax base to fully fund its operations and provide the levels of service expected by its citizens. This has been a recurring challenge in the City for more than 20 years.~~

~~According to the U.S. Census Bureau, the per capita income in Moreno Valley is nearly 40 percent below the State of California average. Nearly 20 percent of the population in Moreno Valley is living below the national poverty level. Moreno Valley has one of the highest high-school drop-out rates in the County with over 50 percent of its adult residents having a high school education or less. Only 15 percent of the residents have a Bachelor’s Degree or higher. The majority of the population, 77 percent, does not have a college degree. Unemployment in~~

~~Moreno Valley remains among the highest in the region at 9.7 percent and median house prices are among the lowest in the Inland Empire.~~





~~To address these conditions, in 2010 the City of Moreno Valley developed an Economic Development Strategy focused on creating job opportunities in the City, which are responsive to the education and skill level of its residents. The logistics and healthcare industries were identified as the two primary areas of opportunity. In April 2011, the City held public hearings on its proposed Economic Development Action Plan which was then adopted by the Moreno Valley City Council on April 26, 2011. The Action Plan focused on five geographic areas within the City and established key initiatives for each. The eastern portion of the City was identified in the Action Plan as being a prime area for logistics development. "Logistics" facilities are warehouses which store, assemble and process manufactured goods and materials prior to their distribution. They also include the facilities to deal with the trucks which deliver goods to, and take goods from, the warehouses. In April 2012 an application was filed for the development of the World Logistics Center which was developed consistent with the City's Economic Development Action Plan. . A Notice of Preparation of the EIR was filed in February 2012 for The World Logistics Center project. In 2013, the City adopted a 3-year Economic Development Action Plan based upon the adopted 2011 Economic Development Strategy. See DEIR Section 3.6.1 for 2011 and 2013 Economic Development Action Plan Objectives related to the WLC.~~

~~According to the Inland Empire Economic Partnership January 2014 Quarterly Economic Report, "Logistics has been the fastest growing sector in the Inland Empire's economic base." The logistics industry offers an opportunity for upward mobility for workers providing access to skill ladders leading to the middle class and the number one contributor to job growth and upward mobility in the Inland Empire region.~~

~~1.3 EXISTING SITE DESCRIPTION~~

~~The project site is largely vacant agricultural land, with seven occupied single-family homes and associated ranch/farm buildings in various locations on the property. In the 1920s, several farm buildings and related houses were constructed on the property and, in the 1940s, a stock farm operated on a portion of the site that was later expanded into a commercial horse farm and training facility that operated until the mid-1990s. The overall project site has been farmed by a variety of owners since the early 1900s and has supported dry (non-irrigated) farming, livestock grazing, and limited citrus groves. Much of the site continues to be used for dry farming today.~~

~~San Diego Gas & Electric (SDG&E) operates a natural gas compressor plant, known as the Moreno Compressor Station, on 19 acres in the south-central portion of the site. The Southern California Gas Company (SCGC) operates a metering and pipe cleaning station on two~~

~~separate parcels (totaling 1.5 acres) in the south-central portion of the site south of Alessandro Boulevard along existing Virginia Street. The site contains a variety of overhead and underground utility lines associated with oil, natural gas, and electrical service. At present, the project site contains a number of unimproved drainage features, but it does not contain any improved flood control facilities.~~

~~1.4 PROJECT DESCRIPTION~~

~~The proposed project is a master planned business park designed to support the logistics operations of large global companies that will be implemented through the adoption of the World Logistics Center Specific Plan. Although it is called a Specific Plan, it is not intended to depict individual building projects, but rather to, provide a guide for the development of infrastructure and building projects within the project area. The Specific Plan will establish the zoning for the project site and include a land use plan, designation of planning areas, design and landscaping guidelines, and development standards for the development. As shown in Figure 3.8 –~~ ~~*Specific Plan Land Use*~~ ~~and reflected in Table 1.A,~~ ~~*Land Use Summary*~~ ~~below, the World Logistics Center Specific Plan will consist of the following land uses:~~

~~**Logistics Development (LD):**~~ ~~Approximately 2,382.8 acres of the Specific Plan Area are planned for development of logistics-oriented land uses to provide high-cube logistics warehouse uses consisting of buildings of 500,000 square feet or greater. Warehousing and logistics activities consistent with the storage and processing of manufactured goods and materials prior to their distribution to other facilities are permitted within this category along with facilities for the outdoor storage of trucks, trailers and shipping containers. Ancillary office, employee services and property management facilities are permitted in connection with primary uses. A permitted use within the LD category will include “logistics support” to provide fueling facilities and limited service commercial uses in support of the World Logistics Center.~~

~~**Light Logistics (LL):**~~ ~~Approximately 37.1 acres of the project site are planned for development of Light Logistics land uses to provide warehouse uses less than 500,000 square feet in size, including self-storage and vehicle storage uses.~~

~~**Open Space (OS):**~~ ~~Approximately 74.3 acres of the project site are planned for permanent open space to preserve the southwestern portion of the site, which is a portion of Mt. Russell.~~

~~**Table 1.A: WLCSP Land Use Summary**~~

~~Right-of-Way included in each land use category~~

~~Gross building area (sf) divided by gross site area (sf)~~

~~1.5 ACTIONS COVERED BY THE EIR~~

~~The proposed project covers 3,818 acres in the Rancho Belago area of the City of Moreno Valley. It includes 3,714 acres of land which is the subject of various entitlements, plus 104 acres of~~

~~land affected by off-site improvements needed to support the proposed development. The proposed entitlements are summarized below.~~

~~A General Plan Amendment is proposed covering 3,714 acres, which redesignates approximately 70 percent of the area (2,610 acres) for logistics warehousing and the remaining 30 percent (1,104 acres) for permanent open space and public facilities. The following elements of the General Plan are included in the proposed Amendment: Community Development (land use), Circulation, Parks, Recreation, and proposed Open Space, Safety, Conservation, and the General Plan Goals and Objectives~~

~~A new Specific Plan will be adopted to govern development of the 2,610-acre World Logistics Center. A separate zoning amendment is also proposed to rezone 1,104 acres for open space and public facilities uses and to incorporate the Specific Plan into the City's Zoning Map.~~

~~In addition to the General Plan Amendment, Specific Plan, and Zone Change, the project includes a Tentative Parcel Map covering a 1,539-acre portion of the site which has not yet been subdivided of the total 2,610-acres. This subdivision map is for financing purposes only creating new legal parcels but will not confer any development rights to said parcels.~~

~~The project includes pre-annexation zoning for an 85-acre parcel of land within the project.~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~Figure 1.2 Component Areas~~

~~**THIS PAGE INTENTIONALLY LEFT BLANK**~~

~~Finally, a Development Agreement between the City and Highland Fairview (the project applicant) is included as one of the project entitlements. The details of all the project entitlements are included in Section 3.4 of the EIR, *Project Characteristics*. The environmental impacts of all of these entitlements on the entire project area are addressed in this EIR and the accompanying technical reports and analyses.~~

~~1.6 SUMMARY OF ENVIRONMENTAL ISSUES~~

~~The following presents a short summary of the analysis conducted as part of this environmental assessment. It is intended to give the reader an easy to read summary of the analytical approach and results. It is not intended to be a comprehensive listing of project impacts or mitigation measures. For complete accounting of any analysis, please refer to the appropriate section of Chapter 4 of this EIR.~~

~~1.6.1 Aesthetics~~

~~The EIR evaluated potential impacts to Aesthetics (Section 4.1). Potential impacts to Scenic Vistas, Scenic Resources and Scenic Highways, Existing Visual Character and Surroundings, and Cumulative Aesthetics Impacts were analyzed and found that the proposed project has the potential to result in substantial adverse effects in these areas even after all feasible mitigation is applied. For the purposes of the analysis, the current undeveloped state of the property is analyzed in comparison to the project built out condition. It is important to note that the project area is currently covered by the Moreno Highlands Specific Plan which, if realized, would have transformed the site into an urbanized environment. The EIR found that the project's impact to light and glare could be mitigated to less than significant. Mitigation measures to address aesthetics impacts include a 250-foot setback from residential property lines, landscaping, berms and or fencing to screen and landscaped views of the project from existing residents, the dedication of 74.3 acres of open space, restriction on building heights to preserve views of Mt. Russell from SR-60, and restrictions on lighting and solar panels to protect existing resident from excess light and glare. Mitigation measures for each of these areas are listed in Table 1.B.~~

~~The Specific Plan contains extensive design guidelines to ensure a uniform architectural theme throughout the project. Similarly, landscape design standards are established project-wide. A process for the discretionary review of each proposed building is included in the Specific Plan which requires staff to evaluate all aesthetic aspects of each proposed building prior to its approval by the City.~~

~~1.6.2 Agriculture and Forestry Resources~~

~~The EIR evaluated potential impacts to Agricultural and Forestry Resources (Section 4.2) and found that impact to forest land zoning, loss or conversion of forest land, and existing zoning for agricultural use or a Williamson Act contract were less than significant and do not require mitigation. Mitigation is required for the loss of 25 acres of land designated as "Unique Farmland" through the provision of a conservation easement over comparably productive land.~~

~~The EIR contains an analysis of the state of the agriculture industry in the Inland Empire in Appendix C which concluded that the agriculture industry will continue to decline in the Inland Empire for three main reasons: 1) the more affordable housing market in the region compared to Los Angeles and Orange Counties, 2) the competition for cheaper farm labor from areas like the South Central Valley, and 3) lower water allocations to agriculture because of the growing urban population that receives priority for the water. The combination of the small size of the Inland Empire's agricultural industry and the three key economic constraints caused the EIR to conclude that the agriculture industry in the Inland Empire is in decline and that the~~

~~agriculture industry within the Inland Empire will become less competitive and continue to decline regardless of whether or not this project is developed.~~

~~An additional study found in EIR Appendix C, was prepared focusing specifically on the World Logistics Center property by Cushman & Wakefield in 2013 which concluded the project impact was not considered significant based on the results of the LESA Model.~~

~~1.6.3 Air Quality~~

~~An air quality and health effects assessment examined emissions from construction and operation of the World Logistics Center from both mobile and stationary sources. Broadly, the analysis of project-related emissions examined the (1) total amount of emissions generated, (2) the resulting concentrations of criteria (regulated) pollutants in the vicinity of the project area, and (3) the health effects of project-related emissions over a sub-regional area. A detailed discussion of the methodology approach can be found in Section 4.3.3 of the EIR.~~

~~1.6.3.1 Emissions~~

~~The total daily emissions from the project were analyzed in the air quality assessment. The analysis considered emissions of volatile organic compounds (VOCs), oxides of nitrogen (NO$_x$), carbon monoxide (CO), particulate matter (PM$_{10}$ and PM$_{2.5}$), and oxides of sulfur (SOx). Emissions from construction and operation of the proposed project were compared to South Coast Air Quality Management District's (SCAQMD) significance threshold separately and combined for those years that construction and operation overlap. For all pollutants, with the exception of SOx and PM$_{2.5}$ the daily emissions exceeded SCAQMD's significance thresholds after mitigation.~~

~~1.6.3.2 Localized Concentrations of Criteria (Regulated) Pollutants~~

~~Consistent with SCAQMD guidelines, localized concentrations of certain criteria pollutants in the vicinity of the project were also analyzed. The analysis considered the project's impacts on ambient concentrations of CO, NO$_X$, PM$_{10}$, and PM$_{2.5}$. The analysis considered multiple scenarios, including conservative assumptions that all work would have been completed in 2012 and in multiple years when construction and operation overlap. After mitigation, the project would exceed the localized significance thresholds at the existing residences located within the project boundaries for PM$_{10}$ in five different analysis scenarios that are described in detail in Section 4.3.6.3. but would not affect any residences outside the project boundary. Therefore, the project's localized impacts would not exceed any significance thresholds for receptors located outside of the project boundaries.~~

~~1.6.3.3 Health Effects~~

~~CEQA requires public disclosure of reasonably foreseeable health related impacts. Section 4.3.6 of the EIR evaluated the Project for both the cancer and non-cancer impacts. No significant impacts were found for either~~

~~The assessment of health impacts is a continuing evolution of science and regulation. Since December 2014, three major scientific and regulatory activities have come forward that will affect how such assessments are performed and what such impacts mean to society as described below.~~

~~On December 30, 2014, the ARB released its update to the Emissions Factor Model, EMFAC2014, which is used to estimated emissions from motor vehicles in California. The EFAC2014 model represents the ARB's current understanding of motor vehicle technologies and regulatory implementation of rules aimed at reducing air emissions from motor vehicles. Of significance in this regard are the new projections of air emissions from heavy duty diesel engines. Based on the results of the EMFAC2014 model, emissions of diesel particulate matter range from 50 to 80 percent lower than previously estimated using the previous~~

~~version of the EMFAC model, EMFAC2011. Since heavy duty trucks constitute nearly all of the project's diesel PM emissions, the incorporation of the emission information from the EMFAC2014 model is important in estimating the amount of diesel PM and in assessing the project's health risk impacts resulting from these emissions~~

~~On January 27, 2015, the Health Effects Institute (HEI), an independent organization funded by the U.S. Environmental Protection Agency and industry, released the result of a comprehensive multiyear (5 ½ years) peer-reviewed scientific study titled *Effects of Lifetime Exposure to Inhaled New-Technology Diesel Exhaust in Rats.* The importance of this study is the finding that diesel PM emissions from new technology diesel engines (2007 or newer-compliant engine) do not cause any increase in the risk of lung cancer or other significant adverse health effects in study animals that, in fact, are more sensitive to particle exposure than humans.~~

~~This is the first study to conduct a comprehensive evaluation of lifetime inhalation exposure to emissions from heavy-duty 2007-compliant engines (referred to as "new technology diesel exhaust," or NTDE). The study evaluated the long-term effects of multiple concentrations of inhaled NTDE, which has greatly reduced particle emissions compared with "traditional-technology diesel exhaust" (TDE) in male and female rats on more than 100 different biologic endpoints, including tumor development, and compared the results with biologic effects seen in earlier studies in rats after exposure to TDE. The study found that NTDE does not induce tumors or pre-cancerous changes in the lung and does not increase tumors that were considered to be related to NTDE.~~

~~Previous studies directed at studying the effects of diesel PM on health were based on exposure studies that date 15 to 20 years ago when diesel emissions were significantly higher than the NTDE. The HEI study of lifetime inhalation exposure of rats exposed to one of three concentration levels of NTDE from a 2007-compliant engine, for 16 hours per day, 5 days a week, used a strenuous operating cycle that more accurately reflected the real-world operation of a modern engine than cycles used in previous studies. It is also important to highlight that the U.S. Environmental Protection Agency (EPA), the California Air Resources Board, the U.S. Department of Energy (DOE) and the U.S. Federal Highway Administration are sponsors and/or reviewers of this study in conjunction with the manufacturers of emissions control equipment.~~

~~On March 6, 2015, the California Office of Environmental Health Hazards Assessment (OEHHA) adopted a new guidance for estimating health risks from toxic air contaminants that incorporated the importance of early-in-life sensitivities of young children to exposures to toxics air contaminants and recommends a lifetime exposure duration of 30-years. Within the context of this assessment, this new assessment guidance is referred to as the "Current OEHHA Guidance". The new guidance updates earlier guidance recommended by OEHHA and SCAQMD referred to in this assessment as the "Former OEHHA Guidance", which was used in the DEIR. The "Former OEHHA Guidance" was based on a lifetime exposure of 70 years and does not incorporate early-in-life age sensitivity factors. The importance of the "Current OEHHA Guidance" is that the guidance produces much more conservative estimates of cancer risks from toxic air contaminant exposures.~~

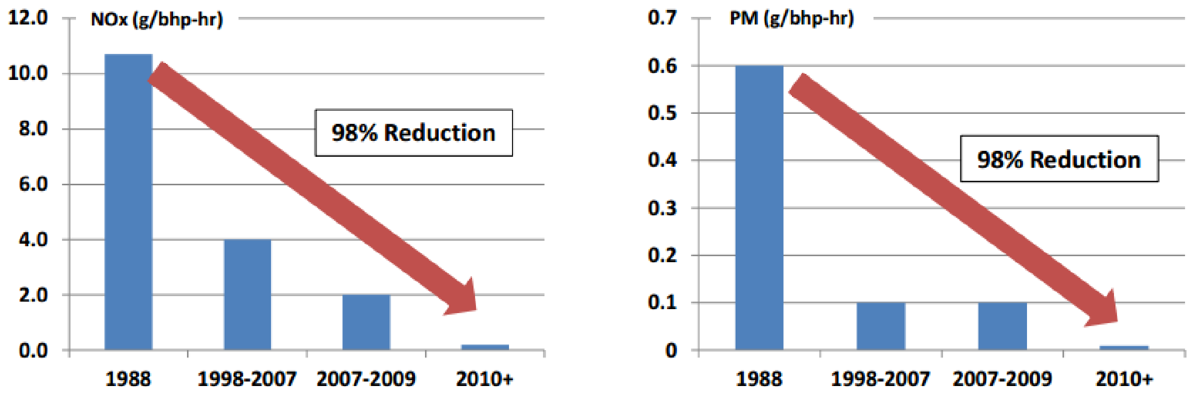
~~It should be kept in mind that the mitigation measures which mandated that all diesel trucks accessing the project be compliant with the 2010 standards and which mandate that all off-road equipment be Tier 4, which results in emissions equivalent to 2010 compliant diesel trucks, means that there will be no adverse health related impacts. Nevertheless, because the DEIR included an analysis of the health related impacts resulting from exposure to diesel exhaust using the "Former OEHHA Guidance," the FEIR includes a similar analysis to allow the reader to understand how the application of the "Current OEHHA Guidance" compares to~~

~~that which resulted from the "Former OEHHA Guidance," i.e. what the impacts would be if the results of the Health Effects Institute study were disregarded.~~

~~1.6.3.4 Mitigation~~

~~The project would incorporate a number of mitigation measures to reduce the project's impacts on air quality. Those mitigation measures are detailed in Table 1.B in the Executive Summary and throughout Section 4.3 in this EIR. Among the many mitigation measures (MM) is MM 4.3.6.3B, which requires that all trucks using the World Logistics Center meet U.S. EPA 2010 emissions standards, the most stringent heavy-duty truck emissions standards ever imposed by the U.S. or California. The trucks that would serve the proposed project would be 90 percent cleaner than the typical truck on the road today.~~

U.S. Emission Standards – Heavy Duty Trucks



~~In addition to requiring clean trucks, the project would require low emission construction equipment, limit vehicle idling to three minutes or less, prohibit trucks from going through residential areas, require that all on-site equipment will be powered by non-diesel fuels, provide electrical hook-ups for the future use of electric vehicles, and require the development of an alternative fuel station to encourage the use of non-diesel vehicles at the World Logistics Center.~~

~~1.6.4 Biological Resources~~

~~The project site has been the subject of numerous professional biological studies since 2005, with the most recent evaluations conducted in 2012 and 2013 in connection with the preparation of this EIR. These reports are included in the appendices of this EIR and are discussed in detail in Section 4.4 in this EIR. The biological studies show that the vast majority of the project site (97.4%) is disturbed by human activity, mostly dry-land farming, with less than 3 percent of the area consisting of native plant communities. These conditions are discussed in depth in Section 4.4 of this EIR.~~

~~The biological studies evaluated the project site for the presence of wildlife and specifically any threatened or endangered species. The studies conclude that the project site is not located within any United States Fish and Wildlife Service (USFWS) designated Critical Habitat area and no threatened or endangered species were observed within the project site during any of~~

~~the field surveys. Further, no evidence of any California State endangered, threatened or protected wildlife species was found on the project site.~~

~~Suitable habitat was identified in the project site for the burrowing owl and the Los Angeles Pocket Mouse (both species of special concern) and mitigation measures are included to require site-specific biological evaluations to address these species prior to any site grading.~~

~~Impacts to jurisdictional waters/wetlands and to habitat fragmentation/wildlife movement were found to be less than significant. Impacts to endangered and threatened species may be significant and mitigation is included. The project has the potential to result in significant impacts to riparian habitat and sensitive natural communities and may require subsequent permits from various resource agencies depending on the details of each site-specific development proposal.~~

~~Other mitigation measures require the establishment of building setbacks along the boundary with the San Jacinto Wildlife Area (SJWA), a runoff management plan and a Biological Resources Management Plan for the SJWA edge, payment of Multi-Species Habitat Conservation Plan fees, prohibition of invasive plant species, and compensation for riparian habitat. A complete list of mitigation measures is included in Table 1.B in this Executive Summary.~~

~~More than 900 acres of the Moreno Highland master-planned community zoned for residential industrial and recreational uses was purchased by the State in 2001 to serve as a buffer from future development to the north. This development area to the north is being planned as the World Logistics Center. The referenced 900+ acres area will continue to serve that buffer purpose. Additionally, the WLC property is more than 4,000 feet (more than ¾ of a mile) from the closest sensitive habitat on SJWA property with the intervening property being used as cultivated farmland and disked regularly as it has for many decades.~~

~~The Specific Plan provides for a continuous buffer along the SJWA property that will include native landscaping, an extensive network of landscaped drainage facilities, trees and shrubs specifically selected to accommodate and support local wildlife, all of which will contribute to an environmentally-sensitive interface between the WLC and the SJWA property.~~

~~1.6.5 Cultural and Paleontological Resources~~

~~A thorough cultural resources study was conducted for the project area in connection with the project EIR and is discussed in Section 4.6. The area includes several known cultural (Native American) resources as well and other potential historical resources. This topic is discussed in Section 4.5.~~

~~The project has been designed to avoid any of the known Native American resources; designating sensitive areas as Open Space, realigning a proposed trail around the existing resources, and protecting the resources from disturbance. Further evaluations will be conducted in connection with site-specific project proposals prior to the issuance of any grading permits.~~

~~Consultations between Native American tribal groups and the City have been initiated pursuant to SB 18 and are ongoing.~~

~~Impacts to archaeological resources were determined to be potentially significant and mitigation measures are included to reduce the impacts. Mitigation measures include historical evaluations of all project sites, archaeological/paleontological monitoring of all project grading. Native American representatives will be invited to monitor all grading activities.~~

~~1.6.6 Geology and Soils~~

~~A detailed geotechnical evaluation was conducted for the project site in connection with the preparation of this EIR and is discussed in Section 4.6. The report evaluated faulting and seismicity, soils and geologic and seismic hazards affecting the property. Impacts due to~~

~~landslides and rockfalls, soil erosion or loss of topsoil, septic tanks, and seismic-related ground failure were considered less than significant and no mitigation is required. Impacts due to fault rupture, ground shaking and unstable soils were considered to be potentially significant and mitigation measures are included to reduce the significance of the identified impacts. Mitigation measures include preparation of site-specific design-level geotechnical investigations and application of all applicable code standards and requirements prior to the issuance of any grading or building permits.~~

~~1.6.7 Greenhouse Gas Emissions, Climate Change and Sustainability~~

~~An evaluation of the World Logistics Center's greenhouse gas impact and contribution to global climate change was conducted and is presented in Section 4.7. Greenhouse gas emissions were quantified for both direct emissions (e.g., motor vehicles) and indirect emissions (e.g., electricity generation and water delivery). In the past few years, the State of California has changed the way it regulates greenhouse gases. Under Assembly Bill 32, the Global Warming Solutions Act of 2006, the California Air Resources Board (CARB) has established a cap-and-trade program which differentiates between emissions that fall under the AB 32 restrictions and those that do not. Those emissions that fall under the restrictions of the cap include those emissions that derive from electricity generation, transportation fuels, natural gas use, and large industrial sources. This differentiation, explained in more detail in Section 4.7 and Appendix D, was used as part of the greenhouse gas analysis.~~

~~Greenhouse gas emissions were segregated between capped and uncapped emissions. The state has created a comprehensive regulatory program that determines the future allowable emissions that fall under the cap-and-trade cap. Significance was determined by comparing uncapped emissions to SCAQMD's significance threshold of 10,000 metric tons of~~ ~~CO_2~~ ~~equivalent annually (~~~~CO_2e~~~~, or carbon dioxide equivalent, is a standard unit for measuring carbon footprints. It expresses the impact of each different greenhouse gas in terms of the amount of~~ ~~CO_2~~ ~~that would create the same amount of warming). Examples of project emissions that fall under the cap include greenhouse gas emissions from transportation sources (trucks and cars), electricity use (from offsite power generation), and water use (from off-site power generation to convey water). Examples of project emissions that fall outside the cap include waste generation from landfill emissions caused by waste generated onsite and the use of refrigerants.~~

~~Mitigation for the proposed project includes increased waste diversion requiring 75 percent of all waste to be diverted to landfills and increased energy efficiency by exceeding California's Title 24 requirements (California's energy efficiency standards) by at least 10 percent. Additionally, the Specific Plan requires that on-site solar systems be provided to offset the demand of office space in the WLC, estimated at 13 megawatts of power at buildout. This is the equivalent amount of power used by over 1,700 homes. After mitigation, the remaining emissions from the project have a less than significant impact. A complete listing of mitigation measures can be found in Section 4.7 and Table 1.B in this Executive Summary.~~

~~1.6.8 Hazards and Hazardous Materials~~

~~An evaluation of Hazards and Hazardous Materials is discussed in Section 4.8 of the EIR. Historic land uses for the project site have included agricultural activities, two dairies, a chicken ranch, and scattered residential uses. Currently, nearly the entire site is used for dryland farming, which typically does not apply pesticides or other agricultural chemicals. The Phase 1 reports did not find significant residual pesticides on the project site and revealed no evidence of recognized environmental conditions on, at, in, or to the project site.~~

~~Sempra Energy operates a natural gas compressor facility near the WLC project. The EIR assessed the potential impacts of the facility on the future development of WLC property and found that compliance with existing safety regulations applicable to the Sempra plant plus the Specific~~

~~Plan's requirement for a 1,000-foot setback between Sempra buildings and future WLC buildings reduced any potential impact to a less than significant level and no mitigation is required.~~

~~In addition, a fueling station is required to be constructed within the WLC project area. The EIR assessed the potential impacts of such a facility and found that with the application of a mitigation measure requiring preparation of a risk assessment prior to any project approvals, potential impacts would be reduced to a less than significant level.~~

~~1.6.9 Hydrology, Drainage, and Water Quality~~

~~The EIR evaluated potential impacts to hydrology, drainage, and water quality (Section 4.9) and found that environmental impacts in these areas were less than significant and do not require mitigation. Potential impacts from construction-related water quality impacts, operation-related water quality impacts, and drainage capacity-related impacts could be mitigated to less than significant. The project would incorporate a number of mitigation measures to reduce these impacts which are detailed in Table 1.B. Among the mitigation measures is MM 4.9.6.1A, which requires the management of flow rates, velocities, and volumes at pre-project levels and the maintenance of historic groundwater recharge (water balance) rates. The project would also be required to implement a Storm Water Pollution Prevention Plan (SWPPP), a Water Quality Management Plan (WQMP), and development of an ongoing Water Quality Sampling Program (WQSP) to protect the San Jacinto Wildlife Area.~~

~~1.6.10 Land Use and Planning~~

~~The EIR evaluates the WLC project's impact on current on-site and adjacent land uses as well at the project's impacts on existing City land use policies (Section 4.10). The WLC project will replace the present Moreno Highlands Specific Plan, a largely residential, mixed-use project that included 7,700 residential units and 600+ acres of business park and mixed-use designations, with a project proposing 40.6 million square feet of logistics uses.~~

~~The EIR concludes that the WLC project is consistent with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) and is generally consistent with SCAG's Regional Comprehensive Plan, Compass Plan and Regional Transportation Plan.~~

~~The project is consistent with the City's Economic Development Action Plan which encourages the development of job-producing land uses in the eastern portion of the City. See DEIR Section 3.6.1 for 2011 and 2013 Economic Development Action Plan Objectives related to the WLC.~~

~~1.6.11 Mineral Resources~~

~~The EIR evaluated whether the project site contains any significant mineral resource areas, defined by the State as Mineral Resources Zone 2 areas. See Section 4.11 for the detailed analysis.~~

~~Lands within the City of Moreno Valley are designated MRZ-3 and MRZ-4, pursuant to the Surface Mining and Reclamation Act of 1975. These zones are not defined as significant mineral resource areas. No sites have been designated as locally-important mineral resource recovery sites on any local plan.~~

~~The EIR concluded that the development of the WLC project would not result in a loss of statewide, regional or locally important mineral resources and will not have any significant impact regarding such resources. No mitigation is required.~~

~~1.6.12 Noise~~

~~Project noise impacts were analyzed and the results are described in Section 4.12. As part of the analysis, existing noise levels were measured. Estimates of future noise levels as a result of the project and increases in background noise levels were assessed to determine where~~

~~significant noise impacts would occur. Generally, project-related noise impacts occur as a result of two types of activity: construction noise and traffic noise occurring as a result of increased project-related vehicle trips. Several measures have been identified that impose operational controls during construction activities to reduce noise impacts or require noise abatement, such as sound walls to reduce impacts from project operation. Examples of operational controls to reduce noise impacts include maintaining minimum distances from homes during nighttime grading activities and limiting the hours of offsite construction.~~

~~Examples of noise abatement mitigation measures include the construction of sound walls at various locations and the requirement for noise barriers located along the perimeter of property that faces any residential areas. While most noise impacts were able to be mitigated to a less than significant level, there are a few areas where significant impacts remain, either as a result of construction activities or the infeasibility of mitigation such as sound walls in specific locations, such as where residential access would be blocked. Section 4.12 details the location specific noise impacts and mitigation measures that have been identified for the proposed project. The majority of noise impacts from the WLC in residential areas are the result of passenger vehicles, not trucks. The WLC design directs all truck traffic away from residential areas. Other potential land uses for the project site could generate similar or greater noise impacts. For instance, the current Moreno Highlands Specific Plan would result in significantly more vehicle trips than the proposed World Logistics Center. As a result, Noise impacts would be expected to be higher under that scenario.~~

~~1.6.13 Population, Housing and Employment~~

~~The EIR evaluated potential impacts to Population, Housing and Employment (Section 4.13) and found impacts to population growth, displacement of housing/people, and cumulative impacts to population and housing were less than significant and did not require mitigation.~~

~~An economic study of the Project prepared by David Taussig and Associates (DTA) concluded that the WLC Project could generate approximately 20,307 new on-site jobs within the City. In addition to the projected on-site job creation, the DTA study estimates the WLC Project could generate new off-site jobs (i.e., indirect/induced employment) in all industries of the economy. The DTA study estimated that an additional 7,386 indirect/induced jobs could be created in the County, of which 3,693 jobs were projected to be within the City as a result of Project implementation. While the specific location of the potential additional indirect/induced jobs created within the County cannot be specifically determined, it is reasonable to assume that some percentage of these jobs will be support service jobs and are likely to be located in the WLC Project vicinity, and therefore the City. A stronger jobs base can support improved property values and the general economic well-being of the City.~~

~~The WLC project is directly consistent with the City's adopted Economic Development Action Plan, which calls for focused efforts to create more jobs-related land uses, specifically logistics uses in the eastern portion of the City. See DEIR Section 3.6.1 for 2011 and 2013 Economic Development Action Plan Objectives related to the WLC.~~

~~The Fiscal and Economic Impact Study prepared by DTA concluded that the WLC project could generate approximately $11,257,000 in annual revenues while causing the City to annually incur approximately $5,557,000 in costs resulting in an annual surplus of almost $5,700,000 once the project is fully built out. These surplus funds could be used to fund police, fire, heath and senior programs and services throughout the City. Additional funding surpluses were identified relative to the Moreno Valley Fire Tax which is estimated to generate an additional $1,800,000 from WLC development for other fire-related needs elsewhere in the City.~~

~~Including the projected Fire Tax surplus, the build out of the WLC is expected to raise the projected tax surplus to the City of approximately $7,500,000.~~

~~1.6.14 Public Services and Facilities~~

~~The EIR evaluated the project's impact on police services, fire protection, schools and parks. See Section 4.14 for the complete analysis. The EIR concluded that as a result of the project's obligation to pay its fair share of applicable City costs the WLC project will not have a significant impact on the City's ability to provide these public services and facilities.~~

~~The EIR's Fiscal and Economic Impact Study (Appendix O) estimates that the projected build out of 40.6 million square feet of building will generate more than $4.7 million for police facilities and more than $10 million for fire facilities from the Development Impact Fee (DIF) program (using 2013 rates) and more than $19 million in school fees. In addition, the study estimates that the WLC will generate more than $11 million every year in taxes, fees, licenses, etc. while requiring $5.7 million in services, resulting in an annual surplus of nearly $6 million to the General Fund. A complete analysis is included in the Fiscal and Economic Impact Study.~~

~~Notably, the WLC is estimated to generate additional funding for fire services through the Moreno Valley Fire property tax that is separate from General Fund revenue sources. The Moreno Valley Fire property tax averages 5.54 percent of the total property taxes levied in the Center, which yields a total of $1.8 million in recurring annually surplus that can be spent on fire services in other parts of the City. Adding this $1.8 million in Moreno Valley Fire property tax surplus to the $5.7 million General Fund surplus is estimated to yield a total annual recurring surplus of $7.5 million generated by the WLC.~~

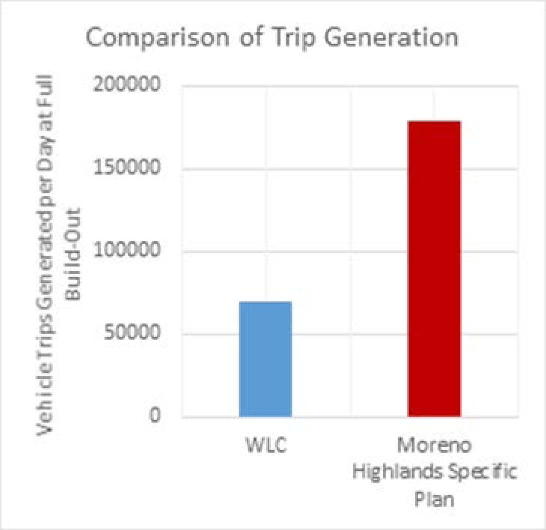
~~The EIR concluded that the project will not have a significant impact to Public Services and Facilities. No mitigation measures are proposed.~~

~~1.6.15 Traffic and Circulation~~

~~A comprehensive Traffic Impact Analysis (TIA) was prepared to evaluate the WLC's impacts within Moreno Valley and throughout the region and is discussed in Section 4.15. The traffic analysis encompasses road segments spanning from the project site 75 miles to the west, all the way to the Ports of Los Angeles and Long Beach, 30 miles to the east beyond the City of Banning, 20 miles to the south and 15 miles to the north.~~

~~As indicated in the table to the right below, 80 percent of the traffic would be generated from Passenger Cars, 12 percent of the traffic generated by the project would be classified as~~

~~Heavy-duty Trucks, and about 8 percent of the traffic would be generated by Light and Medium Duty Trucks.~~



~~**Type of Vehicle**~~	~~**Number of Daily Trips**~~
~~Passenger Cars~~	~~54,714~~
~~Light-duty Trucks (2-axle)~~	~~2,385~~
~~Medium-duty Trucks (3-axle)~~	~~3,181~~
~~Heavy-duty Trucks (4-axle)~~	~~8,440~~
~~**Total Daily Trips**~~	~~**68,720**~~

~~The total number of daily trips generated by the project is 68,720. As shown in the chart above to the left, this represents a 61% reduction, or 100,000 less daily trips generated, compared to the City's General Plan/zoning designations for the project area (i.e., the Moreno Highlands Specific Plan MHSP).~~

~~Located at the eastern end of the City, the WLC will result in a reverse commute travel pattern. The traffic analysis indicates that many residents currently head west out of Moreno Valley for jobs. With thousands of job opportunities created as a result of the project in the eastern portion of the City, future employees will travel in the eastbound direction to the WLC where there is much less traffic. Those who would continue to commute westbound in the morning will have less traffic to deal with as some of the residents that are now or would be headed westbound would be diverted in the eastbound direction traveling to their jobs at the WLC.~~

~~1.6.16 Utilities and Service Systems~~

~~The EIR evaluated potential impacts to Utilities and Service Systems (Section 4.16) and found that impacts to these systems were generally less than significant and do not require mitigation. Potential impacts to storm water drainage requirements, adequate water supply, and electrical and natural gas facilities were able to be mitigated to less than significant.~~

~~The World Logistics Center emphasizes water conservation, and the landscape program is designed to achieve the project's landscape goals while consuming as little water as possible. This approach represents a significant departure from conventional development strategies, particularly in a large-scale master-planned logistics campus setting. Most of the project will be designed without mechanical irrigation, relying instead on maximizing the collection and harvesting of runoff to be directed to landscape areas. Mitigation measures include use of drought tolerant landscaping, using "dry" cleaning equipment, use of weather-based automatic irrigation controllers, use of irrigation systems primarily at night or early morning, use of recirculation system for any outdoor water feature, use of low-flow sprinkler heads and use of reclaimed water for irrigation if it becomes available. Additional mitigation measures include use of flash water heaters, automatic on/off water facets, water efficient appliances, exceedance of the energy-conservation requirements of title 24 (2008) by 10 percent, LEED~~

~~Certification, and solar panels to offset the power demand for office space in each building. Mitigation Measures for each of the affected areas are listed in Table 1.B.~~

~~1.7 PUBLIC INVOLVEMENT~~

~~The EIR process for the proposed project has involved input from the public and affected agencies at several steps. A Notice of Preparation (NOP) was issued on February 26, 2012, to notify state agencies and the public that an EIR was going to be prepared for the WLC project. The NOP was circulated for 30 days as required by CEQA. The distribution list, Notice of Public Scoping Meeting, and response letters are included in Appendix A of the Draft EIR. As of the close of the 30-day NOP public review period, ten responses to the NOP had been received from public agencies, four from conservation organizations, and 14 responses from members of the public.~~

~~On March 12, 2012, the City held a public scoping meeting to solicit input on concerns the public had about the project and issues that should be addressed in the EIR. There were 33 individual speakers including one agency (SCAQMD); 33 letters and comment cards were submitted during or subsequent to the scoping meeting.~~

~~The Draft EIR was circulated for a 60-day public review period, at which time agencies and the public were invited to comment on the technical studies and analysis of environmental issues in the EIR. The Draft EIR was circulated between February 5 and April 8, 2013;, a total of 63 days. All written comments on the Draft EIR received written responses, and the City carefully evaluated all available information on the project. A more thorough discussion of input from the public and affected agencies is presented in Section 2.0,~~ ~~*Introduction.*~~ ~~Table 2.A, in the next section, summarizes the comments received regarding the NOP.~~

~~1.8 AREAS OF CONTROVERSY AND ISSUES TO BE RESOLVED~~

~~The EIR discusses impacts that would occur to on-site and off-site uses as a result of implementation of the project. This EIR also includes proposed mitigation measures that have been identified to reduce or avoid significant effects that would result from the construction and operation of the proposed on-site uses.~~ ~~*CEQA Guidelines*~~ ~~Section 15123(b)(2) requires that areas of controversy known to the Lead Agency (City of Moreno Valley) be stated in the EIR summary. The following discussion identifies issues raised by other agencies and the public~~

~~during the 30-day public comment period of the NOP, as well as comments received during the public scoping meeting for the proposed project.~~

~~Local residents indicated they understood the desire of the City to add employment during these economic times, but also expressed concerns about the following potential impacts associated with the industrial warehouse uses proposed by the WLC project:~~

~~Loss of views from SR-60 and Gilman Springs Road. This issue is discussed in Section 4.1, *Aesthetics,* of this EIR.~~

~~Short-term and long-term air pollutant emissions including dust, diesel particulates, and health risks from truck exhaust that could negatively affect nearby residential uses. These issues are discussed in Section 4.3, *Air Quality,* of this EIR.~~

~~Indirect impacts on wildlife utilizing the San Jacinto Wildlife Area south of the site. This issue is discussed in Section 4.4, *Biological Resources*, of this EIR.~~

~~Potential loss of cultural (archaeological) resources by grading and development of the site, and suggestions to consult with local Native American tribes per SB 18. These issues are discussed in Section 4.4, *Biological Resources*, and 4.5, *Cultural Resources*, of this EIR.~~

~~Concerns about several geologic faults that cross the project site. This issue is discussed in Section 4.6, *Geology and Soils*, in this EIR.~~

~~In addition to air quality impacts, concerns were expressed about the project emitting large quantities of greenhouse gases and their influence on global climate change. These impacts are addressed in Section 4.7, *Greenhouse Gases and Global Climate Change*, in the EIR.~~

~~Potential water-related impacts (drainage and water quality of runoff from the project) are addressed in Section 4.9, *Hydrology and Water Quality*, in the EIR.~~

~~Loss of affordable housing identified in the Moreno Highlands Specific Plan currently approved for the project site. This issue is discussed in Section 4.10, *Land Use and Planning*, and Section 4.13, *Population, Housing, and Employment*, of this EIR.~~

~~Short-term and long-term noise impacts that could affect nearby residential uses. These issues are discussed in Section 4.12, *Noise,* of this EIR.~~

~~Project truck traffic causing congestion on local roads, potential of traveling through residential neighborhoods, intersections, and freeway ramps, primarily on Redlands Boulevard, and impacts to vehicular, bicycle, and pedestrian safety. These issues are discussed in Section 4.15, *Traffic and Transportation,* of this EIR.~~

~~1.9 SIGNIFICANT IMPACTS~~

~~The project will have significant adverse impacts even following adoption of all feasible mitigation measures. The following significant environmental impacts have been identified in the EIR and will require mitigation but cannot be mitigated to a level of insignificance. Sections 4.1~~

~~through 4.16 of the EIR identify the following significant impacts of the WLC project after mitigation:~~

~~Aesthetics: Scenic Vistas.~~

~~Aesthetics: Scenic Resources and Scenic Highways.~~

~~Aesthetics: Substantial degradation of the existing visual character or quality of the site and its surroundings.~~

~~Aesthetics: Cumulative Aesthetic Impacts.~~

~~Air Quality: Construction Air Pollutant Emissions.~~

~~Air Quality: Architectural Coating Emissions.~~

~~Air Quality: Operational Air Pollutant Emissions.~~

~~Air Quality: Consistency with Air Quality Management Plan (AQMP).~~

~~Air Quality: Cumulative Air Pollutant Emissions.~~

~~Land Use and Planning: Divide an Existing Neighborhood (impacts on existing residences).~~

~~Noise: Short-Term Construction Noise.~~

~~Noise: Long-Term Traffic Noise.~~

~~Noise: Cumulative Noise Levels.~~

~~Transportation: Off-Site Impacts to TUMF Facilities.~~

~~Transportation: Off-Site Improvements to Roads Outside the Jurisdiction of the City and Not Part of the TUMF Program.~~

~~1.10 IMPACTS, MITIGATION, AND LEVEL OF IMPACTS SUMMARY TABLE~~

~~Table 1.B provides a summary of the proposed project impacts, proposed mitigation measures, and the level of significance of each impact following the application of identified mitigation measures.~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~*NOTE TO READER: The mitigation measure summaries have been removed from Revised DEIR Table 1.B World Logistics Center Project Environmental Impact Summary and replaced with the revised mitigation measures in their entirety. For this reason, Original DEIR Table 1.B List of All Mitigation Measures has also been deleted.*~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~4.1 Aesthetics~~		
~~LESS THAN SIGNIFICANT IMPACTS~~		
~~None~~	~~Not applicable~~	~~Not applicable~~
~~SIGNIFICANT IMPACTS~~		
~~Impact 4.1.6.1 Scenic Vistas~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The WLC project will significantly impact viewsheds in the area, including views of the Mt. Russell Range and the Badlands.~~	~~**4.1.6.1A** Each Plot Plan application for development along the western, southwestern, and eastern boundaries of the project (i.e., adjacent to existing or planned residential zoned uses) shall include a minimum 250-foot setback measured from the City/County zoning boundary line and any building or truck parking/access area within the project. The setback area shall include landscaping, berms, and walls to provide visual screening between the new development and existing residential areas upon maturity of the landscaping materials. The existing olive trees along Redlands Blvd. shall remain in place as long as practical to help screen views of the project site. This measure shall be implemented to the satisfaction of the Planning Official.~~ ~~**4.1.6.1B** Each Plot Plan application for development adjacent to Redlands Boulevard, Bay Avenue, or Merwin Street, shall include a plot plan, landscaping plan, and visual rendering(s) illustrating the appearance of the proposed development. The renderings shall demonstrate that views of proposed buildings and trucks can be reasonably screened from view from existing residents upon maturity of planned landscaping and to ensure consistency with the General Plan Objective 7.7. "Effective" screening shall mean that no more than the upper quarter (25%) of a building is visible from existing residences, which shall be achieved through a combination of landscaping, berms, fencing, etc. The location and number of view presentations shall be at the discretion of the Planning Division.~~ ~~**4.1.6.1C** Prior to the issuance of a certificate of occupancy for buildings adjacent to the western, southwestern, and eastern boundaries of the project (i.e., adjacent to existing residences at the time of application) the screening required in Mitigation Measure 4.1.6.1A shall be installed in substantial conformance with the approved plans to the satisfaction of the Planning Official.~~ ~~**4.1.6.1D** Prior to the issuance of permits for any development activity adjacent to Planning Area 30 (74.3 acres in the southwest portion of the Specific Plan), the entirety of Planning Area 30 shall be offered to the State of California for open space purposes. In the event that the State does not accept the dedication, the property shall be offered to Western Riverside County Regional Conservation Authority or an established non-profit land conservancy for open space purposes. In the event that none of these organizations accepts the dedication, the property may be dedicated to a property owners association or may remain in private ownership and may be fenced and access prohibited.~~	~~Significant and Unavoidable~~
~~**Impact 4.1.6.2 Scenic Resources and Scenic Highways**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The WLC project will significantly impact existing viewsheds from SR-60 which is a locally designated scenic route.~~	~~Previously referenced Mitigation Measures 4.1.1.6A through 4.1.16D~~	~~Significant and Unavoidable~~
~~Impact 4.1.6.3 Existing Visual Character and its Surroundings~~		
~~The WLC project will fundamentally change views of the area from agriculture to large warehouses.~~	~~**4.1.6.3A** Each Plot Plan application for development shall include plans and visual rendering(s) illustrating any changes in views of Mount Russell and/or the Badlands, for travelers along SR-60, as determined necessary by the Planning Official. The plans and renderings shall illustrate typical views based on proposed project plans, with the location and number of view presentations to be determined by the Planning Official. These views shall be simulated from a height of six feet from the edge of the roadway travel lane closest to the visual resource. The renderings must demonstrate that the development will preserve at least the upper two thirds (67%) of the vertical view of Mt. Russell from SR-60.~~	~~Significant and Unavoidable~~
~~Impact 4.1.6.4 Light and Glare~~		
~~The WLC project will significantly impact the area by substantially increasing lighting and glare in the area.~~	~~**4.1.6.4A** Each Plot Plan application for development adjacent to residential development shall include a photometric plot of all proposed exterior lighting demonstrating that the project is consistent with the requirements of Section 9.08.100 of the City Municipal Code. The lighting study shall indicate the expected increase in light levels at the property lines of adjacent residential uses. The study shall demonstrate that the proposed lighting fixtures and/or visual screening meet or exceed City standards regarding light impacts.~~ ~~**4.1.6.4B** Each Plot Plan application for development shall include an analysis of all proposed solar panels demonstrating that glare from panels will not negatively affect adjacent residential uses or negatively affect motorists along perimeter roadways. Design details to meet these requirements shall be implemented to the satisfaction of the Planning Official.~~	~~Less than Significant with Mitigation~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~**Cumulative Aesthetic Impacts**~~		
~~The cumulative effect of development in the region will continue to modify existing viewsheds, especially along SR-60. Cumulative impacts would remain significant and unavoidable.~~	~~Previously referenced Mitigation Measures 4.1.6.1A through 4.1.6.1D, 4.1.6.3A, 4.1.6.4A and 4.1.6.4B~~	~~Significant and Unavoidable~~
~~**4.2 Agriculture**~~		
~~**LESS THAN SIGNIFICANT IMPACTS**~~		
~~**Forest Land Zoning**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~There are no significant impacts because there are no areas designated as forest land or timberland on the project site,~~	~~No mitigation is required.~~	~~No Impact~~
~~Loss or Conversion of Forest Land~~		
~~There are no forest lands on the project site or in the surrounding area.~~	~~No mitigation is required.~~	~~No Impact~~
~~Existing Zoning and Williamson Act~~		
~~There are no Williamson Act Contracts on or adjacent to the project site.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		
~~Impact 4.2.6.1 Farmland Conversion~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The project will convert 25 acres of land designated Unique Farmland by the state to urban uses.~~	~~**4.2.6.1A** Prior to the issuance of any grading permit affecting land designated as "Unique Farmland" (Figure 4.2.2 in the World Logistics Center Environmental Impact Report), an Agricultural Conservation Easement shall be recorded over land of equivalent or better agricultural economic productivity of the offsite easement property compared to the World Logistics Center property. The analysis will include a comparison of the project's "Unique Farmland" considering its relative economic potential as the best measure of productivity (i.e., net profitability per acre or potential net rental income per acre). It will include a consideration of various important physical factors including location and accessibility, soils and topography, micro and macro climatic conditions, water availability and quality, as well as local practices, good farm management and cultural (growing) costs. The form and content of this easement, as well as the estimates of agricultural productivity, shall be reviewed and approved in advance by the Planning Official.~~	~~Less than Significant with Mitigation~~
~~Impact 4.2.6.2 Conversion of Farmland to Non-Agricultural Uses~~		
~~The project will convert 2,610 acres of Farmland of Local Importance to urban uses.~~	~~Previously referenced Mitigation Measures 4.2.6.1A and 4.2.6.1B~~	~~Less than Significant with Mitigation~~
~~Cumulative Agricultural Impacts~~		

~~As urban development continues in the City and surrounding areas, there will be a cumulative loss of agricultural land through conversion to urban uses. This conversion is a long-established historical process based on local and regional economic conditions, resulting in the eventual relocation of farming to more rural and outlying areas (e.g., Coachella Valley, kern County, etc.).~~	~~No feasible mitigation is available.~~	~~Less than Significant with Mitigation~~
~~4.3 Air Quality~~		
~~LESS THAN SIGNIFICANT IMPACTS~~		
~~Odors~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The proposed project involves large warehouses and no uses that would generate substantial odors. The natural gas facilities on site sometimes generate temporary odors from natural gas blow-offs, but these are not considered significant impacts.~~	~~No mitigation is required.~~	~~Less than Significant.~~
~~**Long-Term Microscale (CO Hot Spot) Emissions**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The project air quality study determined that project-related traffic would not create any CO hot spots on local roadways through project buildout.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		
~~Impact 4.3.6.1 Air Quality Management Plan Consistency~~		

~~The land uses of the proposed project are not consistent with those used to prepare the most current AQMP. Although the project would substantially improve the jobs/housing balance of the City by introducing more employment-generating uses than new housing, it would exceed applicable thresholds for all criteria pollutants, with the exception of SO$_X$. Despite the implementation of mitigation measures for both construction and operation,~~	~~Implementation of Mitigation Measures 4.3.6.2A through 4.3.6.2D, 4.3.6.3A through 4.3.6.3E, and 4.3.6.4A will help reduce air pollutant emissions of the project, but it will still be inconsistent with the AQMP.~~	~~Significant and Unavoidable~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~emissions associated with the proposed project cannot be reduced below applicable SCAQMD thresholds.~~		
~~Impact 4.3.6.2 Construction Equipment Exhaust Emissions~~		

~~Future development within the WLCSP will exceed daily air pollutant significance criteria established by the SCAMQD for construction-related activities.~~	~~**4.3.6.2A** Construction equipment maintenance records (including the emission control tier of the equipment) shall be kept on site during construction and shall be available for inspection by the City of Moreno Valley.~~ ~~a) Off-road diesel-powered construction equipment greater than 50 horsepower shall meet United States Environmental Protection Agency Tier 4 off-road emissions standards. A copy of each unit's certified tier specification shall be available for inspection by the City at the time of mobilization of each applicable unit of equipment.~~ ~~b) During all construction activities, off-road diesel-powered equipment may be in the "on" position not more than 10 hours per day. c) Construction equipment shall be properly maintained according to manufacturer specifications.~~ ~~d) All diesel powered construction equipment, delivery vehicles, and delivery trucks shall be turned off when not in use. On-site idling shall be limited to three minutes in any one hour.~~ ~~e) Electrical hook ups to the power grid shall be provided for electric construction tools including saws, drills and compressors, where feasible, to reduce the need for diesel-powered electric generators. Where feasible and available, electric tools shall be used~~ ~~f) The project shall demonstrate compliance with South Coast Air Quality Management District Rule 403 concerning fugitive dust and provide appropriate documentation to the City of Moreno Valley.~~ ~~g) All construction contractors shall be provided information on the South Coast Air Quality Management District Surplus Off-road Opt-In "SOON" funds which provides funds to accelerate cleanup of off-road diesel vehicles.~~ ~~h) Construction on-road haul trucks shall be model year 2007 or newer.~~ ~~i) Information on ridesharing programs shall be made available to construction employees.~~ ~~j) During construction, lunch options shall be provided onsite.~~ ~~k) A publicly visible sign shall be posted with the telephone number and person to contact regarding dust complaints per AQMD Standards.~~ ~~l) Only non-diesel material handling equipment may be used in any logistics building in the WLC.~~ ~~m) Off-site construction shall be limited to the hours between 6 a.m. to 8 p.m. on weekdays only. Construction during City holidays shall not be permitted.~~ ~~**4.3.6.2B** Prior to issuance of any grading permits, a traffic control plan shall be submitted to and approved by the City of Moreno Valley that describes in detail the location of equipment staging areas, stockpiling/storage areas, construction parking areas, safe detours around the project construction site, as well as provide temporary traffic control (e.g., flag person) during construction-related truck hauling activities. Construction trucks shall be rerouted away from sensitive receptor areas. Trucks shall use State Route 60 using Theodore Street, Redlands Boulevard (north of Eucalyptus Avenue),~~	~~Significant and Unavoidable~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
	~~and Gilman Springs Road. In addition to its traffic safety purpose, the traffic control plan can minimize traffic congestion and delays that increase idling emissions. A copy of the approved Traffic Control Plan shall be retained on site in the construction trailer.~~ ~~**4.3.6.2C** The following measures shall be applied during construction of the project to reduce volatile organic compounds (VOC):~~ ~~a) Non-VOC containing paints, sealants, adhesives, solvents, asphalt primer, and architectural coatings (where used), or pre-fabricated architectural panels shall be used in the construction of the project to the maximum extent practicable. If such products are not commercially available, products with a VOC content of 100 grams per Liter or lower for both interior and exterior surfaces shall be used.~~ ~~b) Leftover paint shall be taken to a designated hazardous waste center.~~ ~~c) Paint containers shall be closed when not in use~~ ~~d) Low VOC cleaning solvents shall be used to clean paint application equipment.~~ ~~e) Paint and solvent-laden rags shall be kept in sealed containers.~~ ~~**4.3.6.2D** No grading shall occur on days with an Air Quality Index forecast greater than 150 for particulates or ozone as forecasted for the project area (Source Receptor Area 24).~~	
~~**Impact 4.3.6.3 Localized Construction and Operation Emissions**~~		

~~Future development within the WLCSP will exceed local significance thresholds of the SCAMQD for trucks and other operational activities.~~	~~**4.3.6.3A** Prior to issuance of occupancy permits for each warehouse building within the WLCSP, the developer shall demonstrate to the City that vehicles can access the building using paved roads and parking lots.~~ ~~**4.3.6.3B** The following shall be implemented as indicated:~~ ~~**Prior to Issuance of a Certificate of Occupancy**~~ ~~a) Signs shall be prominently displayed informing truck drivers about the California Air Resources Board diesel idling regulations and the prohibition of parking in residential areas.~~ ~~b) Signs shall be prominently displayed in all dock and delivery areas advising of the following: engines shall be turned off when not in use; trucks shall not idle for more than three consecutive minutes; telephone numbers of the building facilities manager and the California Air Resources Board to report air quality violations.~~ ~~c) Signs shall be installed at each exit driveway providing directional information to the City's truck route. Text on the sign shall read "To Truck Route" with a directional arrow. Truck routes shall be clearly marked per the City Municipal Code.~~ ~~**On an Ongoing Basis**~~ ~~d) Tenants shall maintain records on fleet equipment and vehicle engine maintenance to ensure that equipment and vehicles are maintained pursuant to manufacturer's specifications. The records shall be maintained on site and be made available for inspection by the City.~~ ~~e) Tenant's staff in charge of keeping vehicle records shall be trained/certified in diesel technologies, by attending California Air Resources Board approved courses (such as the free, one-day Course #512). Documentation of said training shall be maintained on-site and be available for inspection by the City.~~ ~~f) Tenants shall be encouraged to become a SmartWay Partner.~~ ~~g) Tenants shall be encouraged to utilize SmartWay 1.0 or greater carriers.~~ ~~h) Tenants' fleets shall be in compliance with all current air quality regulations for on-road trucks including but not limited to California Air Resources Board's Heavy-Duty Greenhouse Gas Regulation and Truck and Bus Regulation.~~ ~~i) Information shall be posted in a prominent location available to truck drivers regarding alternative fueling technologies and the availability of such fuels in the immediate area of the World Logistics Center.~~ ~~j) Tenants shall be encouraged to apply for incentive funding (such as the Voucher Incentive Program [VIP], Carl Moyer, etc.) to upgrade their fleet.~~	~~Significant and Unavoidable~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
	~~k) All yard trucks (yard dogs/yard goats/yard jockeys/yard hostlers) shall be powered by electricity, natural gas, propane, or an equivalent non-diesel fuel. Any off-road engines in the yard trucks shall have emissions standards equal to Tier 4 Interim or greater. Any on-road engines in the yard trucks shall have emissions standards that meet or exceed 2010 engine emission standards specified in California Code of Regulations Title 13, Article 4.5, Chapter 1, Section 2025.~~	
	~~l) All diesel trucks entering logistics sites shall meet or exceed 2010 engine emission standards specified in California Code of Regulations Title 13, Article 4.5, Chapter 1, Section 2025 or be powered by natural gas, electricity, or other diesel alternative. Facility operators shall maintain a log of all trucks entering the facility to document that the truck usage meets these emission standards. This log shall be available for inspection by City staff at any time.~~	
	~~m) All standby emergency generators shall be fueled by natural gas, propane, or any non-diesel fuel.~~	
	~~n) Truck and vehicle idling shall be limited to three (3) minutes.~~	
	~~**4.3.6.3C** Prior to the issuance of building permits for more than 25 million square feet of logistics warehousing within the Specific Plan area, a publically-accessible fueling station shall be operational within the Specific Plan area offering alternative fuels (natural gas, electricity, etc.) for purchase by the motoring public. Any fueling station shall be placed a minimum of 1000 feet from any off-site sensitive receptors or off-site zoned sensitive uses. This facility may be established in connection with the convenience store required in Mitigation Measure 4.3.6.3D.~~	
	~~**4.3.6.3D** Prior to the issuance of building permits for more than 25 million square feet of logistics warehousing within the Specific Plan area a site shall be operational within the Specific Plan area offering food and convenience items for purchase by the motoring public. This facility may be established in connection with the fueling station required in Mitigation Measure 4.3.6.3C.~~	
	~~**4.3.6.3E** Refrigerated warehouse space is prohibited unless it can be demonstrated that the environmental impacts resulting from the inclusion of refrigerated space and its associated facilities, including, but not limited to, refrigeration units in vehicles serving the logistics warehouse, do not exceed any environmental impact for the entire World Logistics Center identified in the program Environmental Impact Report. Such environmental analysis shall be provided with any warehouse plot plan proposing refrigerated space. Any such proposal shall include electrical hookups at dock doors to provide power for vehicles equipped with Transportation Refrigeration Units (TRUs).~~	
~~**Impact 4.3.6.4 Long-Term Operational Emissions**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~Future development within the WLCSP will exceed daily air pollutant significance criteria established by the SCAMQD for trucks and other operational activities.~~	~~**4.3.6.4A** The following measures shall be incorporated as conditions to any Plot Plan approval within the Specific Plan:~~ ~~All tenants shall be required to participate in Riverside County's Rideshare Program.~~ ~~Storage lockers shall be provided in each building for a minimum of three percent of the full-time equivalent employees based on a ratio of 0.50 employees per 1,000 square feet of building area. Lockers shall be located in proximity to required bicycle storage facilities.~~ ~~Class II bike lanes shall be incorporated into the design for all project streets.~~ ~~The project shall incorporate pedestrian pathways between on-site uses.~~ ~~Site design and building placement shall provide pedestrian connections between internal and external facilities.~~ ~~The project shall provide pedestrian connections to residential uses within 0.25 mile from the project site.~~ ~~A minimum of two electric vehicle-charging stations for automobiles or light-duty trucks shall be provided at each building. In addition, parking facilities with 100 parking spaces or more shall be designed and constructed so that at least three percent of the total parking spaces are capable of supporting future electric vehicle supply equipment (EVSE) charging locations. Only sufficient sizing of conduit and service capacity to install Level 2 Electric Vehicle Supply Equipment (EVSE) or greater are required to be installed at the time of construction.~~ ~~Each building shall provide indoor and/or outdoor - bicycle storage space consistent with the City Municipal Code and the California Green Building Standards Code. Each building shall provide a minimum of two shower and changing facilities for employees.~~ ~~Each building shall provide preferred and designated parking for any combination of low-emitting, fuel-efficient, and carpool/vanpool vehicles equivalent to the number identified in California Green Building Standards Code Section 5.106.5.2 or the Moreno Valley Municipal Code whichever requires the higher number of carpool/vanpool stalls.~~ ~~The following information shall be provided to tenants: onsite electric vehicle charging locations and instructions, bicycle parking, shower facilities, transit availability and the schedules, telecommunicating benefits, alternative work schedule benefits, and energy efficiency.~~	~~Significant and Unavoidable~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~**Impact 4.3.6.5 Impacts to Sensitive Receptors**~~		
~~The construction and operation of the project would result in the emissions of several toxic air contaminants, the most ubiquitous being diesel particulate matter (diesel PM). The projects estimated cancer risk for sensitive receptors onsite would exceed the maximum cancer risk thresholds.~~	~~Implementation of the previously identified Mitigation Measures 4.1.6.1A, 4.3.6.2A through 4.3.6.2D, and 4.3.6.3A through 4.3.6.3E will help reduce short- and long-term project emissions and health risks to sensitive receptors, but not to less than significant levels.~~	~~Significant and Unavoidable~~
~~**Cumulative Air Quality Impacts**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The project will increase short-term local and long-term regional air pollutant emissions and chronic health risks.~~	~~Implementation of the previously identified Mitigation Measures 4.3.6.2A through 4.3.6.2D, 4.3.6.3A through 4.3.6.3E, and 4.3.6.4A will help reduce short- and long-term project emissions and health risks, but not to less than significant levels.~~	~~Significant and Unavoidable~~
~~**4.4 Biological Resources**~~		
~~**LESS THAN SIGNIFICANT IMPACTS**~~		
~~**Adopted Policies and/or Ordinances**~~		
~~There are no local policies or ordinances regarding the protection of biological resources.~~	~~No mitigation required~~	~~No Impact~~
~~**Habitat Fragmentation/Wildlife Movement**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The project will not restrict the movement of wildlife to and from the Badlands and the SJWA/Mystic Lake area, and will protect Drainage 9 through the project area as a natural drainage channel.~~	~~No mitigation required~~	~~Less than Significant~~
~~**SIGNIFICANT IMPACTS**~~		
~~**Impact 4.4.6.1 Endangered and Threatened Species**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~There are 17 plant and animal species designated as endangered or threatened by state and/or federal authorizes that have the potential to occur within the general vicinity of the WLC project area. Development will remove agricultural land which provides minimal habitat value for most species present.~~	~~**4.4.6.1A** All Plot Plan applications within Planning Areas 10 and 12 (i.e. adjacent to the San Jacinto Wildlife Area as shown in Final EIR Volume 2 Figure 4.1.6B) shall provide a 250-foot setback from the southerly property line. Permitted uses within this setback area include landscaping, drainage and water quality facilities, fences and walls, utilities and utility structures, maintenance access drives, and similar related uses. No logistics buildings or truck access/parking/maneuvering facilities are permitted in this setback area.~~ ~~In addition, logistics buildings within Planning Areas 10 and 12 may not be located within 400 feet of the southerly property line. All development proposals in Planning Areas 10 and 12 shall include a minimum six-foot tall chain link fence or similar barrier to separate warehouse activity from the setback area. This fence/barrier shall have metal mesh installed below and above ground level to prevent animals from moving between the development area and the setback area.~~ ~~Within Planning Areas 10 and 12, all truck activity areas adjacent to the 250-foot buffer area along the southern property line shall be enclosed by minimum 11-foot tall solid walls to reduce noise and lighting impacts on the adjacent property. This measure shall be implemented to the satisfaction of the Planning Official.~~ ~~A preliminary landscape plan for the 250-foot setback area shall be submitted with all Plot Plan applications for lots adjacent to the California Department of Fish and Wildlife property. Precise landscape plans shall be submitted with any grading permit for said lots and must be approved prior to the issuance of any building permit on said lots. The landscape plan shall be prepared by a licensed landscape architect in consultation with a qualified biologist and shall be consistent with the design standards contained in the World Logistics Center Specific Plan. No plant species listed in Section 6.1.4 of the Western Riverside County Multiple Species Habitat Conservation Plan shall be installed within the setback area. Cottonwood trees shall be planted within the setback area consistent with the World Logistics Center Specific Plan. This measure shall be implemented to the satisfaction of the Land Development Division Manager.~~ ~~**4.4.6.1B** Each Plot Plan application in Planning Areas 10 and 12 shall provide runoff management and water quality facilities adequate to minimize downstream erosion, maintain water quality standards and retain pre-development flows in a manner meeting the approval of the City Engineer. All drainage improvements shall be designed to minimize runoff and erosional impacts on adjacent property. This measure shall be implemented to the satisfaction of the Land Development Division Manager of Public Works.~~	~~Less than Significant~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~**Impact 4.4.6.2 Adopted Habitat Conservation Plans**~~		
~~The project site is subject to the provisions of SKR HCCP and the MSHCP.~~	~~**4.4.6.2A** Each Plot Plan application shall include a focused plant survey of the proposed development site prepared by a qualified biologist to identify if any of the following sensitive plants (i.e., Coulter's goldfields, smooth tarplant, Plummer's' mariposa lily, or thread-leaved brodiaea) are present. If any of the listed plants are found, they may be relocated to the 250-foot setback area outlined in the Specific Plan and discussed in Mitigation Measure 4.4.6.1A. Alternatively, at the applicant's discretion, an impact fee may be paid to the Western Riverside County Regional Conservation Authority (RCA) or other appropriate conservation organizations to offset for the loss of these species. This measure shall be implemented to the satisfaction of the Planning Official.~~ ~~**4.4.6.2B** Prior to the approval of any tentative maps for development including or adjacent to any Criteria Cells identified in the Western Riverside County Multiple Species Habitat Conservation Plan, the applicant shall prepare and process a Joint Project Review (JPR) with the Riverside County Resource Conservation Agency (RCA). All criteria cells shall be identified on all such tentative maps. This measure shall be implemented to the satisfaction of the City Planning Division and Riverside County Resource Conservation Agency ("RCA").~~	~~Less than Significant~~
~~**Impact 4.4.6.3 Jurisdictional Delineation, Riparian Habitat or Other Sensitive Natural Communities**~~		

~~Drainage Features 7, 8, 9, 12, and 15 within the project area are considered riparian/riverine areas.~~	~~**4.4.6.3A** Prior to the issuance of grading permits the applicant shall secure a jurisdictional determination from the United States Army Corps of Engineers (USACE) and confirm with the Regional Water Quality Control Board (RWQCB) and California Department of Fish and Wildlife (CDFW) if drainage features mapped on the property to be developed are subject to jurisdictional authority. If the features are subject to regulatory protection, the applicant will secure permit approvals with the appropriate agencies prior to initiation of construction. Compensatory riparian habitat mitigation will be provided at a minimum ratio of 1:1 (replacement riparian habitat to impacted riparian habitat) to ensure no net loss of riparian habitat or aquatic resources. It should be noted that this is a minimum recommended ratio but the actual permitting ratio may be higher. These detention basins will be oversized to accommodate the provision of areas of riparian habitat. Maintenance of the basins will be limited to that necessary to ensure their drainage and water quality functions while encouraging habitat growth. Riparian habitat mitigation will be provided concurrent to or prior to impacts. A Compensatory Mitigation Plan will be prepared for all unavoidable impacts and will be consistent with the United States Army Corps of Engineers (USACE)/United States Environmental Protection Agency's Compensatory Mitigation for Losses of Aquatic Resources; Final Rule and the United States Army Corps of Engineers Standard Operating Procedure for Determination of Mitigation Ratios.~~ ~~The applicant shall consult with United States Army Corps of Engineers, California Department of Fish and Wildlife, and Regional Water Quality Control Board to establish the need for permits based on the results of a recent jurisdictional delineation and final design plans for each of the proposed the facilities. Consultation with the three agencies shall take place and appropriate permits obtained for project-level development. Compensation for losses associated with the altering of drainages on site shall be in agreement with the permit conditions and in coordination with compensation outlined below.~~ ~~Mitigation will consist of onsite creation, offsite creation, or purchase of mitigation credits from an approved mitigation bank. As outlined in the WLC programmatic DBESP report, onsite riparian habitat will be created at a minimum 1:1 ratio due to the poor quality of onsite habitat. New habitat will be created within the onsite detention/infiltration basins to the extent allowed by the resource agencies to reduce storm flows, improve water quality, and reduce sediment transport. Habitat creation will include the installation of mule fat scrub or similar riparian scrub habitat to promote higher quality riparian habitat, but still maintain the basins for their primary role as detention facilities. The use of these areas as conservation areas would require consent from CDFW and the City of Moreno Valley (MM BIO-2b and MM DBESP 1 through 3).~~ ~~**4.4.6.3B** As required by the Resource Conservation Agency (RCA), a program-level Determination of a Biological Equivalent or Superior Preservation (DBESP) for impacts to Riverine/Riparian habitat has been prepared and shall be approved by the Resource Conservation Agency prior to project approval. The Determination of a Biological Equivalent or Superior Preservation includes a general discussion of mitigation options for impacts to riverine/riparian areas as well as general location and size of the mitigation area and includes a monitoring program.~~	~~Less than Significant~~

~~If impacts to riparian habitat within the World Logistics Center Specific Plan (WLCSP) cannot be avoided at the time of specific development, then a separate project-level Determination of Biologically Equivalent or Superior Preservation (DBESP) shall be prepared to identify project-specific impacts to riparian habitat and incorporate mitigation options identified in Mitigation Measure 4.4.6.3A.~~

~~A project-level Determination of a Biological Equivalent or Superior Preservation for each specific development shall be prepared to document measures to reduce impacts to riparian/riverine habitats in accordance with the Western Riverside County Multiple species Habitat Conservation Plan (MSHCP). The project-level Determination of a Biological Equivalent or Superior Preservation shall include specific measures to reduce impacts to riparian areas and provide mitigation in the form of on-site preservation of riparian areas and/or a combination of compensation through purchase and placement of lands with riparian/riverine habitat into permanent conservation through a conservation easement and/or restoration or enhancement efforts at offsite or onsite locations. Therefore, mitigation required for compensation for impacts to riparian/ riverine areas will require a minimum of 1:1 mitigation ratio of riparian/riverine mitigation land.~~

~~As outlined in the WLC programmatic DBESP, erosion control improvements will be installed within Drainage 9 to reduce sediment transport, and additional riparian habitat will be enhanced within this drainage following the installation of the erosion control improvements (MM DBESP 4 and 5).~~

~~**4.4.6.3C**~~ ~~Prior to issuance of any grading permit for any offsite improvements that support development within the World Logistics Center Specific Plan, the developer shall retain a qualified biologist to prepare a jurisdictional delineation (JD) for any drainage channels affected by construction of the offsite improvements. This jurisdictional delineation shall be submitted to the U.S. Army Corps of Engineers (USACE) and California Department of Fish and Wildlife (CDFW) for review and concurrence. If the offsite improvements will not affect any identified jurisdictional areas, no United States Army Corps of Engineers permitting is required. However, permitting through the Regional Water Quality Control Board (RWQCB) and California Department of Fish and Wildlife (i.e., Streambed Alternation Agreement) may still be required for these improvements. The applicant shall consult with United States Army Corps of Engineers, California Department of Fish and Wildlife and Regional Water Quality Control Board to establish the need for permits based on the results of the 2012 jurisdictional delineation and final design plans for each of the proposed the facilities. Consultation with the three agencies shall take place and appropriate permits obtained. Compensation for losses associated with any altered offsite drainages shall be in agreement with the permit conditions. Any landscaping associated with these offsite improvements shall use only native species to help protect biological resources residing within or traveling through these drainages per Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Table 6.1.2. This measure shall be implemented to the satisfaction of the City Planning Division in consultation with the U.S. Fish and Wildlife Service, U.S. Army Corps of Engineers, and the California Department of Fish and Wildlife.~~

~~**Impact 4.4.6.4 Candidate, Non-listed Sensitive, or Special-Status Species**~~

~~The project area contains suitable habitat for sensitive species, including a variety of nesting birds, including burrowing owl, and Los Angeles pocket mouse.~~	~~**4.4.6.4A** Pursuant to the Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code (CFGC), site preparation activities (removal of trees and vegetation) shall be avoided during the nesting season of potentially occurring native and migratory bird species (generally February 1 to August 31). If site preparation activities must occur during the nesting season, a pre-activity field survey shall be conducted by a qualified biologist prior to issuance of grading permits for such development. The survey shall determine if active nests of species protected by the Migratory Bird Treaty Act or California Fish and Game Code are present in the construction zone. If active nests of these species are found, the developer shall establish an appropriate buffer zone with no grading or heavy equipment activity within of 500 feet from an active listed species or raptor nest, 300 feet from other sensitive or protected bird nests (non-listed), 250 feet from passerine birds, or 100 feet for sensitive or protected songbird nests. All construction activity within the vicinity of active nests must be conducted in the presence of a qualified biological monitor. Construction activity may encroach into the buffer area at the discretion of the biological monitor in consultation with CDFW. In the event no special status avian species are identified within the limits of disturbance, no further mitigation is required. In the event such species are identified within the limits of ground disturbance, mitigation measure 4.4.6.4B shall also apply. This measure shall be implemented to the satisfaction of the City Planning Division.~~ ~~**4.4.6.4B** If it is determined that project-related grading or construction will affect nesting migratory bird species, no grading or heavy equipment activity shall take place within the limits established in Mitigation Measure 4.4.6.4A until it has been determined by a qualified biologist that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow. This measure shall be implemented to the satisfaction of the City Planning Division.~~ ~~**4.4.6.4C** The loss of foraging habitat for golden eagle and white-tailed kite will be mitigated by payment of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) fee and the creation of a landscaped buffer area adjacent to the San Jacinto Wildlife Area property (SJWA). First, the payment of the Western Riverside County Multiple species Habitat Conservation Plan fee will be required on a project-by-project basis. Second, a 250-foot setback as described in Mitigation Measure 4.4.6.1A will be established within the World Logistics Center Specific Plan area. This area will reduce impacts to raptor species foraging in the adjacent San Jacinto Wildlife Area open space areas.~~ ~~***Burrowing Owl***~~ ~~**4.4.6.4D**A pre-construction clearance survey for burrowing owl shall be conducted by a qualified biologist no more than thirty (30) days prior to any grading or ground disturbing activities within the project area.~~ ~~In the event no burrowing owls are observed within the limits of ground disturbance, no further mitigation is required.~~ ~~If construction is to be initiated during the breeding season (February 1 through August 31) and burrowing owl is determined to occupy any portion of the disturbance area during the 30-day pre-construction survey, construction activity shall maintain a 500foot buffer area around any active nest/burrow until~~	~~Less than Significant~~

~~it has been determined that the nest/burrow is no longer active, and all juveniles have fledged the nest/burrow. If this avoidance buffer cannot be maintained, consultation with the California Department of Fish and Wildlife (CDFW) shall take place and an appropriate avoidance distance established. No disturbance to active burrows shall occur without appropriate permitting through the Migratory Bird Treaty Act and/or California Department of Fish and Wildlife.~~

~~If active burrowing owl burrows are detected outside the breeding season (September through January), or within the breeding season but owls are not nesting or in the process of nesting, active and/or passive relocation may be conducted following consultation with the California Department of Fish and Wildlife. A relocation plan may be required by California Department of Fish and Wildlife if active and/or passive relocation is necessary. The relocation plan will outline the basic process and provides options for avoidance and mitigation. Artificial burrows -may be constructed within the buffer area south of the World Logistics Center Specific Plan. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor in consultation with CDFW.~~

~~A relocation plan may be required by California Department of Fish and Wildlife if active or passive relocation is necessary. Artificial burrows may be constructed within appropriate burrowing owl habitat within the proposed open space/conservation area (Planning Area 30), a 74.3-acre area in the southwest portion of the Specific Plan. This area abuts the Lake Perris State Recreation Area (LPSRA) which is already in conservation. If suitable habitat is not present in Planning Area 30, owls may be relocated to the SJWA, the 250-foot buffer area or other suitable on-site or off-site areas. Construction activity may occur within 500 feet of the burrows at the discretion of the biological monitor.~~

~~Los Angeles Pocket Mouse~~

~~4.4.6.4E~~ ~~Prior to the approval of any Plot Plans proposing the development of land including or adjacent to Drainage 9, a protocol survey for the Los Angeles Pocket Mouse (LAPM), including 100 feet upstream and downstream of the affected reach shall be prepared by a qualified biologist and submitted to the City. If the affected drainage is not occupied, the area is considered not to be occupied and development can continue without further action. If the species is found within the specific survey area, no development shall occur until an appropriate mitigation fee is paid or appropriate amount of land set aside on the project site or off site to compensate for any loss of occupied Los Angeles Pocket Mouse habitat. Alternatively, individuals may be relocated to the 250-foot setback zone along the southern boundary of the property identified in Mitigation Measure 4.4.6.1A, or other appropriate areas as determined by the United States Fish and Wildlife Service. If necessary, this measure shall also be coordinated with Mitigation Measure 4.4.6.2B regarding preparation and processing of a Determination of a Biological Equivalent or Superior Preservation report. This measure shall be implemented to the satisfaction of the City Planning Division.~~

~~Resource Management~~

~~4.4.6.4F~~ ~~Prior to approval of any discretionary permits for development within Planning Areas 10 and 12, a Biological Resource Management Plan (BRMP) shall be prepared to prescribe how the 250-foot setback area outlined in Mitigation Measure 4.4.6.1A will be developed and maintained This plan will~~

~~identify frequent and infrequent vegetation management requirements (i.e., removal of invasive plants) and the planting and maintaining trees to provide roosting and nesting opportunities for raptors and other birds. The Biological Resource Management Plan will also describe how relocation of listed or sensitive species will occur from other locations as outlined in Mitigation Measures 4.4.6.2A, 4.4.6.4D, and 4.4.6.4E.~~

~~The Biological Resource Management Plan shall be reviewed and approved by the Planning Official in consultation with the San Jacinto Wildlife Area Manager. The Biological Resource Management Plan shall cover all the land within the 250-foot setback zone within Planning Areas 10 and 12 Implementation of the plan shall be supervised by a qualified biologist, to the satisfaction of the City Planning Division.~~

~~**4.4.6.4G** Mitigation Measure 4.4.6.1A specifies that a landscape plan shall be submitted with any development proposal for lots adjacent to the California Department of Fish and Wildlife (CDFW) San Jacinto Wildlife Area (SJWA) property prior to issuance of a precise grading permit. The landscape plan shall be prepared by a licensed landscape architect in consultation with a qualified biologist and shall be consistent with the design standards contained in the Specific Plan. No plant species listed in Section 6.1.4 or Table 6.2 of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) shall be installed within the setback area. In conjunction with development adjacent to the San Jacinto Wildlife Area (SJWA), cottonwood trees shall be planted within the 250-foot setback area, consistent with the World Logistics Center Specific Plan plant palette (per DBESP MM 8).~~

~~During construction, the runoff leaving construction areas will be directed to onsite detention basins and away from downstream drainage features located offsite. All projects within the WLCSP will be required to prepare a Storm Water Pollution Prevention Plan (as outlined in MM 4.9.6.2B). Regarding the 250-foot setback area, pedestrian and vehicular access to areas of riparian/riverine habitat will be prohibited except for controlled maintenance access. Finally, no grading shall be permitted within conserved riparian/riverine habitat areas except for grading necessary to established or enhance habitat areas (DBESP MM 6, 7, 9, and 10).~~

~~**4.4.6.4H** As outlined in Mitigation Measure 4.4.6.1A, development adjacent to the 250-foot open space setback shall have a six-foot chain link fence or similar barrier to help separate human activity and the buffer area. Any chain link fencing installed on any properties adjacent to the 250-foot buffer area shall have metal mesh installed below and above ground level to prevent animals from accessing new development areas.~~

~~**4.4.6.4I** The individual property owner and/or Property Owners Association (POA) as appropriate shall be responsible for maintaining the various onsite landscaped areas, open improved or natural drainage channels, and detention or flood control basins in a manner that provide for fuel management and vector control pursuant to standards maintained by the City Fire Marshall and County Department of Environmental Health- Vector Control Group. This measure requires the individual owner or Property Owners Association (POA) to manage vegetation in and around these areas or improvements so as~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
	~~to not represent a fire hazard as defined by the City Fire Department through the substantial buildup of combustible materials. This measure also requires the individual owner or Property Owners Association to manage vegetation and standing water in drainage channels and basins such that they do not encourage or allow vectors to occur (primarily rats and mosquitoes). Runoff shall not be allowed to stand in channels or basins for more than 72 hours without treatment or maintenance to prevent establishment of mosquitoes per published County vector control guidelines and "Best Management Practices for Mosquito Control on California State Properties" which is available from the California West Nile Virus website at http://www.westnile.ca.gov/resources. This measure shall be implemented by the Property Owners Association in consultation with the City Fire Department and Riverside County Department of Environmental Health – Vector Control Group.~~ ~~**4.4.6.4J** A Fuel Management Plan shall be prepared on a project-by-project basis for those Planning Areas adjacent to the south and east boundary of the World Logistics Center Specific Plan adjacent to Western Riverside County Multiple Species Habitat Conservation Plan Conservation Areas. The Fuel Management Plan shall be prepared by the project proponent and submitted for approval to the prior to plot plan approval for those projects on the southern and eastern Western Riverside County Multiple Species Habitat Conservation Plan boundary. Per the Western Riverside County Multiple Species Habitat Conservation Plan guidelines, the Fuel Management Plan shall include the following:~~ ~~A plant palette of adequate plant species that may be planted within the Fuel Management Area, which will be approved by a biologist familiar with the plant requirements of the area.~~ ~~A list of non-native invasive plants that are prohibited from installation.~~ ~~Maintenance activities and a maintenance schedule.~~ ~~Fuel modification zones shall be mapped and include an impact assessment as required under California Environmental Quality Act guidelines for a project-level analysis. The plan shall demonstrate that the adjacent Western Riverside County Multiple Species Habitat Conservation Plan Areas are adequately protected from expected fire risks.~~ ~~**4.4.6.4K** Prior to approval of any plot plans for development adjacent to the SJWA, the applicant shall demonstrate that direct light rays have been contained within the development area, per requirements of the MSHCP Section 6.0 which states, "Night lighting shall be directed away from the MSHCP Conservation Area to protect species within the MSHCP Conservation Area from direct night lighting." This measure shall be implemented to the satisfaction of the City Planning Division.~~	

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Cumulative Biological Impacts~~		
~~With implementation of the stated project-specific mitigation and payment of required MSHCP fees, no significant cumulative effect on biological resources would result from development of the WLC project.~~	~~Previously referenced Mitigation Measures 4.4.6.1A through 4.4.6.1C, 4.4.6.2A and 4.4.6.2B, 4.4.6.3A and 4.4.6.3B, and 4.4.6.4A through 4.4.6.4K.~~	~~Less than Significant~~
~~4.5 Cultural Resources~~		
~~LESS THAN SIGNIFICANT IMPACTS~~		
~~Human Remains~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~There is no evidence that the site has been utilized for human burials, and there is state law dealing with human remains that are found during grading or excavation.~~	~~No mitigation required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		
~~Impact 4.5.6.1 Archaeological Resources~~		

~~Most of the site has been previously surveyed, and previously identified resources have been surveyed and retrieved according to required protocols. Nine on-site rural residential properties (designated "Light Logistics") have not been previously surveyed and would need to be surveyed prior to development.~~ ~~The City has conducted SB 18 Consultation with local Native American tribes and the Pechanga~~	~~**4.5.6.1A** Prior to the approval of any grading permit for any of the "Light Logistics" parcels, the parcels shall be evaluated for significance by a qualified archaeologist. A Phase 1 Cultural Resources Assessment shall be conducted by the project archaeologist and an appropriate tribal representative(s) on each of the "Light Logistics" parcel to determine if significant archaeological or historical resources are present.~~ ~~A Phase 2 significance evaluation shall be completed for any of these sites in order to determine if they contain significant archaeological or historical resources. Cultural resources include but are not limited to stone artifacts, bone, wood, shell, or features, including hearths, structural remains, or historic dumpsites. All resources determined to be prehistoric or historic shall be documented using DPR523 forms for archival research/storage in the Eastern Information Center (EIC). If the particular resource is determined to be not significant, no further documentation is required. If prehistoric resources are determined to be significant, they shall be considered for relocation or archival documentation. If any resource is determined to be significant, a Phase 3 recovery study shall be conducted to recover remaining significant cultural artifacts. If prehistoric archaeological/cultural resources are discovered during the Phase 1 survey and it is determined that they cannot be avoided through site design, they shall be subject to a Phase 2 testing program. The project archaeologist in consultation with appropriate tribal group(s) shall determine the significance of the resource(s) and determine the most appropriate disposition of the resource(s) in accordance with applicable laws, regulations and professional practices (per Cultural Report MM CR-1, MM CR-2, MM CR-7 Table 3, pg. 74).~~ ~~**4.5.6.1B** Prior to the issuance of any grading or ground-disturbing permit for construction of off-site improvements a qualified archaeologist shall be retained to prepare a Phase I cultural resource assessment (CRA) of the project site if an up to date Phase I cultural resource assessment is not available for the site at the time of development per Cultural Report MM CR-5, Table 3, pg. 74).~~ ~~Appropriate tribal representatives as identified by the City shall be invited by the Project Archeologist to participate in this assessment.~~ ~~If archaeological resources are discovered during construction activities, no further excavation or disturbance of the area where the resources were found shall occur until a qualified archaeologist evaluates the find. If the find is determined to be a unique archaeological resource, appropriate action shall be taken to (a) plan construction to avoid the archeological sites (the preferred alternative); (b) cap or cover archeological sites with a layer of soil before building on the affected project location; or (c) excavate the site to adequately recover the scientifically consequential information from and about the resource. At the discretion of the project archaeologist, work may continue on other parts of the project site while the unique archaeological resource mitigation takes place. This measure shall be implemented to the satisfaction of the Planning Official.~~ ~~If the project archaeologist, in consultation with the monitoring Tribe(s), determines that the find is a unique archaeological resource, the resource site shall be evaluated and recorded in accordance with requirements of the State Office of Historic Preservation (OHP). If the resource is determined to be~~	~~Less than Significant with Mitigation~~

~~and Soboba tribes have expressed a desire to consult.~~	~~significant, data shall be collected by the qualified archaeologist and the findings of the report shall be submitted to the City. If the find is determined to be not significant no mitigation is necessary.~~ ~~Should a future project-level analysis show that cultural resource site CA-RIV-3346 will be directly or partially impacted by project-level construction, an Addendum cultural resource report must be prepared and include an analysis of the alternatives associated with mitigation for impacts to this resource following CEQA Guidelines Section 15126.4(b)(3). This information must be included in any project-level CEQA compliance documentation. It should be noted that Phase 3 data recovery is an acceptable mitigation action under CEQA Guidelines Section 15126.4(b)(3)(C) (per Cultural Report MM CR-3, Table 3, pg. 74).~~ ~~Should it be determined through a future project-level EIR analysis that prehistoric cultural resource sites CA-RIV-2993 and/or CA-RIV-3347 shall be directly impacted by future construction, these sites must be Phase 2 tested for significance (per Cultural Report MM CR-4, Table 3, pg. 74).~~ ~~**4.5.6.1C** Prior to the issuance of any grading permits a qualified archaeologist shall be retained to monitor all grading and shall invite tribal groups to participate in the monitoring. Project-related archaeological monitoring shall include the following requirements per Cultural Report MM CR-6, MM CR-8, Table 3, pg. 74):~~ ~~1. All earthmoving shall be monitored to a depth of ten (10) feet below grade by the Project Archaeologist or his/her designated representative. Once all areas of the development project that have been cut to 10 feet below existing grade have been inspected by the monitor, the Project Archaeologist may, at his or her discretion, terminate monitoring if and only if no buried cultural resources have been detected;~~ ~~2. If buried cultural resources are detected, monitoring shall continue until 100 percent of virgin earth within the specific project area has been disturbed and inspected by the Project Archaeologist or his/her designated representative.~~ ~~3. Grading shall cease in the area of a cultural artifact or potential cultural artifact as delineated by the Project Archaeologist or his/her designated representative. A buffer of at a minimum 25 feet around the cultural item shall be established to allow for assessment of the resource. Grading may continue in other areas of the site while the particular find are investigated; and~~ ~~4. If prehistoric cultural resources are uncovered during grading, they shall be Phase 2 tested by the Project Archaeologist, and evaluated for significance in accordance with §15064.5(f) of the CEQA Guidelines. Appropriate actions for significant resources as determined by the Phase 2 testing include but are not limited to avoidance or capping, incorporation of the site in green space, parks, or delineation into open space. If such measures are not feasible, Phase 3 data recovery of the significant resource will be required, and curation of recovered artifacts and/or reburial, shall be required. A report associated with Phase 2 testing or Phase 3 data recovery must be delivered to the City and, if necessary, the museum where any recovered artifacts have been curated.~~	

~~5. No further grading shall occur in the area of the discovery until the City approves specific actions to protect identified resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the City where they would be afforded long-term preservation to allow future scientific study.~~

~~6. The developer shall make reasonable efforts to avoid, minimize, or mitigate significant adverse impacts on cultural resources The State Historic Preservation Office (SHPO) and local Native American tribes will be consulted and the Advisory Council on Historic Preservation will be notified within 48 hours of the find in compliance with 36 CFR 800.13(b)(3). This measure shall be implemented to the satisfaction of the Planning Official.~~

~~**4.5.6.1D** Prior to the issuance of any grading permit the project archaeologist shall invite interested Tribal Group(s) representatives to monitor grading activities. Qualified representatives of the Tribal Group(s) shall be granted access to the project site to monitor grading as long as they provide 48-hour notice to the developer of their desire to monitor, so the developer can make appropriate safety arrangements on the site. This measure shall be implemented to the satisfaction of the Planning Official.~~

~~**4.5.6.1E** It is possible that ground-disturbing activities during construction may uncover previously unknown, buried cultural resources (archaeological or historical). In the event that buried cultural resources are discovered during grading and no Project Archaeologist or Historian is present, grading operations shall stop in the immediate vicinity of the find and a qualified archaeologist shall be retained to determine the most appropriate course of action regarding the resource. The Archeologist shall make recommendations to the City on the actions that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with §15064.5 of the *CEQA Guidelines*. Cultural resources could consist of, but are not limited to, stone artifacts, bone, wood, shell, or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area shall be recorded on appropriate California Department of Parks and Recreation forms and evaluated for significance in terms of CEQA criteria. If the resources are determined to be unique historic resources as defined under §15064.5 of the *CEQA Guidelines*, appropriate protective actions for significant resources such as avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds shall be implemented by the project archaeologist and the City.~~

~~No further grading shall occur in the area of the discovery until the City and project archaeologist approve the measures to address these resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the City where they would be afforded long-term preservation to allow future scientific study.~~

~~**Impact 4.5.6.2 Historic Resources**~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Seven on-site rural residential properties (designated "Light Logistics") have not been previously surveyed for historical resources, and would need to be surveyed prior to development.~~ ~~Juan Bautista de Anza crossed the southern portion of the site while exploring California in 1774.~~	~~**4.5.6.2A** If any historic resources are found during implementation of Mitigation Measure 4.5.6.1A, the Project Archaeologist or Historian (as appropriate) shall offer any artifacts or resources to the Moreno Valley Historical Society (MVHS) or the Eastern Information Center/County Museum or the Western Science Center in Hemet as appropriate for archival storage. From the time any artifacts are turned over to the Moreno Valley Historical Society or other appropriate historical group, the developer shall have no further responsibility for their management or maintenance.~~ ~~In addition, the following measure is proposed to acknowledge the route of Juan Bautista de Anza through the project area as an important historical event:~~ ~~**4.5.6.2B** As part of construction of the trail segment connecting Redlands Boulevard to the California Department of Fish and Wildlife property, the developer shall contribute $5,000 to the City for the installation of a historical marker acknowledging the passing of Juan Bautista de Anza through this area during his exploration of California. This measure shall be incorporated into trail plans for this segment which will be subject to review and approval by the City Park and Recreation Department in consultation with the Moreno Valley Historical Society.~~ ~~**4.5.6.2C** Streets C and E shall follow the historical alignment of Alessandro Boulevard and shall be named Alessandro Boulevard.~~	~~Less than Significant with Mitigation~~
~~**Impact 4.5.6.3 Paleontological Resources**~~		

~~The project area is considered moderately sensitive regarding paleontological resources, and fossiliferous materials have been found in the surrounding region in the past.~~	~~**4.5.6.3A** Prior to the issuance of any grading permits, a City-approved Paleontologist shall be retained to conduct paleontological monitoring as needed for all grading related to development. Development monitoring shall include the following actions:~~ ~~1. Monitoring must occur in areas where excavations are expected to exceed twenty (20) feet in depth, in areas where fossil-bearing formations are found during grading, and in all areas found to contain, or are suspected of containing, fossil-bearing formations.~~ ~~2. To avoid construction delays, paleontological monitors shall be equipped to salvage fossils and remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates if they are unearthed.~~ ~~3. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of specimens.~~ ~~4. Monitoring may be reduced if the potentially fossiliferous units described herein are not present, or, if present, are determined upon exposure and examination by the Project Paleontologist to have low potential to contain fossil resources. This measure shall be implemented to the satisfaction of the Planning Official. The Project Paleontologist and the Project Archaeologist described in Mitigation Measure 4.5.6.1C may be the same person if he/she meets the qualifications of both positions per Cultural Report MM PR-1, Table 4, pg. 76).~~ ~~**4.5.6.3B** Prior to the issuance of any permits for the construction of off-site improvements, a qualified paleontologist shall conduct an assessment for paleontological resources on each off-site improvement location. If any site is determined to have a potential for exposing paleontological resources, the project paleontologist shall monitor off-site grading/excavation, subject to coordination with the City. Development monitoring shall include the following mitigation measures:~~ ~~1. Monitoring must occur in areas where excavations are expected to reach fossil-bearing formations during grading. This monitoring must be conducted by the Project Paleontologist in all areas found to or suspected of containing fossil-bearing formations.~~ ~~2. To avoid construction delays, the Project Paleontologist shall be equipped to salvage fossils and remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates as they are unearthed.~~ ~~3. The Project Paleontologist shall be empowered to temporarily halt or divert equipment to allow removal of specimens.~~ ~~4. Monitoring may be reduced if the potentially fossiliferous units described herein are not present, or, if present, are determined upon exposure and examination by the Project Paleontologist to have low potential to contain fossil resources.~~	~~Less than Significant with Mitigation~~
~~**Cumulative Cultural Impacts**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The project site and surrounding area, especially the uplands associated with Mt. Russell, have yielded cultural resources in the past. As this area develops, there is a potential for impacts to or loss of archaeological, historical, or paleontological resources.~~	~~Previously referenced Mitigation Measures 4.5.6.1A through 4.5.6.1E, 4.5.6.2A and 4.5.6.2B, and 4.5.6.3A and 4.4.6.3B.~~	~~Less than Significant~~
~~**4.6 Geology and Soils**~~		
~~**LESS THAN SIGNIFICANT IMPACTS**~~		
~~**Landslides or Rockfalls**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~A large older landslide has been mapped primarily off site on the north easterly flanks of Mount Russell, near the southwest portion of the property. The Specific Plan designates 74.3 acres in the southwest corner of the site as open space.~~	~~No development will occur in the potential landslide zone, so no mitigation is needed.~~	~~Less than Significant~~
~~Soil Erosion or Loss of Topsoil~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~On-site soils have a slight erosion hazard, and uncontrolled runoff could result in erosion or loss of topsoil.~~	~~The project would be required to adhere to the City's Grading Ordinance, obtain an NPDES Permit, prepare an SWPPP and a WQMP, construction and operational impacts associated with soil erosion hazards are considered to be less than significant, and no mitigation is required.~~	~~Less than Significant~~
~~**Septic Tanks**~~		
~~The project would not involve the installation of septic tanks or alternative wastewater disposal systems, no impacts would occur.~~	~~No mitigation is required.~~	~~No Impact~~
~~**Seismic-Related Ground Failure**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The City's General Plan and project geotechnical report indicates the site has little or no potential for seismically-induced failure or liquefaction.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		
~~Impact 4.6.6.1 Fault Rupture~~		

~~The eastern portion of the site contains one or more splays of the San Jacinto Fault, and the Casa Loma Fault may be in in the general vicinity of the western portion of the site.~~	~~**4.6.6.1A** Prior to approval of any projects for development between Redlands Boulevard and Theodore Street, south of Dracaea Avenue (projected east from Redlands Boulevard), and the area south of Alessandro from the western boundary along the Mount Russell toe of slope easterly into the site 1,500 feet, the City shall determine if a detailed fault study of the Casa Loma Fault Zone area is required based on available evidence. If necessary, any additional geotechnical investigations shall be prepared by a qualified geologist and determine if structural setbacks are needed, and shall identify specific remedial earthwork and/or foundation recommendations. Project plans for foundation design, earthwork, and site preparation shall incorporate all of the mitigations in the site-specific geotechnical investigations. In addition, the project structural engineer shall review the site specific investigations, provide any additional necessary mitigation to meet the California Building Code requirements, and incorporate all applicable mitigations from the investigation into the structural design plans and shall ensure that all structural plans for the project meet current Building Code requirements. Additionally, a registered geotechnical engineer shall review each site-specific geotechnical investigation, approve the final report, and require compliance with all geotechnical mitigations contained in the investigation in the plans submitted for the grading, foundation, structural, infrastructure, and all other relevant construction permits. The City Building Division shall review and approve plans to confirm that the siting, design and construction of all structures and facilities are in accordance with the regulations established in the California Building Code (California Code of Regulations, Title 24), and/or professional engineering standards appropriate for the seismic zone in which such construction may occur. Structures intended for human occupancy shall not be located within any structural setback zone as determined by those studies. This measure shall be implemented to the satisfaction of the City Engineer in consultation with the Project Geologist.~~ ~~**4.6.6.1B** Prior to approval of any projects for development within or adjacent to the San Jacinto Alquist-Priolo Earthquake Fault Zone, the City shall review and approve a geotechnical fault study prepared by a qualified geologist to confirm the alignment and size of any required building setbacks related to the fault zone. If necessary, this study shall identify a "special foundation or grading remediation zone" for the areas supporting structures intended for human occupancy where coseismic deformation (fractures) is observed. This zone shall be determined after subsurface evaluation based on proposed building locations. Specific remedial earthwork and foundation recommendations shall be evaluated as necessary based on proposed building locations. Project plans for foundation design, earthwork, and site preparation shall incorporate all of the mitigations in the site-specific geotechnical investigations. In addition, the project structural engineer shall review the site specific investigations, provide any additional necessary mitigation to meet the California Building Code requirements, and incorporate all applicable mitigations from the investigation into the structural design plans and shall ensure that all structural plans for the project meet current Building Code requirements. Additionally, a registered geotechnical engineer shall review each site-specific geotechnical investigation, approve the final report, and require compliance with all geotechnical mitigations contained in the investigation in the plans submitted for the grading, foundation, structural, infrastructure, and all other relevant construction permits. The City Building Division shall review and approve plans to confirm that the siting, design and construction of all structures and facilities are in accordance with the regulations established in the California Building Code (California Code of Regulations, Title 24),~~	~~Less than Significant with Mitigation~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	**~~Mitigation Measures~~**	**~~Level of Significance~~**
	~~and/or professional engineering standards appropriate for the seismic zone in which such construction may occur.~~ ~~This study may involve trenching to adequately identify the location of the Claremont segment of the San Jacinto Fault Zone that crosses the eastern portion of the World Logistics Center Specific Plan property. This measure shall be implemented to the satisfaction of the City Engineer in consultation with the Project Geologist.~~ ~~**4.6.6.1C** Prior to the approval of grading permits, or permits for construction of off-site improvements, the City shall review and approve plans confirming that the project has been designed to withstand anticipated ground shaking and other geotechnical and soil constraints (e.g., settlement). The project proponent shall submit plans to the City as appropriate for review and approval prior to issuance of grading permits or issuance of permits for the construction of any offsite improvements. This measure shall be implemented to the satisfaction of the City Engineer.~~	
~~Impact 4.6.6.2 Ground Shaking~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	**~~Mitigation Measures~~**	**~~Level of Significance~~**
~~Southern California is located in a seismically active area and will continue to be subject to ground shaking resulting from seismic activity on regional and local faults.~~	**~~4.6.6.2A~~** ~~Prior to issuance of building permits for any portion of the project site, a site-specific, design level geotechnical investigation for each parcel shall be submitted to the City , which would comply with all applicable state and local code requirements, and includes an analysis of the expected ground motions at the site from known active faults using accepted methodologies. The report shall determine structural design requirements as prescribed by the most current version of the California Building Code, including applicable City amendments, to ensure that structures can withstand ground accelerations expected from known active faults. The report shall also determine final design parameters for walls, foundations, foundation slabs, utilities, roadways, parking lots, sidewalks, and other surrounding related improvements. Project plans for foundation design, earthwork, and site preparation shall incorporate all of the mitigations in the site-specific geotechnical investigations. In addition, the project structural engineer shall review the site specific investigations, provide any additional necessary mitigation to meet the California Building Code requirements, and incorporate all applicable mitigations from the investigation into the structural design plans and shall ensure that all structural plans for the project meet current Building Code requirements. Additionally, a registered geotechnical engineer shall review each site-specific geotechnical investigation, approve the final report, and require compliance with all geotechnical mitigations contained in the investigation in the plans submitted for the grading, foundation, structural, infrastructure, and all other relevant construction permits. The City Building Division shall review and approve plans to confirm that the siting, design and construction of all structures and facilities are in accordance with the regulations established in the California Building Code (California Code of Regulations, Title 24), and/or professional engineering standards appropriate for the seismic zone in which such construction may occur.~~	~~Less than Significant with Mitigation~~
~~Impact 4.6.6.3 Unstable Soils~~		

~~On-site soils have a moderate to low shrink-swell potential, and there are some moderately expansive soils on site as well.~~	~~**4.6.6.3A** Each Plot Plan application for development shall include a site-specific, design level geotechnical investigation for each parcel, in compliance with all applicable state and local code requirements, and including an analysis of the expected soil hazards at the site. The report shall determine:~~ ~~1. Structural design requirements as prescribed by the most current version of the California Building Code, including applicable City amendments, to ensure that structures can withstand ground accelerations expected from known active faults.~~ ~~2. The final design parameters for walls, foundations, foundation slabs, utilities, roadways, parking lots, sidewalks, and other surrounding related improvements.~~ ~~Project plans for foundation design, earthwork, and site preparation shall incorporate all of the mitigations in the site-specific geotechnical investigations. In addition, the project structural engineer shall review the site specific investigations, provide any additional necessary mitigation to meet the California Building Code requirements, and incorporate all applicable mitigations from the investigation into the structural design plans and shall ensure that all structural plans for the project meet current Building Code requirements. These investigations shall identify any site-specific impacts from compressible and expansive soils based on the actual location of individual pads proposed in the future, so that differential movement can be further verified or evaluated in view of the actual foundation plan and imposed fill or structural loads. Additionally, a registered geotechnical engineer shall review each site-specific geotechnical investigation, approve the final report, and require compliance with all geotechnical mitigations contained in the investigation in the plans submitted for the grading, foundation, structural, infrastructure, and all other relevant construction permits. The City Building Division shall review and approve plans to confirm that the siting, design and construction of all structures and facilities are in accordance with the regulations established in the California Building Code (California Code of Regulations, Title 24), and/or professional engineering standards appropriate for the seismic zone in which such construction may occur.~~ ~~Compliance with this measure will ensure that future buildings are designed to protect the structure and occupants from on-site soil limitations, consistent with State Building Code requirements. This measure shall be implemented to the satisfaction of the City Engineer.~~ ~~**4.6.6.3B** Any cut slopes in excess of five (5) feet in vertical height shall be constructed as “replacement fill slopes” per the project geotechnical report, due to the variable nature of the onsite alluvial soils. This measure shall be implemented to the satisfaction of the City Land Development Division and the City Engineer in consultation with the Project Geologist.~~ ~~**4.6.6.3C** During all grading activities, a geotechnical engineer shall monitor site preparation, removal of unsuitable soils, mapping of all earthwork excavations, approval of imported earth materials, fill placement, foundation installation, and other geotechnical operations. Laboratory testing of subsurface materials to confirm compacted dry density and moisture content, consolidation potential, corrosion potential, expansion potential, and resistance value (R-value) shall be performed prior to~~	~~Less than Significant with Mitigation~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
	~~and during grading as appropriate. This measure shall be implemented to the satisfaction of the City Engineer in consultation with the Project Geologist.~~	
~~**Cumulative Geology and Soils Impacts**~~		
~~It is reasonable to conclude that all development within this seismically active area will be required to adhere to applicable State regulations, CBC standards, and the design and siting standards required by local agencies.~~	~~Previously referenced Mitigation Measures 4.6.6.1A through 4.6.6.1C, 4.6.6.2A, and 4.6.6.3A through 4.6.6.3C.~~	~~Less than Significant~~
~~**4.7 Greenhouse Gases and Global Climate Change**~~

~~None~~	~~Not applicable~~	~~Not applicable~~
~~**SIGNIFICANT IMPACTS**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Impact 4.7.6.1 Greenhouse Gas Emissions~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	**~~Mitigation Measures~~**	**~~Level of Significance~~**
~~The proposed project will emit substantial quantities of greenhouse gases during construction and operation, mainly related to truck emissions, that will exceed recommended SCAQMD thresholds for greenhouse gases. These emissions, while generated by this project, are nonetheless considered cumulative impacts (see below).~~	~~**4.7.6.1A** The project shall implement the following requirements to reduce solid waste and greenhouse gas emissions from construction and operation of project development:~~ ~~a) Prior to January 1, 2020, divert a minimum of 50 percent of landfill waste generated by operation of the project. After January 1, 2020, development shall divert a minimum of 75 percent of landfill waste. In January of each calendar year after project approval the developer and/or Property Owners Association shall certify the percentage of landfill waste diverted on an annual basis.~~ ~~b) Prior to January 1, 2020, recycle and/or salvage at least 50 percent of non-hazardous construction and demolition debris. After January 1, 2020, recycle and/or salvage at least 75 percent of non-hazardous construction and demolition debris. In January of each calendar year after project approval the developer and/or Property Owners Association shall certify the percentage of landfill waste diverted on an annual basis.~~ ~~Develop and implement a construction waste management plan that, at a minimum, identifies the materials to be diverted from disposal and whether the materials will be sorted on-site or co-mingled. Calculations can be done by weight or volume, but must be consistent throughout.~~ ~~c) The applicant shall submit a Recyclables Collection and Loading Area Plan for construction related materials prior to issuance of a building permit with the Building Division and for operational aspects of the project prior to the issuance of the occupancy permit to the Public Works Department. The plan shall conform to the Riverside County Waste Management Department's Design Guidelines for Recyclable Collection and Loading Areas.~~ ~~d) Prior to issuance of certificate of occupancy, the recyclables collection and loading area shall be constructed in compliance with the Recyclables Collection and Loading Area plan.~~ ~~e) Prior to issuance of certificate of occupancy, documentation shall be provided to the City confirming that recycling is available for each building.~~ ~~f) Within six months after occupancy of a building, the City shall confirm that all tenants have recycling procedures set in place to recycle all items that are recyclable, including but not limited to paper, cardboard, glass, plastics, and metals.~~ ~~g) The property owner shall advise all tenants of the availability of community recycling and composting services.~~ ~~h) Existing onsite street material shall be recycled for new project streets to the extent feasible.~~	~~Less than Significant~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Impact 4.7.6.2 Greenhouse Gas Plan, Policy, Regulation Consistency~~		
~~The proposed project could be potentially inconsistent with established Greenhouse Gas plans, policies, or regulations.~~	~~Implementation of previously referenced Mitigation Measures 4.3.6.3B, 4.3.6.4A, 4.3.6.3C, 4.3.6.3D, 4.7.6.1A, 4.16.1.6.1A, 4.16.1.6.1B, 4.16.1.6.1C, 4.16.4.6.1A, 4.16.4.6.1B, and 4.16.4.6.1C will help reduce project-related GHG emissions~~	~~Less than Significant~~
~~Cumulative Greenhouse Gas Impacts~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The proposed project will emit substantial quantities of greenhouse gases during project operation, mainly related to truck emissions, that will exceed recommended SCAQMD thresholds for greenhouse gases. These emissions are considered cumulative in terms of global climate change.~~	~~Project-specific energy conservation, air quality, and greenhouse gas Mitigation Measure 4.7.6.1A will help reduce project greenhouse gas emissions, the project will not make a significant cumulative contribution to greenhouse gas emissions.~~	~~Less than Significant~~
~~4.8 Hazards and Hazardous Materials~~		
~~LESS THAN SIGNIFICANT IMPACTS~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~**Within Two Miles of a Private Airport, Airport Land Use Plan, or Public Airport**~~		
~~The nearest airport is 7 miles away so, the development of the WLC project area as proposed would not result in airport safety hazards for people working in the WLC project area.~~	~~No mitigation is required.~~	~~No Impact~~
~~**Existing or Proposed School**~~		
~~There are no existing planned schools on or within a quarter mile of the project site.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Routine Transport, Use, or Disposal of Hazardous Materials and Reasonable Foreseeable Upset and Accident Conditions**~~		

~~The transport, use, handling, or disposal of hazardous materials is regulated by various local, state, and federal standards, ordinances, and regulations that would ensure that potential impacts associated with environmental and health hazards related to an accidental release of hazardous materials are less than significant, and no mitigation is required.~~ ~~Compliance with established safety laws and regulations regarding natural gas plants is expected to~~	~~No mitigation is required.~~	~~Less than Significant~~

~~reduce this potential impact to a less than significant level, and no mitigation is required.~~ ~~Local soils would be extensively disturbed during grading, and would employ relatively stringent dust control measures including regular watering, and revegetation as soon as possible after grading. Under these conditions, it is unlikely that *Coccidioides immitis* spores (“Valley Fever”) would survive in the soil. This potential impact~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	**~~Mitigation Measures~~**	**~~Level of Significance~~**
~~appears minimal and no mitigation is recommended.~~		
~~Located on a List of Hazardous Materials Sites~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The project site and surrounding areas are not on any list of the hazardous materials sites as defined by Government Code Section 65962.5. In addition, a number of Phase 1 Environmental Site Assessments (ESAs) prepared for various portions of the site indicate that the site does not contain pesticides or other hazardous materials.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Conflict with Emergency Response Plans**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~Compliance with existing regulations for emergency access and evacuation would ensure that impacts related to this issue are less than significant, and no mitigation is required.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Wildlands Fire Risk**~~		

~~The Badlands to the east, across Gilman Springs Road, is considered a Very High Fire Hazard Area. The project allows the construction of warehouse buildings which have a low fire potential, and the project will add a new roadway network to facilitate access for fire protection vehicles and services.~~ ~~Fire Station #58 is relatively close to the project site, but future development will generate a need for an additional fire station on the site.~~	~~The WLC Specific Plan identifies a new on-site fire station, and payment of DIF and increased property taxes will fund future fire services. No other mitigation is required.~~	~~Less than Significant~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~New structures will have to comply with current Fire and Building Code regulations.~~		
~~SIGNIFICANT IMPACTS~~		
~~On-site Conditions Involving Hazardous Materials~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~A number of Phase 1 Environmental Site Assessments (ESAs) prepared for various portions of the site indicate that the site does not contain pesticides or other hazardous materials. However, the existing rural residences on site have not been surveyed as yet for hazardous materials.~~	~~**4.8.6.1A** Prior to demolition of any existing structures on the project site, a qualified contractor shall be retained to determine if asbestos-containing materials (ACMs) and/or lead-based paint (LBP) are present. If asbestos-containing materials and/or lead-based paint are present, prior to commencement of demolition, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. In addition, onsite soils shall be tested for contamination by agricultural chemicals. If present, these materials shall be removed and transported to an appropriate landfill by a licensed contractor. This measure shall be implemented to the satisfaction of the Building Division including written documentation of the disposal of any asbestos-containing materials, lead-based paint, or agricultural chemical residue in conformance with all applicable regulations.~~ ~~**4.8.6.1B** Prior to the issuance of any discretionary permits associated with the proposed fueling facility (“logistic support” site in the LD zone), a risk assessment or safety study that identifies the potential public health and safety risks from accidents at the facility (e.g., fire, tank rupture, boiling liquid, or expanding vapor explosion) shall be submitted to the City for review and approval This study shall be prepared to industry standards and demonstrate that the facility will not create any significant public health or safety impacts or risks, to the satisfaction of the City Building and Safety Division and the Fire Prevention Bureau.~~ ~~**4.8.6.1C** Prior to grading for any discretionary permits for development in Planning Areas 9-12 adjacent to the natural gas compressor plant, the applicant shall prepare a risk assessment report analyzing safety conditions relative to the existing compressor plant and planned development. The report must be based on appropriate industry standards and identify the potential hazards from the compressor plant (e.g., fire, explosion) and determine that the distance from the plant to the closest planned buildings in Planning Areas 9-12 is sufficient to protect the safety of workers from accidents that could occur (see Final EIR Volume 2 Figure 4.1.6B) at the compressor plant. This measure shall be implemented to the satisfaction of the City Building and Safety Division and the Fire Prevention Bureau.~~ ~~**4.8.6.1D** Prior to the issuance of any grading permit, the developer shall inform the City of any existing solid waste materials within the development area. In conjunction with grading activities, all solid waste matter within the development area shall be removed by a licensed contractor and disposed of in an approved landfill. A record of the removal and disposal of any waste materials, in compliance with applicable laws and regulations, shall be submitted to the City prior to the issuance of any building permits.~~	~~Less than Significant with Mitigation~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~**Cumulative Hazards and Hazmat Impacts**~~		
~~The risk to each future project is based on the location and interface between urbanized area and wildland areas. Potential risks associated with development in this area can be effectively reduced through conformance with Fire and Building Code regulations.~~	~~The WLC Specific Plan identifies a new on-site fire station, and increased property taxes will fund future police and fire services. No other mitigation is required.~~	~~Less than Significant~~
~~**4.9 Hydrology and Water Quality**~~		
~~**LESS THAN SIGNIFICANT IMPACTS**~~		
~~**Seismic Flooding-Related Impacts**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The WLC project area is not identified as being located within the City's mapped inundation area.~~	~~No mitigation required~~	~~Less than Significant~~
~~**Seismic-Related Impacts**~~		
~~The southwest corner of the site has slopes associated with Mt. Russell, but this area is designated as open space and the rest of the WLC area gently sloping and landslides or mudslides would not occur here.~~	~~No mitigation is required~~	~~Less than Significant~~
~~**Groundwater**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The proposed WLC project would not interfere with groundwater recharge as the project site is not identified as a groundwater recharge area and it will utilize water supplies from EMWD.~~	~~No mitigation is required~~	~~Less than Significant~~
~~100-Year Flooding-Related Impacts~~		
~~The project site does not lie within a 100-year floodplain and does not include housing, so impacts related to this issue are less than significant.~~	~~No mitigation is required~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Impact 4.9.6.1 Drainage Pattern and Capacity-Related Impacts~~		

~~The project will modify local drainage patterns, increase impervious surfaces (roofs, hardscape, etc.), and add landscaped areas with irrigation.~~	~~**4.9.6.1A** Prior to issuance of any building permit within the Specific Plan area, the developer shall construct storm drain pipes and conveyances, as well as, combined detention and infiltration basin(s), bioretention area(s), and spreading area(s) within each proposed watershed, as outlined in the project hydrology plan, to mitigate the impacts of increased peak flow rate, velocity, flow volume and reduce the time of concentration by storing and infiltrating increased runoff for a limited period of time and release the outflow at a rate that does not exceed the pre-development peak flows and velocities for the 2, 5, 10, 25, and 100-year storms and volumes as assessed in the water balance model for historical conditions. For the purpose of this mitigation measure, the term “construct” shall mean to substantially complete construction so as to function for its intended purpose during construction with complete construction prior to occupancy. Field investigations will be conducted to determine the infiltration rate of soils underlying the proposed locations of bioretention areas and detention basins. The infiltration rate of the underlying soils will be used to properly size the bioretention areas and detention basins/infiltration basins to ensure that adequate volumes of runoff, in cumulative total for all bioretention areas and detention basins, are captured and infiltrated. The water balance model will be updated and rerun for the site-specific conditions encountered to confirm the water balance. This measure shall be implemented to the satisfaction of the City Engineer. Energy dissipaters shall be used as the spillways of basins to reduce the runoff velocity and dissipate the flow energy. Drainage weir structures shall be constructed at the downstream end of the watersheds flowing to the San Jacinto Wildlife Area to control the runoff and spread the flow such that the flows exiting the project boundary will return to the sheet flow pattern similar to the existing condition. Detention basins and spreading areas shall be designed to account for the amount of the sediment transported through the project boundary so that the existing sediment carrying capacity is maintained.~~ ~~**4.9.6.1B** The bioretention areas and detention/infiltration basins shall be designed to assure infiltrations rates. The monitoring plan will follow the guidelines presented by the California Storm Water Quality Association (CASQA) in the California Storm Water Best Management Program (BMP) Handbook, Municipal, January 2003 Section 4, Treatment Control Best Management Programs Fact Sheets TC-11 Infiltration Basin and TC-30 Vegetated Swale).~~ ~~For the Bioretention areas, as needed maintenance activities shall be conducted to remove accumulated sediment that may obstruct flow through the swale. Bioretention areas shall be monitored at the beginning and end of each wet season to assess any degradation in infiltration rates. The maintenance activities should occur when sediment on channels and culverts builds up to more than 3 inches (CASQA 2003). The swales will need to be cultivated or rototilled if drawdown takes more than 72 hours.~~ ~~For the Detention/infiltration Basins, a 3-5 year maintenance program shall be implemented mainly to keep infiltration rates close to original values since sediment accumulation could reduce original infiltration rate by 25-50%. Infiltration rates in detention basins will be monitored at the beginning and end of each wet season to assess any degradation in infiltration rates. If cumulative infiltration rates of all detention basins drops below the minimum required rates, then the detention basins will be~~	~~Less than Significant with Mitigation~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
	~~reconditioned to improve infiltration capacity by scraping the bottom of the detention basin, seed or sod to restore groundcover, aerate bottom and dethatch basin bottom (CASQA 2003).~~	
~~**Impact 4.9.6.2 Construction-Related Water Quality**~~		

~~The construction and grading phases of the WLC Specific Plan area would temporarily disturb surface soils and removal of vegetative cover, which could potentially result in erosion and sedimentation within the WLCSP area.~~	~~**4.9.6.2A** Prior to issuance of any grading permit for development in the World Logistics Center Specific Plan, the project developer shall file a Notice of Intent (NOI) with the Santa Ana Regional Water Quality Control Board to be covered under the National Pollutant Discharge Elimination System (NPDES) General Construction Permit for discharge of storm water associated with construction activities. The project developer shall submit to the City the Waste Discharge Identification Number issued by the State Water Quality Control Board (SWQCB) as proof that the project's Notice of Intent is to be covered by the General Construction Permit has been filed with the State Water Quality Control Board. This measure shall be implemented to the satisfaction of the City Engineer.~~ ~~**4.9.6.2B** Prior to issuance of any grading permit for development in the World Logistics Center Specific Plan, the project developer shall submit to the State Water Quality Control Board (SWQCB) a project-specific Storm Water Pollution Prevention Plan (SWPPP). The Storm Water Pollution Prevention Plan shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. In addition, the Storm Water Pollution Prevention Plan shall emphasize structural and nonstructural best management practices (BMPs) to control sediment and non-visible discharges from the site. Best Management Practices to be implemented may include (but shall not be limited to) the following:~~ ~~Sediment discharges from the site may be controlled by the following: sandbags, silt fences, straw wattles and temporary debris basins (if deemed necessary), and other discharge control devices. The construction and condition of the Best Management Practices are to be periodically inspected by the Regional Water Quality Control Board during construction, and repairs would be made as required.~~ ~~Materials that have the potential to contribute non-visible pollutants to storm water must not be placed in drainage ways and must be placed in temporary storage containment areas.~~ ~~All loose soil, silt, clay, sand, debris, and other earthen material shall be controlled to eliminate discharge from the site. Temporary soil stabilization measures to be considered include: covering disturbed areas with mulch, temporary seeding, soil stabilizing binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. Stockpiles shall be surrounded by silt fences and covered with plastic tarps.~~ ~~The Storm Water Pollution Prevention Plan shall include inspection forms for routine monitoring of the site during the construction phase.~~ ~~Additional required Best Management Practices and erosion control measures shall be documented in the Storm Water Pollution Prevention Plan.~~ ~~The Storm Water Pollution Prevention Plan would be kept on site for the duration of project construction and shall be available to the local Regional Water Quality Control Board for inspection at any time.~~ ~~The developer and/or construction contractor for each development area shall be responsible for performing and documenting the application of Best Management Practices identified in the project-specific Storm Water Pollution Prevention Plan. Regular inspections shall be performed on sediment control measures called for in the Storm Water Pollution Prevention Plan. Monthly reports shall be~~	~~Less than Significant with Mitigation~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
	~~maintained and available for City inspection. An inspection log shall be maintained for the project and shall be available at the site for review by the City of Moreno Valley and the Regional Water Quality Control Board.~~	
~~Impact 4.9.6.3 Operational-Related Water Quality~~		

~~During the operational phase of the WLC the major source of pollution in storm water runoff would be contaminants such as, a variety of pollutants such as sediment, petroleum products, commonly utilized construction materials, landscaping chemicals, and (to a lesser extent) trace metals such as zinc, copper, lead, cadmium, and iron that have accumulated on the land surface over which runoff passes. These contaminants may lead to the degradation~~	~~**4.9.6.3A** Prior to discretionary permit approval for individual plot plans, a site-specific Water Quality Management Plan (WQMP) shall be submitted to the City Land Development Division for review and approval. The Water Quality Management Plan shall specifically identify site design, source control, and treatment control Best Management Practices that shall be used on site to control pollutant runoff and to reduce impacts to water quality to the maximum extent practicable. The Water Quality Management Plan shall be consistent with the Water Quality Management Plan approved for the overall World Logistics Center Specific Plan project. At a minimum, the site developer shall implement the following site design, source control, and treatment control Best Management Practices as appropriate:~~ ~~**Site Design Best Management Practices**~~ ~~Minimize urban runoff.~~ ~~Maximize the permeable area.~~ ~~Incorporate landscaped buffer areas between sidewalks and streets.~~ ~~Maximize canopy interception and water conservation by planting native or drought-tolerant trees and large shrubs.~~ ~~Use natural drainage systems.~~ ~~Where soil conditions are suitable, use perforated pipe or gravel filtration pits for low flow infiltration.~~ ~~Construct on-site ponding areas or retention facilities to increase opportunities for infiltration consistent with vector control objectives.~~ ~~Minimize impervious footprint.~~ ~~Construct streets, sidewalks and parking lot aisles to the minimum widths necessary, provided that public safety and a walkable environment for pedestrians are not compromised.~~ ~~Reduce widths of street where off-street parking is available.~~ ~~Minimize the use of impervious surfaces such as decorative concrete, in the landscape design.~~ ~~Conserve natural areas.~~ ~~Minimize Directly Connected Impervious Areas (DCIAs).~~ ~~Runoff from impervious areas will sheet flow or be directed to treatment control Best Management Practices.~~ ~~Streets, sidewalks, and parking lots will sheet flow to landscaping/bioretention areas that are planted with native or drought tolerant trees and large shrubs.~~ ~~**Source Control Best Management Practices**~~	~~Less than Significant with Mitigation~~

~~of storm water in downstream channels and require mitigation to reduce impacts to less than significant.~~	~~Source control Best Management Practices are implemented to eliminate the presence of pollutants through prevention. Such measures can be both non-structural and structural.~~ ~~Non-structural source control Best Management Practices include:~~ ~~Education for property owners, operator, tenants, occupants, or employees;~~ ~~Activity restrictions;~~ ~~Irrigation system and landscape maintenance;~~ ~~Common area litter control;~~ ~~Street sweeping private streets and parking lots; and~~ ~~Drainage facility inspection and maintenance.~~ ~~Structural source control Best Management Practices include:~~ ~~MS4 stenciling and signage;~~ ~~Landscape and irrigation system design;~~ ~~Protect slopes and channels; and~~ ~~Properly design fueling areas, trash storage areas, loading docks, and outdoor material storage areas.~~ **~~Treatment Control Best Management Practices~~** ~~Treatment control Best Management Practices supplement the pollution prevention and source control measures by treating the water to remove pollutants before it is released from the project site. The treatment control Best Management Practice strategy for the project is to select Low Impact Development (LID) Best Management Practices that promote infiltration and evapotranspiration, including the construction of infiltration basins, bioretention facilities, and extended detention basins. Where infiltration Best Management Practices are not appropriate, bioretention and/or biotreatment Best Management Practices (including extended detention basins, bioswales, and constructed wetlands) that provide opportunity for evapotranspiration and incidental infiltration may be utilized. Harvest and Reuse Best Management Practice will be used to store runoff for later non-potable uses.~~ ~~Site-specific Water Quality Management Plans have not been prepared at this time as no site-specific development project has been submitted to the City for approval. When specific projects within the project are developed, Best Management Practices will be implemented consistent with the goals contained in the Master Water Quality Management Plan. All development within the project will be required to incorporate on-site water quality features to meet or exceed the approved Master Water Quality Management Plan's water quality requirements identified previously.~~	

	~~**4.9.6.3B** The Property Owners Association (POA) and all property owners shall be responsible to maintain all onsite water quality basins according to requirements in the guidance Water Quality Management Plan and/or subsequent site-specific Water Quality Management Plans, and established guidelines of the Regional Water Quality Control Board. Failure to properly maintain such basins shall be grounds for suspension or revocation of discretionary operating permits, and/or referral to the Regional Water Quality Control Board for review and possible action. This measure shall be implemented to the satisfaction of the City Land Development Division, in consultation with the City Engineer, and Regional Water Quality Control Board.~~ ~~**4.9.6.3C** Prior to issuance of future discretionary permits for any development along the southern boundary of the World Logistics Center Specific Plan (WLCSP), the project developer of such sites, in cooperation with the Property Owners Association (POA), shall establish and annually fund a Water Quality Mitigation Monitoring Plan (WQMMP) to confirm that project runoff will not have deleterious effects on the adjacent San Jacinto Wildlife Area (SJWA). This program shall include at least quarterly sampling along the southern boundary of the site (i.e., at the identified outlet structures of the project detention basins) during wet season flows and/or when water is present, as well as sampling of any dry-season flows that are observed entering the San Jacinto Wildlife Area property from the project property, including Drainage 9, which is planned to convey only clean off-site flows from north of the World Logistics Center Specific Plan site across Gilman Springs Road. The program shall also include at least twice yearly sampling after completion of construction, and a pre-construction survey must be completed to determine general water quality baseline conditions prior to and during development of the southern portion of the World Logistics Center Specific Plan. This sampling shall be consistent with and/or comply with the requirements of applicable Storm Water Pollution Prevention Plans (SWPPPs) for the development site.~~ ~~The project developer of sites along the southern border of the World Logistics Center Specific Plan shall be responsible for preventing or eliminating any toxic pollutant (not including sediment) found to exceed applicable established public health standards. In addition, the discharge from the project shall not cause or contribute to an exceedance of Receiving Water Quality Objectives for the potential pollutants associated with the project as identified in Table 4.9.J. Once development is complete, the developer shall retain qualified personnel to conduct regular (i.e., at least quarterly) water sampling/testing of any basins and their outfalls to ensure the San Jacinto Wildlife Area will not be affected by water pollution from the project site. This measure shall be implemented to the satisfaction of the City Land Development Division Manager based on consultation with the project developer, Eastern Municipal Water District, the Regional Water Quality Control Board-Santa Ana Region, and the Mystic Lake Manager.~~	
~~**Cumulative Hydrology and Water Quality**~~		
~~The drainage system for the proposed~~	~~Previously referenced Mitigation Measures 4.9.6.1A, 4.9.6.1B, 4.9.6.2A and 4.9.6.2B, and 4.9.6.3A through 4.9.6.3C. No additional mitigation is required.~~	~~Less than Significant~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~WLC project would maintain post-development runoff at pre-development levels for off-site downstream properties. Therefore, the proposed WLC project will not make a significant contribution to any cumulatively considerable impacts related to drainage or water quality.~~		
~~**4.10 Land Use and Planning**~~		
~~**LESS THAN SIGNIFICANT IMPACTS**~~		
~~**Conflict with Applicable Land Use Plans, Policies, or Regulations**~~		

~~The land uses per se of the project are not consistent with SCAG growth projections and some Compass Plan policies because they are not residential in nature. However, the project will substantially improve the City's job/housing balance which is consistent with these regional plans. The WLC project is consistent with the City General Plan upon approval of the requested General Plan Amendment. The project is consistent with the City's Housing~~	~~No mitigation is required.~~	~~Less than Significant~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~Element. Therefore, the project is consistent with both regional and local land use plans, policies, and regulations.~~		
~~**Conflict with any Applicable Habitat or Natural Community Conservation Plan**~~		
~~The project will be required to comply with the requirements of the County's MSHCP and pay its development impact fee.~~	~~Previously referenced Mitigation Measures 4.4.6.1A through 4.4.6.1C, 4.4.6.2A and 4.4.6.2B, 4.4.6.3A and 4.4.6.3B, and 4.4.6.4A through 4.4.6.4F related to Biological Resources will be implemented, and no additional mitigation is required.~~	~~Less than Significant~~
~~**Cumulative Land Use and Planning Impacts**~~		

~~The WLC project would not have significant project-related impacts related to dividing an established community, conflicting with applicable land use plans, policies, or regulations, or conflicting with an approved habitat conservation plan. While the WLC project would represent a shift in land use policy, this policy shift does not represent a significant CEQA impact.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		
~~Physically Divide an Established Community~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The WLC is located in the eastern end of the City, so its development would not physically divide an established community. However, development could adversely affect seven existing rural residences onsite, and the land plan cannot accommodate residences within logistics warehousing areas.~~	~~No feasible mitigation is available.~~	~~Significant and Unavoidable~~
~~4.11 Mineral Resources~~		
~~Less than Significant Impacts~~		
~~Loss of Statewide, Regional, or Locally Important Mineral Resources~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The project site and surrounding area do not contain any identified regional or local mineral resources, nor are there any ongoing mineral resource extraction activities in the project area.~~	~~No mitigation is required.~~	~~No impact~~
~~**Cumulative Mineral Resources**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The WLC project site does not contain significant forest resources, so it will not make a significant contribution to cumulatively considerable impacts relative to any forest resources.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		
~~None~~	~~Not applicable~~	~~Less than Significant~~
~~4.12 Noise~~		
~~LESS THAN SIGNIFICANT IMPACTS~~		
~~Groundborne Vibration~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Project-related earthwork will create groundborne vibration, but the project noise study determined it would not exceed significance criteria for adjacent residential uses.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Airport Noise**~~		
~~There are no public airports or private airstrips within two miles of the project site, so there will be no significant airport-related noise.~~	~~No mitigation is required.~~	~~No Impact~~
~~**SIGNIFICANT IMPACTS**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~**Impact 4.12.6.1 Short-Term Construction Noise**~~		

~~Project construction will create significant noise levels for on-site uses and off site away from the project site due to construction vehicle travel.~~	~~**4.12.6.1A** Prior to issuance of any discretionary project approvals, a Noise Reduction Compliance Plan (NRCP) shall be submitted to and approved by the City. The Noise Reduction Compliance Plan shall show the limits of nighttime construction in relation to any then-occupied residential dwellings and shall be in conformance with City standards. Conditions shall be added to any discretionary projects requiring that the limits of nighttime grading be shown on the Noise Reduction Compliance Plan and all grading plans submitted to the City (per Noise Study MM N-2, pg. 51).~~ ~~**4.12.6.1B** All construction equipment, fixed or mobile, shall be equipped with operating and maintained mufflers consistent with manufacturers' standards.~~ ~~**4.12.6.1C** Construction vehicles shall be prohibited from using Redlands Boulevard south of Eucalyptus Avenue to access on-site construction for all phases of development of the Specific Plan (per Noise Study MM N-1, pg. 51).~~ ~~**4.12.6.1D** No grading shall occur within 2,800 feet of residences south of State Route-60 between 8 p.m. and 6 a.m. on weekdays and between 8 p.m. and 7 a.m. on weekends. These restrictions shall be included as part of the Noise Reduction Compliance Plan per Mitigation Measure 4.12.6.1A (per Noise Study MM N-2, pg. 51)~~ ~~**4.12.6.1E** As an alternative to Mitigation Measure 4.12.6.1D, a 12-foot tall temporary construction sound barrier may be installed for residences within 1,580 feet of active nighttime construction areas. The temporary sound barrier shall be constructed of plywood with a total thickness of 15 inches, or a sound blanket wall may be used. If sound blankets are used, they must have a Sound Transmission Class (STC) rating of 27 or greater. This shall be included as part of the Noise Reduction Compliance Plan required in Mitigation Measure 4.12.6.1A, which shall be reviewed and approved by the City prior to implementation (per Noise Study MM N-2 and N-3, pg. 51 and pg. 52).~~ ~~**4.12.6.1F** As an alternative to Mitigation Measure 4.12.6.1D and 4.12.6.1E, on-site noise measurements of construction areas may be taken by qualified personnel and specific buffer distances between construction activities and existing residences may be proposed based on actual noise levels. These measurements will be incorporated into the Noise Reduction Compliance Plan required in Mitigation Measure 4.12.6.1A, which shall be reviewed and approved by the City prior to implementation (per Noise Study MM N-2, pg. 51).~~ ~~**4.12.6.1G** Any discretionary approvals for development that proposes grading within 1,580 feet of occupied residential units shall require that all grading equipment be equipped with residential grade mufflers (or better). All stationary construction equipment shall be placed so that emitted noise is directed away from noise-sensitive receptors nearest the site. Additionally, stationary construction equipment shall have all standard acoustic covers in place during operation (per Noise Study MM N-4, pg. 52).~~ ~~**4.12.6.1H** All material stockpiles in connection with any grading operations shall be located at least 1,200 feet from existing residences (per Noise Study MM N-5, pg. 52).~~	~~Significant and Unavoidable~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
	~~4.12.6.1I~~ ~~All project-related off-site construction shall be limited to 6 a.m. and 8 p.m. on weekdays only. Construction during weekends and City holidays shall not be permitted (per Noise Study MM N-6, pg. 53) to the satisfaction of the Land Development Division/Public Works.~~ **~~4.12.6.1J~~** ~~Prior to issuance/approval of any grading permits, off-site construction activities adjacent to residential uses shall provide for installation of 12-foot temporary sound barriers for construction activities lasting more than one month. The sound barrier will reduce noise levels by approximately 10 dB. The temporary sound barrier may be constructed of plywood with a total thickness of 1.5 inches, or a sound blanket wall may be used. If sound blankets are used, the curtains must have a Sound Transmission Class (STC) rating of 27 or greater. No off-site construction is permitted during weekday nighttime hours (8 p.m. to 6 a.m.) or during weekends and City holidays except for emergencies (per Noise Study MM N-7, pg. 53).~~	
~~Impact 4.12.6.2 Long-Term Traffic Noise~~		

~~Project operations will create significant long-term noise impacts on site and along a number of off-site roadways. Not all off-site impacts can be mitigated to less than significant levels by installing sound-attenuation improvements.~~	~~**4.12.6.2A** When processing future individual buildings under the World Logistics Center Specific Plan, as part of the City's approval process, the City shall require the Applicant to take the following three actions for each building prior to approval of discretionary permits for individual plot plans for the requested development:~~ ~~Action 1: Perform a building-specific noise study to ensure that the assumptions set forth in the FEIR prepared for the programmatic level entitlement remain valid. These procedure used to conduct these noise analyses shall be consistent with the noise analysis conducted in the programmatic FEIR and shall be used to impose building-specific mitigation on the individually-proposed buildings.~~ ~~Action 2: If the building-specific analyses identify that the proposed development triggers the need for mitigation from the proposed building, including all preceding developments in the specific plan area, the Applicant shall implement the mitigation identified in the WLC FEIR. Prior to implementing the mitigation, the Applicant shall send letters by registered mail to all property owners and non-owner occupants of properties that would benefit from the proposed mitigation asking them to provide a position either in favor of or in opposition to the proposed noise abatement mitigation within 45 days. Each property shall be entitled to one vote on behalf of owners and one vote per dwelling on behalf of non-owner occupants.~~ ~~If more than 50% of the votes from responding benefited receptors oppose the abatement, the abatement will not be considered reasonable. Additionally, for noise abatement to be located on private property, 100% of owners of property upon which the abatement is to be placed must support the proposed abatement. In the case of proposed noise abatement on private property, no response from a property owner, after three attempts by registered mail, is considered a *no* vote.~~ ~~At the completion of the vote at the end of the 45 day period, the Applicant shall provide the tentative results of the vote to all property owners by registered mail. During the next 15 calendar days following the date of the mailing, property owners may change their vote. Following the 15-day period, the results of the vote will be finalized and made public.~~ ~~Action 3: Upon consent from benefited receptors and property owners, the Applicant shall post a bond for the cost of the construction of the necessary mitigation as estimated by the City Engineer to ensure completion of the mitigation. The certificate of occupancy permits shall be issued upon posting of the bond or demonstration that 50% of the votes from responding benefited receptors oppose the abatement or, if the abatement is located on private property, any property owners oppose the abatement (per Noise Study MM N-8, pg.53).~~ ~~**4.12.6.2B** Prior to issuance/approval of any building permits, the centerline of Cactus Avenue Extension will be located no closer than 114 feet to the residential property lines along Merwin Street. An alternative is to locate the roadway closer to the residences and provide a soundwall along Cactus Avenue Extension. The soundwall location and height should be determined by a Registered Engineer, and the soundwall shall be designed to reduce noise levels to less than 65 CNEL at the residences. The Engineer shall provide calculations and supporting information in a report that will~~	~~Significant and Unavoidable~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
	~~be required to be submitted to and approved by the City prior to issuing permits to construct the road (per Noise Study, pg. 51, Cactus Avenue Extension, ID #50).~~ ~~**4.12.6.2C** Prior to the approval of any discretionary permits, cumulative impact areas shown in the WLC EIR Noise Study shall be included in the soundwall mitigation program outlined in Mitigation Measures 4.12.6.2A and 4.12.6.2D (per Noise Study MM N-9, pg. 62).~~ ~~**4.12.6.2D** Prior to issuance of a building permit, the applicant shall demonstrate that the development maintains a buffer with soundwall for noise attenuation at residential/warehousing interface (i.e., western and southwestern boundaries of the project site). To keep the noise levels at nearby residential areas less than typical ambient conditions, the warehousing property line shall be located a minimum of 250 feet from the residential zone boundary, and a 12-foot noise barrier shall be located along the perimeter of the property that faces any residential areas. The 12 foot noise barrier may be a soundwall, berm, or combination of the two. The height shall be measured relative to the pad of the warehouse. This requirement shall be implemented anytime residential areas are within 600 feet of the warehousing property line to insure that a noise level of 45 dBA (Leq) will not be exceeded at the residential zone. This requirement is consistent with Item 10 of Municipal Code Section 9.16.160 Business park/industrial that states, "All manufacturing and industrial uses adjacent to residential land uses shall include a buffer zone and/or noise attenuation wall to reduce outside noise levels" (per Noise Study MM N-10, pg.62)~~	
~~Impact 4.12.6.3 Long-Term Operational Noise~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Potential long-term stationary noise impacts would primarily be associated with operations at logistics facilities within the WLCSP area. With implementation of a minimum 250-foot setback from residential uses, potential long-term operational noise impacts would be less than significant.~~	~~The project noise assessment determined that operational noise impacts from warehouse activities would not exceed City standards at nearby residential areas with implementation of the 250-foot setback requirement.~~	~~Less than Significant with Mitigation~~
~~**Impact 4.12.6.4 Long-Term Utility Noise**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Noise generated by SCGC blow-down events has the potential to cause permanent hearing loss in persons in the developed area of the project. This is a significant impact and mitigation is required.~~	**~~4.12.6.4A~~** ~~Prior to the issuance of building permits for projects within 1,300 feet of the Southern California Gas Company (SCGC) and San Diego Gas and Electric (SDG&E) blow-down facilities, documentation shall be submitted to the City confirming that sound attenuation devices and/or improvements for the blow-down facilities providing at least a 40 dB reduction in noise levels during blow-down events are available and will be installed for all planned blow-down events. It shall be the responsibility of the developer to fund all sound attenuation improvements to the blow-down facilities required by this measure. It shall also be the responsibility of the developer to coordinate with San Diego Gas and Electric and/or Southern California Gas Company regarding the installation of any sound attenuation devices or improvements on the blow-down facilities at either the San Diego Gas and Electric compressor station or the Southern California Gas Company pipelines. This measure shall be implemented to the satisfaction of the City Land Management Division (per Noise Study MM N-11, pg.65).~~	~~Less than Significant with Mitigation~~
~~Impact 4.12.6.5 Cumulative Noise Impacts~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Traffic noise level increases from the existing baseline condition and the future (2022 and 2035) time horizons are attributable to the intermingled effects of both the cumulative development projects in the project vicinity and region as well as the proposed project. This is a significant impact and mitigation is required.~~	~~Previously referenced Mitigation Measures 4.12.6.1A through 4.12.6.1I, 4.12.6.2A through 4.12.6.2C, 4.12.6.3A, and 4.12.6.4A will be implemented, but cumulative noise impacts will still be significant.~~	~~Significant and Unavoidable~~
~~**4.13 Population, Housing, and Employment**~~		
~~**LESS THAN SIGNIFICANT IMPACTS**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Population Growth~~		

~~The project proposes to develop logistics warehouses which will result in minimal direct population increase in the City, although some workers may move to the City to work at this project, and some local residents will also work at this project. The project will not necessitate extension of major infrastructure and the project will not remove obstacles that will result in substantial population growth.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~Displace Substantial Housing/People~~		

~~The existing seven rural residences on the site will eventually convert to "Light Logistics" uses. The project will eliminate the potential for the site to provide 388 units of affordable housing that were proposed under the Moreno Highlands Specific Plan. However, the City can meet its regional housing goals without these units, and the project is consistent with the City's current Housing Element.~~	~~No mitigation required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	**~~Mitigation Measures~~**	**~~Level of Significance~~**
~~None~~	~~Not applicable~~	~~Not applicable~~
~~Cumulative Population, Housing, and Employment Impacts~~		
~~Implementation of the proposed WLC project would improve the City's jobs/ housing ratio by creating thousands of new construction and permanent jobs in the City. Therefore, it will not result in cumulatively considerable impacts to population or housing.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~4.14 Public Services and Facilities~~		
~~LESS THAN SIGNIFICANT IMPACTS~~		
~~Police Protection~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~As development under the WLCSP, the need for police services will increase. Future projects will pay applicable development impact fees and contribute property taxes to fund needed police services.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Fire Protection**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~As development under the WLCSP, the need for fire services will increase. Under the WLCSP, a new fire station site will be contributed to the City. Future projects will pay applicable development impact fees and contribute property taxes to fund needed police services.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Schools**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Future industrial development will contribute no new students to local schools. Payment of the school impact fees to the MVUSD and SJUSD will reduce potential impacts to school services and facilities to less than significant levels.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~Parks, Recreation, Trails~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Development under the WLCSP is logistics warehousing which will not generate new City residents who require additional parks and trails. The WLCSP proposes trail connections to Redlands Boulevard, Cactus Avenue, and the State-owned land to the south, plus a loop trail through the WLCSP site.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~New or Physically Altered Recreation and Park Facilities~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	**~~Mitigation Measures~~**	**~~Level of Significance~~**
~~Development under the WLCSP is logistics warehousing which will not generate new City residents who require additional or altered parks.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~Cumulative Public Services and Facilities Impacts~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~As development occurs, the need for public services will incrementally increase. Anticipated property tax increases and payment of DIF fees to the City will effectively mitigation potential cumulative impacts to public services.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		
~~None~~	~~Not applicable~~	~~Less than Significant~~
~~4.15 Traffic and Circulation~~		
~~LESS THAN SIGNIFICANT IMPACTS~~		
~~Air Traffic Patterns~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The project site is not within two miles of a public airport or private airstrip, and there are no major air traffic patterns over or in the immediate vicinity of the project site.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~Design Hazard Features~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The project site is currently vacant agricultural land with only two major roadways (Theodore Street and Alessandro Boulevard). Under the WLCSP, a complete arterial circulation network will eventually be constructed that will allow full truck access and minimize road-related hazards.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Emergency Access**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The project site is currently vacant agricultural land with only two major roadways and minimal need for emergency services. Development under the WLCSP will eventually result in the construction of a complete arterial circulation network which will allow full access for emergency vehicles and services.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~Alternative Transportation Policies, Plans, or Programs~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The proposed project will create a complete roadway circulation network, install a loop trail system, have Class II bikeways and sidewalks on all internal arterial streets, and streets can accommodate bus turnouts when needed by the local transit agency.~~	~~Carpooling is required under Air Quality Mitigation Measure 4.3.6.4A. No additional mitigation is required.~~	~~Less than Significant~~
~~SIGNIFICANT IMPACTS~~		
~~**Impact 4.15.6.1 Existing (2012) With Phase 1 Conditions Traffic and Level of Service**~~		

~~Existing baseline (year 2012) with Phase 1 intersection levels of service for the study area intersections include 15 study intersections where Phase 1 of the project would have a significant impact. Twelve of these intersections already exceed the threshold of significance under existing conditions and would therefore be considered cumulative impacts and mitigation is required. Phase 1 of the project would cause a direct project impact at the~~	~~**4.15.7.4A** A traffic impact analysis ("TIA") conforming to the guidelines for traffic impact analysis adopted by the City shall be submitted in conjunction with each Plot Plan application within the World Logistics Center Specific Plan. Prior to the approval of the Plot Plan, the City shall review the traffic impact analysis to determine if any of the traffic improvements listed in Final EIR Volume 2 Tables 4.15.AV through 4.15.BA (TIA Tables 74 through 79) of the traffic impact analysis prepared for the Program Environmental Impact Report are required to be completed prior to the issuance of a certificate of occupancy for each building. If the City determines that any of the improvements within Moreno Valley are required to be constructed in order to ensure that the traffic impacts which will result from the construction and operation of the building will be mitigated into insignificance, then the completion of construction of the improvements prior to the issuance of a Certificate of Occupancy for the building shall be made a Condition of Approval of the Plot Plan. Construction of improvements within the City shall be subject to credit/reimbursement agreement for those DIF and/or TUMF eligible costs. If the City determines that any of the improvements outside Moreno Valley are required to be constructed in order to ensure that the traffic impacts which will result from the construction and operation of the building will be mitigated to a less than significant level, then the payment of any necessary fair share contribution as prescribed in Mitigation Measure 4.15.7.4G prior to the issuance of a Certificate of Occupancy for the building shall be made a Condition of Approval of the Plot Plan. If the City determines that the traffic impacts which will result from the construction or operation of a building will be significantly more adverse than those shown in the Program Environmental Impact Report, further environmental review shall be conducted prior to the approval of the Plot Plan pursuant to Public Resources Code § 21166 and CEQA Guidelines § 15162 to determine what additional mitigation measures, if any, will be required in order to maintain the appropriate levels of service.~~ ~~**4.15.7.4B** As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require the dedication of appropriate right-of-way consistent with the Subdivision Map Act for frontage street improvements contained within the World Logistics Center Specific Plan Circulation Map, as shown in this Program EIR Figure 3-10 (or Figure 22 in the TIA prepared for this Program EIR). Required dedications shall be made prior to the issuance of occupancy permits for the requested development.~~ ~~**4.15.7.4C** As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require each project to pay the Development Impact Fee (DIF) as set forth in Municipal Code Chapter 3.42. Required DIF payments shall be made prior to the issuance of occupancy permits for the requested development.~~ ~~**4.15.7.4D** As a condition of approval for individual development permits processed in the future under the World Logistics Center Specific Plan, the City shall require each project to pay the requisite Transportation Uniform Mitigation Fee (TUMF) as set forth in Municipal Code Sections 3.55.050 and 3.55.060. Required TUMF payments shall be made prior to the issuance of occupancy permits for the requested development.~~	~~Significant and Unavoidable~~

~~other three intersections and mitigation is required.~~

~~**4.15.7.4E** In order to ensure that all of the Project's traffic impacts are mitigated to the greatest extent feasible, the Applicant shall contribute its fair share of the cost of the needed traffic improvements that are not within the City as identified in the World Logistic Center Specific Plan Traffic Impact Analysis (i.e., under the jurisdiction of other cities, the County of Riverside or Caltrans, pursuant to Mitigation Measure 4.15.7.4F). As used in this mitigation measure, the Applicant's "fair share" has been determined in compliance with the requirements of the Fee Mitigation Act, Government Code § 66000 et seq., and, pursuant to § 66001(g), does not require that the Applicant be responsible for making up for any existing deficiencies.~~

~~For example, the intersection of Martin Luther King Blvd. and the I-215 northbound ramps (Intersection 85) in the City of Riverside was identified as a place where the World Logistic Center contributes to cumulatively significant impacts, and where the fair share contribution of the World Logistic Center project as a whole was computed to be 6.2%. If the City of Riverside establishes a fair share contribution program consistent with this Mitigation Measure 4.15.7.4F to improve that intersection, then when a certificate of occupancy is to be issued for a 2-million square feet high-cube warehouse in the World Logistic Center (approximately 5% of the entire World Logistic Center project) the amount of the fair share payment due from the Applicant to the City of Riverside would be computed as follows:~~

~~Amount Due~~	~~=~~	~~Total cost of Improvement~~	~~×~~	~~Total World Logistics Center fair share (6.2%) as determined by Traffic Impact Analysis~~	~~×~~	~~% attributable to the building that is subject to the certificate of occupancy (5%)~~

~~A × B × C = D~~

~~A= % attributable to the building that is subject to the certificate of occupancy (5%)~~

~~B= Total World Logistics Center fair share (6.2%) as determined by Traffic Impact Analysis~~

~~C= Total cost of Improvement~~

~~D= Amount Due~~

~~A similar calculation would be done for each subsequent building, with payments for each due at the time of issuance of the certificate of occupancy. As a result, while each building individually would not produce a significant impact, and therefore would not be required to pay any mitigation fees if considered by itself, the total amount of the payments for all of the buildings would be equal to the fair share payment for the entire World Logistic Center to the extent that the responsible jurisdiction has chosen to adopt a fair share contribution funding program consistent with Mitigation Measure 4.15.7.4F.~~

~~**4.15.7.4F**~~ ~~The Applicant shall pay a portion of the fair share of the cost of traffic improvements identified in the Transportation Impact Analysis for those significantly impacted road segments and intersections for each warehouse building within the World Logistics Center if the impacted jurisdiction has established a fair share contribution program prior to the approval of a building-specific plot plan. The City shall determine whether a fair share program exists in the impacted jurisdiction and, if one does exist, require that the appropriate fees are paid by the Applicant, consistent with the requirements below, prior to the issuance of a certificate of occupancy for the building in question. If no fair share program exists or if the existing programs are not consistent with the requirements below, then no payment of fees shall be required. The impacts are to be determined on a road segment or intersection basis. Nothing in this condition requires the payment of a traffic impact fee imposed by another jurisdiction which covers improvement to facilities where the project does not have a significant impact. Fair-share contributions will be determined on a building-by-building basis as a share of the impact of the Project as a whole (for each segment or intersection where the World Logistics Center project as a whole has a significant impact identified in the Programmatic Environmental Impact Report) as determined by the Traffic Impact Analysis and will be due as each certificate of occupancy is issued. The fair share payments for the significantly impacted road segments and intersections identified in the Programmatic Environmental Impact Report will be required even though the impact resulting from a specific building does not, by itself, cause a significant impact.~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
	~~**4.15.7.4G** City shall work directly with Western Riverside Council of Governments to request that Transportation Uniform Mitigation Fee funding priorities be shifted to align with the needs of the City, including improvements identified in the World Logistics Center Specific Plan traffic impact analysis. Toward this end, City shall meet regularly with Western Riverside Council of Governments.~~	
~~**Impact 4.15.6.2 Existing (2012) With Project (Buildout) Conditions Traffic and Level of Service Impacts**~~		

~~When project traffic under buildout conditions is overlaid on existing roadway and freeway conditions, significant project-specific and cumulative traffic impacts will occur. Local and regional roadway and intersection impacts can be effectively mitigated, as outlined in the project TIA and described in the mitigation measures to the right.~~ ~~At this time, there is no effective mitigation for anticipated project impacts on local freeways. In addition, the City cannot control the~~	~~Implementation of previously identified Measures 4.15.7.4A through 4.15.7.4G as they apply to development that occurs from project opening until Buildout.~~	~~Significant and Unavoidable~~ ~~(see Cumulative Impacts)~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~timing of improvements required at locations outside of the City of Moreno Valley.~~		
~~Impact 4.15.6.3 Year 2022 with Project (Phase 1) Conditions Traffic and Level of Service Impacts~~		
~~The project will contribute significant amounts of traffic onto roadways and at intersections in the City of Moreno Valley and other cities, and area freeways, during Phase 1 development (approx. 2013 to 2022).~~	~~Implementation of previously identified Measures 4.15.7.4A through 4.15.7.4G as they apply to development that occurs from project opening until Year 2022 (considered to be Phase 1).~~	~~Significant and Unavoidable~~
~~Impact 4.15.6.4 Cumulative Impacts - General Plan Buildout (Year 2035) With Project Conditions Traffic and Level of Service Impacts~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The project will contribute significant amounts of traffic onto roadways and at intersections in the City of Moreno Valley and other cities, and area freeways, after completion of development under the WLCSP (i.e., after 2022).~~	~~Implementation of previously identified Measures 4.15.7.4A through 4.15.7.4G for development as it occurs during development under the WLCSP.~~	~~Significant and Unavoidable~~
~~**4.16 Utilities and Service Systems**~~		
~~**LESS THAN SIGNIFICANT IMPACTS**~~		
~~**Construction or Expansion of Water Treatment Facilities**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The project can connect to the existing water supply and will not require the construction of any new water storage or treatment facilities.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Cumulative Water Supply**~~		

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~The EMWD has determined that it will be able to provide adequate water supply to meet the potable water demand for the project area, including existing and future users, when planned groundwater storage improvements are completed.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Wastewater Treatment Requirements**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Expected wastewater flows from the proposed WLC project will not exceed the capabilities of the serving treatment plant.~~	~~No mitigation is required.~~	~~No Impact~~
~~**Wastewater Treatment Capacity and/or New or Expanded Wastewater Facilities**~~		
~~The proposed WLC project would not require the construction of new wastewater treatment facilities or expansion of existing facilities, which could cause significant environmental effects.~~	~~No mitigation is required.~~	~~Less than Significant~~

~~**Table 1.B: World Logistics Center Project Environmental Impact Summary**~~

~~**Issues/Impacts**~~	~~**Mitigation Measures**~~	~~**Level of Significance**~~
~~**Cumulative Wastewater Treatment**~~		
~~The proposed project, in conjunction with planned and future development within the service area, will incrementally increase the need for wastewater treatment over the long-term. However, the project itself would not require the construction of new wastewater treatment facilities or expansion of existing facilities.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~**Solid Waste Facilities**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Adequate daily surplus capacity exists at the receiving landfill, so project development would not significantly impact current operations or the expected lifetime of the landfill serving the project area.~~	~~No mitigation is required.~~	~~Less than Significant~~
~~Solid Waste Reduction~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The project would be required to comply with applicable elements of AB 1327, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991) and other applicable local, state, and federal solid waste disposal standards, thereby ensuring that the solid waste stream to the Badlands Sanitary Landfill is reduced in accordance with existing regulations.~~	~~Implementation of previously identified Air Quality Mitigation Measure 4.3.6.4B will help reduce long-term production of solid waste from the site, and no additional mitigation is required.~~	~~Less than Significant~~
~~**Cumulative Solid Waste**~~		

~~The proposed project, in conjunction with planned development in the surrounding region, will contribute increased volumes of solid waste to local landfills. However, these volumes will not exceed the capabilities of the County's waste management system. Consequently, cumulative impacts associated with solid waste within the City would be considered less than significant.~~	~~Implementation of previously identified Air Quality Mitigation Measure 4.3.6.4B will help reduce long-term production of solid waste from the site.~~	~~Less than Significant~~
~~Cumulative Energy Facilities and Consumption~~		
~~The WLC project, in conjunction~~	~~Implementation of project as designed (i.e., with sustainability outlined in WLCSP) and allowance for future "solar ready" buildings (PV installations), plus implementation of Mitigation Measures 4.16.4.6.1A~~	~~Less than Significant~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~with planned development in the region, will increase energy consumption as development occurs. The project will adhere to Title 24 and the California Green Building Code, and will exceed Title 24 energy consumption guidelines by at least 10 percent. Therefore, the project will not make a significant contribution to energy facilities or consumption.~~	~~and 4.16.4.6.1C will reduce project's contribution to cumulative energy consumption to less than significant levels.~~	
~~SIGNIFICANT IMPACTS~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~Impact 4.16.1.6.1 Adequate Water Supply~~		

~~The Water Supply Assessment prepared for the project by Eastern Municipal Water District determined there were sufficient supplies of water to serve the proposed project. However, the supply of water imported from the State is not currently guaranteed, so there may be significant impacts related to long-term water supply.~~	~~**4.16.1.6.1A** Prior to approval of a precise grading permit for each plot plan for development within the World Logistics Center Specific Plan (WLCSP), the developer shall submit landscape plans that demonstrate compliance with the World Logistics Center Specific Plan, the State of California Model Water Efficient Landscape Ordinance (AB 1881), and Conservation in Landscaping Act (AB 325). This measure shall be implemented to the satisfaction of the Planning Division. Said landscape plans shall incorporate the following:~~ ~~Use of xeriscape, drought-tolerant, and water-conserving landscape plant materials wherever feasible and as outlined in Section 6.0 of the World Logistics Center Specific Plan;~~ ~~Use of vacuums, sweepers, and other “dry” cleaning equipment to reduce the use of water for wash down of exterior areas;~~ ~~Weather-based automatic irrigation controllers for outdoor irrigation (i.e., use moisture sensors);~~ ~~Use of irrigation systems primarily at night or early morning, when evaporation rates are lowest;~~ ~~Use of recirculation systems in any outdoor water features, fountains, etc.;~~ ~~Use of low-flow sprinkler heads in irrigation system;~~ ~~Provide information to the public in conspicuous places regarding outdoor water conservation; and~~ ~~Use of reclaimed water for irrigation if it becomes available.~~ ~~**4.16.1.6.1B** All buildings shall include water-efficient design features outlined in Section 4.0 of the World Logistics Center Specific Plan. This measure shall be implemented to the satisfaction of the Land Development Division/Public Works. These design features shall include, but not be limited to the following:~~ ~~Instantaneous (flash) or solar water heaters;~~ ~~Automatic on and off water facets;~~ ~~Water-efficient appliances;~~ ~~Low-flow fittings, fixtures and equipment;~~ ~~Use of high efficiency toilets (1.28 gallons per flush [gpf] or less);~~ ~~Use of waterless or very low water use urinals (0.0 gpf to 0.25 gpf);~~ ~~Use of self-closing valves for drinking fountains;~~ ~~Infrared sensors on drinking fountains, sinks, toilets and urinals;~~ ~~Low-flow showerheads;~~	~~Less than Significant with Mitigation~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
	~~Water-efficient ice machines, dishwashers, clothes washers, and other water-using appliances;~~ ~~Cooling tower recirculating system where applicable;~~ ~~Provide information to the public in conspicuous places regarding indoor water conservation; and~~ ~~Use of reclaimed water for wash down if it becomes available.~~ ~~**4.16.1.6.1C** Prior to approval of a precise grading permit for each plot plan, irrigation plans shall be submitted to and approved by the City demonstrating that the development will have separate irrigation lines for recycled water. All irrigation systems shall be designed so that they will function properly with recycled water if it becomes available. This measure shall be implemented to the satisfaction of the City Planning Division and Land Development Division/Public Works.~~	
~~**Impact 4.16.1.6.2 Storm Water Drainage Requirements**~~		
~~The development of the proposed WLC project would introduce a substantial amount of impervious surfaces on the site, which could result in significant increases in off-site runoff.~~	~~**4.16.1.6.2A** Each Plot Plan application for development shall include a concept grading and drainage plan, with supporting engineering calculations. The plans shall be designed such that the existing sediment carrying capacity of the drainage courses exiting the project area is similar to the existing condition. The runoff leaving the project site shall be comparable to the sheet flow of the existing condition to maintain the sediment carrying capacity and amount of available sediment for transport so that no increased erosion will occur downstream. This measure shall be implemented to the satisfaction of the City Land Development Division/Public Works.~~	~~Less than Significant with Mitigation~~
~~**Cumulative Impacts to Water Supply Services**~~		

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	~~Mitigation Measures~~	~~Level of Significance~~
~~The proposed WLC project would connect to existing conveyance infrastructure and adequate treatment capacity is available, so the proposed WLC project would not make a significant contribution to any cumulatively considerable impacts on water supply or infrastructure.~~	~~Mitigation not required~~	~~Less than Significant with Mitigation~~
~~Impact 4.16.4.6.1 Construction or Expansion of Electrical and Natural Gas Facilities~~		

~~Based on calculations contained Tables 4.16.I and 4.16.J, the proposed WLC project would consume approximately 376,426 megawatt-hours (MWh) of electricity and almost 14.6 million cubic feet of natural gas per year. Therefore, the proposed project may induce the need to construct new electrical and natural gas facilities. This is a significant impact that requires mitigation.~~	~~**4.16.4.6.1A** Each application for a building permit shall include energy calculations to demonstrate compliance with the California Energy Efficiency Standards confirming that each new structure meets applicable Building and Energy Efficiency Standards. The plans shall also ensure that buildings are in conformance with the State Energy Conservation Efficiency Standards for Nonresidential buildings (Title 24, Part 6, Article 2, California Administrative Code). This measure shall be implemented to the satisfaction of the Building and Safety and Planning Divisions. Plans shall show the following:~~ ~~Energy-efficient roofing systems, such as “cool” roofs, that reduce roof temperatures significantly during the summer and therefore reduce the energy requirement for air conditioning.~~ ~~Cool pavement materials such as lighter-colored pavement materials, porous materials, or permeable or porous pavement, for all roadways and walkways not within the public right-of-way, to minimize the absorption of solar heat and subsequent transfer of heat to its surrounding environment.~~ ~~Energy-efficient appliances that achieve the 2008 Appliance Energy Efficiency Standards (e.g., EnergyStar Appliances) and use of sunlight-filtering window coatings or double-paned windows.~~ ~~**4.16.4.6.1B** Prior to the issuance of any building permits within the World Logistics Center Specific Plan, each project developer shall submit energy calculations used to demonstrate compliance with the performance approach to the California Energy Efficiency Standards to the Building and Safety and Planning Divisions that shows each new structure meets the applicable Building and Energy Efficiency Standards. Plans may include but are not necessarily limited to implementing the following as appropriate:~~ ~~High-efficiency air-conditioning with electronic management system (computer) control.~~ ~~Variable Air Volume air distribution.~~ ~~Outside air (100 percent) economizer cycle.~~ ~~Staged compressors or variable speed drives to flow varying thermal loads.~~ ~~Isolated High-efficiency air-conditioning zone control by floors/separable activity areas.~~ ~~Specification of premium-efficiency electric motors (i.e., compressor motors, air handling units, and fan-coil units).~~ ~~Use of occupancy sensors in appropriate spaces.~~ ~~Use of compact fluorescent lamps in place of incandescent lamps.~~ ~~Use of cold cathode fluorescent lamps.~~ ~~Use of Energy Star exit lighting or exit signage.~~ ~~Use of T-8 lamps and electronic ballasts where applications of standard fluorescent fixtures are identified.~~	~~Less than Significant with Mitigation~~

~~Table 1.B: World Logistics Center Project Environmental Impact Summary~~

~~Issues/Impacts~~	**~~Mitigation Measures~~**	**~~Level of Significance~~**
	~~Use of lighting power controllers in association with metal-halide or high-pressure sodium (high intensity discharge) lamps for outdoor lighting and parking lots.~~ ~~Use of skylights (may conflict with installation of solar panels in some instances).~~ ~~Consideration of thermal energy storage air conditioning for spaces or hotel buildings, meeting facilities, theaters, or other intermittent-use spaces or facilities that may require air-conditioning during summer, day-peak periods.~~ ~~**4.16.4.6.1C** Prior to the issuance of a building permit, new development shall demonstrate that each building has implemented the following:~~ ~~1) Install solar panels with a capacity equal to the peak daily demand for the ancillary office uses in each warehouse building;~~ ~~2) Increase efficiency for buildings by implementing either 10 percent over the 2008 Title 24's energy saving requirements or the Title 24 requirements in place at the time the building permit is approved, whichever is more strict; and~~ ~~3) Require the equivalent of "Leadership in Energy and Environmental Design Certified" for the buildings constructed at the World Logistics Center based on Leadership in Energy and Environmental Design Certified standards in effect at the time of project approval.~~ ~~This measure shall be implemented to the satisfaction of the Building and Safety and Planning Divisions.~~	

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~1.11 ALTERNATIVES TO THE PROPOSED PROJECT~~

~~In compliance with *CEQA Guidelines* (Section 15126.6), an EIR must describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the project objectives as listed in Table 1.C and would avoid or substantially lessen significant effects of the project. The EIR need not consider every conceivable alternative; rather it must consider a reasonable range of potentially feasible alternatives. This EIR evaluates a “No Project/No Build” as well as a “No Project” alternative (i.e., development according to the General Plan and zoning) in order to allow decision-makers to compare the effect of approving the project to the effect of not approving the project. A more detailed description of each project alternative as well as an analysis of the potential environmental impacts associated with the construction and operation of each is provided in Section 6.0 *Alternatives*, It should be noted that, for all of the alternatives, the 1,084 acres owned by the California Department of Fish and Wildlife (CDFW) and San Diego Gas & Electric (SDG&E) would be designated as Open Space in the City’s General Plan, similar to the proposed project.~~

~~1.11.1 No Project/No Development~~

~~CEQA requires an analysis of the environmental effects of not developing the proposed project. This allows the reviewer to see what the results of not developing the project site would be and also outlines existing or baseline conditions on the site. With the No Development Alternative, no development would occur and the majority of the site would remain in dry farming, with a small amount in rural residential uses.~~

~~1.11.2 No Project/Existing General Plan Alternative~~

~~Pursuant to CEQA (§15126.6[e][2]), this No Project Alternative discusses what would reasonably be expected to occur on the site based on current plans and consistent with available infrastructure and community services in the foreseeable future. This alternative would result in development of the project with the land uses currently shown in the City’s General Plan (i.e., the Moreno Highlands Specific Plan or MHSP). The approved 3,038-acre MHSP is a master planned, mixed-use community, consisting of up to 7,763 residential dwelling units on approximately 2,435 acres and approximately 603 acres of business, retail, institutional, and other uses. The 1,084 acres owned by the CDFW and SDG&E are currently designated as Residential, Public Facilities, and Open Space in the City’s General Plan and would be designated as permanent Open Space under this alternative, similar to the proposed project.~~

~~1.11.3 Alternative 1: Reduced Density~~

~~This alternative would develop approximately 29 million square feet of logistics warehousing (approximately 30% less than under the proposed project) on the 2,610 acres of land under the Specific Plan, including 74.3 acres for open space. The 1,084 acres owned by the CDFW and SDG&E would be designated as Open Space in the City’s General Plan, similar to the proposed project.~~

~~1.11.4 Alternative 2: Mixed Use A Alternative~~

~~This alternative would result in development of the entire property with a mix of 1,410 acres of logistics warehousing (22 million square feet), 1,000 acres of light manufacturing, assembly, or business park uses (20 million square feet), 50 acres of retail commercial uses (500,000 square feet), 100 acres of professional or medical office uses (1 million square feet), and 150~~

~~acres of open space. The 1,084 acres owned by the CDFW and SDG&E would be designated as Open Space in the City's General Plan, similar to the proposed project.~~

~~1.11.5 Alternative 3: Mixed Use B Alternative~~

~~This alternative would develop the project site similar to the land use plan of the MHSP but with 10 million square feet of logistics warehousing on the 603 acres proposed for business, retail, institutional, and other uses under the MHSP.~~

~~1.11.6 Alternative Sites~~

~~This alternative would relocate development under the proposed project to another site in the surrounding region. This analysis included potential sites in nearby cities and several unincorporated sites in the general project area. Due to the size and nature of the project, no feasible alternative sites were found in any of the eleven (11) jurisdictions evaluated.~~

~~**1.11.7 Comparison of Project Alternatives**~~

~~The following discussion compares the impacts of each alternative with the impacts of the proposed project, as detailed in Section 4.0 of this EIR. Table 1.C compares the impacts of the alternatives with those of the proposed project. This table identifies whether the alternative~~

~~results in (1) a reduction of the impact; (2) a greater impact than the project; or (3) the same impact as the project.~~

~~Table 1.C: Comparison of Alternatives to the Proposed Project~~

~~Environmental Issue~~	~~Proposed Project~~	~~No Project/ No Build~~	~~No Project/ Existing General Plan~~	~~Alt. 1 Reduced Density~~	~~Alt. 2 Mixed Use A~~	~~Alt. 3 Mixed Use B~~

~~Proposed Project~~

~~NI: No Impact~~ ~~LTS: Less than Significant Impact~~

~~LTS/mit: Less than Significant Impact with Mitigation~~ ~~SIG: Significant Impact with or without Mitigation~~

~~Project Alternatives~~

~~= Compared with the proposed project, no change in the significance of impact will occur.~~

~~→ Compared with the proposed project, the significance of the impact is increased.~~

~~← Compared with the proposed project, the significance of the impact is reduced.~~

~~+ Compared with the proposed project, a new impact has been identified.~~

~~←SIG Compared with the proposed project, the volume or extent of the impact is reduced, yet still significant.~~

~~1.11.8 Environmentally Superior Alternative~~

~~As shown above in Table 1.C, the No Project/Existing General Plan Alternative has mixed impacts relative to the proposed project; it reduces aesthetic impacts to less than significant levels but worsens the jobs/housing ratio by introducing more housing than employment-generating uses. The Reduced Density Alternative incrementally reduces a number of impacts of the proposed project (e.g., traffic, air quality, and noise) but cannot reduce them to less than significant levels even with mitigation. The Mixed Use A Alternative substantially increases traffic and related impacts compared to the project impacts, but it does not create any additional significant impacts. The Mixed Use B Alternative would incrementally increase traffic and would not improve the jobs/housing balance. In addition, this alternative would also worsen the jobs/housing ratio of the City by allowing the construction of many more homes than job-creating land uses. Regarding air quality impacts (criteria pollutants), development of~~

~~any land uses would likely exceed SCAQMD thresholds mainly due to the size of the proposed project site.~~

~~The *CEQA Guidelines* (Section 15126.6 (e[2]) requires that an environmentally superior alternative be identified in the EIR. Based on the analysis in Section 6.0 *Alternatives* and the summary contained in Table 1.C, Alternative 1 – Reduced Density – is the only alternative that reduces traffic, air quality, and related impacts by reducing the total square footage of warehousing by approximately 30 percent. Alternative 3 - Mixed Use B - is the only alternative that would reduce a significant impact of the proposed project (i.e., aesthetics – views). However, it would worsen the jobs/housing balance of the City over the long term. For these reasons, Alternative 1 – Reduced Density - has been deemed to be environmentally superior to the proposed project. However, none of the alternatives achieves the objectives of the project to nearly the same degree as the proposed project.~~

~~Table 1.D compares Alternative 1 to the project objectives and indicates that Alternative 1 does not meet most of the major goals of the proposed project mainly because of the reduced total~~

~~square footage by 30 percent, which also reduces the amount of new employment and property tax revenues generated to the City.~~

~~***Note:*** *The objectives outlined in this table did not correspond to the Project Objectives outlined in the Project Description of the DEIR, therefore, they are being corrected at this time. In addition, some numerical changes result from the changes to the Specific Plan area.*~~

~~Table 1.D: Comparison of the Environmentally Superior Alternative to the Project Objectives~~

~~**Project Objectives**~~	~~**Degree to Which Alternative 1 Satisfies the Project Objectives**~~
~~Create substantial employment opportunities for the citizens of Moreno Valley and surrounding communities.~~	~~**Not to the Same Degree as the Proposed Project.** This alternative would provide only 16,797 new employees compared to 24,000 from the proposed project (30% less).~~
~~Provide the land use designation and infrastructure plan necessary to meet current market demands and to support the City's Economic Development Action Plan.~~	~~**Not to the Same Degree as the Proposed Project.** The alternative introduces substantially less employment-generating uses on the site which is not consistent with the City's Economic Strategic Plan.~~
~~Create a major logistics center with good regional and freeway access.~~	~~**Not to the Same Degree as the Proposed Project.** The alternative would allow 28 MSF of logistics warehousing near the SR-60 Freeway but it would less attractive as a major regional logistics center compared to the proposed project.~~
~~Establish design standards and development guidelines to ensure a consistent and attractive appearance throughout the entire project.~~	~~**Meets Objective.** Development of the project area under this alternative would most likely proceed under some form of specific plan, which would help ensure future development was consistent with a comprehensive plan for the area.~~
~~Establish a master plan for the entire project area to ensure that the project is efficient and business-friendly, accommodating the next-generation of logistics buildings.~~	~~**Meets Objective.** The alternative would develop a smaller amount of logistics warehousing compared to the proposed project, but it would still be master planned, most likely under a specific plan.~~
~~Provide a major logistics center to accommodate a portion of the ever-expanding trade volumes at the Ports of Los Angeles and Long Beach.~~	~~**Not to the Same Degree as the Proposed Project.** The alternative would allow 28 MSF of logistics warehousing vs. 40.6 MSF for the proposed project.~~
~~Create a project that will provide a balanced approach to the City's fiscal viability, economic expansion, and environmental integrity.~~	~~**Not to the Same Degree as the Proposed Project.** The alternative would not provide nearly as much new warehouse capacity to form a regional port-oriented logistics center compared to the proposed project.~~
~~Provide the infrastructure improvements required to meet project needs in an efficient and cost-effective manner.~~	~~**Not to the Same Degree as the Proposed Project.** The alternative would produce 30% less employment than under the proposed project, and would also provide less property tax revenue and be able to pay for less public improvements and infrastructure compared to the proposed project.~~
~~Encourage new development consistent with regional and municipal service capabilities.~~	~~**Not to the Same Degree as the Proposed Project.** It is unclear if a substantially reduced logistics warehousing project could afford to provide the necessary infrastructure to support the planned development compared to the proposed project.~~

~~Table 1.D: Comparison of the Environmentally Superior Alternative to the Project Objectives~~

~~**Project Objectives**~~	~~**Degree to Which Alternative 1 Satisfies the Project Objectives**~~
~~Significantly improve the jobs/housing balance and help reduce unemployment within the City.~~	~~**Not to the Same Degree as the Proposed Project.** This alternative would provide only 16,797 new employees compared to 24,000 from the proposed project (30% less).~~
~~Provide thousands of construction job opportunities during the project's buildout phase.~~	~~**Not to the Same Degree as the Proposed Project.** The alternative would not provide as much work for as many construction workers compared to the proposed project~~
~~Provide appropriate transitions or setbacks between on-site and off-site uses.~~	~~**Meets Objective.** A smaller logistics warehouse project may be able to provide equal or greater transitions and buffers from existing off-site residential uses compared to the proposed project.~~

2.0 INTRODUCTION AND PURPOSE: TABLE OF CONTENTS

TABLES

~~NOTE TO READERS~~

~~*The Programmatic Draft Environmental Impact Report (DEIR) for the World Logistics Center Specific Plan (WLCSP) was originally circulated for public review from February 4 to April 8, 2013. Since that time, a number of changes have been made to the WLCSP. The original DEIR has also been revised to account for the changes to the WLCSP and to respond to the many comments received on the DEIR.*~~

~~*The primary change in the WLC Project is the total Specific Plan area has been reduced from 2,710 acres to 2,610 acres and the proposed development reduced from 41.6 million to 40.6 million square feet (both a 3.7 percent reduction) due to the removal of 100 acres in the southwest corner of the Specific Plan. In addition, the Specific Plan land use plan was divided into sixteen (16) Planning Areas based on traffic impact zones which allows for more accurate estimates of potential traffic and air quality impacts of the WLC Project. The revised Specific Plan (September 2014) also now shows a specific location for a “Clean Fueling” facility in Planning Area (PA) 7 at the northeast corner of Theodore Street and Eucalyptus Avenue. In the original WLCSP, a trail was proposed along the edge of the Open Space area in the southwestern portion of the site to connect to existing trails along Redlands Boulevard and Cactus Avenue to the west and planned trails within the San Jacinto Wildlife Area and Mystic Lake to the south. In response to changes to the proposed project and concerns expressed by Native Americans, the trail in the revised WLCSP has been moved away from the northern boundary of the Open Space area (now Planning Area 30) to reduce potential impacts to the Mt. Russell foothills. The WLCSP phasing plan or schedule was also revised or extended from 10 to 15 years, so that Phase 1 runs from 2015 to 2022 and Phase 2 runs from 2023 to 2030. Please refer to FEIR Volume 1 Section 1.4 and Section 3.0, Project Description, in this revised DEIR for a more detailed description of changes to the WLC project.*~~

~~*The technical studies that supported the analysis of environmental impacts in the DEIR were also modified to address changes in the WLCSP and in response to the many comments on the EIR and technical studies. The following studies were revised: agriculture, air quality, biology, cultural resources, greenhouse gases, hydrology/water quality, noise, economic and fiscal impacts, traffic, and utilities. An additional study on agricultural resources was prepared as an independent assessment of onsite resources using the state LESA model (see Section 4.2 in this document). For details on the changes to the technical studies, please refer to FEIR Volume 1 Section 1.6 and the introductory paragraphs of each environmental analysis section of this revised DEIR (Sections 4.1 through 4.16).*~~

~~*In summary, the WLCSP DEIR has been revised based on changes to the WLC project, technical studies, and the many comments received on the DEIR and its related technical studies. Changes to the DEIR document are shown in double underline if they are additions to the original text, and shown as if they are deletions to the original text.*~~

2.0 INTRODUCTION AND PURPOSE

This programmatic Environmental Impact Report (EIR) has been prepared to evaluate the environmental impacts associated with the ~~proposed~~ World Logistics Center Project (“~~proposed project” or~~ “project”) in Rancho Belago, the eastern portion of the City of Moreno Valley (“City”), and to identify mitigation measures to avoid or minimize significant environmental impacts. The City is the “public agency which has the principal responsibility for carrying out or approving the project” and, as such, is the “Lead Agency” for this project under the California Environmental Quality Act (CEQA) of 1970 (*CEQA Guidelines* section 15367). CEQA requires the Lead Agency to consider the information contained in the EIR prior to taking any discretionary action. The EIR is also a public disclosure document available to agencies and the public for review and comment prior to the consideration of the proposed project by the City, and is intended to serve as an informational document to be considered by the City, Responsible Agencies, and Trustee Agencies during deliberations on the proposed project. The project approvals associated with the proposed project are described in Section 3.0.

This section of the EIR outlines the document’s format; describes the purpose of the EIR; summarizes public review of the EIR; describes the Mitigation Monitoring and Reporting Program (MMRP); identifies the environmental issues discussed in the EIR; and defines the parameters and data to be used in the analysis of cumulative impacts.

In August, 2015, the City Council of the City of Moreno Valley (City) certified a Final Programmatic Environmental Impact Report (FEIR), which analyzed the environmental impacts that would result from the construction and operation of the World Logistics Center (WLC), as having been prepared in compliance with the California Environmental Quality Act (CEQA) The City Council the approved a General Plan Amendment (“GPA”), a Zone Change (“Zone Change”), the World Logistics Center Specific Plan (“WLC Specific Plan”), a financing and conveyancing Parcel Map (“Parcel Map 36457”), a Development Agreement (“Development Agreement”) and a request that 85 acres in an unincorporated portion of Riverside County be annexed into the City. In September, 2015, a number of lawsuits were filed challenging the City’s certification of the FEIR and the approvals granted for the construction and operation of the WLC.

In November, 2015, the City Council, in response to initiative petitions submitted to it for the GPA, the Zone Change, the WLC Specific Plan and the Development Agreement, vacated approvals for those entitlements granted in August, and then readopted the GPA, the Zone Change, the WLC Specific Plan and the Development Agreement. The Tentative Parcel Map (36547) was not part of the Initiative adoption and is not currently approved. The World Logistics Center Specific Plan is entitled for 40.6 million square feet of logistics and associated infrastructure land uses on the 2,610-acre project site.

In a court ruling dated February, 8, 2018, the Honorable Sharon J. Waters, Judge of the Riverside County Superior Court, identified five deficiencies in the FEIR. The key findings from Judge Waters’ ruling are quoted below:

Energy Impacts: “The FEIR must provide a comparison of feasible, cost-effective renewable energy technologies in the Energy Impacts analysis”.

Biological Impacts: "The FEIR should remove all references to and consideration of the 910 acres of SJWA and MSHCP lands as "buffer zone" or "CDFW Conservation Buffer Area" in the Biological Resources and Habitat Impacts analysis".

Noise Impacts: "The FEIR must provide an analysis of construction noise over ambient levels; provide adequate analysis on construction noise impacts on nearby homes; address the inadequacy of mitigation measures, which fail to include performance standards or ways to reduce construction noise".

Agricultural Impacts: "The FEIR and the resolution certifying the FEIR require clarification as to whether loss of locally important farmland will have a significant direct or cumulative impact on agriculture and, if significant, the FEIR must either explain how proposed mitigation will reduce the impact or why other mitigation is not feasible".

- **Cumulative Impacts**: "The FEIR should include consideration of recently constructed and proposed large warehouse projects in the summary of projections method, and should analyze whether individually significant impacts may be cumulative considerable".

In a writ of mandate issued on June 12, 2018, the Judge order the City to set aside its certification of the FEIR and its approval of the Parcel Map. The remaining approvals – the GPA, Zone Change, World Logistics Center Specific Plan, Annexation Request and Development Agreement granted in November, 2015 – and those entitlements remain in effect.

This Revised Sections of the FEIR has been prepared to respond to the Judge's ruling and writ by correcting the five deficiencies identified in the ruling. With respect to cumulative impacts, the Judge's ruling did not indicate the specific environmental topics to be evaluated, and thus, to ensure compliance with the ruling, this Revised Sections of the FEIR includes an analysis of potential cumulative impacts for all environmental topics, even those never raised in the Superior Court proceedings. While such information may not be required to comply with the Judge's ruling, it is included here to account for the most conservative interpretation of the Judge's ruling. The court will have the discretion to determine whether it was required to comply with the writ or not. This Revised Sections of the FEIR evaluates the current environmental baseline conditions, impacts and any required additional or revised mitigation measures associated with the construction and operation of the World Logistics Center.

Using this interpretation of the Judge's ruling for cumulative impacts, this Revised Sections of the FEIR includes a revised analysis of the WLC's potential transportation impacts to incorporate the cumulative impacts of additional projects, although the FEIR's section on Transportation and Traffic (Section 4.15) was upheld by Judge Waters. Although not required by the Judge's ruling, this section has also been prepared to reflect the latest trip generation rates found in the Institute of Transportation Engineers' Trip Generation Manual (10th ed., 2017). The revised traffic analysis also forms the basis for revised analyses of air quality, greenhouse gases and traffic noise, even though those sections of the FEIR were upheld by the court (Sections 4.3, 4.7 and portions of 4.12).

This Revised Sections of the FEIR is being circulated to the public for review and comment. Written responses to those comments will then be prepared. A Revised FEIR, which will consist of this Revised

Sections of the FEIR, the comments and responses and the portions of the FEIR that were found to be in compliance with CEQA after trial, will be considered by the City.

Because the Judge found that substantial portions of the FEIR did comply with CEQA, only this Revised Sections of the FEIR is being circulated for public review and comment. This Revised Sections of the FEIR presents additional environmental analyses necessary to respond to the Judge's ruling. Some portions of this Revised Sections of the FEIR adds to the FEIR, e.g., new Section 4.17 (Energy), or provides additional information on the same topic, e.g., Section 2.1 (Document Format). Elsewhere in this Revised Sections of the FEIR, individual sections have been revised and replace the corresponding sections in the FEIR (Air Quality, Biological Resources, Greenhouse Gas Emissions/Climate Change). This Revised Sections of the FEIR also identifies certain specific portions of the FEIR (Project Description) that are no longer applicable to the CEQA analysis, which identifies the GPA, Zone Change, the World Logistics Center Specific Plan, Annexation Request and the Development Agreement as a discretionary action anticipated to be taken by the City.

For clarity, although the GPA, Zone Change, WLC Specific Plan, Annexation Request and Development Agreement were approved by the City in compliance the initiative process set forth in the California Elections Code, this Revised Sections of the FEIR in combination with the valid portions of the FEIR, serves to evaluate the environmental effects of the World Logistics Center project.

The absence of any reference to a section of the FEIR in this Revised Sections of the FEIR means that the corresponding section in the FEIR remains unchanged because the Judge found that it complied with CEQA.

The reader should note that each section within Section 4.0 of the FEIR contained a subsection analyzing cumulative impacts. Those subsections are no longer applicable and have been replaced with a new Section 6.0.

Finally, the FEIR sometimes refers to Theodore Street. It has since been renamed World Logistics Center Parkway south of SR-60.

2.1 DOCUMENT FORMAT

To assist the reader's review of the document, the following describes the format of this EIR.

Section 1.0	*Executive Summary* provides a summary of the EIR document and (in Table 1.B) identifies potentially significant impacts, mitigation measures, and the level of significance of each impact following mitigation.
Section 2.0	*Introduction and Purpose* outlines the EIR document's format including technical appendices; describes the purpose of the EIR including the legal purpose of CEQA, the intended use of EIR, and the EIR's incorporated documents and referenced technical reports; summarizes the public review of the EIR to date; describes the role

of the MMRP to be provided in the Final EIR; identifies the sixteen environmental issues that are discussed; and defines the cumulative analysis provided in the EIR.

Section 3.0 *Project Description* provides a detailed description of the geographical setting, project location, project setting, City of Moreno Valley General Plan designations, World Logistics Center Specific Plan land use designations, zoning designations, project characteristics, project objectives, and discretionary actions required to implement the proposed project. This section also explains the other areas in addition to the Specific Plan that are part of the proposed project (i.e., off-site improvement areas, California Department of Fish and Wildlife property, and public facilities lands).

Section 4.0 *Existing Setting, Impacts, and Mitigation Measures* evaluates the impacts associated with the proposed project. This section is organized by sixteen issue areas with each following the framework:

- *Existing Setting*. Information in the existing setting contains a discussion of the local and regional environment conditions (environmental and man-made) in existence at the time this EIR was prepared. Existing setting information provides the reader with the “baseline” from which future impacts are analyzed, and provides a standard against which to measure these impacts.
- *Existing Policies and Regulations.* Regulatory requirements and policies (federal, state, and local) applicable to the issue area are summarized.
- *Methodology*. A brief summary of the methods and resources utilized in the preparation of the environmental analysis.
- *Thresholds of Significance*. Determinations regarding the significance of potential impacts resulting from implementation of the proposed project are provided. These thresholds represent the criteria used in this programmatic EIR to determine whether identified impacts are significant.
- *Less than Significant Impacts*. Potential issues for which the proposed project was determined to have no impact or a less than significant impact are identified. For these issues, either no mitigation would be required or adherence to established regulations, standards, and policies would reduce potential impacts to a less than significant level.
- *Significant Impacts*. Potential impacts from implementation of the proposed project are identified. Each of these issues contains an impact analysis, mitigation measures, and significance after mitigation discussion.
    - *Impact Analysis.* An analysis of potential programmatic impacts of the proposed project is presented in this section. This discussion focuses on the impacts of implementation of the proposed project, and includes potential short-term/long-term and direct/indirect project impacts, and consistency with applicable planning documents or regulations.
    - *Project Design Features.* Characteristics of the WLC Specific Plan or other aspects of the WLC project that help reduce potential environmental impacts.
    - *Mitigation Measures*. The measures proposed to mitigate any potential impacts of the proposed project are identified.
    - *Level of Significance after Mitigation* provides a conclusion as to whether implementation of the proposed project will reduce the project-related and cumulative impacts to a level that is less than significant.

- ~~*Cumulative Impacts.* This discussion focuses on the potential environmental effect of the proposed project combined with the effects of reasonably foreseeable cumulative projects within the project study area.~~

Section 5.0	*Other CEQA Topics* contains discussions of additional topics required by CEQA, including effects found not to be significant, unavoidable effects of the proposed project, and significant irreversible environmental changes. The proposed project's consistency with regional plans (discussed in Section 4.10) and potential to induce growth (discussed in Sections 4.13) are summarized in this section.
Section 6.0	*Cumulative Impacts.* This discussion focuses on the potential environmental effect of the proposed project combined with the effects of reasonably foreseeable cumulative projects within the project study area.
Section ~~6~~7.0	*Alternatives* contains discussion of alternatives to development of the proposed project. As allowed by CEQA, the impacts of these alternatives are evaluated at a more general level than the analyses of the proposed project that is contained in Section 4.0. This section ~~also~~ evaluates the proposed effects of the No Project Alternative ~~and identifies the environmentally superior alternative~~ only.
Section ~~7~~8.0	This section lists the organizations and persons consulted in preparation of the EIR.
Section ~~8~~9.0	This section contains all the references cited in the EIR, acronyms and abbreviations used in the document, and definitions of terms used, including those specific to the proposed WLC project.
Appendices	The Appendices contain a copy of the NOP, NOP mailing list, NOP comment letters and responses, public scoping meeting information, all of the various technical studies that support the EIR analysis, referenced materials, and other relevant correspondence received during the course of the analysis of the proposed project.

As noted above, the Judge's ruling identified five areas where the FEIR failed to comply with CEQA. The ruling requires that the Revised Sections of the FEIR: (1) provide a comparison of feasible, cost-effective renewable energy technologies in the Energy Impacts analysis; (2) remove references to and consideration of the northernmost 910 acres of the San Jacinto Wildlife Area (SJWA) as a "buffer zone" or the "CDFW Conservation Buffer Area" in the Biological Resources analysis; (3) provide an analysis of construction noise over ambient levels, provide adequate analysis of construction noise impacts on nearby homes, and address inadequate mitigation measures, which fail to include performance standards or ways to reduce construction noise; (4) clarify as to whether loss of farmlands of local importance was significant and, if so, how it would be mitigated, if feasible; and (5) consider recently constructed and proposed large warehouse projects to determine whether they will result in cumulatively significant impacts.

This Revised Sections of the FEIR responds to each of the five areas as follows:

> **(1) Renewable Energy**: A new section dealing with renewable energy technologies, Section 4.17, has been prepared and is included in this Revised Sections of the FEIR. In addition, a new Appendix E, World Logistics Center, Comparison of Renewable Energy Technologies, has been prepared and is included in this Revised Sections of the FEIR.

(2) Biological Resources: References to and consideration of the SJWA as a "buffer zone" or "CDFW Conservation Buffer Area" have been removed from Section 4.4, Biological Resources, and a revised version of that section has been prepared. These terms have also been removed in all other relevant sections of the FEIR. Those sections, as revised, have also been included in these Revised Sections of the FEIR.

(3) Construction Noise: Those portions of Section 4.12, Noise, dealing with construction noise and mitigation measures have been revised and are included herein. In addition, a revised Appendix K, Noise Technical Report, has been prepared and is included in the appendices.

(4) Farmlands of Local Importance: Those portions of Section 4.2, Agricultural and Forestry Resources, dealing with the loss of farmland of local importance have been revised and are included herein.

(5) Cumulative Impacts: A new Section 6.0, Cumulative Impacts, has been prepared and is included herein. Over 300 recent past, present and reasonably foreseeable projects that could cumulatively contribute to the World Logistics Center's environmental impacts have been identified and considered. These are in addition to the contributions of projects reflected in various planning documents.

As mentioned, the Revised Sections of the FEIR also includes revised analyses in Traffic and Circulation, and in Appendix F, Traffic Impact Analysis (TIA), Section 4.15, in Air Quality, Section 4.3, and in Appendix D, Air Quality/Health Risk/Greenhouse Gases, Noise, Section 4.12, and in Appendix C, Noise. It should also be noted that the methodologies used to determine the environmental impacts have not been changed. As an example, the same general approach, LOS methodologies, and thresholds that were used in the 2014 TIA were repeated in the 2018 TIA; although the input data and study years were updated to reflect the best available current information.

2.2 PURPOSE OF CEQA AND THE ENVIRONMENTAL IMPACT REPORT

According to Section 15002 of *CEQA Guidelines*, the basic purposes of CEQA are to:

- Inform government decision-makers and the public about the potential significant environmental effects of proposed activities;
- Identify ways that environmental damage can be avoided or significantly reduced;
- Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governing agency finds the changes to be feasible; and
- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

CEQA requires that a project be reviewed to determine the environmental effects that would result if the project were approved and implemented. The City has the responsibility for preparing, processing, and determining whether to approve the proposed project and certify this EIR. As Lead Agency, the City has the authority to make decisions regarding discretionary actions relating to implementation of the proposed project.

2.2.1 Program EIR

This EIR will serve as a Program EIR pursuant to the *State CEQA Guidelines* Section 15168, which states that a Program EIR is appropriate for a project that involves "… a series of actions that can be characterized as one large project and are related either:

(1) Geographically;

(2) A logical parts in the chain of contemplated action;

(3) In connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or

(4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways."

Section 15168 of the *CEQA Guidelines* explains how a Program EIR relates to future activities within the project area:

"(c) Use with Later Activities. Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared.

> (1) If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration.
>
> (2) If the agency finds that pursuant to Section 15162, no new effects could occur or no new mitigation measures would be required, the agency can approve the activity as being within the scope of the project covered by the program EIR, and no new environmental document would be required.
>
> (3) An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.
>
> (4) Where the subsequent activities involve site-specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.
>
> (5) A program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible. With a good and detailed analysis of the program, many subsequent activities could be found to be within the scope of the project described in the program EIR, and no further environmental documents would be required.

(d) Use with Subsequent EIRs and Negative Declarations. A program EIR can be used to simplify the task of preparing environmental documents on later parts of the program. The program EIR can:

> (1) Provide the basis in an Initial Study for determining whether the later activity may have any significant effects.

(2) Be incorporated by reference to deal with regional influences, secondary effects, cumulative impacts, broad alternatives, and other factors that apply to the program as a whole.

(3) Focus an EIR on a subsequent project to permit discussion solely of new effects which had not been considered before.

(e) Notice with Later Activities. When a law other than CEQA requires public notice when the agency later proposes to carry out or approve an activity within the program and to rely on the program EIR for CEQA compliance, the notice for the activity shall include a statement that:

(1) This activity is within the scope of the program approved earlier, and

(2) The program EIR adequately describes the activity for the purposes of CEQA."

2.2.2 World Logistics Center EIR

~~As previously noted, CEQA requires the Lead Agency to consider the information contained in the EIR prior to taking any discretionary action on a project. This EIR provides information to the Lead Agency and other public agencies, the general public, and decision-makers regarding the potential environmental impacts from the construction and operation of the proposed project. The purpose of the public review of the EIR is to evaluate the adequacy of the environmental analysis in terms of compliance with CEQA. Section 15151 of the *CEQA Guidelines* states the following regarding standards from which adequacy is judged:~~

> ~~"An EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among experts. The courts have not looked for perfection but for adequacy, completeness, and a good faith effort at full disclosure."~~

~~An EIR is the most comprehensive form of environmental documentation identified in CEQA and the *CEQA Guidelines*, and provides the information needed to assess the environmental consequences of a proposed project. EIRs are intended to provide an objective, factually supported, full-disclosure analysis of the environmental consequences associated with a proposed project that has the potential to result in significant, adverse environmental impacts.~~

~~Under CEQA (PRC Section 21002.1[a]):~~

> ~~"The purpose of an environmental impact report is to identify the significant effects on the environment of a project, to identify alternatives to the proposed project, and to indicate the manner in which those significant effects can be mitigated or avoided."~~

~~*Note: The following revisions are based on project changes outlined in the WLC Specific Plan.*~~

~~This programmatic EIR has been prepared to evaluate the potential environmental impacts associated with the entitlement, construction and operation of the proposed 40.4 million square feet of logistics warehouse facilities (i.e., the World Logistics Center), as well as its associated infrastructure, designation of the CDFW property as permanent open space, and designation of the Natural Gas Compressor Plant as Public Facility, along with related entitlements. As permitted under the *CEQA Guidelines* (Section 15084[d-e]), LSA Associates, Inc. (LSA) has prepared the EIR under the direction of professional City planning staff. However, prior to certification, the Planning Commission and the City Council must independently review the methodologies used, and conclusions reached in the EIR.~~

~~The City is undertaking an independent review of this EIR by having City planning staff work with LSA on the EIR, and by employing a third-party consultant to independently review the EIR. If certified by the City, the information included in and the conclusions reached in the EIR will therefore represent the City's independent judgment.~~

~~This programmatic EIR has been prepared utilizing information from City planning and environmental documents, applicant-provided technical studies, and other publicly-available data. Alternatives to the proposed project are also discussed and mitigation measures that would offset, minimize, or otherwise avoid significant environmental impacts from the proposed project have been identified. This EIR has been prepared in accordance with CEQA, California Public Resources Code §21000 *et seq.*; the *Guidelines for California Environmental Quality Act* (California Code of Regulations, Title 14, Chapter 3); and the rules, regulations, and procedures for implementing CEQA as adopted by the City. The objective of the EIR is to inform City decision-makers, representatives of other affected/responsible agencies, the public, and other interested parties of the potential environmental consequences that may be associated with the approval and implementation of the proposed project.~~

CEQA requires the Lead Agency to consider the information contained in an EIR prior to taking any discretionary action on a project. This Revised Sections of the FEIR corrects deficiencies found by the court to exist in the FEIR and provides information to the Lead Agency and other public agencies, the general public, and decision-makers regarding the potential environmental impacts from the construction and operation of the World Logistics Center project. The purpose of the public review of an EIR is to evaluate the adequacy of the environmental analysis in terms of compliance with CEQA. Section 15151 of the *CEQA Guidelines* states the following regarding standards from which adequacy is judged:

> "An EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among experts. The courts have not looked for perfection but for adequacy, completeness, and a good faith effort at full disclosure."

An EIR is the most comprehensive form of environmental documentation identified in CEQA and the *CEQA Guidelines*, and provides the information needed to assess the environmental consequences of a proposed project. EIRs are intended to provide an objective, factually supported, full-disclosure analysis of the environmental consequences associated with a proposed project that has the potential to result in significant, adverse environmental impacts.

Under CEQA (PRC Section 21002.1[a]):

> "The purpose of an environmental impact report is to identify the significant effects on the environment of a project, to identify alternatives to the proposed project, and to indicate the manner in which those significant effects can be mitigated or avoided."

This Revised Sections of the FEIR has been prepared to correct deficiencies found by the court to exist in the FEIR by evaluating some of the potential environmental impacts associated with the construction and operation of the World Logistics Center project which will include 40.6 million square feet of logistics warehouse facilities, as well as its associated infrastructure. ESA (ESA) has prepared this Revised Sections of the FEIR under the direction of professional City planning staff. However, prior to certification of the Revised FEIR, the City must independently review the methodologies used, and conclusions reached in this Revised Sections of the FEIR. The City is undertaking an independent review of the Revised Sections of the FEIR by having City planning staff work with ESA on the document, and by employing a third-party consultant to independently review it as well. If certified by the City, the information included and the conclusions reached in the Revised Sections of the FEIR will therefore represent the City's independent judgment.

This Revised Sections of the FEIR has been prepared utilizing information from City planning and environmental documents, applicant-provided technical studies, and other publicly-available data. Additional mitigation measures that would offset, minimize, or otherwise avoid significant environmental impacts from the World Logistics Center project have been identified, where required. This document has been prepared in accordance with CEQA, California Public Resources Code §21000 *et seq.*; the *Guidelines for California Environmental Quality Act* (California Code of Regulations, Title 14, Chapter 3); and the rules, regulations, and procedures for implementing CEQA as adopted by the City. The objective of the Revised Sections of the FEIR is to inform City decision-makers, representatives of other affected/responsible agencies, the public, and other interested parties of the potential environmental consequences that were not adequately dealt with in the FEIR that may be associated with the approval and implementation of the WLC project.

2.3 REGIONALLY SIGNIFICANT PROJECT

When an EIR is prepared for any project that is considered to be of statewide, regional, or area-wide significance, as defined by *CEQA Guidelines* Section 15206, then the Draft EIR must be submitted to the State Clearinghouse and the appropriate metropolitan area council of governments for review and comment. A project is considered to be of statewide, regional, or area-wide significance if it meets any of the following criteria:

(1) A proposed local general plan, element, or amendment thereof for which an EIR was prepared.

(2) A project has the potential for causing significant effects on the environment extending beyond the city or county in which the project would be located. Projects of this nature would include:

  (a) A proposed residential development of more than 500 dwelling units.

  (b) A proposed shopping center or business establishment employing more than 1,000 persons or encompassing more than 500,000 square feet of floor space.

  (c) A proposed commercial office building employing more than 1,000 persons or encompassing more than 250,000 square feet of floor space.

  (d) A proposed hotel/motel development of more than 500 rooms.

   (e) A proposed industrial, manufacturing, processing plant, or industrial park planned to employ more than 1,000 persons, occupying more than 40 acres of land, or encompassing more than 650,000 square feet of floor area.

(3) A project which would result in cancellation of an open space contract made pursuant to the California Land Conservation Act of 1965 (Williamson Act) for any parcel of 100 or more acres.

(4) A project for which an EIR has been prepared that is located in and would substantially affect areas of critical environmental sensitivity.

(5) A project which would substantially affect sensitive wildlife habitats and habitats for endangered, rare, or threatened species.

(6) A project that would interfere with the attainment of regional water quality control standards as stated in the approved area-wide waste treatment management plan.

(7) A project that would provide housing, jobs, or occupancy for 500 or more persons within 10 miles of a nuclear power plant.

The World Logistics Center Project, ~~as proposed,~~ would be considered a "project of statewide, regional or area-wide significance" per criteria 2(e). In addition, the Southern California Association of Governments (SCAG) indicated in its NOP letter that this project was regionally significant. Therefore, the NOP, Draft EIR, and NOC ~~will be~~were transmitted to the State Clearinghouse and the appropriate metropolitan area council of governments, which in this case is the Western Riverside Council of Governments (WRCOG), for review and comment.

2.4 INCORPORATED DOCUMENTS

CEQA (§15150) permits the incorporation by reference of all or portions of other documents that are generally available to the public. Any document incorporated by reference shall be made available to the public for inspection at a public place or public building and requires that the EIR state where the incorporated documents will be made available for public inspection. The following documents have been incorporated by reference:

- *City of Moreno Valley General Plan, various elements,* adopted by City Council Resolution No. 2006-83, July 11, 2006, and last updated October 2006.
- City of Moreno Valley General Plan Final Environmental Impact Report, certified July 2006.
- City of Moreno Valley General Plan Land Use Map, last updated August 2010.
- City of Moreno Valley Zoning Atlas, last updated November 2011.
- City of Moreno Valley Municipal Code (various chapters), last updated February 2012.
- ~~Moreno Highlands Specific Plan EIR, adopted 1992.~~
- City of Moreno Valley General Plan Land Use Map, last updated November, 2017.
- City of Moreno Valley Zoning Atlas, last updated November 2017.

2.5 TECHNICAL REPORTS

Various technical or project-related reports have been prepared to assess specific issues that may result from the construction and operation of the proposed project. As relevant, information from the following documents and technical reports has been integrated into the EIR as appendices.

- **“**The World Logistics Center Specific Plan” (Highland Fairview) original dated January 30, 2013, revised dated September 2014.
- “An Agricultural Industry Analysis of the Inland Empire” (Andrew Chang & Co.), original dated March 2012, revised September 2014.
- “Agricultural Resources Assessment for the WLCSP” (Parsons Brinckerhoff), original dated March 2012, revised December 2013.
- “Agricultural Assessment for the WLCSP” (Cushman and Wakefield) new report dated December 20, 2013 (prepared for Final EIR in response to comments) and revised September 2014.
- “Air Quality, Greenhouse Gas, and Health Risk Assessment for the WLCSP” (MBA), original dated January 2013, revised April 2015.
- “Habitat Assessment, MSHCP Consistency Analysis, and JPR Review” (MBA), original dated December 20, 2012, revised September 2014.
- “Delineation of Jurisdictional Waters and Wetlands” (MBA), original dated November 2012, revised September 2014.
- “Phase I and Phase II Cultural Resources Assessment” (MBA), original dated May 2012, revised September, 2014.
- “Preliminary Geotechnical Investigation” (Leighton), original dated March 23, 2012, revised September 2014.
- “Supplemental Geotech Assessment for Offsite Improvements Related to the WLCSP” (Leighton), original dated March 23, 2013, revised September 2014.
- “Phase 1 Environmental Site Assessments” (various dates, LOR Geotechnical) (not revised).
- **“**Draft Master Plan of Drainage Study” (CH2MHill) original dated November 2012, revised dated September 2014.
- “Preliminary Water Quality Management Plan” (CH2MHill) original dated November 2012, revised September 2014.
- **“**Noise Assessment for the WLCSP” (Mestre Greve Associates) original dated January 2013, revised September 2014.
- “Traffic Impact Assessment (TIA) for the WLCSP” (Parsons Brinckerhoff) original dated January 2013, revised September 2014.
- “NAIOP Assessment of Available High-Cube Trip Generation Rates” (Kunzman Associates), December 20, 2011.
- “Water Supply Assessment for the WLCSP” (Eastern Municipal Water District), March 21, 2012.
- “Highlands Water Budget” (CH2MHill), original dated December 2012, revised September 2014.
- “Water System Modeling Results” (CH2MHill), original dated December 2012, revised dated October 22, 2013.
- “Sewer and Reclaimed Wastewater Memorandum” (CH2MHill), original dated April 25, 2012, revised September 2014.

- “Dry Utilities – Technical Memorandum” (Utility Specialists), original dated December 20, 2012, revised September 2014.
- “Electrical System Forecast of Utility Infrastructure” (MVU Engineering), original dated December 2012, revised September 2014.
- “Fiscal and Economic Impact Study for the World Logistics Center” (David Taussig and Associates), original dated January 15, 2013, revised September 2014.
- Hydrology and Water Quality Memorandum (Woodard Curran), 2018
- Traffic Impact Assessment (WSP), 2018
- Energy Assessment (WSP),2018
- Transportation Energy Assessment (ESA), 2018
- Air Quality Assessment (ESA), 2018
- Noise Assessment (ESA), 2018
- Greenhouse Gas Assessment (ESA), 2018
- Health Risk Assessment (ESA), 2018
- Biological Resources Assessment (ESA), 2018
- Sensitive Species Surveys (ESA), 2018

In addition to their inclusion in their entireties as appendices to this EIR, these documents are available for review at the following location:

Moreno Valley City Hall
Community & Economic Development Department
Planning Division
14177 Frederick Street
Post Office Box 88005
Moreno Valley, California 92552
Phone: (951) 413-3238
Monday–Thursday 7:30 a.m.– 5:30 p.m.
Friday 7:30 a.m. – 4:30 p.m.

2.6 PUBLIC REVIEW OF THE DRAFT ENVIRONMENTAL IMPACT REPORT

~~This EIR was distributed to responsible and trustee agencies, other affected agencies, and interested parties. Additionally, in accordance with Public Resources Code Section 21092(b)(3), the EIR was provided to all parties who previously requested copies. The Notice of Completion (NOC) and Notice of Availability (NOA) of the EIR was distributed for a 63-day public review period in excess of the 45 days typically suggested by CEQA. During the public review period, the EIR and technical appendices were made available for review.~~

This Revised Sections of the FEIR will be distributed to responsible and trustee agencies, other affected agencies, and interested parties. Additionally, in accordance with Public Resources Code Section 21092(b)(3), this document will be provided to all parties who previously requested copies. The Notice of Completion (NOC) and Notice of Availability (NOA) of the EIR is being distributed for a 45-day public review period. During the public review period, the Revised Sections of the FEIR and the revised technical appendices will be made available for review.

Written comments regarding this EIR were addressed to:

~~Richard Sandzimier,~~Albert Armijo ~~Planning Official~~ Interim Planning Manager
~~and~~
~~Mark Gross, Senior Planner~~
14177 Frederick Street
Post Office Box 88005
Moreno Valley, California 92552
Phone: (951) 413-3206
Email: ~~RichardSa~~alberta@moval.org
~~Markg@moval.org~~

~~After the public review period, written responses to all significant environmental issues raised were prepared and included in the Final EIR Volume 1 – Response to Comments. These responses will be available for review for a minimum of 10 days prior to the public hearings before the City of Moreno Valley Planning Commission and City Council, at which time the certification of the Final EIR will be considered. The Final EIR (which includes the Draft EIR, the public comments and responses to the Draft EIR, and findings) will be included as part of the environmental record for consideration by the City decision-makers. The City will respond as appropriate to comments made at public hearings on the WLC Project and EIR.~~

After the public review period, written responses to comments on the Revised Sections of the FEIR will be prepared. These responses will be available for review for a minimum of 10 days prior to the public hearings before the City, at which time the certification of the Revised FEIR will be considered. The Revised FEIR (which includes the Revised Sections of the FEIR, the public comments and responses to the Revised Sections of the FEIR and the portions of the FEIR found to comply with CEQA) will be included as part of the environmental record for consideration by the City decision-makers. The City will respond as appropriate to comments made at public hearings on the WLC Project and Revised Sections of the FEIR.

2.6.1 Notice of Preparation

~~The City initiated the environmental process without completion of an Initial Study. The City determined that, due to the nature and size of the proposed project, all environmental topics warranted further environmental review in an EIR. The City circulated over 40 copies of the Notice of Preparation (NOP) for the World Logistics Center EIR to state, regional, and local agencies, and nine copies to owners of adjacent properties on February 26, 2012, for a 30-day review period.[1] The NOP was distributed to the State Clearinghouse, as well as agencies and organizations that may provide comment on the proposed project as well as the potential environmental impacts that may result from the construction and operation of the proposed on-site uses.~~

~~Comments received regarding the NOP were used to help identify impacts that could result from implementation of the proposed project. The City received 27 comment letters to the NOP and six comment cards from the public Scoping Meeting. In addition, 30 individuals spoke at the Scoping Meeting. The NOP and comment letters received regarding the NOP are included in Appendix A of the EIR. Table 2.A provides a brief summary of NOP comment letters, Table 2.B lists City-identified issues~~

~~[1] The Notice of Preparation 30-day public review period was from February 25 to March 26, 2012. City of Moreno Valley.~~

~~from the scoping process, and Table 2.C lists Senate Bill (SB) 18 Native American consultation contacts.~~

~~Table 2.A: Notice of Preparation Comments Received~~

~~Agency/ Organization/ Individual~~	~~Date~~	~~Comments*~~	~~Addressed in Section(s) of the EIR~~
~~Governor's Office of Planning and Research~~	~~2/22~~	~~Scott Morgan. This letter acknowledges receipt of the NOP and identified the 30-day review period (2/22–3/22). OPR issued State Clearinghouse No. 2012021045~~	~~(2.0) Introduction~~
~~California Department of Transportation (Caltrans)~~	~~2/29~~	~~Daniel Kopulsky. Must prepare a traffic impact study according to the Caltrans' Guide for the Preparation of Traffic Impact Studies. Also must prepare a drainage study and identify impacts to state drainage facilities. Existing capacity of the state drainage systems cannot be exceeded.~~	~~(4.15) Traffic~~
~~California Native American Heritage Commission (NAHC)~~	~~3/7~~	~~Dave Singleton. NAHC Sacred Lands File did not identify any resources within project area, but did list the following local tribes: Pechanga Band; Ramona Band; Santa Rosa Band; Morongo Band; San Manuel Band; Serrano Nation; Cahuilla Band; and Soboba Band (see Table 2.C).~~	~~(4.5) Cultural~~
~~Morongo Band~~	~~2/22~~	~~Franklin Dancy. Tribe indicated site was in its traditional use area and requested to be notified if human remains are found and the Morongo Band is determined to be the Most Likely Descendant, or if Native American artifacts are found during excavation/grading. They also requested that they be consulted if a Treatment Plan is needed for significant cultural resources on site.~~	~~(4.5) Cultural~~
~~Pala Tribe~~	~~3/8~~	~~Shasta Gaughen, Ph.D. Determined project was outside of traditional tribal area.~~	~~(4.5) Cultural~~
~~California Department of Fish and Wildlife (CDFW)~~	~~3/22~~	~~Jeff Brandt. EIR should address County's MSHCP, the San Jacinto Wildlife Preserve (SJWP), State jurisdictional areas and permitting, water resources, greenhouse gases, direct, indirect, and cumulative biological impacts.~~	~~(4.4) Biology~~ ~~(4.9) Hydrology~~
~~California Department of Parks and Recreation~~	~~3/21~~	~~Ron Krueper. Concerned about impacts to Lake Perris State Recreational Area to southwest. Also must evaluate MSHCP and keeping Davis Road closed to traffic.~~	~~(4.4) Biology~~ ~~(4.14) Services~~
~~Southern California Association of Governments (SCAG)~~	~~3/19~~	~~Jacob Lieb. Encouraged EIR to use data from Regional Transportation Plan (RTP) for jobs, housing, and employment. Project is regionally significant.~~	~~(4.10) Land Use~~ ~~(4.13) Population & Housing~~
~~South Coast Air Quality Management District (SCAQMD)~~	~~3/23~~	~~Ian MacMillan. All air quality studies need to provide actual CalEEMod files, and evaluate construction and occupancy impacts for criteria pollutants, LSTs, Health Risk Assessment, dust (PM_{10} and $PM_{2.5}$), and use Western Riverside Council of Governments (WRCOG) "Good Neighbors" guidelines for distribution centers.~~	~~(4.3) Air Quality~~
~~Eastern Municipal Water District (EMWD)~~	~~3/22~~	~~Joseph Lewis. Need to address water resources.~~	~~(4.9) Hydrology~~ ~~(4.16) Utilities~~
~~Sierra Club, San Gorgonio Chapter, Moreno Valley Group~~	~~3/26~~	~~George Hague. EIR needs to address environmental justice and notices should be in Spanish. Also NOP insufficient and public needs more time to review. Need to evaluate SJWP, MSHCP, loss or transfer of 7,700 housing units elsewhere in~~	~~(2.0) Introduction~~ ~~(3.0) Project Description~~ ~~(4.1) Aesthetics~~

Traffic, runoff and water quality, groundwater supplies, water use, and MSHCP analysis.~~	~~(4.1) Aesthetics~~ ~~(4.3) Air Quality~~ ~~(4.4) Biology~~ ~~(4.9) Hydrology~~ ~~(4.15) Traffic~~ ~~(4.16) Utilities (water)~~
~~Residents for a Livable Moreno Valley~~	~~3/26~~	~~Susan Gilchrist. Impacts to employment and income in the City, loss of 7,700 homes, overall EIR process, biology impacts with CDFW land, SJWP, runoff, lighting, buffers for SJWP and Lake Perris, impacts on biology excess runoff, views, traffic, glut of warehouses in the City and region, need jobs diversity, actual number of employees, will it have a truck stop, alternative fuels, and building setbacks.~~	~~(2.0) Introduction~~ ~~(3.0) Project Description~~ ~~(4.1) Aesthetics~~ ~~(4.3) Air Quality~~ ~~(4.4) Biology~~ ~~(4.7) Greenhouse Gases~~ ~~(4.9) Hydrology~~ ~~(4.10) Land Use~~ ~~(4.13) Population & Housing~~ ~~(4.15) Traffic~~ ~~(4.16) Utilities~~ ~~(5.0) Other Topics~~
~~James Devlin~~	~~3/15~~	~~Devlin Eng. Representing Multivac (local property owners). Concerned about truck traffic through residential areas, concentrate trucks onto Theodore Street, use block walls to reduce noise impacts where houses are adjacent, need landscape buffers along Merwin Street and Redlands Boulevard, add lower intensity land uses along west side of project.~~	~~(4.1) Aesthetics~~ ~~(4.10) Land Use~~ ~~(4.12) Noise~~

~~Table 2.A: Notice of Preparation Comments Received~~

~~Agency/ Organization/ Individual~~	~~Date~~	~~Comments*~~	~~Addressed in Section(s) of the EIR~~
~~Michael McCoy~~	~~3/21~~	~~Need site plan details, not Specific Plan; too vague, need accurate employment projections, seismic impacts, traffic, air quality, rail access, biological resources, drainage, and definition of high cube.~~	~~(3.0) Project Description~~ ~~(4.3) Air Quality~~ ~~(4.4) Biology~~ ~~(4.6) Geology~~ ~~(4.9) Hydrology~~ ~~(4.13) Population & Housing~~
~~Michael McKibben~~	~~3/25~~	~~NOP too short. Geologic and seismic constraints (San Jacinto, Casa Loma, and Farm Road Faults), Alquist Priolo earthquake zones, hazards, FEMA flooding, suggested references.~~	~~(4.6) Geology and Soils~~ ~~(4.9) Hydrology~~
~~Thomas Ketcham~~	~~3/12~~	~~Supports creation of new local jobs but not at expense of residents and environment. Skechers mainly transferred jobs from Ontario warehouse and Cabazon Outlet Mall. Also concerned that previous project by Highland Fairview (HF), called Aquabella, has cost the City a lot in terms of improvements while HF has not made its required improvements, and commenter is worried HF might do the same thing on this project. City does not need more debt. Project will generate jobs but does not need or want 100% warehouse jobs, need a mix. Already adequate of space and land for more warehouses in southern end of town where they are more appropriate. Also March JPA has space for warehouses too. City services, police, fire, street maintenance, and street landscaping should not be sacrificed “chasing” new jobs and more growth.~~	~~(3.0) Project Description~~ ~~(4.13) Population & Housing~~ ~~(4.14) Services~~ ~~(4.15) Traffic~~ ~~(4.16) Utilities~~ ~~(5.0) Other Topics~~
~~Ann McKibben~~	~~3/26~~	~~Aesthetics, open space, lighting on SJWP, Dark Skies, loss of agricultural land, air quality, biology, MSHCP, open space, energy and conservation, greenhouse gas emissions, water quality, land use and planning, noise, recreation, traffic, cumulative, and alternatives.~~	~~(4.1) Aesthetics~~ ~~(4.2) Agriculture~~ ~~(4.3) Air Quality~~ ~~(4.4) Biology~~ ~~(4.7) Greenhouse Gases~~ ~~(4.8) Hazards~~ ~~(4.9) Hydrology~~ ~~(4.10) Land Use~~ ~~(4.12) Noise~~ ~~(4.14) Services~~ ~~(4.15) Traffic~~ ~~(5.0) Other Topics~~ ~~(6.0) Alternatives~~
~~Gerald Budlong~~	~~3/22~~	~~Aesthetics, views, geology and soils, Casa Loma Fault, land use and planning, population and housing, widening of Panama Canal, public services, biology (SJWP), transportation, rail alternatives, and utilities (water and gas lines).~~	~~(4.1) Aesthetics~~ ~~(4.3) Air Quality~~ ~~(4.4) Biology~~ ~~(4.10) Land Use~~ ~~(4.14) Services~~ ~~(4.15) Traffic~~ ~~(4.16) Utilities~~ ~~(5.0) Other Topics~~

~~Scoping Meeting Comment Cards~~			
~~Jaeger Jones~~	~~3/12~~	~~HF track record proves this project will not benefit City.~~	
~~Sandra Williams~~	~~3/12~~	~~Should consider less polluting projects within the City that still bring jobs; should not count on only warehouses.~~	~~(4.3) Air Quality~~ ~~(4.10) Land Use~~

~~Table 2.A: Notice of Preparation Comments Received~~

~~Agency/ Organization/ Individual~~	~~Date~~	~~Comments*~~	~~Addressed in Section(s) of the EIR~~
			~~(6.0) Alternatives~~
~~Amber Reilly~~	~~3/12~~	~~Concerned about traffic, air quality, and local owls~~	~~(4.3) Air Quality~~ ~~(4.4) Biology~~ ~~(4.15) Traffic~~
~~Peggy Hadaway~~	~~3/12~~	~~Concerned about actual number of new jobs that will be created and air pollution. Need more variety of new jobs, not just warehousing.~~	~~(4.3) Air Quality~~ ~~(4.10) Land Use~~
~~George Hague (local Sierra Club representative)~~	~~3/12~~	~~EIR must look at viable alternatives that reduce impacts on SR-60. What will be transitional uses along the project boundaries to minimize impacts on adjacent residents? Need to clearly define "high cube" and project objectives. Scoping meeting is premature before Specific Plan is ready for the public to review. Does developer control all the land within the SP area? Will there be a truck stop and what would be the impacts of that facility? What level of LEED will be achieved? Project will displace not replace 7,700 housing units so this must be analyzed in EIR (i.e., where those units will be transferred to within the City). EIR must look at toxic diesel particulates in addition to "diesel vapors" (term undefined).~~	~~(3.0) Project Description~~ ~~(4.1) Aesthetics~~ ~~(4.3) Air Quality~~ ~~(4.10) Land Use~~ ~~(4.15) Traffic~~ ~~(6.0) Alternatives~~
~~"Residents for a Livable Moreno Valley" Scoping handout from local residents (at meeting)~~	~~3/12~~	~~Concerned about relocation of existing jobs rather than creating new jobs here, and not very many new jobs as compared to other uses. Existing zoning would generate more jobs, more sales, and higher property taxes. Displacement vs. replacement of 7,700 housing units. East end of Moreno Valley does not have infrastructure to support this amount of new warehouses. Air pollutant impacts to sensitive receptors. Why change zoning here when General Plan and regional planners anticipates new warehouses in southwest portion of City near I-215?~~	~~(4.3) Air Quality~~ ~~(4.10) Land Use~~ ~~(4.13) Population & Housing~~
~~Arturo Benitez~~	~~3/14~~	~~Very concerned about the process and that everything be transparent and "published" so all can participate.~~	~~(2.0) Introduction~~
~~Charles Robinson~~	~~3/15~~	~~Need to make provisions to hire local employees (i.e., City residents) on a prioritized basis.~~	~~(3.0) Project Description~~ ~~(4.13) Population & Housing~~
~~Scoping Meeting Comments (in order of presentation)~~			
~~Kenny Bell~~	~~3/12~~	~~EIR needs to show accurate estimate of job creation, not like the Skechers project.~~	~~(4.13) Population & Housing~~
~~Susan Nash~~	~~3/12~~	~~State land south of site must be protected. CDFW open space land within project should not count toward open space requirements for project.~~	~~(4.4) Biology~~
~~Mike McCoy~~	~~3/12~~	~~Concerned about seismic safety (Casa Loma and San Jacinto Faults nearby). Impacts of warehouses vs. housing vastly higher, global reductions in logistics due to Panama Canal widening and railroad expansions.~~	~~(4.6) Geology~~
~~Tom Thornsley (2×)~~	~~3/12~~	~~Should bring railroad spur into site, should not just rely on trucks, no plans to widen SR-60, would take 10–20 years to complete such a widening. Need accurate economic~~	~~(4.1) Aesthetics~~ ~~(4.9) Hydrology~~ ~~(4.13) Population & Housing~~

~~Table 2.A: Notice of Preparation Comments Received~~

~~Agency/ Organization/ Individual~~	~~Date~~	~~Comments*~~	~~Addressed in Section(s) of the EIR~~
		~~assessment. Localized flooding and project needs buffers for existing residents.~~	~~(4.15) Traffic~~
~~Cathy Godfree~~	~~3/12~~	~~Need buffers, open space, zero runoff, reduce flooding, so much more asphalt, Skechers did not take care of flooding on Redlands Boulevard as promised. Trucks get off at Redlands Boulevard and try to enter at Eucalyptus Avenue. Trucks park on Redlands Boulevard waiting to enter project block traffic. Will there be a truck stop? Will need big setbacks to not block views off Merwin Street and Bay Avenue~~	~~(4.1) Aesthetics~~ ~~(4.9) Hydrology~~ ~~(4.15) Traffic~~
~~Andrew Jones~~	~~3/12~~	~~Skechers is a nice project, new ones should also be attractive, low water use and runoff.~~	~~(4.1) Aesthetics~~ ~~(4.9) Hydrology~~
~~Nanette Bartenee~~	~~3/12~~	~~On board of "Friends of San Jacinto Valley" SJWP is world-famous raptor habitat. Need good alternatives analysis for regional impacts.~~	~~(4.4) Biology~~ ~~(6.0) Alternatives~~
~~Frank Wright~~	~~3/12~~	~~Need more jobs but this project will generate a lot of traffic and will need to widen freeways.~~	~~(4.13) Population & Housing~~ ~~(4.15) Traffic~~
~~Ian McMillian (SCAQMD)~~	~~3/12~~	~~Works for SCAQMD. Project represents 25% of all planned warehouse space in region, big concern about diesel particulates and other pollutants. He would like to work with developer regarding alternative fuels for trucks.~~	~~(4.3) Air Quality~~ ~~(4.7) Greenhouse Gases~~
~~Rick Tendell (2x)~~	~~3/12~~	~~Need environmental design studies (compressed natural gas, hydrogen fuel cells, solar, etc.). Maybe even fuel trucks.~~	~~(4.7) Greenhouse Gases~~
~~Jim Randondoth~~	~~3/12~~	~~Skechers laid off 600 people in Ontario when it opened, what will all these projects do to regional employment?~~	~~(4.13) Population & Housing~~
~~Peggy Hadaway~~	~~3/12~~	~~Our Quality of Life will deteriorate from more warehouses. Need to bring in more varied employment and is concerned about air pollution.~~	~~(4.3) Air Quality~~ ~~(4.13) Population & Housing~~

~~Agency/Tribe~~	~~Date[1]~~	~~Comments~~	~~Desire to Consult?~~
	~~11/27~~	~~City met on site with tribe consult regarding project activities.~~	

~~Source: City Planning Department 2012 records on tribal correspondence (see DEIR Appendix A)~~

~~[1] NOP notices mailed February 21 so some tribes were responding to that notice before they received official SB 18 notice.~~

SB 18 Consultation. It should be noted that the city met with the Pechanga Tribe on May 30, 2012, and with the Soboba Tribe on November 27, 2012. No other Native American entities requested a government-to-government consultation meeting.

2.6.2 Public Scoping Meeting

~~A public Scoping Meeting was held at the City of Moreno Valley City Hall in the City Council Chambers on March 12, 2012, 6:00 p.m. There was one agency staff representative (from the Air Quality Management District) and over 150 individual members of the public in attendance. City staff and the developer briefly described the project, and then comments from the public were solicited. Local residents brought up essentially every major environmental concern, including traffic, truck traffic, air quality, noise, loss of views, and impacts to the nearby wildlife area. Copies of the written scoping comment forms are included in Appendix A and a list of commenters is provided as part of previously referenced Table 2.A.~~

2.7 MITIGATION MONITORING AND REPORTING PROGRAM

A Mitigation Monitoring and Reporting Program (MMRP) will be ~~prepared~~ revised for this EIR to comply with the requirements of State law (Public Resources Code Section 21081.6) and the Court's ruling and writ. When mitigation measures are required to avoid or reduce the severity of significant impacts, State law requires the adoption of an MMRP. The monitoring program is intended to ensure compliance during implementation of the program. An MMRP will be adopted by the City Council concurrent with certification of the Final EIR for the proposed ~~WLCSP~~ WLC project. ~~A copy of the MMRP, revised to reflect all changes in the DEIR that resulted from changes in the project description, technical studies, and response to comments on the DEIR, is included in the Final EIR Volume 1 Response to Comments.~~

2.8 POTENTIAL IMPACTS OF THE PROJECT DISCUSSED IN THE EIR

~~This EIR focuses on the areas of concern identified in the NOP and comments submitted regarding the NOP. The following sixteen environmental topics are addressed in this EIR:~~

- ~~Aesthetics~~
- ~~Agriculture and Forestry Resources~~
- ~~Air Quality, including Human Health~~
- ~~Biological Resources~~
- ~~Cultural Resources~~
- ~~Geology and Soils~~
- ~~Hydrology, and Water Quality~~
- ~~Land Use and Planning~~
- ~~Mineral Resources~~
- ~~Noise~~
- ~~Population, Housing, and Employment~~
- ~~Public Services and Facilities~~
- ~~Transportation and Traffic~~

- ~~Greenhouse Gas Emissions, Energy Conservation, and Global Climate Change~~
- ~~Hazards and Hazardous Materials~~
- ~~Utilities and Service Systems~~

The Revised Sections of the FEIR focuses on the areas of concern identified by the court ruling and writ.

The following seven environmental topics are addressed in the project impacts section (Section 4.0) of these Revised Sections of the FEIR:

Agriculture and Forestry Resources (loss of farmland of local importance)

Biological Resources

Energy

Noise

Traffic

Air Quality

Greenhouse Gas Emissions

The following seventeen environmental topics are addressed in the cumulative impact sections (Section 6.0) of the Revised Sections of the FEIR:

Aesthetics

Agriculture and Forestry Resources

Air Quality, including Human Health

Biological Resources

Cultural Resources

Geology and Soils

Greenhouse Gas Emissions

Hazards and Hazardous Materials

Hydrology, and Water Quality

Land Use and Planning

Mineral Resources

Noise

Population, Housing, and Employment

Public Services and Facilities

Transportation and Traffic

Utilities and Service Systems

Energy

2.9 EFFECTS FOUND NOT TO BE SIGNIFICANT

As required under CEQA (Section 15128), an EIR is to contain a statement supporting the Lead Agency's determination that some of the possible effects of a project are not significant and, therefore, are not discussed in detail in the EIR. ~~In this case, the proposed project is not consistent with the City's General Plan or the currently approved Moreno Highlands Specific Plan and the respective EIRs prepared for each.~~ Due to the size and scope of the project, the City determined that all potential environmental issues outlined above would be evaluated in this EIR. Section 4.0 of the EIR determined that only mineral resources and forest resources would not be significantly affected by the proposed project.

2.10 CUMULATIVE IMPACTS

2.10.1 Definition of Cumulative Impact

CEQA defines cumulative effects as "two or more individual effects that, when considered together, are considerable or which compound or increase other environmental impacts." (*State CEQA Guidelines* Section 15130). The *Guidelines* further state that the individual effects can be the various changes related to a single project or the changes involved in a number of other closely related past, present, and reasonably foreseeable future projects (Section 15335). Substantial changes are anticipated to occur as the result of warehousing and employment growth of the proposed project, as well as growth in population, housing, and employment from development of other projects in the City of Moreno Valley and the surrounding region. Section 15130 of the *State CEQA Guidelines* requires that an EIR include a discussion of the potential cumulative impacts of a proposed project. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the development when added to the impacts of other closely related past, present, and reasonably foreseeable or probable future developments. Cumulative impacts can result from individually minor, but collectively significant, developments taking place over a period of time.

With respect to the analysis of cumulative impacts, CEQA generally requires the following:

(a) Cumulative impacts shall be discussed when the project's incremental effect is cumulatively considerable.

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided of the effects attributable to the project. The discussion should be guided by the standards of practicality and reasonableness.

Pursuant to *CEQA Guidelines*, Section 15130, the assessment of cumulative impacts contained in EIRs is typically based on either: (i) past, present, and probable future projects, which are either approved or being considered for approval by the City or other municipalities (or anticipated to be submitted for consideration, including projects in the design phase or under construction); or (ii) growth projections set forth in regional plans, including regional modeling plans.

Due to the size of the ~~proposed~~ project and its potential future new land use and employment implications for the City, the cumulative analysis for this EIR will use the City's General Plan growth projections. It is expected that the cumulative impact analysis set forth in this EIR will be conservative and would tend to overstate (rather than understate) cumulative impacts.

The significance of a cumulative impact may be greater than the effects resulting from the individual actions if the effects of more than one action are additive. Thus, as set forth above, this section evaluates the ~~proposed~~ project together with (i) the reasonably foreseeable potential effects of other closely related past, present, and reasonably foreseeable or probable future development in the area of the project, and (ii) growth projections set forth in regional plans.

Criteria for evaluating the significance of adverse effects are identified for each environmental issue in Section 4.0. These criteria, which are based on resource sensitivity, quality, and quantity, are also instructive when evaluating whether the environmental effect resulting from implementation of a particular project is cumulatively considerable. The timing and duration of each activity is also an important consideration for evaluating the potential cumulative effects of activities that may occur only for a limited period. In such cases, a cumulative effect may occur only when two or more of the activities are occurring simultaneously.

Because of the nature of individual environmental factors, the cumulative "universe" for every issue addressed in this EIR will not be identical. For example, the cumulative universe for ~~air quality~~ construction noise impacts is reasonably assumed to be ~~the entire South Coast Air Basin~~cin close proximity to the project boundary, which is much ~~larger~~ smaller than the cumulative universe for ~~public~~ traffic ~~service~~ impacts ~~(i.e., the service area of the various service providers.)~~ which extend well beyond the City boundary. The individual cumulative areas for the issues addressed in this EIR are provided within the cumulative impacts discussion in the respective impact sections, but range from the City of Moreno Valley to the County to the entire SCAG region when necessary.

To summarize, in determining the cumulative impacts of a proposed project with other area projects, the *CEQA Guidelines* provide that an EIR may either consider a list of past, present, and probable future projects, or it may consider a summary of projections method. This EIR utilizes both.~~the summary of projections method due to the size of the project and its growth implications for the City as a whole.~~

2.10.2 City of Moreno Valley Growth Projections

The Moreno Valley General Plan establishes policies to guide future development within the City and its implementation is long-term in nature. The Regional Growth Projections Method is the appropriate methodology in evaluating cumulative impacts because it provides general growth projections for the region and considers long-term growth. Table 2.D summarizes the cumulative growth information from the Final Program EIR for the City General Plan Update from July 2006 (Section 7, *Cumulative Impacts*). Table 2.D shows that the City expects to grow at an average annual rate of 2–3 percent from 2000 to 2030, with a population at that point of 238,703 persons and 71,619 households. The City will comprise approximately 7 percent of the County's population and housing stock at that time.

Table 2.D: General Plan Growth Projections for Moreno Valley (2000–2030)

Jurisdiction	Population		Households	
	2000	2030	2000	2030
City of Moreno Valley	142,655	238,703	39,264	71,619
Average Annual Increase	—	+2.24%	—	+2.75%
Riverside County	1,850,231	3,143,468	509,311	1,127,780
Average Annual Increase	—	+2.33%	—	+4.05%
City (Percent of County)	7.7%	7.6%	7.7%	6.4%

Sources: SCAG, 2008 RTP Growth Forecast, Table 7-1, General Plan Final EIR, Section 7.0, Cumulative Impacts.

2.10.3 Regional Growth Projections

The SCAG estimates regional growth for the Riverside County area for the purposes of planning and public policy development. The most recent set of growth projections are provided in the most recent *Regional Transportation Plan (RTP) Growth Forecast*, based on extensive analyses of the regional economic and demographic conditions. The *Draft 2012 RTP Growth Forecast* provides estimates and forecasts of employment, population, and housing for the period between 2011 and 2035. Consistent with the projections shown in previously referenced Table 2.D, Table 2.E shows that the population, housing, and employment of the City are expected to increase consistent with overall regional trends for that period (i.e., approximately 2–3% per year).

According to SCAG projections, the population of Moreno Valley is expected to increase by about 60,749 persons or approximately 31.2 percent between 2011 and 2035 to approximately 255,200 persons. By comparison, the population of Riverside County is projected to increase by 1.1 million persons or approximately 50 percent between 2011 and 2035 to approximately 3,324,000 persons. The number of households is estimated to increase approximately 30.9 percent in Moreno Valley and 35.7 percent in Riverside County over this same time period.

The number of jobs in Moreno Valley is estimated to increase by approximately 156 percent from 2011 to 2035. Over this same time period, jobs in Riverside County are expected to increase by 125 percent. At present, Moreno Valley has a relatively low jobs-to-housing ratio of 0.45 compared to the overall regional ratio of 1.14 (i.e., 1.14 jobs for each 1 housing unit). SCAG's Compass Blueprint Plan and the Regional Transportation Plan encourages "bedroom" communities (i.e., those with more housing than jobs) to encourage jobs growth instead of housing growth, which will eventually help balance these factors across the region and help reduce commuter traffic. These plans forecast that the City's ratio of jobs to housing will increase in the future but will still be less than 1.0 (estimated 0.89 by 2035), compared to a projected ratio of 1.14 for the County and 1.29 for the entire SCAG area. The City's jobs/housing ratio is expected to still be less than 1.0 by 2035, but to achieve that ratio, the City would need to attract over 34,000 jobs in the next 20 years, compared to attracting 17,000 new houses during that same period.

Table 2.E: Regional Population, Housing, and Employment Forecasts through 2035

Forecast Category	2011	2020	2035
Population			
City of Moreno Valley	194,451[6]	213,700	255,200
Riverside County	2,205,731[6]	2,592,000	3,324,000
SCAG	18,163,664	19,663,000	22,091,000
Housing Units			
City of Moreno Valley	55,635	60,000	72,800
Riverside County	804,913	834,000	1,092,000
SCAG	6,348,741	6,458,000	7,325,000
Employment			
City of Moreno Valley	25,120[5]	48,000	64,400
Riverside County	551,492[5]	939,000	1,243,000
SCAG	7,224,670	8,414,000	9,441,000
Jobs/Housing Ratio			
City of Moreno Valley	0.45	0.80	0.89
Riverside County	0.69	1.13	1.14
SCAG	1.14	1.30	1.29

2.10.4 Analysis of Cumulative Impacts

The analysis of each environmental issue or topic (EIR Sections ~~4.1~~ 6.1 through ~~4.16~~6.17) also discusses the cumulative impacts of the ~~proposed~~ project. Implementation of the mitigation measures identified in each specific section of this EIR will reduce the cumulative impact of the project to the extent feasible. In many cases, the mitigation measures result in reducing the project's cumulative impact to a less than significant level. For other impacts, the implementation of the identified mitigation measures will not avoid a significant cumulative impact. The ~~sixteen~~ seventeen subsections of Section ~~4.0~~6.0 (i.e., ~~4.1~~6.1 through ~~4.16~~6.17) identify those significant, unavoidable cumulative impacts that will not be reduced to a less than significant level by implementation of the identified mitigation measures presented in each of those sections. In addition, the analyses indicate to what degree the project makes a significant contribution to cumulatively considerable impacts for each environmental issue (air quality, biological resources, etc.).

It should be noted that the project Traffic Impact Assessment developed an extensive list of cumulative projects to more accurately estimate potential traffic impacts over time on local roadways and intersections (see Section 4.15, *Transportation*).

~~***NOTE TO READERS.*** *A number of comments were raised on the Draft EIR about the validity of the growth projections used as the basis for the assessment of cumulative impacts of the WLC project. Some comments referred to a number of General Plan Amendments the City had approved since the last General Plan Update. In addition, some comments stated that the General Plan did not account for recent approvals of several warehouse projects, both within the City and in other nearby jurisdictions. However, the City's General Plan was updated in 2006, and SCAG's Regional Transportation Plan (RTP) was last updated in May 2008, although the Growth Forecasts that accompany the RTP were last updated in 2012 (Draft 2012 RTP Growth Forecast, Southern California Association of Governments, March 15, 2012). Both of these do constitute current applicable local and regional planning documents upon which to base the analysis of cumulative impacts in the programmatic WLCSP EIR. Therefore, there are no changes to the growth projections that are the basis for the cumulative impact analysis in this EIR.*~~

3.0 PROJECT DESCRIPTION: TABLE OF CONTENTS

FIGURES

TABLES

THIS PAGE INTENTIONALLY LEFT BLANK

~~***NOTE TO READERS:*** *The original Specific Plan was prepared in December 2012 and was analyzed in the Programmatic Draft EIR that was circulated for public review from February 4 to April 8, 2013. In response to comments received on the public review of the DEIR, the Specific Plan was revised to change the Specific Plan boundary resulting in a loss of 100 acres and 1 million square feet of potential development. In addition, the phasing was extended from ten to fifteen years so Phase 1 is from 2015 to 2022 and Phase 2 is 2023 to 2030 instead of the project completing development in 2022 as analyzed in the original DEIR. Changes to the Project Description are shown in double underline for added text and in strikeout for text to be deleted, plus notes about the reasons for the various changes. The revised figures are included in this section rather than the original figures to provide the most accurate project information for the reader.*~~

~~3.0 PROJECT DESCRIPTION~~

~~The project description is provided in this section of the EIR in conformance with *CEQA Guidelines* Section 15124. It discusses the geographic setting, project location, project setting, City of Moreno Valley General Plan designations, World Logistics Center (WLC) Specific Plan designations, zoning designations, project characteristics, project objectives, and discretionary actions required to implement the proposed project. The project description is used as the basis for analyzing the proposed project's impacts on the existing physical environment in Section 4.0 of the EIR.~~

~~The term "World Logistics Center Project" refers to all related development and planning activities currently proposed by Highland Fairview~~ **NOTE TO READERS:** The project as originally proposed to the City, and as described in the FEIR, included both the World Logistics Center and a General Plan Amendment and a rezoning of land south of the World Logistics Center site to reflect their open space nature. The General Plan Amendment and rezoning have since been accomplished through the initiative process. The description of the World Logistics Center has not changed. It should be noted that Theodore Street has been renamed World Logistics Center Parkway, south of SR-60.

3.0 PROJECT DESCRIPTION

The World Logistics Center is located on 2,610 acres in the Rancho Belago area ~~of~~at the eastern end of ~~the City of~~ Moreno Valley~~. The WLC property is generally located~~, south of SR-60, east of Redlands Boulevard, west of Gilman Springs Road~~,~~ and north of ~~Mystic Lake and~~ the San Jacinto Wildlife Area. ~~The terms "Project Site" or "Project Area" refer to the entire 3,714-acre area covered by the project entitlements, which encompasses: (a) the General Plan Amendment and the Zone Change (including the revised WLC Specific Plan Area (2,610 acres); (b) the CDFW Conservation Buffer Area (910 acres); and (c) the Public Facilities Lands area (194 aces). Additional acreage that was evaluated in the EIR but that is not in the Project Area is the Off-site Improvement Area of 104 acres. See Section 3.4 for more details on these specific areas.~~

3.1 PROJECT LOCATION

The project is located in "Rancho Belago," the eastern portion of the City of Moreno Valley, in northwestern Riverside County. The project site is immediately south of SR-60, between Redlands Boulevard and Gilman Springs Road (the easterly city limit), extending to the southerly city limit. Figure 3.1 depicts the location of the proposed project within the region and the City of Moreno Valley. The major roads that currently provide access to the project site are Redlands Boulevard, Theodore Street, Alessandro Boulevard, and Gilman Springs Road.

The WLC project area is located in portions of Sections 1, 12, and 13 of Township 3 South, Range 3 West; and portions of Sections 6, 7, 8, 9, 16, 17, 18, 19, 20, and 21 of Township 3 South, Range 2 West, as depicted on the U.S. Geological Survey (USGS) 7.5-minute series *Sunnymead* and *El Casco, California* quadrangles. Figure 3.2 depicts the proposed project boundary on the applicable USGS quad sheets.

THIS PAGE INTENTIONALLY LEFT BLANK

3.2 PROJECT SETTING AND HISTORY

3.2.1 Project Setting

The project site slopes gently (approximately 2%) from north to south, with elevations ranging from approximately 1,760 feet above mean sea level (amsl) at the northeast corner to 1,480 feet amsl at the southeast corner. Soils within the proposed project consist of disturbed top soil and natural soils, with a mixture of various silty clays, sandy silts, silty sands, and sands.

3.2.2 On-site Land Uses

The WLC project area is largely vacant undeveloped marginal agricultural land, with ~~seven~~ six occupied single-family homes and associated ranch/farm buildings in various locations on the property. In the 1920s, several farm buildings and related houses were constructed on the property and, in the 1940s, a stock farm operated on a portion of the site that was later expanded into a commercial horse farm and training facility that operated until the mid-1990s. The overall project site has been farmed by a variety of owners since the early 1900s and has supported dry (non-irrigated) farming, livestock grazing, and limited citrus groves. Much of the site continues to be used for dry farming today.

San Diego Gas & Electric (SDG&E) operates a natural gas compressor plant, known as the Moreno Compressor Station, on 19 acres south of the WLC ~~in the south-central portion of the~~ site. The Southern California Gas Company (SCGC) operates a metering and pipe cleaning station on two separate parcels (totalling1.5 acres) ~~in the south-central portion of the site~~ south of Alessandro Boulevard along existing Virginia Street. The site contains a variety of overhead and underground utility lines associated with oil, natural gas, and electrical service.

At present, the WLC project site contains a number of unimproved drainage features, but it does not contain any improved flood control facilities. As Figure 3.3 illustrates, the project vicinity is largely vacant agricultural land with scattered utility facilities and seven rural residential properties.

3.2.3 Surrounding Land Uses

Developed properties in the vicinity include a logistics building to the northwest (Skechers) and several residential neighborhoods along Redlands Boulevard along the western boundary of the project site. An area of the City known as “Old Moreno” is situated near the southwest portion of the project site, around the intersection of Redlands and Alessandro Boulevards. The homes along Bay Avenue, Merwin Street, and Redlands Boulevard constitute the closest off-site “sensitive receptors” to the project site (i.e., they are across the street from the property). Figure 3.3 shows the land uses on and around the project site.

The major roadways that currently provide access to the project area are SR-60 to the north, Redlands Boulevard to the west, Alessandro Boulevard (which traverses the site east-west), Gilman Springs Road to the east, and Theodore Street (which traverses the site north-south). Redlands Boulevard and Theodore Street are north-south arterial roadways that intersect with SR-60. Alessandro Boulevard is an east-west thoroughfare that runs through Moreno Valley from Interstate 215 (I-215) on the west to Gilman Springs Road on the east. Gilman Springs Road runs northwesterly-southeasterly connecting SR-60 to the Hemet-San Jacinto area.

Highland Fairview Corporate Park (HFCP) is located northwest of the project area between Redlands Boulevard and Theodore Street. It is currently under development and the first phase was completed in late 2011 (i.e., the Skechers logistics warehouse). The area north of SR-60 is largely undeveloped with clusters of low-density residential development.

THIS PAGE INTENTIONALLY LEFT BLANK

Near the southwest boundary of the project site is an existing residential neighborhood at the intersection of Redlands Boulevard and Alessandro Boulevard; a small market and a post office are also located near this intersection. This area is referred to as "Old Moreno." The Moreno Valley Ranch and Golf Club residential community is approximately one mile southwest of the project area.

There is little development adjacent to the east and south boundaries of the WLC project area. The area east of the project site across Gilman Springs Road is commonly referred to as the Badlands, a rugged area that separates the City of Moreno Valley from San Timoteo Canyon and the City of Beaumont. Due to its steep slopes and canyons, the Badlands area has experienced little development; however, there are approximately ten single-family homes in the area east of Gilman Springs Road near the project site. The Badlands Sanitary Landfill, operated by the County of Riverside Waste Management Department, is located approximately 1.5 miles northeast of the project area.

Immediately south of the ~~proposed~~ WLC project is the San Jacinto Wildlife Area (SJWA), which includes an "Upland Game Hunting Area," and Mystic Lake. These lands are state-owned and access to these areas is restricted. The Lake Perris State Recreation Area is west of the SJWA and is owned and operated by the California State Parks Department and contains approximately 6,000 acres of open space land, which is used both for recreation and preservation of the natural southern California landscape.

The closest large-scale commercial development is located on the south side of SR-60 at Moreno Beach Drive, approximately 1.25 miles to the west of the proposed project. This shopping complex includes a Walmart and Target along with restaurants and ancillary commercial and service uses, and the Moreno Valley Auto Center. The central core of Moreno Valley, which includes residential neighborhoods and more extensive commercial activity, is located approximately three miles west of the project area.

March Air Reserve Base (MARB) is located approximately seven miles southwesterly of the proposed project. The MARB is under the authority of the March Joint Powers Authority (MJPA), which acts as the land use authority as well as the March Inland Port Airport Authority for reuse of the former March Air Force Base.

3.2.4 Local History

In 1774, the Spanish explorer Juan Bautista de Anza traveled through this area, passing by Mystic Lake and traveling around the Mount Russell Range on his exploration of Alta California.

The project area was first developed in the late 1890s; prior to this, the property had been part of the *San Jacinto Nuevo y Potrero Rancho*. This Rancho, a subdivision of the massive San Jacinto Rancho (originally 8 square leagues in size or more than 50 square miles) lay vacant during the Spanish era and was not part of any rancho until 1842. Once defined, the old road from Temecula to San Jacinto was expanded such that a road was established between San Jacinto and the Box Springs area of the City of Riverside and points beyond. This road probably ran along the track now covered by Gilman Springs Road, headed to Box Springs across what is now Moreno Valley, thence to Riverside and points west. Because of the lack of reliable water, it is unlikely that the project area was used during the early historic period for anything except springtime grazing of sheep and cattle.

During the historic era, most of the parcels in the project area have been used sporadically for dry-land crops and the occasional irrigated farming plots. Horses were raised on one farm in the northwest corner of the site. Although plans were made to bring water from Big Bear to the project area as part of a regional California land boom scheme (circa 1891), the plan was never completed because the issue of water rights was adjudicated in favor of the City of Redlands.

The Moreno Valley area supported numerous military facilities from the early 1900s to today, with the March Air Reserve Base still functioning near I-215 on the west side of town. From the 1970s through the 1990s, Moreno Valley was one of the fastest-growing residential communities in the nation, and incorporated in 1984. In 1992, the City approved a master planned, mixed-use community called “Moreno Highlands Specific Plan” on most of the project site, but no uses within this community were ever built.

3.3 GENERAL PLAN AND ZONING DESIGNATIONS

3.3.1 Designations on the Project Site

The WLC site currently has a General Plan designation of Business Park/Light Logistics and is subject to the World Logistics Center Specific Plan.

~~The Community Development Element of the City’s General Plan currently designates the project area as a mix of residential, commercial, business park, and open space land uses. The currently approved 3,038-acre Moreno Highlands Specific Pan (MHSP) proposes a master planned, mixed-use community consisting of up to 7,763 residential dwelling units on approximately 2,435 acres and approximately 603 acres of business, retail, institutional, and other uses. Table 3.A is a summary of land uses of the MHSP. Figure 3.4 depicts the City General Plan land use designations for the area.~~

~~Table 3.A: Moreno Highlands Specific Plan (Current Land Use Designations)~~

~~Land Use~~	~~Acreage~~
~~Residential Community~~	
~~Residential (7,763 du)~~	~~1,359.3~~
~~Parks and Open Space~~	~~701.9~~
~~Neighborhood Commercial~~	~~10.0~~
~~Cemetery~~	~~16.5~~
~~Public Facilities~~	~~347.7~~
~~Planned Business Center~~	
~~Business Park~~	~~360.8~~
~~Mixed Use~~	~~80.5~~
~~Community Commercial~~	~~16.0~~
~~Parks and Open Space~~	~~77.9~~
~~Public Facilities~~	~~67.4~~
~~Project Total~~	**~~3,038.0~~**

~~Adopted by City Council March 17, 1992~~

~~As a result of a variety of factors, the Moreno Highlands Specific Plan has not been implemented.~~

~~The City’s 2006 Housing Element identified the Moreno Highlands Specific Plan as a potential source of vacant land that could accommodate possible future residential growth in the City. In 2011, the City updated its Housing Element and anticipated possible land use changes from mixed use and residential to jobs producing warehouses in the eastern part of the City. The 2011 Housing Element concluded that redesignating the entire land area east of Redlands to the eastern City border for warehouse uses would not impede the City’s Housing Element Objectives. The State Department of Housing and Community Development certified the City’s Housing Element as being in compliance with State law on February 22, 2011. The proposed project is consistent with the City’s current Housing Element.~~

Highland Fairview currently owns or controls development rights on 1,754 acres or ~~46 percent of the total 3,714 acres within the WLC project area and~~ 67 percent of the WLC site~~SP area~~. The remainder of the project area property is owned by private individuals or entities such as the ~~San Diego Gas &~~

~~Electric Company, Southern California Gas Company,~~ Metropolitan Water District~~, and California Department of Fish and Wildlife~~. Figure 3.5 depicts the property ownership within the WLC site~~project area~~.

I:\HFV1201\Reports\EIR\fig3-5_Ownership.mxd (9/29/2014)

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

An 85-acre parcel located on the west side of Gilman Springs Road near Alessandro Boulevard is within an unincorporated area of Riverside County and within the City Sphere of Influence adopted in 1985. The City has requested that trghe 85 acres be annexed to the City.~~project will request a pre-annexation General Plan land use designation and zoning of Logistics Development (LD) within a Specific Plan for this parcel, and this~~This ~~-~~EIR will be the environmental documentation used by the Local Agency Formation Commission (LAFCO) to complete the annexation action. The County's land use designation currently applicable to this parcel is W-2-2½. The W-2 area allows single-family residential and light agriculture (the suffix indicates minimum parcel size in acres). ~~and t~~The City's current General Plan land use designation for the site is Business Park/Light Logistics ~~(BP)~~ under the ~~MHSP~~ subject to the World Logistics Center Specific Plan.

~~The General Plan Amendment and Zone Change includes approximately 910 acres of land owned by the CDFW that are part of the San Jacinto Wildlife Area (SJWA). Much of this property is designated for residential development in the MHSP. The CDFW parcels were acquired by the State beginning in 1992 to act as a buffer from future development to the north (the MHSP) and to further the CDFW goal of eventually preserving approximately 20,000 acres of restored wetlands and ponds. The land around Mystic Lake was originally purchased as mitigation for habitat loss as a result of construction of the state water project.~~

~~The SJWA was the first state wildlife area to utilize reclaimed water to create and enhance wetlands, and improvements are ongoing. Waterfowl, wading birds, and quail are among the many animals found in this area. It also supports a number of private hunting clubs around its northwestern perimeter.~~

The following information was added at the request of the Metropolitan Water District of Southern California (Letter C-2) regarding the Inland Feeder.

The figure showing the location of the Inland Feeder can be found at the end of comment Letter C-2 from the Metropolitan Water District of Southern California.

> "Metropolitan owns property and owns and operates facilities on and adjacent to the site of the proposed project. As shown on the attached map, Metropolitan's irregularly shaped fee-owned property (APN 422-040-009 and 422-040-015), Inland Feeder Tunnel, and appurtenant tunnel access structure are located within the proposed specific plan area. In addition, Metropolitan's 145-inch-inside-diameter Inland Feeder pipeline and appurtenant structures extend through the specific plan area in the street rights-of-way for Eucalyptus Avenue, Theodore Street, and Davis Road. Metropolitan also has a 110-foot-wide easement along Davis Road."

3.3.2 Existing Conditions and Land Use Designations in Surrounding Areas

3.3.2.1 South of SR-60/East and north of Eucalyptus ~~-~~Avenueof Redlands Boulevard

Existing Conditions. This area ~~is~~ is planned and zoned for Business Park and is currently improved with a logistics facility used by Skechers.~~currently used mainly for dry farming, with several scattered rural residences. The only major improvements are several natural gas facilities and two local roadways (Alessandro Boulevard and Theodore Street)~~.

~~**Existing Land Use Designations.** The Highland Fairview Corporate Park (HFCP) project is currently under development and Phase 1 (Skechers' North American Operational Headquarters) was completed in late 2011. HFCP is located immediately northwest of the project area, on the north side~~

~~of Eucalyptus Avenue between Redlands Boulevard and Theodore Street. The HFCP project was approved by the City of Moreno Valley in 2009. The City General Plan land use designation for the site is a mixture of Commercial (C) and~~of Business Park/Light Industrial ~~(LI).~~

3.3.2.2 North of SR-60

Existing Conditions. This area is relatively rural at present with mixed light industrial uses along the freeway and scattered residences farther away from the freeway.

Existing Land Use Designations. The land located on the north side of SR-60 and westerly of Theodore Street is within the City of Moreno Valley and has a land use designation of Office (O) and Residential (R1—density of one dwelling unit per acre). The area easterly of Theodore Street is in an unincorporated area of Riverside County with land use designations of Scenic Highway Commercial (C-P-S) and Controlled Development Area (W-2). The W-2 area allows single-family residential and light agriculture (the suffix indicates a 2-acre minimum parcel size); and the C-P-S district allows certain wholesale and retail commercial uses. This county territory is within the City's Sphere of Influence; the City land use designation for the area is Rural Residential (RR) and Residential (R1).

3.3.2.3 East of Gilman Springs Road

Existing Conditions. This area currently contains scattered rural residences east and a golf course southeast of the WLC project area.

Existing Land Use Designations. The Badlands area, lying easterly of Gilman Springs Road, is within the jurisdiction of the County of Riverside and has a land use designation of Controlled Development Area (W-2, W-2-1, and W-2-20). Allowed uses include single-family residential and light agriculture (the suffix indicates minimum parcel size in acres). A portion of this county territory is within the City's Sphere of Influence. The City land use designation for the area is Rural Residential (RR).

3.3.2.4 Southern Boundary

Existing Conditions. All the land south of the WLC project site is part of the Mystic Lake/San Jacinto Wildlife Area property, and currently provides various open space uses related to the presence of wildlife around the lake.

Existing Land Use Designations. The lands south of the WLC project are within the San Jacinto Wildlife Area and the Lake Perris State Recreation Area, and are designated either Open Space (OS) or public facilities (PF).

3.3.2.5 West of Redlands Boulevard

~~*The following change has been made to update the DEIR with the most current information.*~~

Existing Conditions. The land north of Eucalyptus Avenue (currently Fir Avenue) was recently approved for industrial warehousing (West Ridge Project) but the City approval of an EIR for that project had been challenged in court. As of the printing of this EIR the court challenge has been settled and the project sold. The new owners are currently processing a plot plan with the City. The land south of Fir Avenue is planned for suburban residential uses. There are residential neighborhoods along the west boundary of the project site, west of Redlands Boulevard south of Eucalyptus Avenue, and east of Redlands Boulevard south of Cottonwood Avenue.

Existing Land Use Designations. The City land use designations for the residential areas west of Redlands Boulevard are Residential R2 and R3 (maximum density of 2 and 3 dwelling units per acre, respectively). Residential areas southerly of the site along Alessandro Boulevard are subject to City land use designations of R2 and R5 (maximum density of 2 and 5 dwelling units per acre respectively).

Table 3.B summarizes on-site and adjacent land uses for the project site.

Table 3.B: On-site and Adjacent Land Use Designations

Location	Jurisdiction	Current Land Uses	General Plan Land Uses	Zoning Designations
On site	City of Moreno Valley	Agriculture/dry farming, rural residential	~~Moreno Highlands Specific Plan~~Business Park/Light Logistics	~~Moreno Highlands~~World Logistics Center Specific Plan
North	County and City of Moreno Valley	SR-60, rural residential north of freeway	County W-2, C-P-S City RR, R1	County W-2, C-P-S City O, R1
South	County and State of California	Agriculture, San Jacinto Valley Wildlife Area	~~MHSP and~~ OS (City and County)	~~MHSP and~~ OS (City and County)
East	Riverside County	Gilman Springs Road, rural residential	RR (City)	W-2, W-2-1 and W-2-20 (County)
West	City of Moreno Valley	Residential, Industrial [1]	R2, R3, R5, and LI	R2, R3, R5, and LI

[1] approved Westridge project

3.4 PROJECT CHARACTERISTICS

The World Logistics Center Specific Plan ~~being evaluated in this EIR~~ covers 2,610 acres and allows ~~proposes~~ a maximum of 40.4 million square feet of “high-cube logistics” warehouse distribution uses classified as “Logistics Development” (LD) and 200,000 square feet (approximately 0.5%) of warehousing-related uses classified as “Light Logistics” (LL). The lands within the WLC Specific Plan that are designated LL are existing rural lots, some containing residential uses, that ~~will~~ became ~~become~~ “legal, non-conforming uses” when ~~once~~ the WLC Specific Plan was~~is~~ approved. In addition, the LD designation includes land for two special use areas; a fire station and a “logistics support” facility for vehicle fueling and sale of convenience goods (3,000 square feet is assumed for planning purposes for the “logistics support”). The components of the proposed project are discussed below and are shown in Figure 3.6.

3.4.1 Project Terms

The following terms and areas are defined here for the purposes of analysis in the EIR:

- **World Logistics Center or WLC Project:** The term refers to all related development and planning activities for the World Logistics center ~~currently proposed by~~ Highland Fairview in the Rancho Belago area of the eastern end of the City of Moreno Valley. The WLC property is generally located south of SR-60, east of Redlands Boulevard, west of Gilman Springs Road, and north of Mystic Lake and the San Jacinto Wildlife Area.

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~Figure 3.6: WLC Project Areas~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

- ~~**Project Site or Project Area:** This term refers to the entire 3,818 acre area covered by the EIR encompassed by: (a) the Specific Plan Area (2,610 acres); (b) the CDFW Conservation Buffer Area (910 acres); c) the Public Facilities area (194 aces); and (d) the Off-site Improvement Area on 104 acres.~~

~~**CDFW Conservation[1] Buffer Area:** This term refers to a 910-acre parcel owned by the State of California as part of the San Jacinto Wildlife Area (SJWA). This land is within the City of Moreno Valley and is included in the approved Moreno Highlands Specific Plan. That plan designates this property for a broad mix of urban uses including suburban residential, schools, parks, and roads. This land was purchased by the State in 1991 as additional upland habitat for the SJWA and also to act as a buffer between the sensitive biological resources of the SJWA and the future urban development under the Moreno Highlands Specific Plan. This land has been actively farmed for many decades and most of it remains in active production. The southwestern portion contains areas of non-native grasslands, although aerial photographs show that this area has been intermittently tilled over the last 80 years. This property is included in the General Plan Amendment and the Zone Change to replace the current urban land uses that are permitted and to replace them with Open Space and Public Facility designations. This property is **not** within the proposed Specific Plan – Logistics Development) and WLCSP-LL (World Logistics Center Specific Plan (i.e., not in the area planned for development). This Conservation Buffer Area is a large part of the "Other Project Areas" described herein. – Light Logistics). The site is subject to the adopted World Logistics Center Specific Plan which authorizes the construction and operation of 40,600,000 square feet of logistics facilities and associated infrastructure. The land use plan in the Specific Plan is shown in Figure 3-8 and is also shown in this section in Figure 3-1.~~

~~**Other Project Areas:** The San Diego Gas & Electric Company (SDG&E) and All of the Southern California Gas Company (SCGC) own a total of 194 acres of land immediately south of the Specific Plan site. These properties are included in the proposed General Plan Amendment and the Zone Change to designate them for Open Space and Public Facilities uses. These designations are consistent with present uses. These properties are not within the proposed World Logistics Specific Plan. Approximately 174 acres of the land owned by SDG&E will be designated as Open Space. Nineteen acres of SDG&E land and one acre of SCGC land will be designated as Public Facilities.~~

- **Off-site Improvement Areas:** Development under the Specific Plan will require construction of a number of off-site infrastructure improvements covering approximately 104 acres of land adjacent to the Specific Plan Site including, but not limited, to the following facilities (see Figure 3.7):
    - Debris basins easterly of Gilman Springs Road;
    - Water reservoirs and access roads located northeast, north, and west of the project site;
    - SR-60 interchange improvements; and
    - Roadway, water, sewer, drainage, and utility improvements extending north and west from the project.
- ~~**Specific Plan Site:** Approximately 2,610 acres of the project area are included in the proposed WLC Specific Plan, located generally south of SR-60, east of Redlands Boulevard, west of Gilman Springs Road, and north of the San Jacinto Wildlife Area.~~
- **WLC Specific Plan:** The ~~revised~~ WLC Specific Plan proposes a master-planned logistics campus ~~to~~ that includes up to 40.4 million square feet of high-cube logistics warehousing, up to 200,000 square feet of light logistics uses, and 74.3 acres of Open Space in the southwest corner of the site. The Specific Plan includes extensive development standards, design guidelines, and review procedures for all development within the project.

~~[1] Although there were many comments suggesting the term "buffer" be removed from the name of this area, it accurately reflects the purpose of its purchase by the State Conservation Board. However, it should be noted that this land **is**, and will remain, part of the SJWA.~~

- **Annexation Area:** This term refers to an 85-acre parcel located adjacent to Gilman Springs Road that is to be annexed into the City of Moreno Valley. The parcel is already within the City's Sphere of Influence, adopted on November 21, 1985.

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~Figure 3.7: Off-site Improvement Areas~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

- **Tentative Parcel Map Area:** A Tentative Parcel Map is being processed to subdivide 1,539 acres of the WLC project for financing purposes only. This property is owned by the project applicant. Approval of the map will confer no development rights to the property.

- ~~**General Plan Amendment:** One of the proposed~~ land use entitlements ~~is a General Plan Amendment (GPA) that will permit the establishment of logistics land uses on 3,487 acres of property located east of Redlands Boulevard and south of SR-60. The following General Plan Elements will be amended: Community Development; Circulation; Parks, Recreation, and Open Space; Safety; Conservation; and General Plan Goals and Objectives. The GPA will replace the current Moreno Highland Specific Plan/General Plan Designations with the following land use designations: (a) 2,383 acres for high cube logistics development; (b) 1,084 acres of Open Space; and (c) 20 acres for Public Facilities. The General Plan land use designation for the site would become Business Park/Light Industrial (BP).~~

- ~~**Zone Change:** The project includes a Zone Change covering, 3,714 acres, which will designate 1,084 acres of land for Open Space (CDFW and SDG&E properties), 20 acres for Public Facilities (SDG&E and SCGC properties), and 2,610 acres~~ for the World Logistics Center ~~Specific Plan. The specific land use zones would be Logistics Development (LD) and Light Logistics (LL).~~

- ~~**State Lands:** Refers to lands owned by the State of California and includes the San Jacinto Wildlife Area (SJWA) located south of the Specific Plan Site, and the Lake Perris State Recreation Area (LPSRA) located southwesterly of the Specific Plan Site.~~

- ~~**Moreno Highlands Specific Plan (MHSP):** This term refers to the currently approved Specific Plan that covers 3,038 acres of the project area. This Specific Plan permits the development of a master planned, mixed-use community consisting of up to 7,763 residential dwelling units and approximately 603 acres of business, retail, institutional, and other uses.~~

~~*NOTE: Several commenters indicated that any mention of the current MHSP land plan should include the loss of 1,000 acres of land in the south end of that property that was purchased by the state for conservation as part of the SJWA, which is referred to in this document as the State Conservation Buffer Area.*~~

- ~~**Proposed Project or World Logistics Center Project:** General term applied to all of the entitlements outlined above that are addressed in this EIR, including:~~
    - ~~WLC Specific Plan .... 2,610 acres~~
    - ~~General Plan Amendment....................... 3,714 acres~~
    - ~~Zone Change .... 3,714 acres~~
    - ~~Tentative Parcel Map ....1,539 acres~~
    - ~~Annexation ....85 acres~~
    - ~~Off-site improvements ....104 acres~~

3.4.2 Logistics Warehousing Development

Logistics warehouses are used primarily for the storage and/or consolidation of manufactured goods (with no manufacturing) prior to their distribution to secondary retail outlets. These facilities consist of large buildings typically larger than 500,000 square feet in size, often subdivided for multiple tenants, with typical ceiling heights of 24 feet or more, and can be characterized by highly automated material handling systems supported by truck activities frequently during off-peak hours, and good freeway access. Goods imported through the Ports of Long Beach and Los Angeles as well as other locations are delivered via truck to the proposed distribution centers and distributed via truck to both in and out of state locations, thus benefiting both local and interstate commerce.

High-cube warehouse and logistics facilities include ancillary office and maintenance space along with the outdoor storage of trucks, trailers, and shipping containers. High cube-logistics warehouses provide businesses with a centralized location to sort, organize, and often transfer products from one shipping process to another where multiple forms of transport are available.

High-cube logistics warehouses are generally constructed with vertical-lift dock-high roll up doors to allow access for the loading and unloading of products from truck/trailers. Building interiors are typically large and open to accommodate the temporary storage and consolidation of the products to be distributed. Parking is provided for trucks and trailers in addition to parking for passenger vehicles in accordance with local standards.

3.4.3 Open Space Properties

~~The California Department of Fish and Wildlife (CDFW) owns 910 acres of vacant open space land within the project area. This area is the most northerly end of the San Jacinto Wildlife Area and all of it is being actively farmed. Section 4.4, *Biological Resources*, explains the importance of the SJWA in more detail, but generally supports a diversity of birds and other wildlife in and around Mystic Lake. This land was purchased by the State as a “buffer” between Mystic Lake and approved development under the Moreno Highlands Specific Plan within the City of Moreno Valley. This land is currently actively farmed and provides raptor foraging habitat in the northern portion of the SJWA. This land is designated as permanent open space on the proposed General Plan Amendment and Zone Change.~~

~~SDG&E owns and maintains 174 acres of open space around its 19-acre Moreno Compressor Station plant. The WLC project proposes this land be designated as permanent Open Space under the City are in place – the General Plan and zoning.~~

The WLC Specific Plan includes 74.3 acres of land designated as open space in the southwest corner of the property. It should be noted that Mount Russell and the Mount Russell Range are immediately southwest of the WLC project area, along with the Lake Perris State Recreational Area. No development is proposed for the 74.3 acres designated as Open Space within the Specific Plan.

~~3.4.4 Moreno Compressor Plant and Public Facilities~~

~~SDG&E operates a regional natural gas compression-transmission facility on 19 acres in the south-central portion of the site. This site is bounded on three sides by the CDFW property identified in Specific Section 3.4.3. The project proposes to designate this facility as “Public Facility” under the City General Plan and zoning, and does not propose or anticipate any further development of this site. Any proposal to expand the existing facilities at the site would require separate evaluation under CEQA.~~

~~A one-acre natural gas facility operated by SCGC is located just north of the Moreno Compressor Facility. It is also proposed to be designated as “Public Facility” as part of the project.~~

3.4.5 Annexation Area

Approximately 85 acres of land within ~~the~~ the WLC project area are within an unincorporated area of Riverside County and within the City’s Sphere of Influence. The ~~proposed~~ WLC project includes the completion of the annexation process for this land. This property is located just west of Gilman Springs Road and north of Alessandro Boulevard and is currently dry farmed similar to the land surrounding it. The 85 acres is currently has a General Plan designation of Business Park/Light Logstiocs and is subject to the WLC Sopecific Plan~~project includes approval of a pre-annexation General Plan and zoning land use designations of Logistics Development (LD) within the Specific Plan for this parcel~~. This EIR will be the environmental documentation used by the LAFCO to complete the annexation action, which commenced when the property was included in the City's Sphere of Influence in 1985. The County's land use designation currently applicable to this parcel is W-2-2½, which allows single-family residential and light agriculture~~, while the City's current General Plan land use designation for the site under the MHSP is Business Park (BP)~~.

3.4.6 World Logistics Center Specific Plan

The ~~proposed~~ WLC project includes a Specific Plan to implement the ~~new~~ General Plan ~~Amendment~~ designation and to set forth comprehensive land use regulations governing the ~~proposed~~ WLC project. The Specific Plan is a master plan for the future development of up to 40.6_million square feet of building area on 2,610 acres, providing for mainly high-cube logistics and distribution facilities. This programmatic EIR provides a streamlined environmental review process for future development projects in the WLC Specific Plan area, including site-specific subdivisions and development entitlements that are consistent with the overall plan. Subsequent projects that the City determines to be within the scope of the EIR may be approved pursuant to the procedures set forth in *CEQA Guidelines* Sections 15162 and 15177.

The following sections provide a summary of key elements of the Specific Plan, and Table 3.C provides a summary of the land uses of the Specific Plan and other areas addressed by the project.

Table 3.C: WLC Project Characteristics ~~(updated September 2014)~~

Area/Land Use	~~Original Project~~		~~Revised Project~~	
	~~Acres~~	~~Square Footage~~	Acres	Square Footage

[1] Included in LD zone 3,000 square feet of "logistics support" in Planning Area 22 at northeast corner of ~~Theodore~~ World Logistics Center Parkway and Eucalyptus.

[2] Right-of-Way included in each land use category

[3] Floor Area Ratio (FAR) is gross building area divided by gross site area

~~*NOTE: The following changes are due to revisions to the Specific Plan size, land plan, and phasing.*~~

3.4.6.1 Land Use Plan/Planning Areas

The WLC Specific Plan is a master plan for the development of up to 40.6 million square feet of development emphasizing modern high-cube logistics distribution facilities. The following information summarizes Section 2.0, *Land Use Plan*, of the WLC Specific Plan (see Appendix B), including three proposed land use designations, as shown in Figure 3.8.

High Cube-Logistics Development (LD). The WLC Specific Plan project ~~proposes~~ allowsthe development of ~~to develop~~ approximately 2,383 acres with up to 40.4 million square feet of high cube logistics warehouse space. This represents approximately 99.5 percent of the total building area of the WLC Specific Plan ~~project~~areat. Land uses allowed under this classification include high cube logistics warehouse buildings of 500,000 square feet or greater. High cube logistics warehouses are characterized by a high level of automated material handling systems and typical truck activities outside of the peak hour. High cube logistics warehouses are generally used for the storage of manufactured goods prior to their distribution to retail outlets (see Section 4.15 and Appendix J of this EIR). Warehouses permitted in the LD portion of the WLC site would be no smaller than 500,000 square feet, with a maximum height of 80 feet. The Specific Plan prohibits buildings over 60 feet in height along the western, northern, and southern boundaries of the site (see Figure 3.9).

Warehousing and logistics activities consistent with the storage and processing of manufactured goods and materials prior to their distribution to other facilities and retail outlets will be permitted throughout the WLC Specific Plan area. Refrigerated warehouse space is not an allowed use within the Specific Plan area (see Mitigation Measure 4.3.6.3E). Ancillary office and maintenance space is included along with the outdoor storage of trucks, trailers, and shipping containers. LD land uses provide a location for businesses to sort, organize, and transfer products from one shipping process to another.

Special Uses. Two “special use” areas are proposed within the land designated LD within the WLCSP. The first special use is at least one City fire station in Planning Area 11 east of Street F and west of Gilman Springs Road, although the City Fire Chief has not determined the specific site yet. The second special use area is for “logistics support” which will provide alternative fueling services for onsite users. The WLCSP encourages the development of warehousing that uses trucks powered by non-diesel fuels such as natural gas. The Specific Plan requires that smaller on-site service vehicles associated with these same buildings will use non-diesel fuels such as compressed natural gas (CNG) (WLCSP Section 12.3). The use of LNG/CNG will substantially reduce vehicular emissions from the WLC project, including diesel particulate matter (DPM) and other diesel-related pollutants. This facility will include a maximum of 3,000 square feet of building area for diesel and LNG/CNG fuel sales, and for a small convenience store on a minimum of a 1 acre plot. This facility will be located a minimum of 250 feet away from any residential uses (see Specific Plan Section 2.2.5, Land Use Plan for more information on this facility). Other permitted uses within the “logistics support” area include construction yards within, or immediately adjacent to approved construction sites, cellular transmission facilities and structures and public utility uses and structures.

NOTE: Diesel Emissions and Project Operation Restrictions. All medium-heavy duty trucks and heavy-heavy duty trucks entering logistics sites will be required to meet or exceed 2010 engine emission standards specified in California Code of Regulations Title 13, Article 4.5, Chapter 1, Section 2025 or be powered by natural gas, electricity, or other diesel alternative. Year 2010 diesel engines are generally considered to be as “clean” in terms of emissions compared to natural gas engines. Facility operators must maintain a log of all trucks entering the facility to document that on average, the daily truck fleet meets the emission standards contained in this mitigation. This log shall be available for inspection by City staff at any time. All service yard trucks (hostlers, yard goats, etc.), pallet jacks, forklifts, and other on-site equipment used during operation shall be powered by electricity, natural gas, and/or propane. Electrical power sources shall be provided for service equipment.

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

Light Logistics Uses (LL). This category provides for the storage of materials such as general warehouse, self-storage, or vehicle storage uses, and would also include related office and/or maintenance areas. The WLC Specific Plan applies this designation to approximately 37 acres of existing lots that are not large enough for LD buildings (minimum 500,000 square feet). Buildout of these areas could support up to 200,000 square feet of building area or 0.5 percent of the planned development of the site. Some of these lots are currently improved with residential uses and/or agricultural uses. ~~Under the~~Upon the adoption of the Specific Plan, the residential and agricultural uses ~~would become~~became legal, non-conforming uses.

Open Space (OS). Approximately 74.3 acres in the southwest corner of the project area is designated for open space use in the WLC Specific Plan. This property is adjacent to Mount Russell and the Lake Perris State Recreational Area. The Specific Plan restricts this property to passive open space and recreation uses. According to the WLC Specific Plan Section 2.4 the entire Open Space in Planning Area 30 will be offered for dedication in fee to the State of California for expansion of its adjacent ownership, or other public or private conservation organizations (see DEIR Section 4.1.6.1 for details). It should be noted that the only improvement planned for this area is the extension of Cactus Avenue.

Planning Areas. The Specific Plan land use plan is divided into sixteen (16) Planning Areas based on traffic impact zones which allows for more accurate estimates of potential traffic and air quality impacts of the WLC Project. The specific land use of each planning area is outlined in Table 3.D. Planning Areas (PA) 1-12 are designated as Logistic Development (LD), PA 20-22 are designated as Light Logistics (LL), PA 7 has been specified as an alternative fueling station (refer to DEIR Section 3.4.7.5 for more information), and PA 30 is Open Space (OS). The previous Figure 3.8 shows the locations of the new planning areas for the WLCSP on the revised land use plan.

NOTE: The following table and figure have been added to show planning areas in the Specific Plan.

Table 3.D: WLC Project Land Uses by Planning Areas ~~(all new from original DEIR)~~

Planning Area (PA)	Land Use Designation	Area (acres)	Building (square feet)
Logistics Development (LD)			
1	LD	77.8	1,100,000
2	LD	193.5	4,200,000
3	LD	120.3	1,600,000
4	LD	301.5	5,600,000
5	LD	64.2	600,000
6	LD	115.3	500,000
7	LD	10.3	50,000

3.4.6.2 Circulation System

The ~~revised~~ current General Plan Circulation Element ~~(as amended by the proposed WLC project)~~ and the Specific Plan's Circulation Plan (Specific Plan Section 3.1) provides for the movement of vehicles in and around the World Logistics Center area. It provides the details of the road/street designations, right-of-way design, and road improvement thresholds. This section addresses the interface of the planning area with existing roadways as defined in the City General Plan.

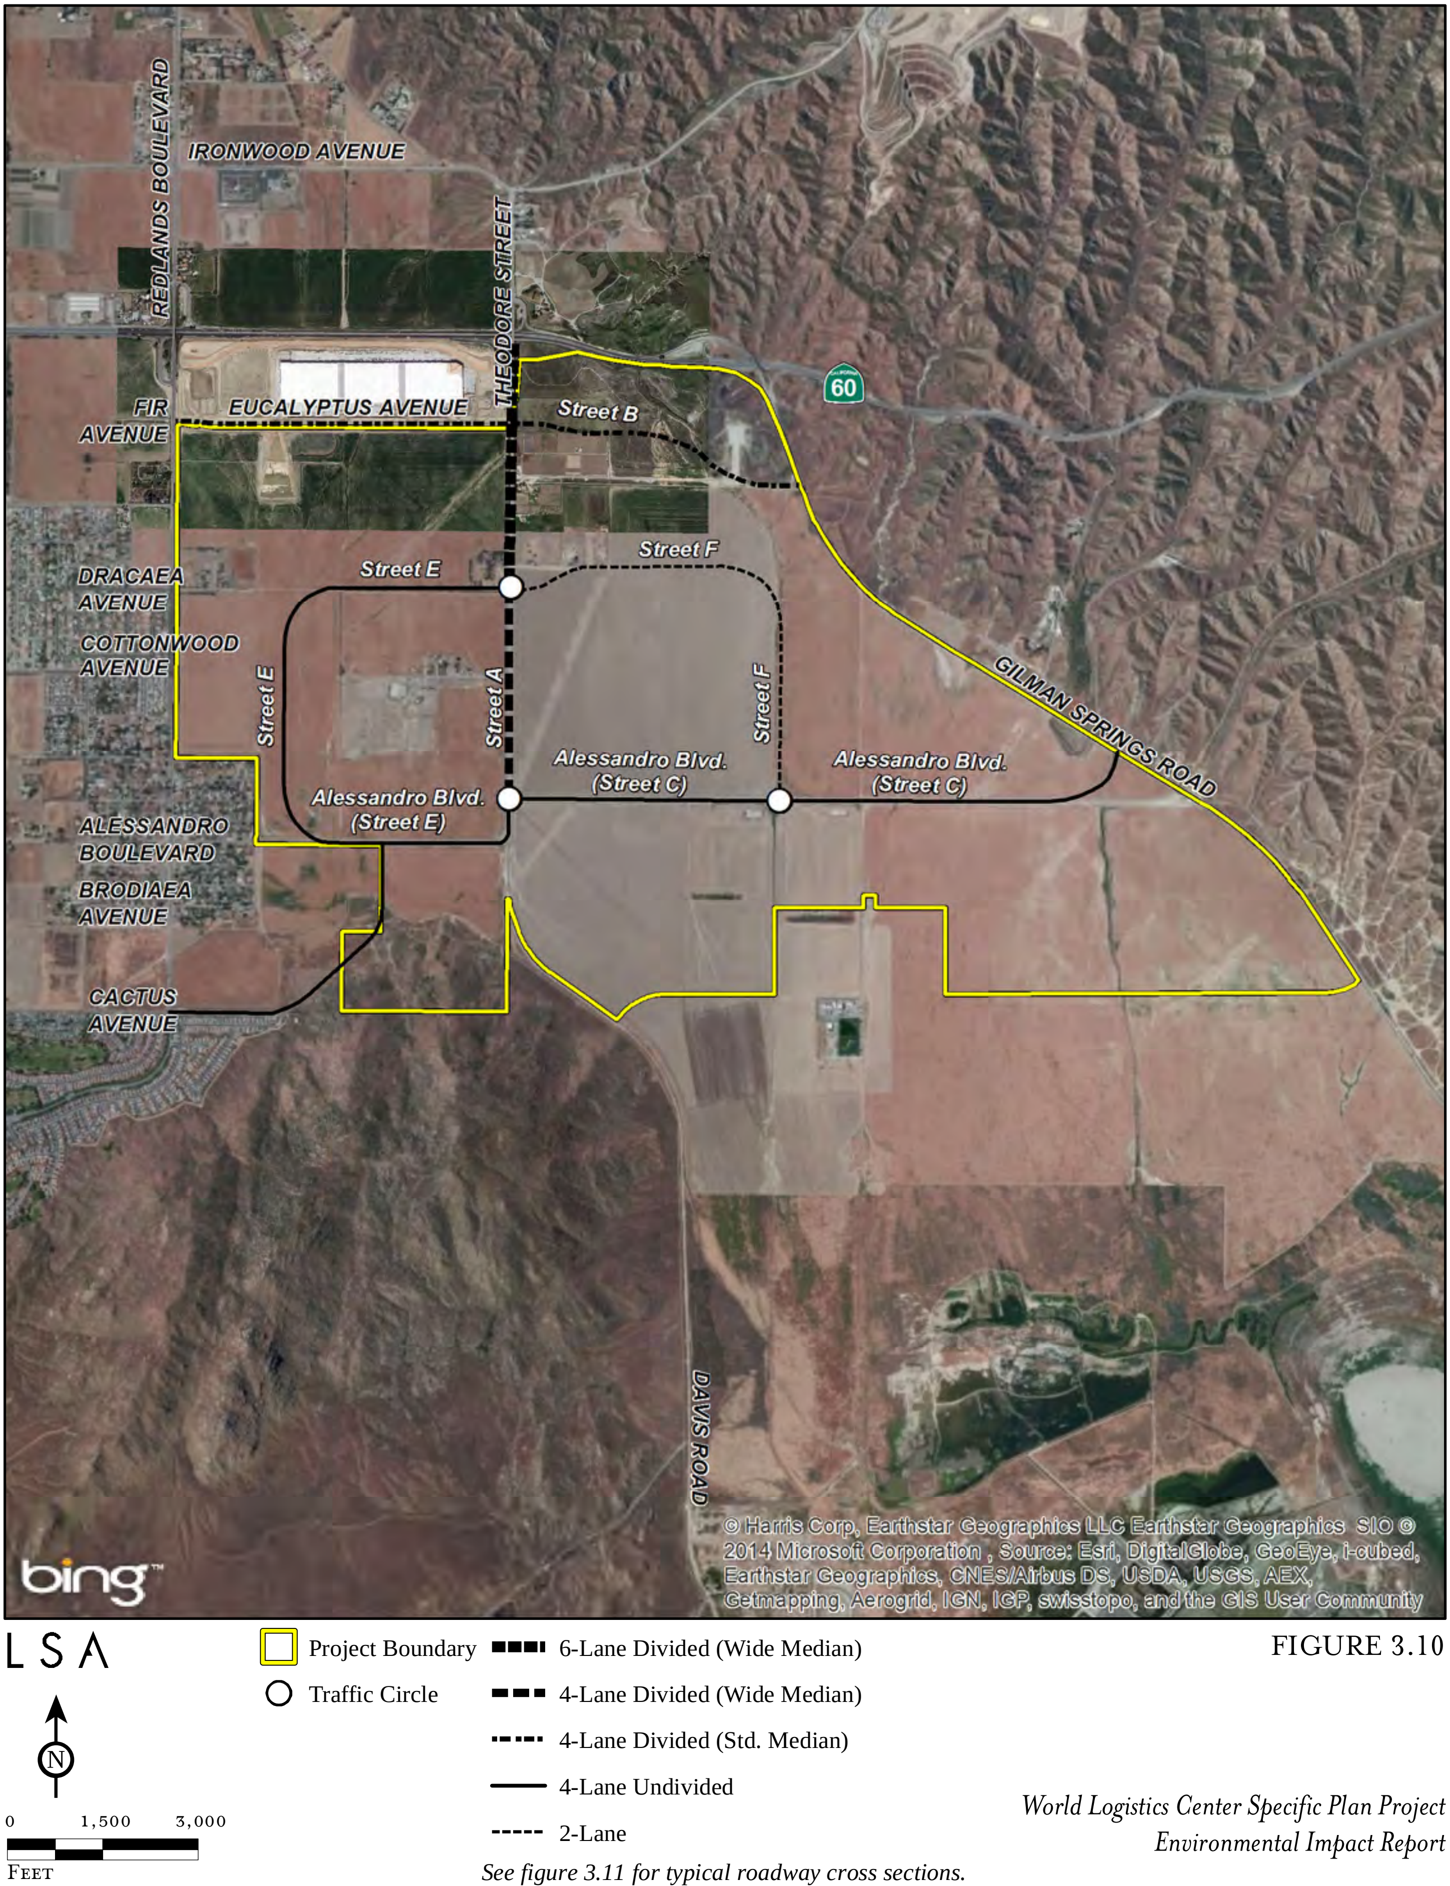
Four key roadways will provide access to the proposed project: ~~Theodore Street~~World Logistics Center Parkway, Eucalyptus Avenue (between Redlands Boulevard and ~~Theodore Street~~World Logistics Center Parkway), Gilman Springs Road, and Alessandro Boulevard (between Gilman Springs and the proposed extension of Cactus Avenue), as depicted in previously referenced Figure 3.6. The Specific Plan identifies five points of access for project traffic: (1) Eucalyptus Avenue at Redlands Boulevard; (2) ~~Theodore Street~~ World Logistics Center Parkway at SR-60; (3) Street B at Gilman Springs Road; (4) Street C at Gilman Springs Road; and (5) Cactus Avenue Extension extended to Cactus Avenue (no trucks, passenger vehicles only). Primary vehicular access to the project would be from SR-60 at Theodore Street and interchange improvements are planned to accommodate the increase in traffic volumes.

The Traffic Section of the DEIR provides that Transportation Management Plans (TMPs) may be included with each future building-specific project proposal in order to address project parking requirements in order to support "green building" or sustainable concepts. The number of required parking spaces may be modified subject to the approval of a TMP based on the provision of carpooling, van pools, staggered work hours or other facilities and programs. TMP applications would be processed in connection with future project-specific development applications.

Street Improvements. The following roadways lie on the WLC project perimeter. Future improvements to project-affected roadways will be completed in accordance with City General Plan standards. Figure 3.10 provides the WLCSP Circulation Plan and Figure 3.11 shows the typical street cross-sections.

- **State Route 60.** SR-60 is a State freeway that currently has two mixed-flow lanes in each direction. Future improvements are planned by Caltrans to add a separate truck lane eastbound on the freeway through the Badlands including a dedicated truck lane in the future. SR-60 provides primary access to the project area.
- **Redlands Boulevard.** Redlands Boulevard is a designated truck route between SR-60 and Eucalyptus Avenue only; therefore, truck travel would be prohibited on Redlands Boulevard south of Eucalyptus Avenue. The ultimate street section is a 4-lane Divided Arterial.
- **Eucalyptus Avenue (west of ~~Theodore Street~~World Logistics Center Parkway).** Eucalyptus Avenue is a 4-lane Divided Arterial within an ultimate right-of-way of 110 feet. Improvements on the north side of the street (two westbound lanes, a raised median, and one eastbound lane) were recently completed by the HFCP project.

LSA



See figure 3.11 for typical roadway cross sections.

~~**THIS PAGE INTENTIONALLY LEFT BLANK**~~

- **Cactus Avenue (extension east of Redlands Boulevard).** This is proposed to be a 4-lane undivided north-south roadway connecting existing Cactus Avenue with the westerly internal loop street (Street "E"). The intersection with Street "E" and would be designed to prohibit large trucks from using Cactus Avenue Extension to prevent their travel through adjacent residential neighborhoods. Special design features and signage will reinforce this restriction.
- **Gilman Springs Road.** At project opening year 2020~~13~~, Gilman Springs Road will remain in its current condition (i.e., a two-lane undivided roadway) and future improvements would occur based on demand. The ultimate street section is a Divided Major Arterial with six through lanes and a raised median. Gilman Springs Road is a City-designated truck route. However, because Gilman Springs Road is partially a Riverside County facility and is thus partially outside the jurisdiction of the City of Moreno Valley, the City cannot ensure that the identified improvements would be made outside of its jurisdiction.

The following roadways within the Specific Plan are classified as Arterials (see Figure 3.11). Access rights and intersections with other streets or highways are limited:

- **~~Theodore Street~~World Logistics center Parkway (Street A).** ~~Theodore Street~~World Logistics Center Parkway is a north/south Arterial and is the primary truck route to and from SR-60. The ultimate street section is a four- to six-lane Divided Arterial within a 144-foot right-of-way including a landscaped median. Traffic roundabouts are proposed at the two key intersections along ~~Theodore Street~~World Logistics Center Parkway within the project.
- **Street B (Eucalyptus Avenue east of** World Logistics Center Parkway**~~Theodore Street~~)**. This roadway will ultimately extend through the project from Theodore Street to Gilman Springs Road. The proposed street section is currently a four-lane Divided Arterial with a 122-foot right-of-way and a standard median.
- **Streets C and E.** The WLCSP circulated for public review with the Draft EIR showed these roadways would be four-lane Minor Arterials each within a 112-foot right-of-way with no median. Traffic roundabouts were proposed at key intersections within the project to facilitate efficient movement of trucks. However, these streets have been realigned northward to maintain the local historical landmark designation of Alessandro Boulevard (see below).

- **Alessandro Boulevard.** Alessandro Boulevard currently runs through the WLC site in an east-west direction, connecting to Gilman Springs Road on the east and traveling through Moreno Valley to the west. The WLCSP circulated for public review with the Draft EIR showed Alessandro Boulevard realigned as Streets C and E (see below). However, this roadway has been designated a City historical landmark, so the WLCSP circulation plan has been modified to retain the name, ROW width, and current alignment of Alessandro Boulevard as an undivided roadway running east-west through the World Logistics Center, still intersecting with Gilman Springs Road on the east and the Cactus Avenue Extension on the west. An existing section of Alessandro Boulevard between Merwin Street and the Cactus Avenue Extension will be closed to vehicular traffic except for emergency vehicles and bicycles and pedestrians access. This is to prevent project traffic, both trucks and passenger vehicles, from traveling through the existing residential neighborhoods to the west.

The smaller roadways within the Specific Plan (Streets F through H) would convey truck and other vehicle traffic in and around the project site. These two-lane roadways will have an ultimate right-of-way of 88 feet.

As Figure 3.10 shows, the Specific Plan proposes traffic roundabouts at the three internal intersections (World Logistics Center Parkway ~~Theodore Street~~/Streets E & F, World Logistics Center Parkway ~~Theodore Street~~/Alessandro Boulevard, and Street C/Street F.

Planned Improvements. As part of the analysis of project traffic impacts, it is important to note that development within the WLCSP area will make a number of roadway and intersection improvements that are within or adjacent to project property (i.e. onsite improvements). As outlined in the project TIA, these improvements include but are not limited to:

- Gilman Springs/Alessandro Boulevard Intersection;
- Gilman Springs/Eucalyptus Avenue Intersection;
- SR-60 Westbound Ramp/ World Logistics Center Parkway~~Theodore Street~~ Intersection;
- Redlands Boulevard/Eucalyptus Avenue Intersection;
- Theodore Street/Eucalyptus Avenue Intersection;
- Eucalyptus Avenue from Redlands Boulevard to World Logistics Center Parkway~~Theodore Street~~ (south side);
- Extension of Cactus Avenue east onto the WLC property; and
- Internal Streets A through F shown on WLCSP Circulation Plan (DEIR Figure 3-10).

Mobility. Section 3.4, *Non-Vehicular Circulation*, of the Specific Plan indicates that the intent of the mobility, transit, and pedestrian movement section is to ensure that people are able to move from one destination to another with minimal delays, either by walking or using other means of non-motorized travel. This means separating vehicles from pedestrian pathways and incorporating shared modes of travel such as trucks, autos, and bikes in the same right-of-way area where feasible. Bicycles would be able to use the street right-of-way throughout the project area. The Specific Plan states that project site development will support alternative transportation options for employees through implementation of on-site bicycle storage, preferred parking for low-emitting and fuel-efficient cars, carpool high-occupancy vehicles, and access to public transit.

According to Section 3.4.3, *Bicycle Circulation*, the Specific Plan will provide Class II (on-street) bicycle access along all connecting project roadways (i.e., not cul-de-sac streets), as shown in Figure 3.12. These Class II bicycle lanes will be integrated into the City's Bikeway Plan as well as the WRCOG Non-Motorized Transportation Plan, with connectivity to Class II bicycle lanes in the City that are adjacent to the WLC project site.

The Specific Plan requires sidewalks along all project streets (Specific Plan Section 5.2.8). Pedestrian movement relies on sidewalks providing direct access from the street to entry points for properties and buildings. Sidewalks are required to be shown on project-specific plot plans submitted for review by the City. All public street improvement shall meet the standards set forth in Title 24.

Local bus service to the area is provided by the Riverside Transit Agency (RTA). Local bus routes will be extended into the project area when adequate demand is generated as determined by the RTA. All roadways within the WLC area will be designed to accommodate bus access. The need for bus stops, turnouts, etc. will be determined by the RTA during the review of subsequent project-specific applications.

In addition to public sidewalks provided adjacent to project streets, Section 3.4.2 of the Specific Plan, *Multi-Use Trails*, requires the construction of a trail connection between the Redlands Boulevard/ Cottonwood Avenue intersection and the existing Cactus Avenue trail connection to the Lake Perris Recreational Area. This new trail will continue along Street E avoiding the Open Space area and connect to a new trail head and a potential trail (by others) to the San Jacinto Wildlife Area at the former Davis Road alignment (see Figure 3.12). Engineering details of the new trail will be provided with project-specific development applications in this portion of the project area.

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

3.4.6.3 Utilities and Services

The Utilities section of the Specific Plan (Section 3.5) describes the infrastructure systems needed to support the development of the project. This section identifies facilities for potable water, reclaimed water, wastewater, storm drain systems, power, natural gas, and telecommunications. This section also addresses the demand for general City services.

Potable Water. The Eastern Municipal Water District (EMWD) provides water service to the project area. EMWD obtains its water from Metropolitan Water District (MWD) and local groundwater wells.

The 2009 EMWD Water Facilities Master Plan (Master Plan) in conjunction with the Moreno Valley Water Pressure Zone Realignment Study (Realignment Study) evaluated the existing and future water needs and facilities required for the Moreno Valley water system. The Master Plan and Realignment Study analyzed the existing water system operating pressures and flows and recommended improvements to the system including realignment of the 1764 and 1900 pressure zones to 1764, 1860, and 1967 pressure zones. The area is currently served by existing pipelines in the 1764 and 1900 pressure zones that range in size from 8-inch to 21-inch diameter pipes (see Figure 3.13). The Master Plan is included in Appendix M of this EIR. The Master Plan indicates that sufficient water is available for potable use and landscaping under expected conditions over a 20-year period.

The MWD owns and operates a 108-inch transmission line that runs north-south through the project area in Theodore Street, and then east-west in Eucalyptus Avenue, east of Theodore Street. Build-out of the proposed project site will require the construction of new water reservoirs to serve each of three water pressure zones (1967, 1860, and 1764). All three reservoir sites are located outside of the Specific Plan boundary. As development proceeds within the project area, new waterlines, ranging in size from 12 to 24 inches, will be constructed in the existing and future street rights-of-way to connect the future water tanks to the development area. The water system will require a new pump station at the 1764 reservoir and an upgrade to the existing EMWD pump station near Cottonwood Avenue and Redlands Boulevard.

All water facilities will be constructed to EMWD standards and will be subject to a Plan of Service approval by EMWD (Specific Plan Section 3.5.1). Previously referenced Figure 3.13 shows the new water system proposed for the project. The EIR will examine potential impacts of onsite and offsite water improvements including these reservoirs as outlined in Appendix M.

Reclaimed/Recycled Water. As stated in EMWD’s Water Supply Assessment (Appendix M), EMWD policy recognizes recycled water as the preferred source of supply for all non-potable water demands, including irrigation of recreation areas, greenbelts, open space common areas, commercial landscaping, and aesthetic impoundment or other water features. The proposed project is near an existing recycled water line and EMWD has indicated that in the future, recycled water may be available for the project. If EMWD determines adequate recycled water supply is available, recycled water will be used on the proposed project to the greatest extent practical. The availability, feasibility, and reliability of recycled water use will be included in EMWD’s evaluation of the Plan of Service for the project. Landscape irrigation may use potable water until recycled water facilities are in place. Information on reclaimed water is provided in Appendix N. “Purple” reclaimed water irrigation piping will be installed to certain landscaped areas as needed.

Wastewater. EMWD provides wastewater service to the project area at EMWD’s Moreno Valley Regional Water Reclamation Facility (WRF) located in the southwestern portion of the City near Kitching Street and Mariposa Avenue. The WRF has the capacity to treat 16 million gallons per day

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

(mgd) of wastewater. The analysis provided in Section 4.16, *Utilities and Service Systems*, indicates the WRF has a current excess capacity of 4.5 mgd and the proposed WLCSP would consume 0.3 mgd (6% of excess), so the WLC project does not by itself generate a need for new wastewater treatment facilities.

The primary trunk sewer line serving the WLC project area is located within Redlands Boulevard. This trunk sewer line continues in a southerly direction within Cactus Avenue, JFK Drive, Iris Avenue, and Lasselle Streets conveying wastewater to the WRF (Specific Plan Section 3.5.2). The proposed sewer in Street A and all lines to the west of World Logistics Center Parkway~~Theodore~~ (Street A) are a gravity system and run generally southwest to a point of connection at Brodiaea Avenue and Redlands Boulevard. As demand requires, the segment of sewer line within Brodiaea Avenue that is west of Redlands Boulevard will be upsized from a 15-inch to a 21-inch line. The sewer system east of World Logistics Center Parkway~~Theodore Street~~ (Street A) will flow by gravity to a future sewer lift station at the southerly project boundary. From there, a force main will carry wastewater in a northwest direction, where it will join the gravity system west of Street A described above. Sewer lines will be located within public street rights-of-way to the greatest degree possible. Some of the buildings may require individual (private) lift stations due to building lengths, location of buildings, and phasing of improvements. Future sewer lines will range in size between 8 and 21 inches, and will be constructed to EMWD standards and will be subject to a plan of service approval. Figure 3.14 shows the proposed sewer/wastewater system for the Specific Plan. Technical studies related to wastewater services are provided in Appendix N.

Storm Water Drainage. The WLC project area is within the San Jacinto River watershed, which is part of the larger Santa Ana River watershed. The storm water runoff from the project generally flows in a southerly direction to the San Jacinto River at an average gradient of 1 to 2 percent. A topographic divide located west of World Logistics Center Parkway~~Theodore Street~~ (Street A) separates storm water flows to the San Jacinto River into two subareas. Runoff east of the divide flows through the San Jacinto Valley to the San Jacinto Wildlife Area and ultimately to the Gilman Hot Springs hydro-subarea. Runoff west of the divide flows to the Perris Valley Storm Drain and ultimately the Perris Valley hydro-subarea. Both hydro-subareas eventually flow to the San Jacinto River, approximately 10 miles south of the project site (Specific Plan Section 3.5.4).

The Riverside County Flood Control and Water Conservation District (RCFCWCD) is the responsible agency for the project area’s regional flood control system. The westerly portion of the project site is located within the Moreno Master Drainage Plan (MMDP). An existing 12-foot by 8-foot reinforced concrete box (RCB) owned and maintained by RCFCWCD is located east of Redlands Boulevard. This facility collects storm water passing under SR-60 and outlets south of Eucalyptus Avenue where it flows through a spreading basin then across agricultural land. Farther south, the agricultural land drains to an RCFCWCD earthen channel at Redlands Boulevard flows to a greenbelt channel located south of Cactus Avenue and east of Redlands Boulevard and ultimately drains to the Perris Valley Storm Channel.

There is no master plan of drainage on the east side of the WLC project site. The existing drainage facilities consist of open ditches along World Logistics Center Parkway~~Theodore Street~~ that convey runoff from adjacent areas and lands northerly of SR-60. A series of existing drainage culverts crosses Gilman Springs Road conveying the off-site runoff from the Badlands through the project site. Four of these culverts drain into natural drainage courses which drain to the south. Based on the latest Flood Insurance Rate Map (FIRM) published by the Federal Emergency Management Agency (FEMA), the project site is not located within a 100-year floodplain.

Development according to the WLC Specific Plan will result in the placement of impervious surfaces on the project site, which would substantially increase the potential for runoff from the site. Post-development flows are required to be equal or less than pre-development flows, so the on-site storm

~~**THIS PAGE INTENTIONALLY LEFT BLANK**~~

I:\HFV1201\Reports\EIR\fig3-14_WastewaterSystem.mxd (9/22/2014)

~~**THIS PAGE INTENTIONALLY LEFT BLANK**~~

water flows will be routed through a new system of underground drainage lines to a series of on-site detention basins. While the increase in impervious surfaces attributable to the proposed project would contribute to a greater volume and higher velocity of storm water flows, the hydrology report for the project indicates that the proposed detention basins would be designed to accommodate runoff and maintain off-site flows at pre-project conditions. Drainage improvements will be phased as needed to ensure that the peak flows at downstream discharge points at the southerly project boundary will not exceed the peak flows for the existing condition (Specific Plan Section 3.5.4). Figure 3.15 shows the proposed drainage system for the Specific Plan area. The drainage study is included in Appendix J.

Drainage from east of Gilman Springs Road flows southwest and south out of the Badlands and flows under Gilman Springs Road through corrugated steel pipe culverts. These culverts are relatively small, and during times of high flow, runoff often causes repeated localized flooding along the roadway. When Gilman Springs Road is improved to its ultimate width by the County, improvements will include the installation of larger culverts where needed to eliminate flooding along the roadway.

Solid Waste. The WLC Specific Plan encourages recycling and reducing waste generation. Examples of the recycling processes identified by the Specific Plan include:

- Support recycling programs to sort and store materials destined for landfills;
- Reuse and recycle construction and demolition waste as much as feasible during building construction;
- Encourage the City of Moreno Valley to support by either implementing or expanding recycling and composting programs for businesses;
- Extend the types of recycling services offered (e.g., to include food and green waste recycling);
- Provide public education and publicity about recycling services conducted at the World Logistics Center; and
- Promote recycling programs aimed at supporting sustainable certification programs such as LEED, CalGreen, or similar sustainability programs.

Energy. Moreno Valley Electric Utility (MVEU) is the electricity provider for the World Logistics Center. While it will not provide service within the Specific Plan area, Southern California Edison (SCE) has existing 12 kV and 115 kV overhead power lines throughout the project area. There are SCE 115 kV power lines along Gilman Springs Road, Eucalyptus Avenue east of World Logistics Center Parkway~~Theodore Street~~, Theodore Street north of Eucalyptus Street, and along Brodiaea Avenue/Davis Road to the south. There are also SCE 12 kV power lines along Gilman Springs Road, World Logistics Center Parkway~~Theodore Street~~, Alessandro Boulevard, Eucalyptus Avenue east of Theodore Street, and Redlands Boulevard. MVEU has an existing underground electrical system at the intersection of Dracaea Avenue and Redlands Boulevard. As the project builds out, the Moreno Beach Substation will be expanded to 112 MW and a new 60 MW substation will be constructed to serve the project. Many of the existing 115 kV and 12 kV lines will be relocated as the Specific Plan is built out. Electrical facilities are shown in Figure 3.16.

Solar Energy. The WLC Specific Plan requires solar photovoltaic (PV) arrays to be installed on the project buildings to offset the electrical power requirements of the office portion of each proposed warehouse building (WLCSP Section 12.7, Solar Commitment).

The SCGC is the natural gas provider for the project. An existing 4-inch medium pressure service line is located within Redlands Boulevard. Low-pressure facilities serve the residential area located west of Redlands Boulevard and southwest of Merwin Street and Bay Avenue. Throughout the project, natural gas is transmitted through existing SDG&E underground pipelines serving the Southern

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

California region that range in size from 16 inches to 36 inches. Two 30-inch diameter transmission pipelines run in an east-west direction north and south of Alessandro Boulevard. Three transmission pipelines, 16, 24, and 36-inch diameters run in a north-south direction along Virginia Street, south of Alessandro Boulevard. The 36-inch diameter line also extends east from Virginia Street parallel with the 30-inch line that runs south of Alessandro Boulevard. Figure 3.17 shows planned natural gas facilities.

SCGC transmission facilities in the WLC Specific Plan area include a gas line blow-down facility and flow metering station at Alessandro Boulevard and Virginia Street. Farther south on Virginia Street, SDG&E operates the Moreno Compressor Station, which supplies gas to San Diego via 16, 30, and 36-inch transmission pipelines. In addition, Questar, a private utility company, has a 16-inch natural gas transmission line that runs within Alessandro Boulevard from Gilman Springs Road to World Logistics Center Parkway~~Theodore Street~~, where it turns south to Maltby Avenue, and then turns west to Redlands Boulevard.

SCGC has indicated the 4-inch medium-pressure service line that runs in Redlands Boulevard will be extended into the area to service the development. Gas service will be installed in the public street right-of-way or easements as a joint trench with telephone, cable TV, and electrical services. In connection with the development of the property, relocation of some natural gas transmission lines into public street right-of-way or easements will be necessary. SDG&E's Moreno Compressor Station will remain in place.

3.4.6.4 Public Services

Fire protection services in the WLC project area are provided by the Riverside County Fire Department under contract to the City of Moreno Valley. The Fire Department has an existing fire station located on Eucalyptus Avenue just east of Moreno Beach Boulevard. Response times to the project site from this station are approximately five (5) minutes. The Specific Plan indicates a new fire station will be located in the LD zone in the northeast portion of the site. At present, it is proposed in the north end of Planning Area 11, and the Specific Plan requires it to be built during Phase I. Placement of the fire station is subject to review and approval by the Fire Chief (Specific Plan Section 2.2.4 First Station Site). As development progresses, fire protection services within the Specific Plan area will continue to be evaluated through the plan development process, and additional facilities and/or services may be needed in the future.

Police service is provided to the WLC project area by the Riverside County Sheriff's Department under contract to the City of Moreno Valley. At present, the City's main police station is at its design capacity, and additional capacity may be needed in the future. No new police facilities are planned on the project site at this time.

Park facilities and programs are provided by the City of Moreno Valley. There are no local parks in or adjacent to the WLC project site at present and none are planned with the project. The Lake Perris State Recreation Area is located southwest of the project site.

School facilities and services are provided by the Moreno Valley Unified School District. No school sites are existing in or adjacent to the WLC project site and none are planned.

Library facilities and services are provided to local residents by the City of Moreno Valley. No library facilities are proposed to be included in the WLC Specific Plan area.

3.4.7 Sustainability

Site and building design within the WLC Specific Plan area will incorporate many sustainability and green building concepts. Green building is the practice of increasing building efficiency through site planning, water and energy management, material use, control of indoor air quality, and the use of innovative design concepts. These practices help to improve building operational efficiency, conserve water, reduce waste, and lessen the heat island effect of development.

All buildings within the WLC project will comply with the Title 24 California Building Code. Adopted in 1978 in response to the energy crisis of the 1970s and updated every five years by the California Energy Commission (CEC), California's Title 24 contains the strictest and most energy-efficient building code in the nation. The Title 24 Building Codes are called California's "Green Building" codes because they create energy efficiencies of up to 30 percent in some categories above and beyond the energy efficiencies achieved under the previous versions of Title 24.

The 2013 version of standards went into effect January 1, 2014. The CEC adopted these changes to the Building Energy Efficiency Standards for the following reasons:

1. To provide California with an adequate, reasonably-priced, and environmentally-sound supply of energy.
2. To respond to Assembly Bill 32, the Global Warming Solutions Act of 2006, which mandates California reduce its greenhouse gas emissions to 1990 levels by 2020.
3. To pursue California policy that energy efficiency is the resource of first choice for meeting California's energy needs.
4. To act on California's Integrated Energy Policy Report (IEPR) findings that Standards are the most cost-effective means to achieve energy efficiency, that the Building Energy Efficiency Standards will continue to be upgraded over time to reduce electricity and peak demand, and that the Standards will play a role in reducing energy related to meeting California's water needs and in reducing greenhouse gas emissions.
5. To meet the Executive Order in the Green Building Initiative to improve the energy efficiency of nonresidential buildings through aggressive standards.

The WLC Specific Plan requires sustainable development standards so that new development within the project area minimizes energy consumption, conserves water, and uses recycled or sustainable building materials, where feasible. It provides developers with a specific framework for identifying and implementing a variety of practicable and measurable green building design, construction, operations, and maintenance. All new development within the project area will be required to be designed to meet the CEC standards in effect at the time construction commences (WLCSP Section 1.3.2). In addition, buildings within the Specific Plan will be designed to be "solar ready" (i.e., allow the installation of solar photovoltaic systems on the roof of each building) (WLCSP Section 1.2.2, Green Building – Sustainable Development).

The sustainability guidelines for the World Logistics Center serve the following functions to:

- Assist in meeting California's greenhouse gas reduction targets as set forth through Executive Order S-3-05 and Assembly Bill 32 (also known as the Global Warming Solutions Act of 2006);
- Assist in the region's development of a sustainable communities strategy pursuant to Senate Bill 375;
- Assist in meeting other state and local goals and requirements, including Assembly Bill 1385, The Complete Streets Act;

- Establish practical and innovative solutions for the developer, business, and residential community to improve resource efficiency and reduce consumption of energy, water, and raw materials; and
- Support waste management reduction identified in AB 341.

3.4.7.1 Building Design and Construction

The WLC Specific Plan requires sophisticated construction techniques that will provide pollution prevention and control such as noise, air quality, erosion, and sediment controls. Both site planning and future building design will require best practices for use of recycled materials and products, such as recycled steel, and crushed concrete and pavement materials.

Low-emitting volatile organic compound (VOC) building materials will be required to be used on the WLC site. Project design will allow the incorporation of alternative energy sources such as rooftop solar systems (i.e., "solar ready" buildings) or other technologies reasonably available at the time of development. Project design and construction techniques will be employed to reduce the heat island effect, which creates thermal gradient differences between developed and undeveloped areas. Such techniques will include the use of materials that have a low solar reflectance index such as white roofs and light-colored pavements.

All development within the Specific Plan will require the preparation of a waste management plan requiring the diversion of at least 50 percent of waste from landfill. This goal will be achieved through a comprehensive recycling and management program including storage and collection of recyclables, building and material reuse, and careful construction waste management.

The Specific Plan ~~will~~ incorporates the use of passive heating and cooling into the design or modification of the high-cube warehouse development (e.g., white building colors and roof insulation to minimize heat gain, and landscaping to help shade buildings).

Electrical power sources will be provided both indoors and outdoors to accommodate the use of electrical property maintenance equipment (Section 12.4 of the WLCSP).

3.4.7.2 Landscaping

The WLC Specific Plan requires development to install xeriscape or drought-tolerant landscaping that requires minimal irrigation and to utilize on-site runoff into landscaped areas as much as possible for landscape irrigation.

3.4.7.3 Water Usage

Under the requirements of the WLC Specific Plan, the project will employ water reduction and conservation principles, which will include advanced irrigation systems, drought-tolerant plants, the use of mulch, recycled and other permissible alternative sources of water, and turfless plantings with alternative landscaping materials such as rock and other materials that do not require potable water sources. The final design will be used to calculate the site's water demand. The annual maximum allowable water budget (AMAWB) will be compared to the estimated annual water use (EAWU) to ensure that the design meets EMWD guidelines.

3.4.7.4 Storm Water Quality

Through implementation of the design standards in the WLC Specific Plan, the project will incorporate storm water quality measures including infiltration basins, bioretention facilities, and extended detention basins to reduce pollutants in storm water (Specific Plan Section 5.1.8.5). Future development projects will be required to implement a Water Quality Management Plan (WQMP) in accordance with the National Pollutant Discharge Elimination System (NPDES) Permit Board Order R8-2010-0033. The current approved Riverside County WQMP for Urban Runoff addresses the Municipal Separate Storm Sewer Systems (MS4) NPDES permit. The most recent WQMP for the Santa Ana Region of Riverside County addresses the latest MS4 NPDES permit requirements. Projects identified as a "Priority Development Project" will be required to prepare a project-specific WQMP. The MS4 Permit mandates a Low Impact Development (LID) approach to storm water treatment and management of runoff discharges. Site-specific projects will be designed to minimize imperviousness, detain runoff, and infiltrate, reuse, or evapotranspirate runoff where feasible. LID design will be used to infiltrate, evapotranspirate, harvest and use, or treat runoff from impervious surfaces, in accordance with the *Design Handbook for Low Impact Development Practices*.

The WLC project should also ensure that runoff does not create any hydrologic conditions of concern. The Regional Water Quality Control Board (RWQCB) continuously updates impairments as studies are completed. The most current version of impairment data should be reviewed prior to preparation of the Preliminary and Final Project-Specific WQMP (WLC Specific Plan Section 5.1.8, *Water Quality Site Design*).

The WLC Specific Plan contains extensive site design, source control, and treatment control Best Management Practices (BMPs) that will be analyzed in detail in Section 4.9, *Hydrology and Water Quality* of this EIR.

3.4.8 Architectural Design Guidelines

Sections 4.1 and 5.3 of the WLC Specific Plan contain the architectural and building design standards that will be applicable to all future off-site conditions and specific on-site development proposals. The design standards provide for attractive, functional, compatible contemporary designs, which can also minimize energy consumption and the production of greenhouse gases, helping to reduce the project's contribution to global climate change. These Specific Plan sections include typical building elevations, cross-sections, and photographic renderings that illustrate how future development will appear. The architectural guidelines also address project details such as building setbacks, walls, fences, building materials, and colors.

Section 2.0 of the WLC Specific Plan establishes building height limitations throughout the project, as shown in previously referenced Figure 3.9. Building heights are limited to 60 feet for buildings located along the north, west, and southern boundaries of the project and 80 feet along Gilman Springs Road and in the interior. The WLC Specific Plan contains a provision that portions of buildings could be raised an additional 10 percent to accommodate interior facilities (i.e., elevator shafts) and architectural design elements, which may be approved through the administrative variance process.

3.4.9 Landscaping Design Guidelines

Sections 2.5, 4.2, and 5.4 of the WLC Specific Plan provide landscaping guidelines for the project. The intent of these guidelines is to develop a landscape program that reduces the use of mechanical irrigation systems, maximizing the collection and use of rainfall to irrigate carefully designed landscape areas. The Specific Plan includes a plant palette specifically designed for the project site to consume significantly less water than conventional landscaping concepts. The Specific Plan contains an extensive palette of drought-tolerant plants.

The WLC Specific Plan calls for a more substantial landscape treatment to be installed along the perimeter of the site. These special edge treatment areas will be along the western boundary of the project site, north along SR-60, east along Gilman Springs Road, and along the southern boundary of the project adjacent to the SJWA. These areas have been designed to provide an aesthetic buffer and soften views between the surrounding land uses and the planned warehouse buildings and truck activity areas. Further description of the special edge treatment areas can be found in the Section 2.5 of the WLCSP and DEIR Section 4.1.6 and in DEIR Figure 4.1.6A. For areas not along the perimeter, landscaped areas would be grouped by water needs. Irrigation systems would be designed to irrigate at no more than 70 percent[2] of the plant groups' reference evapotranspiration rate (minimum required water for the plant groups' survival), and would be designed to minimize water runoff onto sidewalks or streets. The project will direct runoff to landscaped areas and employ techniques to promote percolation and water capture at the root zone, reducing the need for mechanical irrigation.

Section 5.4.2 of the WLCSP requires future development to consider the following water conservation measures: macro and micro climates, solar exposure, prevailing wind conditions; site analysis of, seasonal temperature patterns, soils and drainage, grades, and slopes; use of historical evapotranspiration rates and weather station (CIMIS) data; use of planting zones coordinated according to plant type, climatic exposure, soil condition and slope to facilitate use of zoned irrigation systems; use of low water or drought-tolerant plant species in landscape areas served by potable water; audit of water use and certification by a licensed landscape architect that the irrigation system was installed and operates as designed; use of reclaimed water systems if available and practical, use of best available irrigation technology to maximize efficient use of water, including moisture sensors, multi-program electronic timers, rain shutoff devices, remote control valves, drip systems, backflow preventers, pressure reducing valves and matched output sprinkler heads; use of gate valves to isolate and shut down mainline breaks; design to meet peak moisture demand of all plant materials within design zones, while avoiding flow rates that exceed infiltration rate of soil; design to prevent overspray or discharge onto roadways, non-landscaped areas or adjacent properties; and timing of irrigation cycles to operate at night when wind, evaporation, and human activities are at a minimum.

3.4.10 Lighting Design Guidelines

Section 5.5 of the WLC Specific Plan contains guidelines for site lighting within the Specific Plan area. The regulations prohibit direct light spillage onto adjacent properties, especially the San Jacinto Wildlife Area to the south (Specific Plan Sections 4.3 and 5.5), while providing sufficient light for nighttime activities and project security. The project will incorporate the design standards adopted by Ordinance 851 which established stricter controls on outdoor lighting.

3.4.11 Off-site Improvements

Development within the WLC Specific Plan area will require various infrastructure improvements, some of them located off site. Local roadways and intersections affected by project traffic will be improved as outlined in the project Traffic Impact Analysis (TIA). Electrical service will be extended from the Moreno Beach substation to the project. Electric power lines along Gilman Springs Road will be relocated when that road is widened. Providing potable water to the site will require the construction of three new reservoirs, one north of SR-60 off of Theodore Street, one east of Gilman Springs Road near the northeast corner of the site one in the northwestern portion of the project (see Figure 3.13). The Cactus extension will extend east through a portion of the Open Space area, then turn north to intersect with Alessandro Boulevard (see Figure 3.10), and a four-inch gas line will be constructed within this street extension (see Figure 3.10). A 21-inch sewer line will be extended to the west from the southwest corner of the site (see Figure 3.14) from Cactus Avenue. The existing County drainage channel near the southwest corner of the site will be improved to handle increased flows from project runoff. At such time as traffic demand dictates, the Theodore Street interchange on

---

[2] Per the California Code of Regulations, Title 23 Waters Division, Department of Water Resources, Ch. 2.7 Model Water Efficient Landscape Ordinance, the County of Riverside Water Efficient Landscape Requirements Ordinance No. 859, and the Eastern Municipal Water District (EMWD) 2010 Urban Water Management Plan, or current Urban Water Management Plan.

SR-60 will be reconstructed to accommodate project traffic. All of the off-site improvements needed to support development of the Specific Plan are shown in previously referenced Figure 3.7. This EIR examines the impacts of these off-site improvements on approximately 104 acres of off-site land that they affect.

NOTE: The analysis of environmental impacts from the project, including biological resources, cultural resources, geotechnical constraints, air quality, greenhouse gases, noise, etc., also address development of these offsite improvement areas as well as development of the WLCSP property.

3.4.12 Grading and Excavation

Approximately 42 million cubic yards (cy) of cut and fill will be required to rough/mass grade the entire WLC project site, including remedial grading and overexcavation. Earthwork will balance on site within the Specific Plan, eliminating the need to import or export dirt for the project. See Figure 3.18 for the conceptual grading plan.

3.4.13 Phasing

Development of the ~~Specific Plan~~WLC project is planned over a period of fifteen years, from ~~2015~~2020 through ~~2030.~~ 2035.

Under this projected development schedule, the project will absorb an average of approximately 2.7 million square feet of new development each year from ~~2015~~2020 to ~~2030~~2035, with actual development phasing and square footage buildout based on future market conditions. Section 8.0 of the Specific Plan, *Project Phasing*, suggests that development will likely occur in two large phases, starting in the western portion of the site south of Eucalyptus Avenue This phasing concept is based on beginning construction where infrastructure presently exists and expanding southerly and easterly. It is anticipated that Phase 1 would be completed by ~~2022~~2025 and would contain approximately 50% of development or approximately 20,300,000 square feet of logistics warehouse uses. Phase 2 anticipates full development build-out by ~~2030~~2035. Figure 3.19 shows the proposed phasing plan.

As stated in the Specific Plan, project phasing predictions are conceptual. The actual amount and timing of development will be dependent upon numerous factors, many of which are outside the control of the City or the developer, including interest by building users, private developers and local, regional, and national economic conditions. These and other factors acting together will ultimately determine the location and rate at which development within the project area occurs.

~~City adoption of the project will establish the~~The framework for development of the area will be in accordance with the Specific Plan, which identifies the type and intensity of land uses permitted within the project. It is anticipated that development of the project would occur over time, as the result of the construction of multiple separate independent projects of varying sizes and configurations. Each of these future projects would be required to be consistent with the General Plan and zoning and would comply with all applicable regulations of the Specific Plan. Table 3.E provides an estimate of the rate at which the project area could be built out, consistent with the Specific Plan, and estimated levels of construction projected to occur during each phase of development. Table 3.E also includes the approximate amount of equipment anticipated to be used during construction of the project.

NOTE: The analysis of environmental impacts from the WLC project, including biological resources, cultural resources, geotechnical constraints, air quality, greenhouse gases, noise, etc., addressed development of these offsite improvement areas as well as development of the WLCSP property.

3.4.14 Construction Hours

Similar to the Highland Fairview Corporate Park, construction of warehousing buildings within the WLC Specific Plan area will occur on a 24 hour-a-day, 7 day-a-week basis. This is necessitated by the extensive use of poured concrete in the construction of building sites and the logistics buildings themselves. Major concrete pours are most efficiently and economically done in the cooler night and early morning hours. Additionally, the large number of concrete delivery trucks necessary for this construction has a minimal traffic impact in the nighttime hours.

The City's Municipal Code contains the following language regarding construction hours:

> ***Section 8.14.040*** *Hours of Construction. Any construction within the city shall only be as follows: Monday through Friday (except for holidays which occur on weekdays), six a.m. to eight p.m.; weekends and holidays (as observed by the city and described in Chapter 2.55 of this code), seven a.m. to eight p.m., unless written approval is obtained from the city building official or city engineer.*

> ***Section 8.21.050*** *Time of Grading Operations. Grading and equipment operations shall only be completed between the hours of seven a.m. and six p.m. Monday through Friday, excluding holidays and from eight a.m. to four p.m. on weekends and holidays. The city engineer may, however, permit grading or equipment operations before or after the allowable hours of operation if he or she determines that such operations are not detrimental to the health, safety, or welfare of residents or the general public. Permitted hours of operations may be shortened by the city engineer's finding of a previously unforeseen effect on the health, safety, or welfare of the surrounding community.*

If necessary, future developers within the WLCSP area can apply to the City for extended hours of operation under the Municipal Code guidelines, as outlined in Condition of Approval #7 for the Highland Fairview Corporate Center (Skechers):

> *Construction and Demolition. No person shall operate or cause the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the city engineer or designee.*

3.4.15 Specific Plan Implementation

Although financial and economic parameters of a project are not typically included in an EIR, the size and complexity of the WLC Specific Plan project dictate that a certain amount of this information be included in the EIR to demonstrate that the project is feasible and that the City will not incur undue risk relative to the installation of public infrastructure and other facilities and services (Specific Plan Section 11.0).

Funding for the transportation, infrastructure, and other improvements identified in the WLC Specific Plan would be provided by a variety of sources. For example, Highland Fairview would construct certain backbone roads at the outset of project development; future development would install road connections and on-site improvements. ~~All projects would contribute to the City's Development Impact Fee (DIF) program to help fund future roadway improvements in the immediate surrounding City area.~~ In addition, future development would contribute to the County's Transportation Uniform Mitigation Fee (TUMF) program to fund identified regional improvements such as the SR-60 ramps at Redlands Boulevard. The Specific Plan contains a discussion of potential financing measures and mechanisms the City would need to enact, adopt, or participate in for the proposed infrastructure improvements.

One of the available regional infrastructure funding mechanisms is the TUMF managed by the Western Riverside Council of Governments (WRCOG). The primary purpose of the TUMF program is to fund regional transportation improvements. The TUMF program has become a key way to ensure that growth does not create gridlock on regional and local thoroughfares. Under the TUMF program, Western Riverside County is divided into five zones, with the Specific Plan located in the "Central" zone. The TUMF is structured so that 48.7 percent of funds generated in each zone go back to that zone to be programmed for projects. Another 48.7 percent is allocated to regional inter-zone projects programmed by the Riverside County Transportation Commission (RCTC), and 2.6 percent is allocated for regional transit projects programmed by the RTA. TUMF-eligible roadways within the proposed project include Redlands Boulevard, Alessandro Boulevard, Gilman Springs Road, and freeway interchanges at Gilman Springs Road and Redlands Boulevard.

The City of Moreno Valley has implemented a Capital Improvement Program (CIP) that is closely linked to the City DIF program. According to the 2011–2012 CIP, the City has experienced a reduction in DIF as well as other development-related funding sources. The current CIP reflects the new projects that have been funded. DIF funding is collected for "Arterial Streets," "Interchange

Improvements," and "Traffic Signals." The CIP describes approximately $1.66 billion in capital projects through build out of the City.

There are several identified CIP projects within the project area including traffic signals along Alessandro Boulevard at Redlands Boulevard, Sinclair Street, Theodore Street, Virginia Street, and Gilman Springs Road; Eucalyptus Avenue at Redlands Boulevard, Sinclair Street, Theodore Street, Virginia Street, and Gilman Springs Road; SR-60 eastbound ramps at Theodore Street, and westbound ramps at Theodore Street and Redlands Boulevard. Future street improvements within the project area include SR-60 interchanges at Redlands Boulevard and/or World Logistics Center Parkway~~Theodore Street~~, and Gilman Springs Road; although these are included in the City CIP program, the funding sources are TUMF and private developer contributions. Other future CIP identified street improvements include Alessandro Boulevard through the project area, Eucalyptus Avenue, Gilman Springs Road (within the city limits), World Logistics Center Parkway~~Theodore Street~~, and Virginia Street. Updates to the CIP program may include future streets within the WLC project.

~~3.5 GENERAL PLAN AMENDMENT~~

~~Approval of the project includes amendments to the following General Plan text and Elements to incorporate the many aspects of the WLC Specific Plan (also see Figures 3.20a-j):~~

1. ~~**Community Development Element**~~
    - ~~a. Revise Land Use Map (Figure 2-2) to include WLCSP land plan~~
    - ~~b. Revise Section 2.1.3~~

    ~~… intersection of Virginia Street and Gato del Sol. The acquisitions encompasses about one third of the land within the Moreno Highlands Specific Plan.~~

    ~~Neither of the aforementioned land purchases are likely to be developed as envisioned in the original specific plan, and are likely to remain substantially vacant. In that the Moreno Highlands Specific Plan Development Agreement precludes the City from making unilateral changes to the specific plan land use plan, no changes were recommended for the Moreno Highland Specific Plan as part of the General Plan Update.~~

2. ~~**Parks, Recreation and Open Space Element**~~
    - ~~a. Revise Open Space Map (Figure 4-1) (page 4-2) to include WLCSP.~~
    - ~~a. Revise Future Parkland Acquisition Areas map (Figure 4-2) (page 4-6).~~
    - ~~b. Revise Master Plan of Trails (Figure 4-3) (page 4-13) to include WLCSP.~~

3. ~~**Circulation Element**~~
    - ~~a. Revise discussion on Industrial Development (Section 5.3.2.2).~~

    ~~Industrial and business park development is concentrated in the southern part of the City, located south of Iris Avenue and north of San Michele Road to the Perris city limits, and in the eastern part of the City, generally between Redlands Boulevard and Gilman Springs Road. This development … (page 5-7)~~

~~**6. Goals and Objectives**~~

   ~~a. Revise Circulation Plan (Figure 9-1) (page 9-26) to incorporate WLCSP circulation plan.~~

   ~~a. Revise LOS Standards map (Figure 9-2) (page 9-28) consistent with WLCSP.~~

   ~~b. Revise Bikeway Plan map (Figure 9-4) (page 9-29) consistent with WLCSP bikeway plan.~~

3.6 PROJECT OBJECTIVES

The purpose of the ~~proposed~~ WLC project is to provide a new master-planned facility specializing in logistics warehouse distribution services. Section 1.3.1, *Development Goals*, of the WLC Specific Plan outlines the following overall objectives for the proposed WLC Specific Plan:

***NOTE:** The indicated minor wording change was made so the objectives would more accurate regarding service to the port which will only represent a small fraction of project trips (see Section 4.15, Transportation).*

- Create substantial employment opportunities for the citizens of Moreno Valley and surrounding communities.
- Provide the land use designation and infrastructure plan necessary to meet current market demands and to support the City's Economic Development Action Plan.
- Create a major logistics center with good regional and freeway access.
- Establish design standards and development guidelines to ensure a consistent and attractive appearance throughout the entire project.
- Establish a master plan for the entire project area to ensure that the project is efficient and business-friendly, accommodating the next-generation of logistics buildings.
- Provide a major logistics center to accommodate a portion of the ever-expanding trade volumes at the Ports of Los Angeles and Long Beach.
- Create a project that will provide a balanced approach to the City's responsibilities of fiscal viability, economic expansion, and environmental integrity.
- Provide the infrastructure improvements required to meet project needs in an efficient and cost-effective manner.
- Encourage new development consistent with regional and municipal service capabilities.
- Significantly improve the City's jobs/housing balance and help reduce unemployment within the City.
- Provide thousands of construction job opportunities during the project's build-out phase.
- Provide appropriate transitions or setbacks between on-site and off-site uses.

3.6.1 City's Economic Development Action Plan Objectives

In 2011, the City adopted an Economic Development Action Plan (EDAP) that outlined the following general objectives:

Objectives for Economic Development

- Create jobs locally and address City's high unemployment rate
- Address the Community's jobs to housing imbalance
- Strengthen and broaden the local economic foundation by attracting quality businesses
- Enhance City revenue generation from sources such as sales tax, property tax, transient occupancy tax, and utility tax – all aimed at improving quality of life in Moreno Valley

Eastern Moreno Valley–Rancho Belago

- Prime area of Community with large undeveloped areas.
- Skechers USA opening has generated interest by other prospective corporate users.
- Nearly 20-year old Moreno Highlands Specific Plan to expire in 2012
- Highest and Best land uses should be evaluated to address City's jobs to housing imbalance

Survey of Inland Region Industrial/Business Park Zoning

- Ontario 25.3%
- Perris 21.7%
- San Bernardino 18.0%
- Chino 17.1%
- Fontana 17.0%
- Rancho Cucamonga 15.3%
- Riverside 15.2%
- Corona 11.4%
- Moreno Valley 9.0%

In 2013, the EDAP was replaced and included the following specific objectives related to the World Logistics Center:

World Logistics Center at Rancho Belago

- Collaborate with Highland Fairview in the development of the World Logistics Center—a 41.6 million S.F. master planned corporate park proposed to be developed on 2,700 acres in the Rancho Belago area of eastern Moreno Valley.
- Process an Environmental Impact Report and preliminary development plans for the World Logistics Center in eastern Moreno Valley—south of SR 60 and east of Redlands Boulevard to Gilman Springs Road.
- Assist in the drafting of a Specific Plan that will guide the orderly development for of World Logistics Center.
- Cooperate with Highland Fairview in the formulation of a Development Agreement to create a public-private partnership to help facilitate the development of new public infrastructure in eastern

Moreno Valley associated with the World Logistics Center including roads, trails, utilities, storm water protection and fire protection facilities.

- Work with Highland Fairview in branding the World Logistics Center as one of the largest e-commerce focused development projects in the U.S.

3.7 REQUIRED DISCRETIONARY ACTIONS AND PERMITS

3.7.1 City of Moreno Valley – Current Approvals

This Program EIR is intended to inform the City of Moreno Valley decision-makers and the general public of the environmental consequences of the ~~proposed~~ WLC project. Entitlements being analyzed in this EIR include a ~~General Plan Amendment, adoption of a Specific Plan, a Zone Change, a Development Agreement, a~~ Tentative Parcel Map, and annexation of an 85-acre parcel along Gilman Springs Road. The City of Moreno Valley is the Lead Agency for the proposed project, but discretionary actions may also be required by other agencies (see Section 3.6.3).

The following discretionary actions are anticipated to be taken by the City of Moreno Valley as part of the proposed project:

3.7.1.1 Environmental Impact Report

Before taking action on the WLC project, the City must certify that the EIR prepared for the project is adequate and represents the independent judgment of the City as the Lead Agency under CEQA.

~~3.7.1.2 General Plan Amendment~~

~~The General Plan Amendment proposes a revision to the City General Plan land use designations for 3,714 acres to Business Park/Light Industrial (BP). The General Plan Amendment also includes amendments to several other elements, including the Community Development Element, the Parks, Recreation and Open Space Element, the Circulation Element, the Environmental Safety Element, and the Conservation Element to make them consistent with the proposed project (see previous Section 3.5, *General Plan Amendment*).~~

~~3.7.1.3 WLC Specific Plan~~

~~The proposed project includes a Specific Plan to implement the amended General Plan and to set forth comprehensive land use regulations governing the development of the proposed project. The World Logistics Center Specific Plan is a master plan for a 2,610-acre site for the development of up to 40.6 million square feet of modern high-cube logistics and related warehouse distribution facilities defined as Logistics Development and Light Logistics. The Specific Plan establishes the master plan of development for the project area, including development standards and use regulations, a master plan for circulation, infrastructure, architectural, landscape and design guidelines and sustainability goals, all of which will be applicable to all development within the area covered by the Specific Plan.~~

~~3.7.1.4 Change of Zone~~

~~The Change of Zone will establish the World Logistics Center Specific Plan, which will replace most of the Moreno Highlands Specific Plan and rezone several other contiguous properties. The new Specific Plan will become the regulatory land use document for the entire 2,610-acre Specific Plan area. The 910-acre CDFW property and the 174-acre SDG&E property will not be included in the~~

~~Specific Plan but will be rezoned to Open Space to reflect the long-range plans for the properties. The 20 acres of land owned by SDG&E and SCGC that are used for natural gas facilities will be zoned for Public Utility use. The WLC property would then have two land use zones, Logistics Development (LD) and Light Logistics (LL).~~

~~3.7.1.5 Development Agreement~~

~~The project includes a Development Agreement between the project applicant, Highland Fairview, and the City of Moreno Valley in order to provide certainty for the future development of the project for those parcels owned by Highland Fairview (see Final EIR Appendix H for updated text).~~

3.7.1.6 Tentative Parcel Map

A Tentative Parcel Map (for financing purposes only) proposes the subdivision of a portion of the WLC project site into large parcels. This map is for financing purposes only and does not create any development rights for the subdivided properties. Subsequent subdivision applications will be required prior to the development of any buildings on the site.

3.7.1.7 Annexation

The WLC project includes the completion of the annexation process for an 85-acre parcel located on the north side of Alessandro Boulevard at Gilman Springs Road which have a General Pklan designation of Business Park/Light Logistics and which are subject to the World Logistic Center Specific Plan. The County has already taken the first step to make this parcel part of the City by including it in the City's Sphere of Influence in 1985. The City has already requested that the Local Agency Formation Commission complete the annexation process~~proposed project includes pre-annexation General Plan land use designations and zoning for this parcel~~. This EIR will be the environmental documentation used by the Local Agency Formation Commission to complete the annexation process. ~~This project proposes to incorporate this property into the World Logistics Center Specific Plan.~~

3.7.2 City of Moreno Valley – Future Approvals

While building sizes, configurations and designs will vary, it is anticipated that between 15 and 30 logistics buildings will be developed within the WLC project. Each building may enclose from one to two million square feet and have multiple tenants. Each building will be subject to a discretionary Plot Plan process described in Section 11 of ~~this~~ the Specific Plan~~.~~"

Upon submittal of any site-specific development proposal within or related to the WLC Specific Plan project, the City must determine whether the environmental effects of the proposal are within the levels of environmental effects analyzed in this programmatic EIR. In order to make this determination, the City may require the completion of an initial study (*CEQA Guidelines*, Appendix G Checklist). For each development proposal, the City will make one of the following determinations, as set forth under CEQA:

3.7.2.1 Categorical Exemptions (CE)

The City would adopt a categorical exemption under the following circumstances.

1) An assessment of the proposed action relative to the certified Program EIR determined there was no possibility of a significant environmental impact and the proposed action (utility improvements within rights-of-way, etc.) had already been evaluated in the EIR.

3.7.2.2 Negative Declaration (ND)

The City would adopt a negative declaration under the following circumstances.

2) If the initial study leads to the conclusion that the proposed project would have no significant environmental effects; or
3) If the initial study leads to the conclusion that the project may have potentially significant environmental effects, but all such effects are within levels that were fully reviewed, disclosed, and/or mitigated within this programmatic EIR.

Upon making a negative declaration, no further environmental analysis would be required.

3.7.2.3 Mitigated Negative Declaration (MND)

The City would adopt a mitigated negative declaration if the initial study leads to all of the following conclusions:

1) The proposed project could have a significant environmental effect; and
2) This potentially significant environmental effect may exceed levels that were fully reviewed, disclosed and/or mitigated within this programmatic EIR; and
3) The City, through a review of any associated studies that may accompany the completion of the initial study, concludes that these potentially significant effects can be fully mitigated with mitigation measures in addition to those identified in this programmatic EIR.

Upon making a mitigated negative declaration, no further environmental analysis would be required.

3.7.2.4 Supplemental EIR

A Supplemental EIR would be needed if the City concluded that the proposed project could have significant environmental effects exceeding the levels that were fully reviewed, disclosed, and/or mitigated within this program EIR and that further study is needed to determine if any feasible mitigation measures may be reasonable or prudent to address these environmental effects. Any Supplemental EIR(s) would only cover the environmental topic areas in which potentially significant impacts were identified in the initial study.

The initial study process outlined above will also help the City in determining if any proposed project within the project area qualifies for a partial or full exemption from any further environmental analysis. Specifically, some proposed projects may qualify for a statutory or categorical exemption, as outlined in Articles 18 and 19 of the *CEQA Guidelines*. Other provisions of California law limit the extent of further environmental review required in the case where a city has adopted a specific plan and certified an associated EIR, as would be the case for this project. Notwithstanding, the law also provides that in the event of changed circumstances in the project area or the identification of impacts not previously considered or analyzed, subsequent environmental review (such as a mitigated negative declaration or supplemental EIR) may be required.

3.7.2.5 Subsequent EIR

CEQA Section 15162 requires a Subsequent EIR “If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration or EIR, the Lead Agency shall prepare a subsequent EIR if required under subsection (a). Otherwise, the Lead Agency shall determine whether to prepare a subsequent negative declaration, an addendum, or no further documentation.” Any changes to the Specific Plan will be subject to the criteria listed below. As required by Section 15162(a), a proposed change in a project will require preparation of a subsequent EIR if:

1. Substantial changes are proposed in the project which will require major revisions of the previous EIR or a negative declaration due to an involvement of new significant environmental effects, or a substantial increase in the severity of previously identified significant effects; or
2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects, or a substantial increase in the severity of the previously identified significant effects; or
3. New information of substantial importance, which was not known and could have not been known with the exercise of reasonable diligence at the time the previous EIR was certified, shows:
    a. The project will have one or more significant effects not discussed in the previous EIR;
    b. The significant effects previously examined will be substantially more severe than identified in the previous EIR;
    c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or
    d. Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives.

If none of the above conditions is met, the preparation of a subsequent EIR is not required.

3.7.2.6 Addendum to WLC EIR

An Addendum to a previously approved EIR may be required if there are minor changes or additions to the previously analyzed project. An Addendum is used:

- To evaluate whether or not there are any new or more severe significant environmental effects associated with the proposed project;
- To review whether there is new information or circumstances that would require preparation of additional environmental documentation in the form of a subsequent or supplemental EIR, or if an Addendum is appropriate; and
- To evaluate the proposed project's potential environmental impacts in the context of the questions posed in CEQA Section 15162(a).

3.7.3 Actions by Others

Although the City of Moreno Valley is the Lead Agency for the proposed project, a number of other Federal, State, or special purpose agencies may consult this EIR for their own decision-making and actions now or in the future. The following is a list of anticipated discretionary or non-discretionary actions by other agencies; however, it is not exhaustive and may include other agencies and processes in the future as appropriate:

- ***County of Riverside***
    - Local Agency Formation Commission (LAFCO): Annexation of 85-acre parcel.
    - Flood Control and Water Conservation District: Amend Storm Drain Master Plan.

- ***Other Affected Agencies***
  - Western Riverside Council of Governments: TUMF Contributions.
  - Eastern Municipal Water District: Water Service Agreements.
  - Developer will make "fair share" contributions to established development impact fee programs in the cities of Riverside, Perris, and Redlands for local road and intersection improvements identified in the programmatic Traffic Impact Assessment (TIA) included with the EIR (Final EIR Volume 2 Appendix L-1). This item is subject to review and approval by the City Transportation Division.

- ***State of California***
  - Regional Water Quality Control Board: Water Quality Permitting.
  - Department of Transportation (Caltrans): Encroachment Permits for SR-60 and adopt fair share contribution programs for future development within the WLCSP to contribute funds for local road and intersection improvements identified in the programmatic Traffic Impact Assessment (TIA) included with the EIR (Final EIR Volume 2 Appendix L-1).
  - California Department of Fish and Wildlife: Streambed Alteration Agreements.

- ***Federal Agencies***
  - U.S. Army Corps of Engineers: Clean Water Act Permitting.

~~**THIS PAGE INTENTIONALLY LEFT BLANK**~~

~~***NOTE TO READERS:*** *This section contains no major revisions based on changes to the WLC Project, revised technical studies, or in response to comments on the Programmatic Draft EIR.*~~

NOTE TO READERS: This portion of the Revised Sections of the FEIR replaces Sections 4.2, 4.3, 4.4, 4.7, and 4.15. of the FEIR. A new Section 4.17 has been added. The cumulative portions of Chapter 4.0 have been deleted from the FEIR to allow for their reanalysis to include the impacts expected from other past, present and reasonably foreseeable future projects. The revised cumulative analysis can be found in Chapter 6.0 of this Revised Sections of the FEIR.

The Revised Sections of the Final EIR (FEIR) sets forth those portions of Section 4.0 that have been revised. Revisions to, and deletions from, the FEIR have been identified in a separate document, available for review at the City of Moreno Valley. The absence of any reference to a portion of Section 4.0 means that the corresponding portion of Section 4.0 in the FEIR remains unchanged or has been deleted.

4.0 ENVIRONMENTAL IMPACT EVALUATION

~~As stated previously, there~~There are ~~16~~17 environmental issue areas that are analyzed in this ~~EIR with respect to~~Revised Sections of the ~~proposed project. These issues are~~FEIR. Issue areas highlighted in bold remain valid in the FEIR and no additional analysis is included herein:

4.1 Aesthetics
4.2 Agriculture and Forestry Resources
4.3 Air Quality
4.4 Biological Resources
4.5 Cultural Resources
4.6 Geology and Soils
4.7 Greenhouse Gas Emissions, Energy Conservation, and Global Climate Change
4.8 Hazards and Hazardous Materials
4.9 Hydrology and Water Quality
4.10 Land Use and Planning
4.11 Mineral Resources
4.12 Noise
4.13 Population, Housing, and Employment
4.14 Public Services
4.15 Transportation and Traffic
4.16 Utilities and Service Systems
4.17 Energy (New)
~~**4.16 Utilities and Service Systems**~~

~~Within each subsection described in Section 4.0, the following information is presented relative to each environmental issue described:~~
Those portions of the FEIR that have been found to be deficient by the Superior Court have been updated. In addition, because of the inclusion of additional past, present and reasonably foreseeable projects and the issuance of a new Trip Generation Manual, the Traffic and Circulation section has been updated. That section also serves as the basis for analyzing the World Logistic Center's air quality, greenhouse gas and traffic noise impacts so the sections for each of them have also been updated. The analysis of all other issues were not included because there were no substantive updates. The following information is presented relative to each environmental issue that was updated:

- Description of the existing setting as it relates to the specific environmental issue;
- A summary of policies and regulations relevant to the specific environmental issue;
- Identification of the thresholds of significance;

- Evaluation of project-specific impacts and a determination of significance based on identified threshold levels;
- Description of design features of the Specific Plan that will help reduce potential impacts;
- Identification of mitigation measures;
- A determination of the level of significance after mitigation measures are implemented~~; and~~
- ~~Cumulative impacts.~~

~~The environmental analysis provided in Sections 4.1 through 4.16 focuses on changes in the existing physical environment and identifies direct and indirect significant impacts associated with the proposed project. The cumulative impacts for each of the proposed project components are analyzed within the discussion of each component for each threshold.~~

~~**THIS PAGE INTENTIONALLY LEFT BLANK**~~

Because the cumulative impact analysis has been ordered to be updated by the Superior Court, all updated cumulative impact analysis is addressed in Chapter 6.0 of these Revised Sections of the FEIR.

4.1 AESTHETICS: TABLE OF CONTENTS

FIGURES

TABLES

NOTE TO READERS. *The cumulative portion of Section 4.1 has been deleted from the 2015 FEIR to allow for its reanalysis to include the impacts expected from other past, present and reasonably foreseeable future projects. The revised cumulative analysis can be found in Section 6.1 of the Revised Sections of the FEIR. All other portions of Section 4.1 of the 2015 FEIR remain unchanged. The absence of reference to a portion of Section 4.1 means that the corresponding portion of Section 4.1 in the FEIR remains unchanged or has been deleted.*~~*This section has been revised based on changes to the WLC Specific Plan and in response to comments on the Programmatic DEIR regarding views.*~~

4.1 AESTHETICS

This section describes the existing aesthetic condition of the project area and analyzes potential impacts of the proposed WLC project relative to views, and light and glare based on the development characteristics outlined in the WLC Specific Plan (September 2014). Although there are no specific building locations or designs proposed at this time, the Specific Plan contains sufficient detail as to the general appearance and locations of buildings to evaluate the potential aesthetic impacts of development.

As a program-level CEQA document, this analysis will be based on the characteristics of buildings that can be built under the WLCSP. This analysis will look at the height, glare and lighting, visual impact, and viewshed impacts of the type of buildings authorized by the design standards and criteria set forth in Section 5.0 of the WLCSP. This section of the WLCSP creates comprehensive design and aesthetic guidelines. Section 4.2.4 of the Specific Plan presents various line-of-sight cross-sections and photographic renderings showing views of various locations around the project site, which are illustrative of the massing and types of buildings authorized by the WLCSP.

~~*Note: The following changes have been made due to revisions to the Specific Plan project area.*~~

For the reader's reference, this EIR has been written to evaluate the potential environmental impacts associated with the entitlement, construction and operation of the 40.6 million square feet World Logistics Center Specific Plan, as well as its associated infrastructure. The World Logistic Center Specific Plan covers 2,610 acres and associated off-site infrastructure covers 104 acres of land needed to support the proposed development. ~~and each of the technical reports and analyses contained herein have been written to address a series of planning entitlements that affect several separate, adjacent and related properties. The overall project site covers 3,818 acres in the Rancho Belago area of the City of Moreno Valley. It includes 3,714 acres of land, which is the subject of various entitlements, plus 104 acres of land affected by off-site improvements needed to support the proposed development. The proposed entitlements are summarized below.~~

~~A General Plan Amendment is proposed covering 3,714 acres, which redesignates approximately 70 percent of the area (2,610 acres) for logistics warehousing (new LD and LL zones) and the remaining 29 percent (1,104 acres) for permanent open space and public facilities. The following elements of the General Plan are included in the proposed Amendment: Community Development (land use); Circulation; Parks, Recreation, and Open Space; Safety; Conservation; and the General Plan Goals and Objectives.~~

~~A new Specific Plan will be adopted to govern development of the World Logistics Center for the 2,610 acres. A separate zoning amendment will also be processed and adopted to rezone 1,104 acres for open space and public facilities uses and to incorporate the Specific Plan into the City's Zoning Map.~~

~~In addition to the General Plan Amendment, Specific Plan, and Zone Change, the project includes a Tentative Parcel Map covering 1,539 acres (property owned by the project applicant, Highland Fairview) within the project site. This subdivision map is for financing purposes only and will not confer any development rights to the property owner.~~

~~The project includes pre-annexation zoning for an 85-acre parcel of land within the project area.~~

~~Finally, a Development Agreement between the City and Highland Fairview (the project applicant) is included as one of the project entitlements. The details of all the project entitlements are included in Section 3.4 of the EIR, *Project Characteristics*.~~

~~The environmental impacts of all of these entitlements on the entire project area are addressed in this EIR and the accompanying technical reports and analyses.~~

Information on visual characteristics, both on the site and in the vicinity of the project site, is presented in this section. Potential impacts to aesthetic visual resources and viewshed impacts resulting from the development of the proposed WLC project are based on analyses of site photographs, site reconnaissance, project data from the WLC Specific Plan, line-of-sight cross sections, and photographic renderings. The determinations in this section of the EIR are based, in part, on the City of Moreno Valley General Plan polices related to views and open space.

For the purposes of the following analyses, two general aesthetic terms are defined: scenic vistas and viewsheds.

- **Scenic Vistas.** A scenic vista can be categorized as either containing a panoramic view[1] or a focal view. Panoramic views are typically associated with publicly-accessible vantage points that provide a sweeping geographic orientation not commonly available (e.g., skylines, valleys, mountain ranges, or large bodies of water). Focal views are typically associated with views of natural landforms, public art/signs, and visually important structures, such as historic buildings. Aesthetic components of a scenic vista include three components: scenic quality, sensitivity level, and view access.
- **Viewsheds.** A viewshed is typically defined as the natural environment that is visible from one or more viewing points. CEQA documents most often define viewshed as what portions of the project viewers can see from surrounding areas. A viewshed can be divided into three distinct components: the foreground, midground, and background.

4.1.1 Existing Setting

~~*NOTE: The following changes have been made due to revisions to the Specific Plan.*~~

The approximately ~~3,714~~2,610-acre project site is located in Rancho Belago, the eastern portion of the City, and is situated on a gently sloping valley floor directly south of State Route 60 (SR-60) with the Badlands area to the east and northeast, the Mount Russell Range to the southwest, and Mystic Lake and the San Jacinto Wildlife Area to the southeast.

4.1.1.1 On-Site Conditions

Situated within northeastern Moreno Valley, the project site gently slopes to the south and elevations on-site range from 1,760 feet above mean sea level (amsl) near the northeast corner down to 1,480 feet amsl at the southeast corner. The site is largely vacant and supports mainly dry farm agriculture with little ornamental landscaping, lighting, or signage located within the project limits. At present, there are seven rural residences and associated farm structures in three areas on site: one on the east side of Redlands Boulevard in the west-central portion of the site and the others on either side of World Logistics Center Parkway~~Theodore Street~~ in the north-central portion of the site. The project site itself contains no scenic resources, although the large areas of agricultural fields do represent a kind of visual

---

[1] A panoramic view consists of visual access to a large geographic area, for which the field of view can be wide and extend into the distance.

"open space" as vacant land and allow existing residences in the area to have unobstructed panoramic views. The site has significant views and scenic vistas of Mount Russell to the south, the Badlands to the north and east, Mount San Jacinto to the east, and the San Jacinto Wildlife Area to the south.

4.1.1.2 Adjacent Land Uses

Land uses adjacent to the project site include the Skechers logistics building to the northwest, and several suburban residential neighborhoods along Redlands Boulevard south of Cottonwood Avenue, and the "Old Moreno" commercial area at the intersection of Redlands Boulevard and Alessandro Boulevard. The closest residences are within 40 feet of the project property along Bay Street and Merwin Street. An additional residential neighborhood is located several hundred feet west of Redlands Boulevard, south of Eucalyptus Avenue. North of SR-60, there are several rural residences located between Redlands Boulevard and World Logistics Center Parkway~~Theodore Street~~ (refer to previously referenced Figure 3.3, *Existing Land Uses*). Much of the surrounding land is vacant and supports agriculture or open space (e.g., Badlands and Mount Russell). It should be noted that the General Plan makes reference to the "rural northeast portion of the City," which refers to the land north of SR-60, not south of the freeway (J. Terrell, personal communication, November 2012).

4.1.1.3 Existing Viewsheds and Scenic Vistas

As illustrated in Figure 4.1.1, the proposed project site represents a large undeveloped area situated between the Badlands (northeast and east), the San Jacinto Wildlife Area (south), and the Lake Perris Recreational Area (southwest). Views across the site from SR-60 and from Gilman Springs Road are of vacant agricultural land forming the foreground, midground, and background. In the far background from these two roadways are Mystic Lake and the uplands surrounding Lake Perris. The major scenic resources for the project area, as documented in Figure 7-2 of the General Plan Conservation Element, are the Russell Mountains to the southwest, the Badlands to the east and northeast, Moreno Peak to the west, and the Reche Mountains to the far northwest. The existing agricultural fields provide a pleasant low relief foreground over which to view the three surrounding upland areas described above. The Conservation Element does not include the existing agricultural fields as a major scenic resource, although it does acknowledge that "Expanses of open land are found throughout the eastern portion of the study area. These tracts of land allow for uninterrupted scenic vistas from State Route 60, Gilman Springs Road, and other roadways and provide views of the San Jacinto Valley and the ephemeral Mystic Lake" (General Plan page 7-12).

Section 5.11, *Aesthetics*, in the City's General Plan EIR, indicates the major scenic resources within the Moreno Valley study area are visible from SR-60, a City-designated local scenic road. As SR-60 travels through the eastern part of Moreno Valley, it approaches and eventually passes through the Badlands area. Characterized by steep and eroded hillsides, the Badlands provide a range of hills that act as a visual backdrop to the valley. Similarly, views afforded while traveling west through Rancho Belago, the eastern part of the City, include views of the Badlands to the north and south, and Mystic Lake and the Mount Russell Range to the far south. These resources are highlighted in General Plan EIR Figure 5.11-1, *Major Scenic Resources*. Table 4.1.A provides a summary of the existing viewsheds to and from the project site. Because of these resources, travelers on SR-60 and Gilman Springs Road are considered scenic routes since these visual resources are readily visible from these roadways.

The Conservation Element of the General Plan also states that, "The City of Moreno Valley has the opportunity to designate scenic routes as the basis for preserving outstanding scenic views. Special attention to the location and design of buildings, landscaping, and other features should be made to protect and enhance views from scenic roadways" (General Plan page 7-14). These statements indicate the City acknowledges the eventual conversion of the extensive agricultural fields and their replacement by buildings, but it emphasizes the importance of locating and designing the buildings to maintain existing scenic views (i.e., the surrounding uplands).

Table 4.1.A: Existing Viewsheds

Vantage Point	Characteristics of Views		
	Foreground	Midground	Background
Looking north from the SJWA* land toward the project site	Agricultural fields that are part of SJWA property	Agricultural fields on project site and SDG&E** facility	SR-60 with Badlands rising above
Looking east from existing residential uses along Redlands Boulevard toward the project site	Agricultural fields of the project site and windrow of olive trees along east side of Redlands Boulevard	Agricultural fields of the project site and Gilman Springs Road	Gilman Springs Road with Badlands rising above, and portions of Mount San Gorgonio visible above the Badlands (on a clear day)
Looking south from SR-60 toward the project site	Agricultural fields and related equipment on the project site	Agricultural fields of the project site and the northern SJWA property	Mystic Lake, SJWA, and Mount Russell Range surrounding the Lake Perris State Recreational Area
Looking west from Gilman Springs Road and the Badlands toward the project site	Agricultural fields and related equipment on the project site	Agricultural fields of the project site	Skechers building, scattered rural residential on the project site, and suburban residential at southwest portion of project site

* San Jacinto Wildlife Area.
** San Diego Gas & Electric Natural Gas Compressor Plant.
Source: LSA Associates, Inc. Site Survey, March 2012.

Views from the Project Site. Views to the north from the project site include the new Skechers logistics building and SR-60, while to the northeast, east and southeast, the rugged topography of the Badlands dominates the view. To the south, the view is of the San Jacinto Wildlife Area with partial views of Mystic Lake. To the southwest, views of Mount Russell and the Mount Russell Range predominate, with suburban residential uses visible to the far southwest and west. These views are experienced by travelers on Redlands Boulevard, World Logistics Center Parkway~~Theodore Street~~, and Alessandro Boulevard, and residents of the rural residences on the project site. These represent significant visual resources; SR-60 and Gilman Springs Road are scenic routes because they have unobstructed views of these resources.

Views toward and across the Project Site. Views of the project site from the area north of SR-60 are limited by the SR-60 roadway and existing development. The skyline is dominated by views of the Badlands and of the Mount Russell Range. Views across the site from the northwest are from existing and/or planned non-residential uses. Current views of the site from these areas are of vacant agricultural land and the few scattered residences, and also the Skechers building near the northwest corner of the project site.

Foreground and midground views for the residences along the west and southwest boundaries of the project site are presently of vacant agricultural land, a windrow of olive trees along Redlands Boulevard, scattered palm trees, and scattered rural residences on site. Background views from these areas are of the Badlands, sweeping from the northeast to southeast. The Mount Russell Range dominates the southeasterly view from this area. Mystic Lake and the surrounding SJWA lands are not visible. These areas are also not visible from houses farther north along Redlands Boulevard as they are not elevated enough to see all the way to Mystic Lake, although there may be some limited views in that direction from second-story windows facing east that are not blocked by other residences.

Users of the SJWA south of the site have views of the existing agricultural lands on the project site. Finally, residents in the few homes on the east side of Gilman Springs Road have views of the agricultural lands on the project site.

Mount Russell, the Badlands, the SJWA, and Mystic Lake represent significant visual resources, and SR-60 and Gilman Springs Road are considered scenic routes because they have relatively unobstructed views of these resources.

This EIR analyzes the viewshed impacts of the project on (i) the residences along the west and southwest portions of the project site; (ii) the motoring public on SR-60 and Gilman Springs Road (designated scenic routes), Redlands Boulevard, World Logistics Center Parkway~~Theodore Street~~, and Alessandro Boulevard; (iii) residences north of SR-60; and (iv) existing residences within the project area.

Figures 4.1.2 and 4.1.3A and B present a photographic key map and representative views of the project site.

4.1.1.4 Lighting and Visibility

The majority of the project area is currently very dark, with little or no ambient nighttime lighting other than from scattered rural residences and the SDG&E compressor facility. There is street lighting and general lighting along the western boundary of the site (i.e., along Redlands Boulevard) and from the Skechers warehouse building. The only other lighting comes from SR-60 along the northern boundary of the site. At present, Gilman Springs Road has no streetlights. Assuming “worst-case” conditions, current ambient light levels in the central and southern portions of the project site are assumed to be at or near zero foot-candles per square foot; this is the same unit of measurement used by professionals when referring to sky glow and nighttime light levels.

4.1.1.5 NOP/Scoping Comments

Many residents commented during the public scoping process that they were concerned about what the project would look like and about night lighting since the area is presently undeveloped and has no significant source of night lighting. Several commenters raised issues with future “night sky” impacts on the area.

4.1.2 Existing Policies and Regulations

4.1.2.1 City of Moreno Valley General Plan Policies

The following policies and goals pertain to aesthetics and are applicable to the proposed project:

Community Development

Objective 2.5 Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors, and which meets the service needs of local businesses.

Policy 2.5.1 The primary purpose of areas designated Business Park/Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio (FAR) of 1.00 and the average FAR should be significantly less.

Policy 2.5.2 Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.

Policy 2.5.3 Screen manufacturing and industrial uses where necessary to reduce glare, noise, dust, vibrations, and unsightly views.

Policy 2.5.4 Design industrial developments to discourage access through residential areas.

Objective 2.10 Ensure that all development within the City of Moreno Valley is of high quality, yields a pleasant living and working environment for existing and future residents, and attracts business as the result of consistent exemplary design.

Policy 2.10.1 Encourage a design theme for each new development that is compatible with surrounding existing and planned developments.

Policy 2.10.2 Screen trash storage and loading areas, ground and roof mounted mechanical equipment, and outdoor storage areas from public view as appropriate.

Policy 2.10.3 Require exterior elevations of buildings to have architectural treatments that enhance their appearance.

- (a) A design theme, with compatible materials and styles, should be evident within a development project.
- (b) Secondary accent materials, colors, and lighting should be used to highlight building features.
- (c) Variations in roofline and setbacks (projections and recesses) should be used to break up the building mass.
- (d) Industrial buildings shall include architectural treatments on visible façades that are aesthetically pleasing.

Policy 2.10.4 Landscaping and open spaces should be provided as an integral part of project design to enhance building design, public views, and interior spaces, provide buffers and transitions as needed, and facilitate energy and resource conservation.

Policy 2.10.5 Development projects adjacent to freeways shall provide landscaped buffer strips along the ultimate freeway right-of-way.

Policy 2.10.6 Buildings should be designed with a plan for adequate signage. Signs should be highly compatible with the building and site design relative to size, color, material, and placement.

Policy 2.10.7 On-site lighting should not cause nuisance levels or glare on adjacent properties.

Policy 2.10.8 Lighting should improve the visual identification of structures.

Policy 2.10.9 Fences and walls should incorporate landscape elements and changes in materials or textures to deter graffiti and add visual interest.

Policy 2.10.10 Minimize the use and visibility of reverse frontage walls along streets and freeways by treatments such as landscaping, berming, and “side-on” cul-de-sacs.

Policy 2.10.11 Screen and buffer non-residential projects from adjacent residential property and other sensitive land uses when necessary to minimize noise, glare, and other adverse effects on adjacent uses.

Policy 2.10.12 Screen parking areas from streets to the extent consistent with surveillance needs (e.g., mounding, landscaping, low profile walls, and/or grade separations).

Policy 2.10.13 Provide landscaping in automobile parking areas to reduce solar heat and glare.

Conservation Element

Objective 7.7	Where practicable, preserve significant visual features, significant views, and vistas.
Policy 7.7.3	Implement reasonable controls on the size, number, and design of signs to minimize degradation of visual quality.
Policy 7.7.4	Gilman Springs Road, Moreno Beach Drive, and State Route 60 shall be designated as local scenic roads.
Policy 7.7.5	Require development along scenic roadways to be visually attractive and to allow for scenic views of the surrounding mountains and Mystic Lake.

4.1.2.2 City of Moreno Valley Municipal Code

On September 11, 2012, the City Council adopted Ordinance 851, which amended various sections of the City Municipal Code, including Section 9.08.100 *Lighting* to address citywide night lighting standards. Among other things, it requires non-residential lighting to be fully shielded and directed away from surrounding residential uses. It also restricts non-residential lighting to not exceed 0.25 foot-candle of light measured from within five feet of any property line.

4.1.3 Methodology

Any evaluation of visual impacts is necessarily subjective; however, community aesthetic values can be used to evaluate changes in views within a particular community. These values are found in General Plan policies, zoning ordinances, and, where specific policies are absent, general design theory and visual analysis methods can be incorporated to evaluate aesthetic impacts. For the purposes of CEQA compliance, this analysis of visual impacts will focus on changes in the visual character of the project site that would result from the development of the proposed on-site uses, including the visual compatibility of on-site and adjacent uses, changes in vistas and viewsheds where visual changes would be evident, and the introduction of sources of light and glare. Impacts to the existing environment of the project site are to be determined by the contrast between the site's visual setting before and after the proposed development. In this analysis, emphasis has been placed on the transformation of the existing undeveloped conditions into urbanized uses. Although few standards exist to singularly define perceptions of aesthetic value, the degree of visual change can be measured and described in terms of visibility and visual contrast, dominance, and magnitude. Visual elevations and line-of-sight cross-sections from various vantage points around the project site are provided in Figures 4.1.4A-I, while computerized photographic renderings showing views of the site from different vantage points around the site are provided in Figures 4.1.5A-K.

~~*NOTE: In Responses to Comments F-8-54 through -56 and G-51-40, the captions on several renderings were found to be incorrect and have since been corrected. In addition, several more renderings have been added to more fully illustrate potential views from areas surrounding the WLC site. These illustrations include one view toward Mt. Russell from SR-60 (traveling westbound on SR-60) and one additional view toward the Badlands and Mt. San Jacinto (traveling eastbound on SR-60).*~~

Current residences southwest of the project site, as well as travelers along SR-60 and Gilman Springs Road are considered sensitive to the visual and aesthetic alteration of the project site. Where possible, the potential aesthetic impacts of the proposed project will be evaluated to determine if or the degree to which the project is consistent with applicable General Plan objectives and policies.

4.1.4 Thresholds of Significance

Appendix G of the *CEQA Guidelines* recognizes the following significance thresholds related to aesthetics. Based on these significance thresholds, a project would have a significant impact on aesthetic resources if it would result in:

- A substantial adverse effect on a scenic vista;
- Substantial damage to scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway;
- Substantial degradation of the existing visual character or quality of the site and its surroundings; and/or
- A new source of substantial light or glare that would adversely affect daytime or nighttime views in the area.

4.1.5 Less than Significant Impacts

Due to the size and location of the project, and due to the fundamental and permanent alteration of the aesthetic characteristics of the site, all aesthetic impacts were determined to be potentially significant.

4.1.6 Significant Impacts

4.1.6.1 Scenic Vistas

Impact 4.1.6.1: *The proposed project would have a substantial significant effect on a scenic vista.*

Threshold	Would the proposed project have a substantial adverse effect on a scenic vista?

The proposed project could have a substantial adverse effect on one or more scenic vistas, notably views of the Badlands, Mount Russell and the Mount Russell Range, and Mystic Lake/San Jacinto Wildlife Area. For the proposed project, the nearest sensitive permanent visual receptors would be the existing single-family residences to the west and southwest along Redlands Boulevard. In addition, the views of the motoring public along SR-60, Gilman Springs Road, Redlands Boulevard, World Logistics Center Parkway~~Theodore Street~~, and Alessandro Boulevard would be significantly affected as well. At present, the Skechers building blocks views of the site for travelers on SR-60 who are immediately north of the Skechers building.

One of the development goals of the Specific Plan is to have the heights of the buildings along the north, west and south perimeter of the site, including SR-60, be approximately the same height as the existing Skechers building (i.e., approximately 55 feet above a ground elevation of 1,740 feet amsl). This means, as the site elevation decreases to the south, taller buildings theoretically could be built as long as they do not exceed 1,795 feet elevation (i.e., height above sea level, not building height above ground). This would result in seeing only the buildings adjacent to the freeway for eastbound travelers on SR-60, but it would adversely affect views from other locations around the WLC Specific Plan site regardless of the height comparison to the Skechers building. The motoring public heading westbound on SR-60 would experience impacts to their views of Mount Russell.

Along Gilman Springs Road and away from the perimeter of the site, the Specific Plan allows warehouse buildings that may reach a height of 80 feet. These buildings would have a maximum altitude of 1,795 feet. The potential heights of project buildings, and possible viewshed impacts of future development under the Specific Plan, are shown in previously referenced Figure 4.1.5, which provides computerized photographic renderings of the proposed project building and landscaping.

As stated previously, the project will allow a maximum of 60-foot tall warehouse buildings along the west, north, and south perimeters of the site, and 80-foot buildings on the “interior” portions of the site and along the eastern perimeter (i.e., Gilman Springs Road). Ground elevations range from 10 to 30 feet lower than Gilman Springs Road, which will help reduce visual impacts of warehouse buildings in the eastern portion of the site. The existing Skechers building at the northwest corner of the site can be seen from almost anywhere on the project site at present, and from surrounding off-site areas. Other warehouse buildings within the project will be at least that prominent when they are built.

Section 5.0 of the WLCSP contains architectural and design guidelines that will encourage the construction of attractive warehouse buildings and surrounding grounds. This is supported by the examples of building designs, materials, colors, and landscaping illustrations in the Specific Plan. The general development, setback, architectural design, and landscaping guidelines of the WLCSP require future development to provide attractive warehouse buildings with native plants and trees to help screen views of the lower portions of the buildings.

The Skechers building is mainly white, and the WLCSP indicates that future warehouse buildings on site will also be white or light colored to minimize energy consumption, provide architectural compatibility, and reflect heat to minimize the urban “heat island” effect (see also Section 5.3.13 Sustainability). Based on current views of the Skechers building, these new buildings will also be visible from various off-site locations (e.g., north of SR-60 and east of Gilman Springs Road). However, white or light-colored buildings, like Skechers, may be more visible at longer distances compared to darker or earth-toned buildings.

General View Impacts from Existing Residences. The Specific Plan establishes a minimum setback of 250 feet along the west and south boundary of the project site between sensitive receptors (i.e., SJWA houses) and buildings or parking/circulation areas within the WLCSP. The setback area is located entirely onsite and measured from the World Logistics Center Property boundary inward and onto the project site. The Specific Plan also includes specific landscaping and other design criteria for this setback~~buffer~~ (see WLCSP Section 4.2, *Offsite Landscaping*). It should be noted that the width of the adjacent street outside of the WLC project boundaries (e.g., Redlands Boulevard, Bay Avenue, and Merwin Street) is included in the 250-foot setback~~buffer~~ distance.

The line-of-sight exhibits and the photographic renderings help predict how the WLCSP project will appear as buildings are constructed. Figures 4.1.4A-E include typical cross-sections that show the 250-foot setback as measured from the center line of Redlands Boulevard and Merwin Street, and the center line of Bay Avenue. Not counting the existing street widths, the new landscaping setback/berm areas along the west side of the WLCSP will be approximately 150 feet wide (e.g., from the east side of Redlands Boulevard to the nearest truck activity area). These setbacks, and the proposed landscaping within the setback areas, are shown in previously referenced Figures 4.1.4A-E and 4.1.5A-F (Views 1-5). Section 4.2 of the Specific Plan describes and illustrates how the landscaping will appear both upon installation and at maturity (photographic renderings of these conditions are also shown in Section 4.2, *Offsite Landscaping*).

As development of the proposed project occurs, buildings, associated parking lots, and landscaping will be built on the project site. This will change existing views from virtually every point in and around the project site. Foreground and midground views would consist of trees, ornamental landscaping, and new warehouse buildings. Most background views will be affected as well with limited distant views of the Badlands, Mount San Jacinto, and Mount Russell remaining from some adjacent properties and roadways. Although the warehouse buildings and the single-family residences would be separated by some distance, the proposed project will result in the reduction or elimination of existing background views.

Views from SR-60. The existing Skechers building can be used as a visual reference relative to future views involving the WLCSP. The average floor elevation of the Skechers facility is 1,740 feet amsl. Assuming an average building height of 55 feet, the Skechers building is at an elevation of 1,795 feet amsl compared to the elevation of SR-60 at 1,760 feet amsl adjacent to the Skechers building. This means a person driving on SR-60 cannot see much of the WLCSP property, or Mystic Lake while adjacent to the Skechers building, although the top of Mount Russell is visible from most locations.

Travelers in both directions on SR-60 will have views of the project site until the northernmost portion of the site is developed. As the site develops, the buildings would replace existing flat agricultural fields with industrial buildings, which may block foreground and midground views of travelers in both directions, depending on their locations. There are no site plans at present to show exact building locations or heights, so the determination of impacts must be based on the characteristics of buildings allowed under the Specific Plan. Buildings adjacent to the freeway would be approximately 60 feet in height, while buildings away from the northern perimeter (i.e., the south side of SR-60) could be up to 80 feet tall. If all of the future buildings along the south side of SR-60 block views to the same degree as the Skechers building, this would be a significant visual impact as it would reduce views of Mount Russell, and the Badlands south of SR-60 along Gilman Springs Road.

The height and location of buildings along this portion of the project will have to be designed to allow background views between and over them (i.e., so the mountains and Mystic Lake are not fully or largely obscured by buildings in the future). The conceptual landscape plans for the proposed project show trees will be planted along the south side of SR-60 to soften views of future buildings, but these will not fully obscure views of the buildings or parking areas, as the buildings may be taller than the trees will grow, and the buildings will extend farther into the midground and background views for many travelers. Even with the landscaping proposed by the WLC Specific Plan, development of this area will eventually replace the existing flat agricultural fields with tall industrial warehouse buildings that may completely or partially block views of the lower slopes of Mount Russell and the Badlands. If future buildings were to block views of these major scenic resources substantially (per GP Figure 7-2), the WLC project would result in significant visual impacts along SR-60. The simulated view from SR-60 is shown in Figure 4.1.5J and K (Views 8 and 9).

Views from Gilman Springs Road. Travelers in both directions on Gilman Springs Road will have extensive views across the project site until the easternmost portion of the site is developed. As the site develops, the buildings would replace existing flat agricultural fields with industrial buildings. Buildings constructed in the eastern portion of the site may block foreground and midground views for travelers in both directions, depending on the location of the building and the traveler. There are no site plans at present to show exact building locations or individual building size/mass or heights, so the determination of impacts must be based on the characteristics of buildings allowed under the Specific Plan. Buildings adjacent to the roadway would be approximately 80 feet in height, while buildings away from the eastern perimeter (i.e., the west side of Gilman Springs Road) could be up to 80 feet tall. If all of the future buildings along the west side of Gilman Springs Road block views to the same degree as the Skechers building, this would be a significant visual impact as it would - reduce views of Mount Russell to the west and views of Mystic Lake to the south. The height and location of buildings along this portion of the project will have to be designed to allow background views between and over them (i.e., so the mountains and Mystic Lake are not fully or largely obscured by buildings in the future). The conceptual landscape plans for the proposed project show trees will be planted along the west side of Gilman Springs Road to soften views of future buildings, but these will not fully obscure views of the buildings or parking areas, as the buildings may be taller than the trees will grow, and the buildings will extend farther into the midground and background views for many travelers. Even with the landscaping proposed by the WLC Specific Plan, development of this area will eventually replace the existing flat agricultural fields with tall industrial warehouse buildings, which may completely or partially block views of the lower slopes of Mount Russell and Mystic Lake. If future buildings block views of these major scenic resources substantially (per GP Figure 7-2), the WLC project would result in significant visual impacts along Gilman Springs Road. The simulated view from this vantage point is shown in Figure 4.1.5G (View 6).

On-site Views. As the WLC project is developed, views from the various rural residences on site will become increasingly blocked, depending on the relative locations and heights of buildings. Over time, these views will be blocked by new logistics warehouse buildings.

In addition to the cross-sections in the WLCSP, LPA Architects created photographic renderings at nine locations to illustrate existing and future views from various vantage points around the WLC site. The following analysis of views is organized by the corresponding rendering(s). These renderings used actual photographs of the sites and superimposed a rendering of potential future buildings within the WLCSP, consistent with Specific Plan development guidelines. These renderings represent possible architectural treatments under the WLCSP design guidelines.

Views from Residences Southwest of the Site. As the project develops, views of the project site from existing residences southwest of the site will fundamentally change from vacant agricultural land to an urbanized logistics campus with major warehouse buildings, roadways, landscaping, and signage. The change in views would be softened somewhat by landscaping, which will be subject to the architectural and landscaping design guidelines outlined in the Specific Plan. All building proposals will be subject to a discretionary plan review process by the City with the opportunity for the public input and comment.

The WLCSP restricts building heights to 60 feet along the perimeter of the project, with the exception of along Gilman Springs Road, and 80 feet for non-perimeter buildings. The WLCSP also allows for the building office entrances and corners to be slightly higher than the main portions of buildings. By comparison, single-family residences southwest of the proposed project have an approximate maximum height of 18 feet for single-story homes and 30 feet for two-story homes. It should be noted that there is an existing windrow of olive trees along the east side of Redlands Boulevard between Cottonwood Avenue north to 700 feet north of Dracaea Avenue (almost 1,800 feet or a third of a mile in total). This windrow would help soften views of the WLCSP site from the homes west of the windrow for as long as the windrow remains in place.

The WLCSP requires that a landscaped berm be installed along the Redlands Boulevard right-of-way to soften project views from residential areas to the west. The Specific Plan requires that all truck accessways and loading areas be at least 250 feet from residential properties along Redlands Boulevard, Bay Avenue, and Merwin Street. The Specific Plan includes renderings of potential future buildings, which illustrate that future buildings will be largely screened by the landscaped berm and other landscaping. While the Specific Plan requires the use of native, drought-tolerant species throughout the project site, the areas adjacent to residential uses along Redlands Boulevard, Bay Avenue, and Merwin Street will receive a more extensive landscape treatment (WLCSP Section 4.2.4 refers these as special edge treatment area). However, landscaping will take a number of years to mature to a height that would soften views from residential areas. Even with the setbacks, berms, walls, and landscaping required by the WLC Specific Plan, the proposed development will fundamentally change views generally available to the public in this area (i.e., area residents driving or walking along Redlands Boulevard, Bay Avenue, and Merwin Street). This is a significant impact and requires mitigation. The photographic renderings for the project show proposed landscaping upon installation and at maturity (assumed to be approximately 15 years) for each rendered location (refer to Figures 4.1.5B-F, Views 1-5).

Views from the South. The existing view from the San Jacinto Wildlife Area north toward the Badlands will eventually be blocked by future buildings, resulting in visual impacts from this area. Buildings in this area will be setback from the SJWA boundary a minimum of 400 feet and limited in height to 60 feet, Figure 4.1.6A shows the location of three special edge treatment areas. Cross section and line of site diagrams are shown for the edge treatments in Figures 4.1.4A through 4.1.4I. Additional information on the Southern Boundary is shown in Figure 4.1.6B.

Views from the East. Permanent views from existing residences east of Gilman Springs Road will fundamentally change. The views they now have of the agricultural fields on the project site will eventually be replaced by a view of an urbanized area consisting of warehouse buildings, parking areas, streets, and ornamental landscaping. The proposed buildings will not block views of the Mount Russell Range to the southwest but may block or partially block views of the Mystic Lake area.

Transient/Motorist Views along Gilman Springs Road. Transient views for travelers on Gilman Springs Road will fundamentally change over time, as future buildings within the WLCSP will be visible to travelers in both directions, replacing existing views of agricultural fields. Eventually buildings within the Specific Plan may block or partially block views of the lower slopes of the Mount Russell Range, as well as distant views of Mystic Lake for southbound drivers. This is a potentially significant impact requiring mitigation.

Transient/Motorist Views along SR-60. Transient views for travelers on SR-60 will fundamentally change over time, as future logistics buildings will be visible to travelers in both directions as development occurs in the project area, replacing existing views of agricultural fields. Eventually buildings within the Specific Plan may block or partially block views of the lower slopes of the Badlands and the lower slopes of the Mount Russell Range, as well as views of Mystic Lake southbound depending on the driver's location and viewing angle. Mystic Lake is not visible for travelers along SR-60; therefore buildings will not block views of the lake for those traveling along SR-60.

Views from the North. Permanent views for residences north of SR-60 will change, and the upper portions of some of the future logistics buildings closest to SR-60 may be visible above the freeway. For residences that are elevated, views across the freeway may be more extensive and residents may see more of the WLC project as it develops. The proposed buildings are not expected to block views of the Mount Russell Range to the south or the Badlands to the southeast, but may eventually completely or partially block distant views of the vacant agricultural land and of Mystic Lake.

Views related to Off-site Improvements. Most project-related infrastructure improvements will not change existing views except for the future World Logistics Center Parkway / Theodore Street/SR-60 interchange improvements. When this interchange is rebuilt, views from some homes northwest of the intersection (i.e., looking southeast) may be incrementally affected by a larger, possibly higher bridge structure, depending on the ultimate design.

Construction of three off-site reservoir tanks will affect views of neighbors living near the new tanks. A new 1860 Zone tank southeast of SR-60/Gilman Springs Road and a new Zone 1967 tank just east of Theodore Street/Ironwood Avenue may be visible to some residents living northwest of Theodore Street/SR-60. In addition, a new 1764 Zone tank off of Cottonwood Avenue west of Redlands Boulevard may be visible to some residents living off of or driving along Cottonwood Avenue (see previously referenced Figure 3.13, *Water System*). However, views of a water tank are incremental and generally consistent with suburban areas, so these changes in views would not be considered significant.

General Plan Policies. These anticipated visual changes, while substantial, are generally consistent with General Plan Objective 7.7 in the Conservation Element regarding visual resources, which states, “Where practicable, preserve significant visual features, significant views, and vistas.” Based on the analysis in the preceding section, the WLCSP can preserve significant visual features, significant views, and vistas if the size and location of buildings developed under the WLCSP can be controlled so as to not substantially block views of Mount Russell, the Badlands, and Mystic Lake. The views from all areas surrounding the WLC site will fundamentally change as development occurs, but views of major scenic resources (i.e., Mount Russell, the Badlands, and Mystic Lake) may be largely preserved through careful limitations on the height and location of future buildings. The WLCSP outlines how future development will be made visually attractive and, through careful limitations on the height and location of future buildings, views of the surrounding mountains and Mystic Lake can be preserved through mitigation of individual buildings.

Impact Summary: Scenic Vistas. The implementation of the proposed project will obstruct and/or substantially affect scenic views for residents living within, or in the vicinity of, the project, and for travelers on SR-60, Gilman Springs Road, Redlands Boulevard, World Logistics Center Parkway~~Theodore Street~~, and Alessandro Boulevard. Many of the views of the motoring public while on local roadways will fundamentally change instead of views of open agricultural land, these residents and motorists will view new logistics buildings and the associated parking areas, roadways, infrastructure, and landscaping. Therefore, the project will have a significant visual impact. The degree to which these buildings may block views of major scenic resources (i.e., Mount Russell, the Badlands, and Mystic Lake) will depend on the location and heights of buildings. This impact requires mitigation; however, this change in views, while substantial, is anticipated in the City’s General Plan, which allows development within the project area. At present, the General Plan allows development of a mixed-use residential community (i.e., Moreno Highlands Specific Plan), which would mainly be one-story and two-story buildings (approximate maximum height 35 feet). The WLCSP proposes to instead develop the site with logistics warehouse buildings (maximum height 60–80 feet), so this change in itself would represent a significant visual impact. In addition, the eventual change in views from existing (baseline) conditions is substantial and is considered a significant visual impact on scenic vistas.

Project or Specific Plan Design Features. The WLC Specific Plan contains design guidelines for architecture and landscaping within the site, which will guide the design of all project buildings toward attractive and visually appealing treatments. Section 2.0 of the Specific Plan indicates that warehouse uses will occur throughout the site, except for in the 74.3 acres at the southwest corner of the site designated for Open Space (OS). Section 5.0 of the Specific Plan outlines the design standards to be applied to development within the project site, including Site Plan Guidelines (5.2), Architecture (5.3), Landscaping (5.4), and Lighting (5.5).

Specific Plan Section 5.1 indicates the project will utilize “Sustainable Design” to reduce pollution and conserve natural resources by considering renewable energy systems, minimizing the use of potable water, use atriums, skylights and internal courtyards to provide daylighting, orienting buildings to screen loading and service areas, collecting rainwater to irrigate drought-tolerant landscaping, providing landscaped outdoor plazas or entries, screening all truck yards from public view, etc.

Specific Plan Section 5.2 indicates building designs should “employ clean, simple, geometric forms and coordinated massing that produce overall unity, scale, and interest.” They should have appropriate façades, fenestration, glazing materials, roofs, colors, etc. Appropriate building design includes visible vertical support, visible structural base, functional and straightforward elements, columns integrated into the façade, and proper structural scale. The visual examples of what are appropriate and what are not also helps the reader to understand how the future buildings will appear.

NOTE: The following mitigation measures relative to views have been revised largely in Responses to Comments F-13-6 and F-13-21in Letter F-13 from Johnson & Sedlack on behalf of the Sierra Club, Moreno Valley Group & Residents for a Livable Moreno Valley, Responses to Comments G-57-13, G-95-6, G-95-9, G-95-20, G-95-21, G-95-41, and related comments by others.

Mitigation Measures. The sizes, heights, and general locations of buildings on the site are limited by the standards and guidelines contained in the Specific Plan. The following mitigation measures are recommended to reduce project impacts related to the potential loss of public viewsheds:

4.1.6.1A Each Plot Plan application for development along the western, southwestern, and eastern boundaries of the project (i.e., adjacent to existing or planned residential zoned uses) shall include a minimum 250-foot setback measured from the City/County zoning boundary line and any building or truck parking/access area within the project. The setback area shall include landscaping, berms, and walls to provide visual screening between the new development and existing residential areas upon maturity of the landscaping materials. The existing olive trees along Redlands Blvd. shall remain in place as long as practical to help screen views of the project site. This measure shall be implemented to the satisfaction of the Planning Official.

4.1.6.1B Each Plot Plan application for development adjacent to Redlands Boulevard, Bay Avenue, or Merwin Street, shall include a plot plan, landscaping plan, and visual rendering(s) illustrating the appearance of the proposed development. The renderings shall demonstrate that views of proposed buildings and trucks can be reasonably screened from view from existing residents upon maturity of planned landscaping and to ensure consistency with the General Plan Objective 7.7. “Effective” screening shall mean that no more than the upper quarter (25%) of a building is visible from existing residences, which shall be achieved through a combination of landscaping, berms, fencing, etc. The location and number of view presentations shall be at the discretion of the Planning Division.

4.1.6.1C Prior to the issuance of a certificate of occupancy for buildings adjacent to the western, southwestern, and eastern boundaries of the project (i.e., adjacent to existing residences at the time of application) the screening required in Mitigation Measure 4.1.6.1A shall be installed in substantial conformance with the approved plans to the satisfaction of the Planning Official.

4.1.6.1D Prior to the issuance of permits for any development activity adjacent to Planning Area 30 (74.3 acres in the southwest portion of the Specific Plan), the entirety of Planning Area 30 shall be offered to the State of California for open space purposes. In the event that the State does not accept the dedication, the property shall be offered to Western Riverside County Regional Conservation Authority or an established non-profit land conservancy for open space purposes. In the event that none of these organizations accepts the dedication, the property may be dedicated to a property owners association or may remain in private ownership and may be fenced and access prohibited.

Level of Significance after Mitigation. After implementation of the proposed mitigation measure(s), adverse effects on scenic vistas would remain significant and unavoidable due to the fundamental change in public views for residents within and surrounding the project site, for travelers on SR-60, Gilman Springs Road, World Logistics Center Parkway~~Theodore Street~~, and Redlands Boulevard,

4.1.6.2 Scenic Resources and Scenic Highways

Impact 4.1.6.2: *The proposed project would have a significant impact on the views of scenic resources for motorists traveling on SR-60 and Gilman Springs Road.*

Threshold	Would the proposed project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway and/or local scenic road?

The California Department of Transportation (Caltrans) Scenic Highway Program does not identify any State-designated scenic highways[1] near the project site[2]. However, the City of Moreno Valley identifies SR-60 and Gilman Springs Road as local scenic roads.[3] According to the City's General Plan EIR, major scenic resources within the Moreno Valley study area are visible from SR-60 and Gilman Springs Road, both of which are City-designated local scenic roadways. It should be noted that Moreno Beach Drive, the other City-designated scenic route (per GP policy 7.7.4), is approximately one mile west of the project site. The proposed project would not be visible from Moreno Beach Drive, so it will not be analyzed further in this document. According to the City's General Plan, the built environment is equally important as natural landforms in terms of scenic values (e.g., buildings, landscaping, and signs).

Section 4.1.6.1 of this EIR determined that the proposed project could have a substantial adverse impact on one or more scenic vistas, including views of the Mount Russell Range and the Badlands for both residents and travelers on SR-60 and Gilman Springs Road.

The project is not required to provide a formal Visual Impact Assessment (VIA) to Caltrans since SR-60 is not a state-designated scenic highway; however, a cursory application of typical VIA requirements is useful in evaluating potential visual impacts of the project relative to travelers on SR-60 just north of the site. According to the Caltrans Handbook, a VIA is typically considered for projects that have the potential to change the "visual" environment. The level of assessment for the VIA can range from "no formal analysis" to a "complex analysis" and is determined by many factors such as numbers of viewer groups affected; existence of scenic resources; degree and totality of the proposed changes in the visual environment; local concerns or project controversy; and cumulative impacts along the transportation corridor.

In order to establish the need and level of study for a VIA, a preliminary evaluation is performed to determine if the project will cause any physical changes to the environment. This preliminary evaluation includes activities such as conducting a site visit to inventory the scenic resources of the project site, estimating potential changes to that character, and identifying viewer groups and public concerns or opposition to the proposal.

The following analysis of visual impacts of the project was conducted with the VIA criteria in mind. Even though a Caltrans VIA was not prepared, the following evaluation of potential impacts to visual resources is based on guidance from the following resource documents:

- Federal Highway Administration (FHWA) Technical Advisory T6640.8;
- FHWA Guidance HI-88-054: Visual Impact Assessment for Highway Projects;
- Title 23 U.S.C. 109 (h); and

---

[1] A State Scenic Highway is defined as any freeway, highway, road, or other public right-of-way, that traverses an area of exceptional scenic quality.

[2] *Eligible and Officially Designated Routes,* California Department of Transportation Scenic Highway Program, http://www.dot.ca.gov/hq/LandArch/scenic_highways/scenic_hwy.htm, website accessed April 4, 2012.

[3] *Conservation Element, Figure 7-2 Major Scenic Resources,* City of Moreno Valley General Plan, adopted July 11, 2006.

- FHWA DOT-FH-11-9694: Visual Impact Assessment for Highway Projects, as published by the American Society of Landscape Architects.

Table 4.1.B provides the thresholds for a qualitative analysis as to what would be considered a minor, moderate, or major visual intrusion along scenic highways.

Table 4.1.B: Visual Intrusion Criteria

Type of Intrusion	Characteristics
Minor	Widely dispersed buildings; natural landscape dominates; wide setbacks and buildings screened from roadway; exterior colors and materials are compatible with environment; or buildings have cultural or historical significance.
Moderate	Increased number of buildings, but complementary to the landscape; smaller setbacks and lack of roadway screening; buildings do not degrade or obstruct scenic view.
Major	Dense and continuous development; highly reflective surfaces; buildings poorly maintained; visible blight; development along ridgelines; or buildings degrade or obstruct scenic view.

Source: *Scenic Highway Guidelines,* California Department of Transportation, March 1996; http://www.dot.ca.gov/hq/LandArch/scenic/guidelines/scenic_hwy_guidelines.pdf, site accessed April 27, 2012. Page 23.

The following analysis is generally based on the visual intrusion criteria from the Caltrans Guidelines for the Official Designation of Scenic Highways. These criteria, as identified in Table 4.1.B, provide for a qualitative analysis as to what would be considered a minor, moderate, or major visual intrusion along scenic highways. Existing views for motorists traveling eastbound and westbound on SR-60 consist of agricultural fields in the foreground and midground, and the Mount Russell Range and Badlands in the background. As previously identified in Figures 4.1.4 and 4.1.5, development of the proposed project would significantly alter the existing view by introducing large industrial buildings adjacent to the freeway. Existing eastbound and westbound views on SR-60 and Gilman Springs Road would be fundamentally altered with the future development of the proposed project. Views of the project buildings would occur for up to 112 seconds or almost two minutes when motorists are traveling at normal freeway speeds (approximately 9,000 feet or 1.7 miles @ 55 mph, Redlands Boulevard to Gilman Springs Road). Views would be even longer during rush hour or times of congestion when freeway speeds are below 55 mph and shorter higher freeway speeds.

According to Figure 5-3 in the WLCSP (Building Height Plan, and Figure 3.9 in the Project Description of this EIR), the north, west, and south perimeter portions of the site will have buildings with heights up to 60 feet, and some of the buildings along the eastern perimeter and south of Street C (southeastern portion of the site but not adjacent to the San Jacinto Wildlife Area), would have heights of up to 80 feet. Since the Skechers building (roof height approximately 1,790 feet amsl) is already visible throughout the project site and from off-site areas to the east, south, and southwest, it is likely that most new buildings will be visible from these areas or possibly even farther away, depending on building heights and locations. The use of light colors and reflective surfaces such as glass and polished metal near office entrances and building corners, such as required in the WLC Specific Plan design guidelines, will enhance the visibility of these buildings.

The proposed sound walls and ornamental landscaping would soften the visual impacts of future buildings, but the proposed project would likely result in at least a partial obstruction of a portion of the Mount Russell Range for motorists traveling on SR-60, so the proposed buildings may obstruct the view of a major scenic feature from a City-designated scenic route. The proposed project meets criteria in both the moderate and major visual intrusion categories. Therefore, it is anticipated that the WLC Specific Plan design guidelines may create a major visual intrusion (i.e., significant impact) for motorists traveling on SR-60 and Gilman Springs Road.

General Plan Policies. These anticipated visual changes, while substantial, are generally consistent with the General Plan policies in the Conservation Element regarding visual resources and scenic routes, as outlined in Section 4.1.2.2 and excerpted below:

Objective 7.7	Where practicable, preserve significant visual features, significant views, and vistas.
Policy 7.7.4	Gilman Springs Road, Moreno Beach Drive, and State Route 60 shall be designated as local scenic roads.
Policy 7.7.5	Require development along scenic roadways to be visually attractive and to allow for scenic views of the surrounding mountains and Mystic Lake.

Based on the analysis in the preceding section, the WLCSP can preserve significant visual features, significant views, and vistas if the size and location of buildings developed under the WLCSP can be controlled so as to not substantially block views of Mount Russell, the Badlands, and Mystic Lake. The views from SR-60 and Gilman Springs Road will fundamentally change, but their views of major scenic resources (i.e., Mount Russell, the Badlands, and Mystic Lake) may be preserved through careful limitations on the height and location of future buildings. The WLCSP outlines how future development along SR-60 and Gilman Springs Road will be made visually attractive and can maintain some view corridors of the surrounding mountains and Mystic Lake through careful limitations on the height and location of future buildings. These are considered significant visual impacts on local scenic roads that will require mitigation.

Project or Specific Plan Design Features. As outlined in the previous section, the WLCSP contains architectural and design guidelines that require the construction of attractive warehouse buildings and surrounding grounds. The WLCSP provides examples of building designs, materials, colors, and landscaping that would be allowed (or not allowed) within the Specific Plan. Section 5.0 of the Specific Plan outlines the design standards to be applied to development within the project site, including Site Plan Guidelines (5.2), Architecture (5.3), Landscaping (5.4), and Lighting (5.5).

Specific Plan Section 5.2.3 indicates the project will utilize “Sustainable Design” to reduce pollution and conserve natural resources by considering renewable energy systems, minimizing the use of potable water, use atriums, skylights and internal courtyards to provide daylighting, orienting buildings to screen loading and service areas, collecting rainwater to irrigate drought-tolerant landscaping, providing landscaped outdoor plazas or entries, screening all truck yards from public view, etc.

Specific Plan Section 5.3.4 indicates building designs should employ clean, simple, geometric forms and coordinated massing that produce overall unity, scale, and interest. They should have appropriate façades, fenestration, glazing materials, roofs, colors, etc. Appropriate building design includes visible vertical support, visible structural base, functional and straightforward elements, columns integrated into the façade, and proper structural scale. The visual examples of what are appropriate and what are not also help the reader understand how the future buildings will appear.

However, even with the extensive design features of the Specific Plan, the resulting change in views from SR-60 and Gilman Springs Road will be significant, and mitigation is required.

Mitigation Measures. Construction of future logistics warehousing according to the development standards and design guidelines of the WLC Specific Plan will help soften building façades, and the installation of ornamental landscaping will help screen ~~buffer~~ the visual appearance of the buildings from SR-60, but the obstruction of local views will still be significant. Implementation of **Mitigation Measures 4.1.6.1A** through **4.1.6.1D** will help reduce these impacts, but not to less than significant levels.

Level of Significance after Mitigation. Even with implementation of **Mitigation Measures 4.1.6.1A** through **4.1.6.1D**, the loss of views from SR-60 will remain a significant and unavoidable visual impact, but one that is nonetheless consistent with the City's applicable General Plan policies.

4.1.6.3 Existing Visual Character and Surroundings

Impact 4.1.6.3: *The proposed project will significantly degrade the existing visual character of the project site from open space to an urbanized setting by introducing large high cube logistics warehouse buildings.*

Threshold	Would the proposed project substantially degrade the existing visual character or quality of the site and its surroundings?

NOTE: The following changes have been made due to revisions made to the Specific Plan project size.

Visual impacts associated with changes to the general character of the project site (e.g., loss of open space), the components of the visual settings (e.g., landscaping and architectural elements), and the visual compatibility between proposed site uses and adjacent land uses would occur. The significance of visual impacts is inherently subjective as individuals respond differently to changes in the visual characteristics of an area. The project site is currently undeveloped with existing agricultural fields throughout the site. Development of the proposed industrial uses on the project site would include approximately 40.6 million square feet of warehouse distribution uses with associated parking areas, ornamental landscaping, and roadway and infrastructure on approximately 2,635 acres. Maximum building heights will range from 60 to 80 feet depending on location within the project and will substantially change the views of both nearby residents and motorists on adjacent roadways.

The proposed project would also change views for travelers on the adjacent portion of SR-60 and Gilman Springs Road by introducing large industrial buildings in place of agricultural vacant land. The proposed buildings closest to the freeway would most likely have an average height of approximately 55 to 60 feet, although the maximum height may be increased by up to 10 percent for portions of some buildings if necessary to accommodate interior facilities (i.e., elevator shafts) and architectural design elements, which would exceed the existing height of the adjacent freeway by approximately 30 feet. Such changes may be approved through the administrative variance process which provides for consideration of alternative standards, such as greater building heights, up to a maximum modification of 10%. The Administrative Variance process is provided in Section 11.3.3.1 of the Specific Plan. Development of the proposed project would substantially and fundamentally change the existing character of the project site from open space to an urbanized setting with many large logistics buildings. The change in the character of the site would constitute a significant alteration of the existing visual character of the WLC project site, regardless of the architectural treatment and landscaping of the site. These impacts would be especially significant for residents of the existing residences on the project site, depending on the timing, location, and size of development in the future.

The proposed WLCSP includes a variety of architectural elements including façade accents such as corner treatments and roof trim. The project also provides variation in wall planes that serve to avoid an institutional appearance and break up the bulk of the buildings. This variation would create shadow lines at various times of the day.

The proposed warehouse buildings and ornamental landscaping would replace the widespread agricultural fields and scattered landscaping plants on the site. Landscaping would be provided in accordance with the Specific Plan Landscaping Guidelines.

The City recently approved an amendment to the Municipal Code requiring a 250-foot setback between industrial uses (i.e., the closest building and/or parking areas) and residential uses (i.e., Municipal Code Section 9.06). The Specific Plan design guidelines require specific setback distances. These required setbacks are shown in Section 4.2, *Offsite Landscaping*, of the Specific Plan. This section also includes a number of line-of-sight cross-sections and landscaping plans for the setbacks along the west side of the project. These setbacks provide a minimum 250 feet from existing residences to new proposed buildings or truck activity areas, consistent with the intent of Municipal Code Section 9.06.

In summary, the proposed setbacks, landscaping, berms, and walls outlined in the Specific Plan appear sufficient to provide adequate visual screening between proposed warehouse buildings and the existing residential uses. However, mitigation is required to ensure the actual design and appearance of setback areas will effectively screen new development from existing residences and neighboring roadways.

Consistency with General Plan Policies. Sections 4.1.6.1 and 4.1.6.2 evaluated the WLC project relative to the General Plan objectives and policies in the Conservation Element. Table 4.1.C compares the WLCSP project to the General Plan objectives and policies in the Community Development Element:

Table 4.1.C: WLCSP Consistency with Community Development Element

General Plan Objective or Policy	Evaluation of WLCSP Consistency
Objective 2.5: Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors, and which meets the service needs of local businesses.	**Consistent.** The WLCSP provides high cube logistics industrial uses near SR-60.
Policy 2.5.1: The primary purpose of areas designated Business Park/Industrial is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio (FAR) of 1.00 and the average FAR should be significantly less.	**Consistent.** The WLCSP provides warehousing that is at FAR 0.5, which is much less than the maximum allowed.
Policy 2.5.2: Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.	**Consistent.** The WLCSP provides setbacks and visual screening from neighboring residential and open space uses, and precludes project traffic through these areas as well.
Policy 2.5.3: Screen manufacturing and industrial uses where necessary to reduce glare, noise, dust, vibrations, and unsightly views.	**Consistent.** The WLCSP shows that the proposed warehouse buildings will be set back and screened from existing off-site residential uses.
Policy 2.5.4: Design industrial developments to discourage access through residential areas.	**Consistent.** WLCSP precludes project truck traffic through residential areas to the west and southwest, as outlined in the WLCSP circulation plan (see DEIR Figure 3.10).
Objective 2.10: Ensure that all development within the City of Moreno Valley is of high quality, yields a pleasant living and working environment for existing and future residents, and attracts business as the result of consistent exemplary design.	**Consistent.** The WLCSP provides high quality architectural and landscaping themes for the proposed buildings and grounds within the project.
Policy 2.10.1: Encourage a design theme for each new development that is compatible with surrounding existing and planned developments.	*Note: The following changes have been made due to the revisions of the Specific Plan project size.* **Consistent.** The WLCSP encompasses 2,610 acres in the last remaining large vacant land in the

Table 4.1.C: WLCSP Consistency with Community Development Element

General Plan Objective or Policy	Evaluation of WLCSP Consistency
	City. It will create a new logistics center with unique design themes. This development will be set back and visually screened to make it compatible with other development within the project and screened from adjacent residential uses.
Policy 2.10.2: Screen trash storage and loading areas, ground and roof-mounted mechanical equipment, and outdoor storage areas from public view as appropriate.	**Consistent.** The WLCSP provides design and development guidelines that achieve these requirements.
Policy 2.10.3: Require exterior elevations of buildings to have architectural treatments that enhance their appearance. (a) A design theme, with compatible materials and styles should be evident within a development project. (b) Secondary accent materials, colors, and lighting should be used to highlight building features. (c) Variations in roofline and setbacks (projections and recesses) should be used to break up the building mass. (d) Industrial buildings shall include architectural treatments on visible façades that are aesthetically pleasing.	**Consistent.** The WLCSP contains detailed development and architectural design guidelines intended to provide high quality logistics warehousing development on the project site. The WLCSP design guidelines include secondary accents, roofline variations, setbacks, and façade treatments, consistent with this policy.
Policy 2.10.4: Landscaping and open spaces should be provided as an integral part of project design to enhance building design, public views, and interior spaces, provide buffers and transitions as needed, and facilitate energy and resource conservation.	**Consistent.** The WLCSP emphasizes landscaping and energy conservation or sustainability concepts as an integral part of project design. The entire southern boundary and the southwest corner of the project will be permanent open space.
Policy 2.10.5: Development projects adjacent to freeways shall provide landscaped buffer strips along the ultimate freeway right-of-way.	**Consistent.** The WLCSP provides extensive landscaping along the south side of SR-60.
Policy 2.10.6: Buildings should be designed with a plan for adequate signage. Signs should be highly compatible with the building and site design relative to size, color, material, and placement.	**Consistent.** The WLCSP includes a section on signage to provide a comprehensive plan for signage throughout the project area.
Policy 2.10.7: On-site lighting should not cause nuisance levels or glare on adjacent properties.	**Consistent with Mitigation.** The WLCSP contains lighting guidelines for future development, but ambient light level impacts will need to be calculated and, if necessary, mitigated through the City's site plan review process for each specific building proposed.
Policy 2.10.8: Lighting should improve the visual identification of structures.	**Consistent.** The WLCSP includes a section on signage with lighting for a comprehensive plan throughout the project area.
Policy 2.10.9: Fences and walls should incorporate landscape elements and changes in materials or textures to deter graffiti and add visual interest.	**Consistent.** The WLCSP design guidelines require that fences and walls incorporate landscaping and materials designed to reduce graffiti.
Policy 2.10.10: Minimize the use and visibility of reverse frontage walls along streets and freeways by treatments such as landscaping, berming, and "side-on" cul-de-sacs.	**Consistent.** The WLCSP design guidelines do not allow reverse frontage walls. The SR-60 freeway frontage along the north side of the project will be fully landscaped.
Policy 2.10.11: Screen and buffer non-residential projects from adjacent residential property and other sensitive land uses when necessary to minimize noise, glare, and other adverse effects on adjacent uses.	**Consistent.** The WLCSP provides a physical and visual setback to screen new warehouse buildings from existing residential buildings.

Table 4.1.C: WLCSP Consistency with Community Development Element

General Plan Objective or Policy	Evaluation of WLCSP Consistency
Policy 2.10.12: Screen parking areas from streets to the extent consistent with surveillance needs (e.g., mounding, landscaping, low profile walls, and/or grade separations).	**Consistent.** The WLCSP requires parking areas to be screened consistent with surveillance needs.
Policy 2.10.13: Provide landscaping in automobile parking areas to reduce solar heat and glare.	**Consistent.** The WLCSP landscaping plan provides for planting vegetation in parking areas that will help provide shade and reduce glare.

Due to the size and nature of the project, development of the WLCSP will eventually degrade the existing visual character of the area to a significant degree.

Project or Specific Plan Design Features. As outlined in previous sections, the WLCSP contains architectural and design guidelines that will encourage the construction of attractive warehouse buildings and surrounding grounds. The WLCSP provides examples of building designs, materials, colors, and landscaping that would be allowed (or not allowed) within the Specific Plan.

~~*NOTE: The following mitigation measure regarding views has been changed in Response to Comment F-8-3 in Letter F-8 from Shute Mihaly & Weinberger LLP, Comment G-33-6 in Letter G-33 from Tom Behrens, Responses to Comments G-95-21, G-96-4, and related comments from others.*~~

Mitigation Measures. Incorporation of the proposed design guidelines, landscaping guidelines, and **Mitigation Measure 4.1.6.1A** will help soften the visual appearance of the buildings from SR-60, Gilman Springs Road, and nearby residences. However, the fundamental change in visual character of the area will still be significant. Even with compliance with the City's General Plan and Municipal Code development guidelines for industrial development, including the 250-foot setback between industrial and residential land uses, the anticipated fundamental change in views expected in this area will be significant. Due to the heights and mass of buildings needed to accommodate the proposed land uses, no feasible mitigation is available that would reduce these potential impacts to less than significant levels. However, the following measure will help reduce the project's visual impacts on adjacent residential development:

4.1.6.3A Each Plot Plan application for development shall include plans and visual rendering(s) illustrating any changes in views of Mount Russell and/or the Badlands, for travelers along SR-60, as determined necessary by the Planning Official. The plans and renderings shall illustrate typical views based on proposed project plans, with the location and number of view presentations to be determined by the Planning Official. These views shall be simulated from a height of six feet from the edge of the roadway travel lane closest to the visual resource. The renderings must demonstrate that the development will preserve at least the upper two thirds (67%) of the vertical view of Mt. Russell from SR-60.

Level of Significance after Mitigation. Even with implementation of **Mitigation Measures 4.1.6.1A** through **4.1.6.1D** and **4.1.6.3A** the substantial change in visual character of the project site and surrounding area from development of the proposed project will cause aesthetic impacts to remain significant and unavoidable.

4.1.6.4 Light and Glare

Impact 4.1.6.4: *The proposed project will introduce a significant new source of light and glare into the project area.*

Threshold	Would the proposed project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?

Currently, there are few sources of light or glare on the project site and there is little or no impact on adjacent properties. Existing sources of light and glare in the surrounding area include the new Skechers building to the northwest of the project site, SR-60 traffic, streetlights, exterior lighting from the nearby residences, and vehicle headlights from motorists on Gilman Springs Road, Redlands Boulevard, World Logistics Center Parkway~~Theodore Street~~, and Alessandro Boulevard.

Development of the project site would introduce numerous new sources of light and glare into the area in the form of street lighting, parking lots, and security lighting for the buildings and nighttime traffic.

The WLCSP requires that all site lighting be oriented downward so as to not project direct light rays upward into the sky or onto adjacent properties. The development of the project will cause a significant increase in light and glare in the area. This new lighting will incrementally affect nighttime conditions in the area.

The WLC Specific Plan requires energy-efficient lighting in most cases, but does allow mercury or incandescent lighting under some conditions (i.e., limited walkway or entryway applications). In addition, the lighting guidelines of the Specific Plan require high-pressure sodium or light-emitting diodes (LEDs) that produce a very “white” color of light, which allows for accurate color rendition (e.g., compared to low-pressure sodium, which produces an orange-tinged light that skews color rendition).

Exterior surfaces of the concrete tilt-up structure would be finished with a combination of architectural coatings, trim, and/or other building materials such as concrete and brushed metal. The proposed project will incrementally increase the amount of daytime glare in the project area by introducing windows and metal fixtures into the area. All development in the City, which includes light generated from warehouse buildings and parking lots, is required to adhere to lighting requirements contained in the City’s Municipal Code (Section 9.08.100 *Lighting*), which states that any outdoor lighting associated with nonresidential uses shall be shielded and directed away from the surrounding residential uses. Such lighting shall not exceed one-quarter (0.25) foot-candle at property lines and shall not blink, flash, oscillate, or be of unusually high intensity or brightness. Lighting in parking areas and drive aisles must be at least 1.0 foot candle and cannot exceed a maximum of 8.0 foot candles.

Adherence to the City’s Zoning Code would help reduce potential building or parking lighting impacts, but the location of industrial uses adjacent to residential uses would not reduce potential lighting impacts on adjacent residential uses to less than significant levels.

The WLC Specific Plan also allows for the installation of roof-mounted solar panels on future warehouse buildings and these panels may produce unintended glare to the southeast, south, and southwest of the site, depending on the angle of the sun, the number and location of panels, and the degree to which the building parapet blocks views of the panels from surrounding land uses. Without additional information, this impact is determined to be potentially significant and requires mitigation.

Consistency with General Plan Policies. The only General Plan policy that specifically addresses lighting is Policy 2.10.7, which states, **“**On-site lighting should not cause nuisance levels or glare on adjacent properties.” Due to the amount of new development proposed, the project’s impact relative to nuisance lighting and glare is potentially significant, even with implementation of the development and lighting design guidelines in the WLCSP. Therefore, mitigation is required.

Consistency with Municipal Code Requirements. The recent changes to the Municipal Code from Ordinance 851 will help control lighting impacts of the proposed project relative to adjacent residential properties. All development within the Specific Plan adjacent to residences along Redlands Boulevard, Bay Avenue, and Merwin Street will be required to demonstrate compliance with the off-site light spillage requirements of Section 9.08.100 of the Municipal Code.

Project or Specific Plan Design Features. The WLCSP contains lighting standards and design guidelines that will require the minimal use of lighting for building visibility and safety at night. The WLCSP provides examples of lighting that would be allowed (or not allowed) within the Specific Plan. However, Section 5.5.1 of the Specific Plan states that, "… lighting in the vicinity of the San Jacinto Wildlife Area shall be designed to confine all direct light rays to the project site and preclude the visibility of direct light rays from the wildlife area" (WLCSP page 5-47).

In addition, Section 5.5 of the Specific Plan includes the following guidelines regarding lighting:

5.5.2.2 All exterior on-site lighting must be shielded and confined within site boundaries. No direct rays or glare are permitted to shine onto public streets or adjacent lots.

5.5.2.3 Lighting fixtures are to be of clean, contemporary design.

5.5.2.4 Lighting must meet all requirements of the City of Moreno Valley.

5.5.2.5 Tilted wall fixtures (i.e., light fixtures which are not 90 degrees from vertical) are not permitted. Lights mounted to the roof parapet are not permitted. Wall-mounted light fixtures used to illuminate vehicular parking lots are not permitted.

5.5.2.6 Wall-mounted utility lights that cause off-site glare are not permitted. "Shoebox" lights are preferred.

NOTE: The following changes to mitigation for lighting impacts from solar panels have been made in Response to Comment G-95-42 in Letter G-95 from Thomas Thornsley.

Mitigation Measures. Even with compliance with the City's General Plan, Municipal Code, and the Specific Plan's development guidelines for lighting and building materials, the anticipated lighting and glare changes in this area will be potentially significant, especially adjacent to the San Jacinto Wildlife Area. Implementation of **Mitigation Measures 4.1.6.1A** through **4.1.6.1B** will help reduce related visual impacts, while **Mitigation Measures 4.1.6.4A** and **4.1.6.4B,** below, will help reduce light and glare associated with the new buildings near the SJWA. The project will also have to comply with the lighting requirements of City Municipal Code.

In addition, the following measures are recommended to help ensure that potential lighting impacts of the project will remain at less than significant levels:

4.1.6.4A Each Plot Plan application for development adjacent to residential development shall include a photometric plot of all proposed exterior lighting demonstrating that the project is consistent with the requirements of Section 9.08.100 of the City Municipal Code. The lighting study shall indicate the expected increase in light levels at the property lines of adjacent residential uses. The study shall demonstrate that the proposed lighting fixtures and/or visual screening meet or exceed City standards regarding light impacts.

4.1.6.4B Each Plot Plan application for development shall include an analysis of all proposed solar panels demonstrating that glare from panels will not negatively affect adjacent residential uses or negatively affect motorists along perimeter roadways. Design details to meet these requirements shall be implemented to the satisfaction of the Planning Official.

Level of Significance after Mitigation. Light and glare impacts of the proposed project can be reduced to less than significant levels by compliance with the lighting requirements of the City Municipal Code and implementation of **Mitigation Measures 4.1.6.4A** and **4.1.6.4B.**

~~4.1.7 Cumulative Impacts~~

~~**Significant Cumulative Impact:** The proposed project, in combination with other projects in the eastern portion of the City and along SR-60 and Gilman Springs Road, would have a cumulatively significant and unavoidable impact related to views, scenic resources, night lighting, and glare in this portion of the City.~~

~~The development of the proposed project would partially obstruct views of surrounding mountain vistas from various vantage points in and around the project area. Partial view opportunities would continue to be available over future buildings, along roadways, between development areas, etc. Development of lands within the City, particularly along SR-60, would result in the cumulative conversion from open space to urbanized land uses. The proposed project would continue the development of logistics uses along the south side of SR-60 east of the City's Auto Center. The proposed project, in conjunction with other cumulative projects, would be developed in a manner consistent with existing development trends in the City. Since other projects in the area will include similar distribution uses, it can be anticipated that such uses would have a similar design and massing as the proposed project. Since the proposed project would affect views of the surrounding mountains, it is reasonable to conclude that similar warehouse distribution uses would also obstruct views of the surrounding mountains. However, the analysis in Section 4.1.6.1 determined visual impacts, though substantial, were consistent with applicable General Plan policies (Policy 7.7.4 in the Conservation Element). Based on this analysis, the proposed project, in combination with other cumulative projects in the surrounding area, will have a cumulatively significant and unavoidable impact related to aesthetics (i.e., views, scenic resources, and lighting) in this portion of the City.~~

~~The proposed, existing, and future development within the planning area will increase the amount of light and glare in the area. The cumulative lighting-related impacts of this new development would be reduced through the adherence to applicable City Municipal Code lighting standards. However, this project, in combination with the Auto Center and other approved high cube logistics developments in this portion of the City, will result in cumulatively considerable light and glare impacts, and the proposed project will make a significant contribution to that cumulative impact.~~

~~4.2 AGRICULTURAL AND FORESTRY RESOURCES: TABLE OF CONTENTS~~

~~FIGURES~~

~~TABLES~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~***NOTE TO READERS.*** *This section has been revised based on responses to comments on the Programmatic DEIR regarding calculation of and mitigation for loss of agricultural land, changes to the WLC Specific Plan, and changes to related technical studies.*~~

~~4.2 AGRICULTURAL AND FORESTRY RESOURCES~~

NOTE TO READERS: The cumulative portion of Section 4.2 has been deleted from the FEIR to allow for its reanalysis to include the impacts expected from other past, present and reasonably foreseeable future projects. The revised cumulative analysis can be found in Section 6.2 of this Revised Sections of the FEIR. This section has been updated to reflect the updated 2016 State of California, Riverside County Important Farmland Map. The absence of reference to a portion of Section 4.2 means that the corresponding portion of Section 4.2 in the FEIR remains unchanged or has been deleted.

4.2 AGRICULTURAL AND FORESTRY RESOURCES

This section discusses possible agricultural and forestry resource impacts attributable to the ~~proposed~~World Logistics Center project. It describes existing agricultural resources and State farmland classifications for the project site. This section focuses on applicable State, regional, and local policies regarding agricultural resources and the conversion of farmland to non-agricultural uses.

~~*NOTE:*~~ The Superior Court ruling and writ of mandate require the following ~~*changes have been made due*~~actions with regards to ~~*revision to the Specific Plan project size.*~~

~~For~~ the ~~reader's reference, this EIR and each of the technical reports~~analysis of Agricultural and ~~analyses contained herein have been written to address a series of planning entitlements that affect several separate, adjacent and related properties. The overall project site covers 3,818 acres in the Rancho Belago area of the City of Moreno Valley. It includes 3,714 acres of land, which is the subject of various entitlements, plus 104 acres of land affected by off-site improvements needed to support the proposed development. The proposed entitlements are summarized below.~~Forestry Resources:

~~A General Plan Amendment is proposed covering 3,714 acres, which redesignates approximately 70 percent of the area (2,610 acres) for logistics warehousing (new LD and LL zones) and the remaining 29 percent (1,104 acres) for permanent open space and public facilities. The following elements of the General Plan are included in the proposed Amendment: Community Development (land use); Circulation; Parks, Recreation, and Open Space; Safety; Conservation; and the General Plan Goals and Objectives.~~

~~A new Specific Plan (September 2014) will be adopted to govern development of the World Logistics Center for the 2,610 acres. A separate zoning amendment will also be processed and adopted to rezone 1,104 acres for open space and public facilities uses and to incorporate the Specific Plan into the City's Zoning Map.~~

~~In addition to the General Plan Amendment, Specific Plan, and Zone Change, the project includes a Tentative Parcel Map covering 1,539 acres (property owned by the project applicant, Highland Fairview) within the project site. This subdivision map is for financing purposes only and will not confer any development rights to the property owner.~~

~~The project includes pre-annexation zoning for an 85-acre parcel of land within the project area.~~

~~Finally, a Development Agreement between the City and Highland Fairview (the project applicant) is included as one of the project entitlements. The details of all the project entitlements are included in Section 3.4 of the EIR,~~ ~~*Project Characteristics.*~~

- *The FEIR and the resolution certifying the FEIR require clarification as to whether loss of locally important farmland will have a significant direct or cumulative impact on agriculture and, if significant, the FEIR must either explain how proposed mitigation will reduce the impact or why other mitigation is not feasible".*

At the time the Draft EIR was prepared, 25 acres of the project site were designated as "Unique Farmland" and 2,200 acres were designated as "Farmland of Local Importance by the state Department of Conservation. The Draft EIR found that the development of the World Logistics Center would convert the 25 acres of "Unique Farmland" to urban uses represented a significant impact to agricultural resources. Mitigation Measure 4.2.6.1 was applied to require an agricultural easement over comparable land, and therefore, reduce this impact to less than significant. In response to comments, the FEIR added analysis under the California Land Evaluation and Site Assessment (LESA) model (discussed further in Section 4.2.6.2 below) which demonstrated that potential impacts to Farmland of Local Importance would be less than significant. However, certain other text in the FEIR and in the City's resolution to certify the FEIR had not been updated and erroneously indicated that there was a significant impact resulting from the development of the Farmland of Local Importance. This revised Section 4.2 corrects these misstatements and replaces in its entirety Section 4.2 of the FEIR.

Since publication of the FEIR, the California Department of Conservation has published its "Riverside County Important Farmland 2016" map (published July 2017) which shows that the 25-acre parcel that had previously been designated as "Unique Farmland" has been re-designated as "Farmland of Local Importance." In addition, there were additional revisions to the Farmland designations on the project site. Based on the Farmland map published in July 2017, the 2,610-acre World Logistics Center site includes 2,361 acres of Farmland of Local Importance, 247.5 acres of Other Land, and 1.5 acres of Urban Built-up Land. With the change in designations for this parcel, the mitigation measure to reduce the impact from the loss of the onsite area designated as Unique Farmland is no longer applicable, since there is no longer any "Unique Farmland" in the development area of the World Logistics Center site. As a result of the publication of the revised map, this Revised Sections of the FEIR has updated the exhibit and text to reflect the most current designations.

The following text and figure from the FEIR has been revised to address the issues discussed above.
The analysis contained in this section is based on the following reference documents:

- *Agricultural Mitigation Bank Memorandum*, County of Riverside Transportation and Land Management Agency, October 2, 2003.

The California Land Evaluation and Site Assessment (LESA) Model worksheets prepared for the project are included in Appendix C to this ~~EIR~~Revised Sections of the FEIR (*Agricultural Resources Assessment for the World Logistics Center Specific Plan Draft Environmental Impact Report*, Parsons Brinckerhoff, original dated February 2012, revised September 2014).

4.2.1 Existing Setting

Most of the land within the project area has been utilized for agricultural purposes since the late 1880s. The area has a history of citrus production and dryland farming incorporating various agricultural activities such as frequent disking, infrequent pesticide application, and very limited irrigation. Due to a variety of local and regional economic factors, agricultural production is no longer a principal characteristic of the Moreno Valley economy.[1]

~~*NOTE: The following changes have been made due to revision to the Specific Plan project size.*~~

Based on the updated project ~~biology study (MBA 2014~~habitat assessment (ESA, 2018) and the review of recent aerial photographs, ~~currently~~ approximately 2,~~452~~200 acres or ~~94~~84 percent of the 2,610-acre Specific Plan area is currently dry farmed, mainly with winter wheat. The remaining acreage of the Specific Plan area contains rural ~~residences and related building/~~residential uses~~,~~ and disturbed native vegetation~~ in the northeast and southwest portions of the site~~.

~~Approximately 897 acres or 81 percent of the 1,104-acre open space properties that are owned by the State and public utility companies and located south of the Specific Plan site are in active agriculture; they are also being dry farmed primarily with winter wheat. The remaining land in this area includes disturbed native vegetation associated with Mystic Lake and public facilities, such as the two natural gas facilities.~~

~~Adjacent to the project area, suburban residential uses are located to the west, open space and scattered rural residential uses are located to the east, and State-owned open space properties, such as the Lake Perris Recreation Area and the San Jacinto Wildlife Area, are located to the southwest and south, respectively.~~ The farming activity on the WLC area has been conducted for the past several years under contract to a single contractor, Bruno Farms. The landowner, Highland Fairview, has made the land available for agricultural use at no cost, as the agricultural activities provide a valuable property maintenance function (fuel modification). Based on conversations with the contractor, agricultural production on the World Logistics Center site has been largely unsuccessful. For example, during the last seven years (the period for which statistics are available), only one year (2017) produced a

---

[1] Conservation Element, City of Moreno Valley General Plan.

harvestable crop. That year, rainfall levels in the area were extraordinarily high. In six of the past seven years, no crops were harvested at all. The contractor indicates that the lack of productivity of the past seven-year period is typical for the entire period he has been farming the WLC property. Despite the lack of productivity, the contractor continues to farm the property simply to continue his family's long history in agriculture. Table 4.2-1 includes the results of each year's production.

Table 4.2-1: Agricultural Production at World Logistics Center Site

Year	Rainfall (Wet/Dry)	Planted (Acres)	Crop	Harvested (Bushels)
2012	Dry	2,200	Wheat	0
2013	Dry	2,200	Wheat	0
2014	Dry	2,200	Wheat	0
2015	Dry	2,200	Wheat	0
2016	Dry	2,200	Wheat	0
2017	Wet	2,200	Wheat	79,992
2018	Dry	2,200	Wheat	0
Total Production from 2012 to 2018 (7 Years)				79,992
Average Annual Production for 2,200 acres				11,427
Average Annual Production per Acre				5.19

Source: Highland Fairview and Bruno Farms, 2018.

4.2.1.1 State Designated Farmland

The California Government Code (Section 65570) requires the collection and reporting of agricultural land use acreage ~~and conversion~~ by June 30 of each even-numbered year. Utilizing data from the U.S. Department of Agriculture~~ (USDA)~~, Natural Resource Conservation Service (USDA, NRCS) soil survey and current land use information, the ~~California Department of Conservation (DOC), the~~ Farmland Mapping and Monitoring Program (FMMP)[1] within the California Department of Conservation (DOC), compiles important farmland maps for each county within the State. Maps and statistics are produced biannually using a process that integrates aerial photo interpretation, field mapping, a computerized mapping system, and public review. These maps delineate land use in eight mapping categories (and one overlay category) and represent an inventory of agricultural soil resources within each county. The map for Western Riverside County ~~(see~~is provided in Figure 4.2~~.~~2-~~1).~~. The categories of land shown on these maps are listed below.

- **Prime Farmland:** Land that has the best combination of physical and chemical characteristics for the production of crops. It has the soil quality, growing season, and moisture to produce sustained high yields of crops when treated and managed, including water management, according to current farming methods.
- **Farmland of Statewide Importance:** Land that is similar to Prime Farmland but with minor shortcomings, such as greater slopes or less ability to store moisture.

World Logistics Center

Figure 4.2-2
State Designated Farmlands

ESA

- **Unique Farmland:** Land of lesser-quality soils used to produce specific high economic value crops. It has the special combination of soil quality, location, growing season, and moisture supply needed to produce sustained high quality or high yields of a specific crop when treated and managed according to current farming methods. It is usually irrigated, but may include non-irrigated orchards or vineyards as found in some climatic zones in California. Examples of Unique Farmland crops include oranges, olives, avocados, rice, grapes, and cut flowers.
- **Farmland of Local Importance:** Land of importance to the local agricultural economy, as determined by each county's board of supervisors and local advisory committees, i.e., dairies, dry land farming, aquaculture, and uncultivated areas with soils qualifying for Prime Farmland and Farmland of Statewide Importance.

  Farmland of Local Importance in Riverside County, including the City of Moreno Valley, is defined as:

  - Lands with soils that would be classified as Prime Farmland and Farmland of Statewide ~~Farmland~~Importance but lack available irrigation water.
  - Lands planted with dry land crops of barley, oats, and wheat.
  - Lands producing major crops for Riverside County but that are not listed as Unique crops. These crops are identified as returning one million or more dollars on the 1980 Riverside County Agriculture Crop Report. Crops identified are permanent pasture (irrigated), summer squash, okra, eggplant, radishes, and watermelons.
  - Dairylands, including corrals, pasture, milking facilities, hay and manure storage areas if accompanied with permanent pasture, or hayland of 10 acres or more.

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

  - Lands identified by city or county ordinance as Agricultural Zones or Contracts, which includes Riverside City “Proposition R” lands.
  - Lands planted with jojoba, which are under cultivation and are of producing age.

- **Grazing Land:** Land on which the existing vegetation, whether grown naturally or through management, is suitable for grazing or browsing of livestock.

- **Urban and Built-up Land:** Land used for residential, industrial, commercial, construction, institutional, and public administrative purposes such as railroad yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment plants, water control structures, and other development purposes. Highways, railroads, and other transportation facilities also are included in this category.

- **Other Land:** Land not included in any of the other mapping categories. Common examples include low-density rural developments, brush, timber, wetland, and riparian areas not suitable for livestock grazing, confined livestock, poultry or aquaculture facilities, strip mines, borrow pits, and water bodies smaller than 40 acres.

- **Water:** Water areas with an extent of at least 40 acres.

- **Land Committed to Nonagricultural Use:** This optional designation is an overlay to the standard farmland categories and represents existing farmland and grazing land and vacant areas that have a permanent commitment for development. Examples of Land Committed to Nonagricultural Use would include an area undergoing permanent infrastructure installation or for which bonds or assessments have been issued for public utilities. Such lands represent planning areas where there are commitments for future nonagricultural developments that are not reversible by a simple majority vote by a city council or board of supervisors.

Figure 4.2.2 details farmland designations on the project area. Approximately 2,~~201~~361 acres, or ~~59~~90 percent of the ~~3,714~~2,610-acre project ~~area~~site, are designated as Farmland of Local Importance. Approximately ~~25 acres at the southeast corner of Theodore and Eucalyptus Streets are designated Unique Farmland. Imagery dated 2007 shows fallow fields with ruderal vegetation in this area, although some plowing appears to have occurred and several greenhouses stood on the site at that time.~~~~[1]~~ ~~Approximately 400~~247.5 acres located in several areas of the project area are designated X (Other Land) with the largest acreages in the northeast corner, southwest, and south central portions of the project area. ~~Although there are seven scattered rural residences on the project site, a “worst-case” assumption is that 2,200 acres of the WLC project site are considered Farmland of Local Importance with 25 acres classified as Unique Farmland by the State.~~Approximately 1.5 acres are designated Urban Built-up Land in the southwest portion of the project site. In addition,104 acres of offsite area required for infrastructure improvements are designated as X (Other Land).

4.2.1.2 California Land Conservation Act (Williamson Act)

The California Land Conservation Act of 1965, also referred to as the Williamson Act, is a non-mandated State program administered by counties and cities for the preservation of agricultural land. This program enables local governments to enter into contracts with private landowners to restrict specific parcels of land to agricultural or related open space use. In return, landowners receive much lower property tax assessments than normal because the assessments are based upon farming and open space uses rather than full market value.

Participation in the program is voluntary on the part of both landowners and local governments, and it is implemented through the establishment of Agricultural Preserves and the execution of Williamson

---

~~[1] Google Maps Street View, dated 2007, viewed April 3, 2012.~~

Act contracts. Individual property owners enter into a contract that restricts or prohibits development

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~**Figure 4.2.2: State Designated Farmland**~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

of their property to non-agricultural uses during the term of the contract in return for lower property taxes. Initially signed for a minimum ten-year period, the contracts are automatically renewed each year for a successive minimum ten-year period unless a notice of non-renewal is filed, or a contract cancellation is approved by the local government.

The nearest parcel that is under Williamson Act contract is approximately 1.5 miles to the southeast of the project site just west of Gilman Springs Road~~ (see Figure 4.2.3).~~. This property is outside of Moreno Valley city limits but within the city's sphere of influence. There are no Williamson Act Conservation contracts[1] within the project area.

4.2.1.3 General Plan, Specific Plan, and Zoning Designations

General Plan. The City's 2006 General Plan Land Use Element (Land Use Map, updated November, 2017) has no "agricultural" land use designation.[2] The EIR accompanying the City's 2006 General Plan determined that the conversion of agricultural land to nonagricultural uses ~~throughout the City represented a significant cumulative impact. As~~represented a significant cumulative impact. In accordance with Section 15152 of the CEQA Guidelines, "agencies are encouraged to tier the environmental analysis which they prepare for separate but related projects including general plans, zoning changes, and development projects. This approach can eliminate repetitive discussions of the same issues and focus the later EIR or negative declaration on the actual issues ripe for discussion at each level of environmental review." This Revised Sections of the FEIR is being tiered with the City's 2006 General Plan EIR. The City's 2006 General Plan EIR identified that as the transition from agricultural to urban and suburban uses continues, the extent to which agriculture and supporting economic activities contribute to the economic base of the City is reduced. In its adoption of the 2006 General Plan, the City recognized that these losses were offset by the economic activities and social benefits that typically accompany urban development. In connection with the City's conclusion that a significant cumulative impact would result from implementation of the General Plan, the City adopted ~~findings and facts~~Findings of Fact and a Statement of Overriding Considerations indicating that social and economic factors outweighed the significant cumulative impacts associated with conversion of agricultural land to non-agricultural use.

~~Most of the project area is within the current Moreno Highlands Specific Plan and is designated for a mix of Business Park, Open Space, Residential, Commercial, Mixed Use, and Public Facilities land uses (see Section 4.10, *Land Use and Planning*). The land uses proposed in the WLCSP are Logistics Development (LD), Light Logistics (LL), and Open Space (OS).~~

~~4.2.1.4 NOP/Scoping Comments~~

~~During the NOP/scoping process, some local residents expressed concern over the loss of agricultural land on the project site.~~

The General Plan designation for the project site is Business Park/Light Industrial. The zoning for the project site is World Logistics Center Specific Plan – Logistics Development and World Logistics Center Specific Plan – Light Logistics. The development of the project site is regulated by the World Logistics Center Specific Plan.

---

4.2.2 Existing Policies and Regulations

4.2.2.1 City of Moreno Valley General Plan Policies

~~The~~Neither, the City of Moreno Valley's General Plan ~~does not designate~~nor it's zoning designates any land for agricultural production or preservation, but growing crops is permitted in all of the City's zoning categories. Where practical, the City encourages incorporation of crops, such as existing tree groves, into the design of proposed development projects allowing continuation of the agricultural character of the area as well as providing a buffer between different types of land uses.

The following City General Plan goals and policies ~~pertain to and~~ are applicable to the ~~proposed~~World Logistics Center project.

~~**THIS PAGE INTENTIONALLY LEFT BLANK**~~

9.1 Ultimate Goals

VIII. Recognize the need to conserve natural resources while accommodating growth and development.

9.4.2 Parks, Recreation, and Open Space Element Objectives and Policies

Objective 4.1 Retain agricultural open space as long as agricultural activities can be economically conducted, and are desired by agricultural interests, and provide for an orderly transition of agricultural lands to other urban and rural uses.

4.2.3 Thresholds of Significance

Appendix G of the *CEQA Guidelines* recognizes the following significance thresholds related to agricultural resources. Based on these significance thresholds, potential impacts to agricultural resources could be considered significant if the proposed project would:

- Conflict with existing zoning for agricultural use, or a Williamson Act contract;
- Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220[g]), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104[g]);
- Result in the loss of forest land or conversion of forest land to non-forest use;
- Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use; and/or
- Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program (FMMP) of the California Resources Agency, to non-agricultural use.

4.2.4 Methodology

The methodological analysis underlying this section of this Revised Sections of the ~~EIR~~FEIR consists of the following:

- First, analyze the FMMP data to determine if portions of the ~~3,714~~2,610-acre project site and 104-acre offsite improvement area are designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.
- Second, evaluate the current General Plan land use designations, ~~Specific Plan proposal,~~ and zoning applicable to the site to determine the existence of any conflicts between the project and any potential existing agricultural General Plan and zoning designations applicable to the site.
- Finally, use the California Land Evaluation and Site Assessment (LESA) model, developed by the State Department of Conservation, as a guide to quantify any potential impacts the ~~proposed~~ project may have on agricultural resources. Utilization of the LESA model is currently considered to be the most reliable method by which to determine a project's potential impacts on agricultural resources.

In the late 1980s and the early 1990s, the ~~DOC~~Department of Conservation (DOC) and the State Legislature began exploring ways by which local agencies could analyze the specific impacts of local projects related to the conversion of farmland in a manner that was consistent throughout the State. At that time, reference to the FMMP maps was the only widely utilized methodological approach to analyzing conversion impacts. Oftentimes, the FMMP maps were outdated and/or did not contain specific data on local conditions that could better assess whether local land contains viable farmland. Federal and State agencies were and are cognizant of the fact that determining the true significance of agricultural conversions is a function of understanding the specific characteristics affecting a particular site proposed for conversion. In order to create a more site-specific methodological approach to assessing agricultural impacts, following the preparation of several State and Federal studies, the DOC developed the LESA model as an optional method by which local agencies could assess the impacts of land conversion on agricultural resources. (See, e.g., Stats. 1993, Ch. 812; Pub. Res. Code § 21095; California Agricultural Land Evaluation and Site Assessment Model, Instruction Manual, 1987.) Because of its use of localized input factors, the LESA model is generally recognized as the preferred methodological tool to assess the significance of a ~~proposed~~ project's impacts on agricultural resources.

4.2.5 Less than Significant Impacts

The following potential impacts were determined to be less than significant. In each of the following issues, either no impact would occur or adherence to established regulations, standards, and policies would reduce potential impacts to a less than significant level. In either instance, no mitigation would be required.

4.2.5.1 Forest Land Zoning

Threshold	Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

According to the California Department of Forestry and Fire Protection, there are no areas designated as forest land or timberland on the project site. Therefore, no significant impacts would occur from the implementation of the project.

4.2.5.2 Loss or Conversion of Forest Land

Threshold	Would the project result in the loss of forest land or conversion of forest land to non-forest use?

There are no areas of forest lands on the project site. Therefore, no significant impacts would occur from the implementation of the project.

4.2.5.3 Existing Zoning and Williamson Act

Threshold	Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?

~~*NOTE: The following changes have been made due to revision to the Specific Plan project size.*~~

While some portions of the ~~3,714~~2,610-acre project site are currently used for agriculture, there are no Williamson Act contracts (see previously referenced Figure 4.2~~.3~~-2) on either the project site or any adjacent properties. Because the project would not conflict with any Williamson Act contracts, ~~the~~there would be no impacts related to this issue ~~would be less than significant~~ and no mitigation is required.

~~*The following changes have been made due to revision to the Specific Plan project size.*~~ There are no agricultural zones identified on the ~~3,714~~2,610-acre project site or on any of the surrounding properties.[1] However, agriculture is allowed in most areas of the City as an interim land use until it is replaced by development. The project site is not zoned for agricultural uses, so implementation of the ~~proposed~~World Logistics Center project would not conflict with ~~existing zoning for~~an agricultural ~~uses. Agriculture~~zone. Existing agriculture use is a permitted use in all areas of the proposed Specific Plan. In the absence of a significant impact, no mitigation is required.

~~It should be noted that the CDFW Conservation Buffer Area within the SJWA, which is immediately south of the Specific Plan site, is currently being used for agriculture. For additional analysis of the CDFW Conservation Buffer Area, see Section 4.4, *Biological Resources*, and 4.9, *Water Resources*.~~

General Plan Consistency. The following evaluates the~~ proposed~~ project in relation to the City's General Plan goals and objectives relative to agriculture:

9.1 Ultimate Goals

Goal VIII. Recognize the need to conserve natural resources while accommodating growth and development.

Consistency: With mitigation outlined in Section 4.1, *Aesthetics*, the Specific Plan will allow for preservation of the most prominent existing visual resources in this portion of the City, but will result in the removal of agricultural fields to support the proposed development of logistics warehousing. Therefore, the project is consistent with this goal and no mitigation is needed.

9.4.2 Parks, Recreation, and Open Space Element Objectives and Policies

Objective 4.1 Retain agricultural open space as long as agricultural activities can be economically conducted, and are desired by agricultural interests, and provide for an orderly transition of agricultural lands to other urban and rural uses.

Consistency: The project will eventually result in the loss of agricultural land within the Specific Plan area~~ but will allow for the permanent designation of open space within the "other project areas" south of the Specific Plan area, which are currently dry farmed. Therefore, the proposed~~; however, Section 12.5 of the Specific Plan contains a "right to farm" provision that will allow farming to continue within the WLCSP until such time as it converts to developed uses. This provision will help protect onsite farming from "nuisance" claims by new landowners or tenants (e.g., dust and noise). Therefore, the World Logistics Center project is consistent with this objective and no mitigation is needed.

4.2.~~6 **Significant Impacts**~~

~~Impacts of the project on agricultural resources have been determined to be significant based on two significance thresholds.~~

5.4~~.2.6.1~~ Farmland Conversion

Impact 4.2.~~6.1~~5.4: *Construction of the proposed project would not convert ~~25 acres of~~any Prime Farmland, Unique Farmland or Farmland of Statewide Importance as identified by the State of California to non-agricultural uses.*

---

[1] *Land Use Map, Land Use Designations,* City of Moreno Valley General Plan, July 2006~~.~~, last updated November, 2017

Threshold	Would the project result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance~~,~~ (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural land use?

~~*NOTE: The following changes have been made due to revision to the Specific Plan project size.*~~

~~Approximately 25 acres of the project site are designated Unique Farmland. Under the proposed Specific Plan, this land will eventually be converted to non-agricultural use, which would result in a significant and unavoidable impact relative to “designated” farmland conversion. In addition, the project would result in the conversion of 2,585 acres of land designated as Farmland of Local Significance within the Specific Plan area (total 2,610 acres total minus 25 acres of Unique Farmland and 384.0 acres designated as Other). The 1,104 acres of open space and utility lands south of the Specific Plan site are not proposed for development and it is expected they will remain in their existing condition (i.e., dry farming).~~

While portions of the project site is currently used for agriculture, there is no land designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance on the 2,610-acre project or in the 104-acre off-site improvement area. Because the project would not convert any onsite or off-site land designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, the project’s impacts related to this issue would be less than significant, and no mitigation is required.

Project or Specific Plan Design Features. Section 12.5 of the Specific Plan contains a “right to farm” provision that will allow farming to continue ~~on vacant land~~ within the WLCSP until such time as it converts to developed uses. This provision will help protect onsite farming from “nuisance” claims by new landowners or tenants (e.g., dust and noise).

Mitigation Measures. ~~Consideration was given to the contribution to an agricultural mitigation bank as potential project-related mitigation. The County of Riverside considered the establishment of an Agricultural Mitigation Bank to mitigate the loss of farmland during the adoption process of the Riverside County General Plan in 2003; however, purchase of credits in such a bank to mitigate the loss of agricultural lands as part of the Draft EIR for the County General Plan (refer to Mitigation Measures 4.2.2A, B, and C in the Draft EIR of the Riverside County Integrated Project) were specifically removed from the General Plan during the public hearings on the General Plan.[1] Since potential mitigation for regional loss of agriculture has already been considered and rejected by the County, such mitigation would be even more infeasible on a citywide basis~~Since there is no impact to Prime Farmland, Farmland of Statewide Importance or Unique Farmland, no mitigation measures are required.

~~The DEIR originally contained the following text. In 2009, a regional agricultural conversion report was prepared by CBRE Consultants[2] for an unrelated development project in the City of Perris and a similar study was prepared in 2011 for this project by Andrew Chang and Company (ACC 2012). The ACC[3] and CBRE reports both concluded that the agriculture industry will continue to decline in the Inland Empire and identified three main reasons for the decline: 1) the more affordable housing market in the region compared to Los Angeles and Orange Counties, 2) the competition for cheaper farm labor from areas like the South Central Valley, and 3) lower water allocations to agriculture because of the growing urban population that receives priority for the water. The reports also noted that the agriculture industry within the Inland Empire is very small, making up only 4.1 percent of California’s total agricultural industry and only 1 percent of the regional economy in 2010. There is a clear pattern of agricultural decline from 2006 to 2010. Over these four years, 24,000 acres of farmland were removed in the Inland~~

~~[1] Riverside County Integrated Project website, http://www.rcip.org/, accessed April 5, 2012.~~
~~[2] Economic Viability of Agriculture in the East Inland Empire. CBRE Consulting. 2009.~~
~~[3] Agriculture Industry Analysis of the Inland Empire, Andrew Chang and Company, 2012.~~

~~Empire to make way for urban land uses. Agricultural production levels were 28 percent lower in 2010 than they were in 2004. The combination of the small size of the Inland Empire's agricultural industry and the three key economic constraints caused these studies to conclude that the agriculture industry in the Inland Empire is in decline. The ACC report concluded that the agriculture industry within the Inland Empire will become less competitive and continue to decline regardless of whether or not this project is developed. Under these circumstances, no mitigation that would artificially preserve or prolong agricultural activities (i.e., other than current market forces) in the project area and/or on the project site would be feasible or necessary.~~

~~The DEIR originally concluded there were no feasible mitigation measures to preserve agriculture over the long term on the project site in a regional context; however, the following Mitigation Measure 4.2.6.1A was recommended to preserve a part of the local heritage of farming for the Moreno Valley community for future generations:~~

~~Subsequent to circulation of the DEIR, it was determined that the new mitigation measure outlined below would sufficiently mitigate the loss of Unique Farmland, and so Mitigation Measure 4.2.6.1A for a "heritage farm" was no longer required.~~

~~The following mitigation measure has been added to the EIR in Response to Comment F-3-27 in Letter F-3 from California Clean Energy Committee, Comments F-7A-9, F-7A-39, and F-7A-63, in Letter F-7A from Lozeau Drury LLP, Response to Comment F-9A-43 in Letter F-9A from the Sierra Club, Response to Comment F-11-34 in Letter F-11 from the Sierra Club, Response to Comment F-13-06 in Letter F-13 from the Sierra Club et al, and related comments from others. The Response to Comment F-7A-39 outlines the changes made to the agricultural resources assessment for the project (FEIR Volume 2 Appendix C-2). In addition, a new MM 4.2.6.1A has been added to the FEIR Volume 2 requiring the acquisition of a conservation easement be recorded over land of comparable productive value to preserve offsite farmland or equal or more agricultural productivity compared to the unique farmland (refer to Response to Comment F-7A-39). It should be noted that the revised agricultural assessments determined the loss of farmland of local importance was in fact not significant under CEQA based on the results of the revised LESA model (see FEIR Volume 2 Appendices C-1 and C-4 for more information).~~

~~**4.2.6.1A** Prior to the issuance of any grading permit affecting land designated as "Unique Farmland" (Figure 4.2.2 in the World Logistics Center Environmental Impact Report), an Agricultural Conservation Easement shall be recorded over land of equivalent or better agricultural economic productivity of the offsite easement property compared to the World Logistics Center property. The analysis will include a comparison of the project's "Unique Farmland" considering its relative economic potential as the best measure of productivity (i.e., net profitability per acre or potential net rental income per acre). It will include a consideration of various important physical factors including location and accessibility, soils and topography, micro and macro climatic conditions, water availability and quality, as well as local practices, good farm management and cultural (growing) costs. The form and content of this easement, as well as the estimates of agricultural productivity, shall be reviewed and approved in advance by the Planning Official.~~

~~**Level of Significance after Mitigation.** The eventual conversion of 25 acres of Unique Farmland is a significant impact of the project resulting from the basic project objectives. However, implementation of the additional Mitigation Measure 4.2.6.1A will reduce this impact to a less than significant level.~~

4.2.6.2 Conversion of Farmland to Non-Agricultural Uses

Impact 4.2.~~6.2~~5.5: *The project would convert approximately 2,~~226~~200 acres of land currently being farmed~~, which includes~~ and approximately 2,~~201~~361 acres ~~of land~~that are designated as Farmland of Local Importance, to non-agricultural uses.*

Threshold	Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of ~~farmland~~Farmland to non-agricultural use, or conversion of forest land to non-forest use?

In addition to the FMMP designations, Riverside County has established a program through which it classifies various land within the County as Locally Important Farmland. ~~While the County has established criteria by which Locally Important Farmland is categorized, a small portion of that land has been so designated due simply to the historical use of the land~~The state uses the County's determination to identify Farmland of Local Importance for its FMMP designations.

The factors used by Riverside County to define Locally Important Farmland are ~~as follows:~~provided in Section 4.2.1.1 above.

- ~~Lands with soils that would be classified as Prime and Statewide Farmland but lack available irrigation water.~~
- ~~Lands planted with dry land crops of barley, oats, and wheat.~~
- ~~Lands producing major crops for Riverside County but that are not listed as Unique crops. These crops are identified as returning one million or more dollars on the 1980 Riverside County Agriculture Crop Report. Crops identified are permanent pasture (irrigated), summer squash, okra, eggplant, radishes, and watermelons.~~
- ~~Dairylands, including corrals, pasture, milking facilities, and hay and manure storage areas if accompanied with permanent pasture or hayland of 10 acres or more.~~
- ~~Lands identified by city or county ordinance as Agricultural Zones or Contracts, which includes Riverside City "Proposition R" lands.~~
- ~~Lands planted with jojoba which are under cultivation and are of producing age.~~

~~The majority of the proposed project site is currently designated Farmland of Local Importance by the County. None of the above factors supports maintaining the property as farmland; it is likely that the property was designated as Locally Important Farmland based simply on the agricultural uses that at one time existed on the property. The County's maps do not reflect the City's General Plan Land Use Map, which shows no agricultural designations in the City.~~

~~*NOTE: The following changes have been made in response to Comment G-95-54 in Letter G-95 from Thomas Thornsley.*~~

~~Implementation of the project would result in the permanent conversion of approximately 2,226 acres currently used for dry farming to non-agricultural uses. While this could have an effect on accelerating the loss of other existing agricultural land, the state conservation lands to the south could be continued for agricultural production. Likewise, there is no other agricultural use in the Zone of Influence (term used in the State LESA Model) and a majority of the land in that zone is vacant (i.e., in the Badlands to the east and portions of the San Jacinto Wildlife Area and the Lake Perris State Recreation Area to the south). The conversion of agricultural lands to urban uses is supported by the City's General Plan policies, as discussed above. The entire project site and adjacent lands have been designated for urban uses for nearly 20 years by the City. Nevertheless, much of the Specific Plan area is designated Farmland of Local Importance and will be permanently converted to non-agricultural urban uses. Therefore, the project will cause significant, unavoidable impacts related to conversion of locally important farmland (see previously referenced Figure 4.2.2).~~

~~The farming that is currently conducted on the CDFW property south of the Specific Plan area is expected to continue for the foreseeable future. The existing vacant land adjacent to the SDG&E compressor plant property is not currently being farmed, but is expected to remain vacant for the foreseeable future.~~

~~The following information was added to the LESA Model analysis in Response to Comment F-7A-39 and related comments by others, and also due to changes in the two technical studies on agricultural resources (FEIR Volume 2 Appendices C-1 and C-4).~~

~~**The LESA Model.**~~ **The LESA Model.** The California LESA Model was developed to provide lead agencies with an optional methodology to ensure that potentially significant effects on the environment from agricultural land conversions are quantitatively and consistently considered in the environmental review process (Public Resources Code Section 21095), including in California Environmental Quality Act (CEQA) reviews. The California Agricultural LESA Model evaluates measures of soil resource quality, a given project's size, water resource availability, surrounding agricultural lands, and surrounding protected resource lands. For a given project, the factors are rated, weighted, and combined, resulting in a single numeric score. The project score becomes the basis for making a determination of a project's potential significance.

The conversion of agricultural land to non-agricultural uses is a result of various economic and demographic factors. Increased costs for water and a continuing demand for housing and commercial development in the City and region have provided the primary impetus for this agricultural land conversion. ~~Although the project results in a significant impact related to the conversion of farmland to non-agricultural use, this EIR also refers to the State LESA model as an analytical tool by which the project's impacts on agricultural conversion can be assessed, and to further gauge the level of significance of that farmland conversion.~~ Appendix G of the *CEQA Guidelines* states as follows: "In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation (DOC) as an optional model to use in assessing impacts on agriculture and farmland."~~[1]~~ ~~Further, the LESA model was specifically created by the DOC in order to provide "specific guidance concerning how agencies should address farmland conversion impacts." Because of its use of localized inputs as part of the model, the LESA model is generally considered the preferred methodological tool by which to assess the significance of a proposed project's impacts related to agricultural resources.~~[2]

- The LESA model is intended to provide lead agencies with a methodology to identify potentially significant impacts that may result from agricultural land conversions. The model is a method of rating the relative quality of land resources and potential impacts to agricultural resources.
- The LESA Model uses six different factors (two based on soil resource quality and four based on on-site and adjacent land characteristics) to develop a weighted score that identifies the significance of potential impacts to agricultural resources. The Land Evaluation (LE) scoring utilizes two soil factors. The Land Capability Classification (LCC) indicates the suitability of soils for most kinds of crops and the risk of damage when they are used in agriculture, while the Storie Index provides a numeric rating (0–100) of the relative degree of suitability or value of a given soil for intensive agriculture. The Site Assessment (SA) scoring considers the size of the site to be converted, water supply restrictions in drought and non-drought years, and the presence (or absence) of adjacent agricultural, habitat, or parkland uses.
- By assessing and weighing a variety of soil, water, and land use characteristics, it is possible that the conversion of a large parcel containing poor soils and with limited access to water would not

---

~~[1] *California Land Evaluation and Site Assessment Model*, Instruction Manual, State of California Department of Conservation, Office of Land Conservation, 1997.~~

[2] *California Land Evaluation and Site Assessment Model*, Instruction Manual, State of California Department of Conservation, Office of Land Conservation, 1997.

result in a significant impact, while the conversion of a much smaller well-watered parcel with quality soils could be considered significant. To ensure potential impacts to adjacent agricultural activities are appropriately considered, the LESA model requires an examination of land use on all parcels within a Zone of Influence (ZOI) that extends a minimum 0.25 mile from the boundary of the site. For any site evaluated using the LESA model, the factors are rated, weighed, and combined, resulting in a single numeric score that becomes the basis for determining a project's potential significance.[1]

WLC Project Assessment

~~**DEIR Assessment.**~~ To assess potential agricultural resource impacts that may result from development of the ~~proposed~~World Logistics Center site, the LESA model was run ~~as part of the original DEIR~~by Parsons Brinkerhoff (PB) for the ~~entire 3,818~~2,610-acre project area.~~[2]~~ The total LESA score for the project is ~~63.51~~60.4, which is considered significant unless ~~the~~either LE and SA ~~sub-scores fall below~~are less than 20 (see Table 4.2~~.A~~-1). The LE sub-score is ~~43~~40.9 and the SA sub-score is ~~20~~19.5, indicating a less than significant impact and therefore does not require mitigation. The worksheets detailing the variables considered during the evaluation of each site are included in the *Agricultural Resources Assessment for the World Logistics Center Specific Plan* (DEIR Appendix C). ~~This was the conclusion of the DEIR that was circulated for public review.~~

An independent analysis was conducted on the potential agricultural resource impacts that may result from development of the World Logistics Center site, the LESA model was run by Agribusiness, Natural Resources & Energy Practice Group of Cushman & Wakefield Western, Inc. (C&WW) for the 2,610-acre project area. The total LESA score for the project is 58.9, which is considered significant only if the LE and SA sub-scores are each greater than 20 (see Table 4.2-2). The LE sub-score is 40.9 and the SA sub-score is 18.0, indicating a less than significant impact and therefore does not require mitigation. The worksheets detailing the variables considered during the evaluation of each site are included in the *Agricultural Resources Assessment for the World Logistics Center Specific Plan* (DEIR Appendix C).

Table 4.2~~.A~~-2: LESA Model Significance Determination

Total LESA Score	Scoring Decision
0–39 Points	Not considered significant
40–59 Points	Considered significant *only* if LE and SA sub-scores are each *greater* than or equal to 20 points
60–79 Points	Considered significant *unless* either LE or SA sub-score is *less* than 20 points
80–100 Points	Considered significant

Source: California Land Evaluation and Site Assessment Model, Instruction Manual, State of California Department of Conservation, Office of Land Conservation, 1997.

The majority of the ~~**Revised WLCSP Assessment.** In response to comments regarding agricultural impacts, the LESA Model assessment prepared by Parsons Brinckerhoff (PB)(DEIR Appendix C-1) was revised to account for the smaller WLCSP project site (2,610 acres instead of 2,710 acres) and delete the CDFW Conservation Buffer Area, and to address Response to Comment F-7A-39 and related comments by others. In addition, an independent analysis was conducted on the subject by the Agribusiness, Natural Resources & Energy Practice Group of Cushman & Wakefield Western, Inc. (C&WW). Part of their analysis included the preparation of a LESA Model report to validate assumptions made in the DEIR. The revised PB analysis (FEIR Volume 2 Appendix C-1) and the new C&WW analysis (FEIR Volume 2 Appendix C-4) both determined the WLC project impact on agricultural~~

[1] *California Land Evaluation and Site Assessment Model*, Instruction Manual, State of California Department of Conservation, Office of Land Conservation, 1997. Zoning map last updated November, 2017.

~~[2] *Agricultural Resources Assessment for the World Logistics Center Specific Plan Draft Environmental Impact Report*, Parsons Brinckerhoff, February 2012.~~

~~resources is not considered significant because both the LE and SA sub-scores were less than 20 points (the revised PB report indicated an SA score of 19.5 while the new C&WW report indicated an SA score of 18.5), so mitigation is not required for this impact (i.e., "Conversion of Farmland to Non-Agricultural Uses"). In addition, Mitigation Measure 4.2.6.1A has been added to address the WLC project's contribution to loss of agricultural resources in western Riverside County.~~

World Logistics Center project site is currently designated as Farmland of Local Importance by the state's FMMP as determined by the County. The County's maps do not reflect the City's General Plan Land Use Map, which shows no agricultural designations in the City.

Implementation of the project would result in the permanent conversion of approximately 2,200 acres currently used for dry farming to non-agricultural uses, and would result in the permanent conversion of approximately 2,361 acres of land designated as Farmland of Local Importance. While this could have an effect on accelerating the loss of other existing agricultural land, portions of the state-owned lands to the south likely will continue in agricultural production. Likewise, there is no other agricultural use in the Zone of Influence (term used in the State LESA Model) and a majority of the land in that zone is vacant (i.e., in the Badlands to the east and portions of the San Jacinto Wildlife Area and the Lake Perris State Recreation Area to the south). The conversion of agricultural lands to urban uses is supported by the City's General Plan policies, as discussed above. The entire project site and adjacent lands have been designated for urban uses for nearly 20 years by the City, and the area designated Farmland of Local Importance within the Specific Plan area will be permanently converted to non-agricultural urban uses. Therefore, project implementation will result in less than significant impacts to conversion of Farmland of Local Importance (see previously referenced Figure 4.2-2). No mitigation is required.

Project or Specific Plan Design Features. There are no features included in the Specific Plan that address the loss of agriculture on the project site.

Mitigation Measures. ~~As stated above, consideration was given to the contribution to an agricultural mitigation bank as potential project-related mitigation. However, the County, through the adoption of its General Plan, determined that contribution to an agricultural mitigation bank is not feasible and the City of Moreno Valley followed suit in the adoption of its General Plan.~~ ~~**Mitigation Measure 4.2.6.1A** will help reduce impacts to agricultural resources, but development of the Specific Plan site will eventually remove 2,226 acres of locally important farmland from production, and this is considered a significant long-term impact.~~No mitigation measures are required.

Level of Significance after Mitigation. ~~**Level of Significance after Mitigation.** The DEIR concluded that there was no feasible mitigation to reduce the significant impacts resulting from the loss of agricultural land to a less than significant level. However, implementation of,~~ ~~**Mitigation Measure 4.2.6.1A,**~~ ~~to establish an off-site agricultural conservation easement, would mitigate the conversion of agricultural land, to non-agricultural uses. With implementation of these measures, project impacts to agricultural resources are reduced to less than significant levels.~~

~~4.2.7 Cumulative Impacts~~

~~**Significant Cumulative Impact:**~~ ~~*Riverside County has experienced a net loss of Unique Farmland over the most recent 2-year reporting period. The project contributes to the cumulative impacts of this net loss by removing an additional 25 acres of Unique Farmland from potential agricultural production in this portion of the County. In addition, it will eventually remove 2,201 acres of land that is designated*~~

~~as Farmland of Local Importance (including all of the land currently being dry farmed, in the project area, from potential agricultural production in this portion of the County.~~~~[1]~~

~~The DOC Office of Land Conservation publishes a Farmland Conversion Report every two years as part of its FMMP. These reports document land use conversion by acreage for each California county. The most recent data are for the 2008–2010 period,~~~~[2]~~ ~~during which Riverside County experienced a net loss of 3,300 acres of Prime Farmland, 567 acres of Farmland of Statewide Importance, and 1,742 acres of Unique Farmland. The amount of Important Farmland inventoried in Riverside County during the last countywide survey of farmland totaled 428,989 acres.~~

~~The cumulative area for agricultural resource impacts is Riverside County. As detailed in Table 4.2.B, the agricultural acreage inventoried in Riverside County by the FMMP has declined in each of the five past reporting cycles. The total planted acreage in Riverside County has fluctuated during the past five years (Table 4.2.C).~~

~~Table 4.2.B: Agricultural Acreage Inventoried~~

	~~Reporting Period~~

~~While agricultural land is a finite resource, the City, through its designation of the site for non-agricultural urban uses in its General Plan, has previously considered that continuing development pressures in the City and region would result in the conversion of agricultural land to non-agricultural uses. The utilization of the property sites for agricultural activity would impede the City from achieving the goals and objectives set forth in its General Plan.~~

~~As explained previously, the CBRE and the ACC reports concluded that the agriculture industry within the Inland Empire will become less competitive and continue to decline whether or not the proposed project is developed. Under these circumstances, no mitigation that would artificially preserve or prolong agricultural activities (i.e., other than current market forces) in the project area would be feasible or effective over the long term.~~

~~The continuation of agricultural operations on site over the long term is likely not economically viable. The County continues to experience a net loss of Unique Farmland and Farmland of Local Importance, and the development of the project would contribute to the countywide net loss of designated farmland. However, with implementation of Mitigation Measure 4.2.6.1A, the WLC project will not make a significant contribution to cumulative agricultural impacts in western Riverside County.~~Less than significant impact.

~~4.3 AIR QUALITY: TABLE OF CONTENTS~~

~~FIGURES~~

~~TABLES~~

THIS PAGE INTENTIONALLY LEFT BLANK

NOTE TO READERS: This portion of the Revised Sections of the FEIR replaces portions of Section 4.3 of the FEIR, except for subsections 4.3.1, 4.3.1.1 and 4.3.1.2 which remain unchanged... The cumulative portion of Section 4.3 has been deleted from the FEIR to allow for its reanalysis to include the impacts expected from other past, present and reasonably foreseeable future projects. The revised cumulative analysis can be found in Section 6.3 of this Revised Sections of the FEIR. The absence of reference to a portion of Section 4.3 means that the corresponding portion of Section 4.3 in the FEIR remains unchanged or has been deleted.

4.3 AIR QUALITY

Although not required by the Judge's ruling, portions of the Traffic and Circulation analysis have been revised to: (1) Show the effect of using the trip generation rates shown in the most recent edition of the Institute of Traffic Engineer's Trip Generation Manual; and (2) Show the effect of the inclusion of the over 360 projects that cumulatively contribute to traffic impacts. As a result, Section 4.3 Air Quality, Section 6.3 Air Quality Cumulative, along with Appendix A, Air Quality, Greenhouse Gas, and Health Risk Assessment Report, have also been revised to show the effect of incorporating the applicable data from the revised traffic analysis.

This section analyzes the World Logistics Center project's potential air quality impacts and provides a discussion of the World Logistics Center project, the physical setting of the project area, and the air quality regulatory framework. The air quality analyses evaluate potential air quality impacts by examining the short-term construction as well as long-term operational impacts associated with the project and by evaluating the effectiveness of the identified mitigation measures. Modeled air quality levels are based upon vehicle data, project trip generation, and vehicle miles traveled assumptions included in the project's *Traffic Impact Analysis (TIA)* and peak turn volumes generated for the World Logistics Center project combined with emission factors from the California Air Resources Board (CARB). The evaluation was prepared in accordance with appropriate standards, utilizing procedures and methodologies as recommended by the South Coast Air Quality Management District (SCAQMD), the California Office of Environmental Health Hazards Assessment (OEHHA), and CARB. Air quality data posted by the SCAQMD, CARB, and the EPA web sites are included to document the local air quality environment and are incorporated herein by reference.

Compared to the FEIR, construction emissions analyzed herein assume later construction years and therefore newer, more efficient equipment. This results in reduced construction emissions. As reflected in the TIA, use of the most recent edition of the Institute of Traffic Engineer's Trip General Manual results in fewer average daily trips than previously analyzed in the FEIR. A lower trip rate coupled with a lower regional vehicle miles traveled assumption analyzed in the TIA and the later operational year assumption results in reduced mobile emissions when compared to those in the FEIR. Additionally, the later operational year results in the inclusion of a greater number of electric vehicles in the operational assumptions. Due to these factors, the construction and operational analyses contained herein entirely replace the analyses included in the FEIR and no further comparison is required.

The analysis contained in this section is based on the following technical studies prepared for the World Logistics Center project:

- *Air Quality, Greenhouse Gas, and Health Risk Assessment Report* (ESA Associates, dated June 2018) contained in Appendix A of this Revised Sections of the FEIR; and
- *Traffic Impact Analysis Report, The World Logistics Center*, (WSP USA, Inc., dated June 2018) contained in Appendix L of this Revised Sections of the FEIR.

4.3.1.1 Regional Air Quality Improvements

The American Lung Association website (lung.org) includes data collected from State air quality monitors that are used to compile an annual *State of the Air* report. These reports have been published over the last 13 years. The latest *State of the Air Report* compiled for the Basin was in 2017 (American Lung Association, 2017). As noted in this report, air quality in the Basin has significantly improved in terms of both pollution levels and high pollution days over the past three decades. Riverside County's average number of unhealthy ozone days dropped from 203 days per year in the initial 2000 State of the Air report to 122 in the 2017 report and San Bernardino County's number of unhealthy ozone days dropped from 230 in 2000 to 142 in 2017. Both Counties has seen dramatic reduction in particle pollution since the initial State of the Air report (2000). While the 2017 *State of the Air Report* shows a slight uptick in the number of days of unhealthy particle pollution for both counties since the 2016 report, it is important to note that pollution levels measured in this latter report were affected by fluctuations in weather conditions.

The 2016 Air Quality Management Plan (SCAQMD, 2017) outlines a comprehensive control strategy that meets the requirement for expeditious progress towards an attainment date for the five National Ambient Air Quality Standards (NAAQS) being analyzed. As stated in the 2016 AQMP, "The ozone and PM levels continue to trend downward as the economy and population increase, demonstrating that it is possible to maintain a healthy economy while improving public health through air quality improvements" (SCAQMD, 2017). NO_X, VOC, PM, NH_3, have been decreasing in the Basin since 2000 and are projected to continue to decrease through 2035 (CARB, 2013). These decreases result primarily from motor vehicle controls and reductions in evaporative emissions. Although vehicle miles traveled in the Basin continue to increase, NO_X and VOC levels are decreasing because of the mandated controls on motor vehicles and the replacement of older polluting vehicles with lower-emitting vehicles. NO_X emissions from electric utilities have also decreased due to use of cleaner fuels and renewable energy. The number of days exceeding the ozone national 8-hour standard has decreased between 1992 and 2011. During the 1992 time period, nearly all of the South Coast had more than 50 exceedance days, with more than 100 days in nearly one-third of the Basin. This is equivalent to more than three months during a year with ozone concentrations above the level of the standard. Much of this area currently meets the national standard, including about two-thirds of Orange County and one-third of Los Angeles County, where the majority of the Basin population lives and works (CARB, 2013).

The reduction in air pollution levels experienced in the Basin is attributable to multiple factors. First, Federal and State regulatory strategies requiring the use of cleaner fuels and use of emissions control technology in the transportation and energy production industries have proven to greatly reduce the amount of tailpipe emission (vehicles) and point source (power plants) pollutants (e.g., NO_X and ROG). Second, the SCAQMD's rules and regulatory programs have proven to be instrumental in improving the air quality in the Basin. As an example, the SCAQMD has adopted multiple rules regarding fugitive dust (PM_{10} and $PM_{2.5}$) and construction emissions that have resulted in reduced emission levels. Third, the SCAQMD's creation of the 1993 CEQA review handbook has resulted in lead agencies throughout the air basin employing uniform CEQA analyses and methodologies. The use of uniform CEQA review has allowed the SCAQMD and lead agencies that rely on the 1993 SCAQMD Air Quality Handbook to perform CEQA analysis to better track progress and to employ uniform mitigation and design feature strategies. Fourth, the use of the SCAQMD thresholds of significance to determine a project's direct and cumulative impact has allowed the SCAQMD to make tremendous progress toward achieving air quality attainment. The discussion above (pertaining to the air quality improvements achieved over the past 20 years) demonstrates that the SCAQMD's rules and procedures, including the uniform utilization of the thresholds of significance recommended in the SCAQMD *CEQA Air Quality Handbook* are contributing toward the achievement of improved air quality in the Basin.

4.3.1.2 Local Air Quality

The SCAQMD, together with the CARB, maintains ambient air quality monitoring stations in the Basin. The air quality monitoring station most representative of the project site is the Riverside-Rubidoux station. This station monitors CO, SO_2, NO_2, O_3, PM_{10}, and $PM_{2.5}$. Some monitoring data for SO_2 has been omitted as attainment is regularly met for this pollutant within the Basin. This station characterizes the air quality representative of the ambient air quality in the project area. The ambient air quality data in Table 4.3-3 identify that CO and NO_2 levels are consistently below the relevant State and Federal standards in the project vicinity. O_3, PM_{10}, and $PM_{2.5}$ levels all exceed State and/or Federal standards regularly. Figure 4.3-1 identifies the location of the monitoring station relative to the World Logistics Center project site.

Table 4.3-1: Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[1]		Federal Standards[2]		
		Concentration[3]	Method[4]	Primary[3,5]	Secondary[3,6]	Method[7]
Ozone (O_3)[8]	1-Hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8-Hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
Respirable Particulate Matter (PM_{10}) [9]	24-Hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		—		
Fine Particulate Matter ($PM_{2.5}$) [9]	24-Hour	No Separate State Standard		35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3	Gravimetric or Beta Attenuation	12.0 µg/m^3	15.0 µg/m^3	
Carbon Monoxide (CO)	8-Hour	9.0 ppm (10 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	9 ppm (10 mg/m^3)	None	Non-Dispersive Infrared Photometry (NDIR)
	1-Hour	20 ppm (23 mg/m^3)		35 ppm(40 mg/m^3)		
	8-Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—	—
Nitrogen Dioxide (NO_2) [10]	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)	Gas Phase Chemiluminescence	53 ppb (100 µg/m^3)	Same as Primary Standard	Gas Phase Chemiluminescence
	1-Hour	0.18 ppm (339 µg/m^3)		100 ppb (188 µg/m^3)	None	
Sulfur Dioxide (SO_2) [11]	Annual Arithmetic Mean	—	Ultraviolet Fluorescence	0.030 ppm (for certain areas) [11]	—	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method)
	24-Hour	0.04 ppm (105 µg/m^3)		0.14 ppm (for certain areas) [11]	—	
	3-Hour	—		—	0.5 ppm (1300 µg/m^3)	
	1-Hour	0.25 ppm (655 µg/m^3)		75 ppb (196 µg/m^3)	—	
Lead[12, 13]	30 Day Average	1.5 µg/m^3	Atomic Absorption	—	—	High-Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m^3 (for certain areas) [12]	Same as Primary Standard	
	Rolling 3-Month Average[11]	—		0.15 µg/m^3		
Visibility-Reducing Particles[14]	8-Hour	Extinction coefficient of 0.23 per kilometer - visibility of ten miles or more (0.07-30 miles or more for Lake Tahoe) due to particles when relative humidity is less than 70 percent. Method: Beta Attenuation and Transmittance through Filter Tape.	Beta Attenuation and Transmittance through Filter Tape	**No Federal Standards**		
Sulfates	24-Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1-Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24-Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

Footnotes

[1] California standards for ozone; carbon monoxide (except 8-hour Lake Tahoe); sulfur dioxide (1- and 24-hour); nitrogen dioxide; particulate matter (PM_{10} and $PM_{2.5}$ and visibility-reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[2] National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth-highest eight-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current federal policies.

[3] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[4] Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

[5] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[6] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[7] Reference method as described by the EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the EPA.

[8] On October 1, 2015, the natural eight-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[9] On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 µg/m^3 to 12.0 µg/m^3. The existing national 24-hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM_{10} standards (primary and secondary) of 150 µg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

[10] To attain the 1-hour national standard, the 3-year average of the 98th percentile of the daily maximum concentrations at each site must not exceed 0.100 ppm. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[11] On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 0.75 ppb. The 1971 SO2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm).

[12] The CARB has identified lead and vinyl chloride as "toxic air contaminants" with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[13] The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

°C = degrees Celsius
EPA = United States Environmental Protection Agency
µg/m^3 = micrograms per cubic meter

Table 4.3-2: Attainment Status of Criteria Pollutants in the South Coast Air Basin

Pollutant	State	Federal
O_3 1-hour	Nonattainment	N/A
O_3 8-hour	Nonattainment	Extreme Nonattainment
PM_{10}	Nonattainment	Maintenance – serious (San Bernardino County is in nonattainment)
$PM_{2.5}$	Nonattainment	Moderate Nonattainment
CO	Attainment	Serious Maintenance
NO_2	Attainment	Attainment/Maintenance
SO_2	Attainment	Attainment
Pb	Attainment	Attainment
All others	Attainment/Unclassified	Attainment/Unclassified

Unclassified designation: a pollutant that is designated unclassified if the data are incomplete and do not support a designation of attainment or nonattainment.
Attainment designation: a pollutant is designated attainment if the State standard for that pollutant was not violated at any site in the area during a 3-year period.
Nonattainment: a pollutant is designated nonattainment if there was at least one violation at any site in the area during a 3-year period.

4.3.1.3 Sensitive Land Uses in the Project Vicinity

Sensitive receptors include residences, schools, medical offices, convalescent facilities, and similar uses where people sensitive to air pollutants may be located (i.e., the ill, elderly, pregnant women, and children). There are currently six occupied single-family homes and associated ranch/farm buildings in various locations on the World Logistics Center project site. These residences are existing on-site sensitive receptors. The nearest off-site existing sensitive receptors in the vicinity of the project site are the residences located along Bay Avenue, Merwin Street, west of Redlands Boulevard, and scattered residences along Gilman Springs Road north of Alessandro Boulevard. Nearby sensitive land uses are depicted in Figure 4.3-2.

4.3.1.4 Existing Project Area Emissions

The project area is largely vacant undeveloped marginal agricultural land, with six occupied single-family homes and associated ranch/farm buildings in various locations on the property. Much of the site is currently used for dry farming. San Diego Gas & Electric (SDG&E) operates a natural gas compressor plant, known as the Moreno Compressor Station, on 19 acres south of the site. The Southern California Gas Company (SCGC) also operates a metering and pipe cleaning station on two separate parcels (totaling 1.5 acres) south of the site south of Alessandro Boulevard along existing Virginia Street. Existing air quality conditions at the project site reflect ambient[1] monitored conditions as presented in Table 4.3-3.

---

[1] Ambient: of or related to the immediate surroundings of something; in this context it means "in the air"

Table 4.3-3: Ambient Air Quality Monitored in the Project Vicinity

Pollutant	Standard	2014	2015	2016	2017
Carbon Monoxide (CO)					
Maximum 1-hr concentration (ppm)		2.4	2.5	1.6	2.4
Number of days exceeded:	State: > 20 ppm	0	0	0	0
	Federal: > 35 ppm	0	0	0	0
Maximum 8-hr concentration (ppm)		1.9	1.7	1.3	1.8
Number of days exceeded:	State: ≥ 9.0 ppm	0	0	0	0

4.3.2 POLICIES AND REGULATIONS

4.3.2.1 Federal Regulations

Clean Air Act. Pursuant to the Federal Clean Air Act (CAA) of 1970, the EPA established national ambient air quality standards (NAAQS). The NAAQS were established for six major pollutants, termed "criteria" pollutants. Criteria pollutants are defined as those pollutants for which the Federal and State governments have established ambient air quality standards, or criteria, for outdoor concentrations in order to protect public health.

Effective June 2, 2010, the EPA revised the primary standard for SO_2 by establishing a new 1-hour standard at a level of 75 ppb. The EPA revoked the two existing primary standards of 140 ppb evaluated over 24 hours and 30 ppb evaluated over an entire year as they would not provide additional public health protection given a 1-hour standard at 75 ppb. To attain this standard, the 3-year average of the 99th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 75 ppb.

Effective December 14, 2012, the national annual $PM_{2.5}$ standard was lowered from 15 $\mu g/m^3$ to 12 $\mu g/m^3$ but the existing 24-hour and annual secondary standards were retained.

On October 1, 2015, the national eight-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm, respectively.

4.3.2.2 Regional Regulations

Regional Air Quality Management Plan (AQMP). The SCAQMD and the SCAG are responsible for formulating and implementing the AQMP, which has a 20-year horizon for the Basin. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the Federal and/or California ambient air quality standards. The SCAQMD and SCAG must update the AQMP every three years.

2012 AQMP. The 2012 AQMP was adopted December 7, 2012 (SCAQMD, 2012b). The purpose of the 2012 AQMP for the Basin was to set forth a program that would lead the Basin into compliance with the Federal 24-hour $PM_{2.5}$ air quality standard, and to provide an update of the Basin's projections in meeting the Federal 8-hour ozone standards. The AQMP was adopted by the SCAQMD Board; therefore, it was submitted to the EPA as the State Implementation Plan (SIP). Specifically, the AQMP served as the official SIP submittal for the Federal 2006 24-hour $PM_{2.5}$ standard. In addition, the AQMP updated specific elements of the previously approved 8-hour ozone SIP: 1) an updated emissions inventory, and 2) new control measures and commitments for emissions reductions to help fulfill the Section 182(e)(5) portion of the 8-hour ozone SIP.

The 2012 AQMP states, "The remarkable historical improvement in air quality since the 1970's is the direct result of Southern California's comprehensive, multiyear strategy of reducing air pollution from all sources as outlined in its AQMPs."

The 2012 AQMP proposed Basin-wide $PM_{2.5}$ measures that would be implemented by the 2014 attainment date, episodic control measures to achieve air quality improvements (would only apply during high $PM_{2.5}$ days), Section 182(e)(5) implementation measures (to maintain progress toward meeting the 2023 8-hour ozone national standard), and transportation control measures. Most of the control measures focused on incentives, outreach, and education.

Proposed $PM_{2.5}$ reduction measures in the 2012 AQMP included the following:

- Further NO_X reductions from the SCAQMD's Regional Clean Air Incentives Market (RECLAIM) program. The RECLAIM program was adopted by the SCAQMD in October 1993 and set an emissions cap and declining balance for many of the largest facilities emitting NO_x and SO_x in the South Coast Air Basin. RECLAIM includes over 350 participants in its NO_x market and about 40 participants in its SO_x market. RECLAIM has the longest history and practical experience of any locally designed and implemented air emissions cap and trade program. RECLAIM allows participating facilities to trade air pollution while meeting clean air goals.
- Further reductions from residential wood-burning devices.
- Further reductions from open burning.
- Emission reductions from under-fired char broilers.
- Further ammonia reductions from livestock waste.
- Backstop measures for indirect sources of emissions from ports and port-related sources.
- Further criteria pollutant reductions from education, outreach, and incentives.

There were multiple VOC and NO_X reductions in the 2012 AQMP to attempt to reduce ozone formation, including further VOC reductions from architectural coatings, miscellaneous coatings, adhesives, solvents, lubricants, and mold release products.

The 2012 AQMP also contained proposed mobile source implementation measures for the deployment of zero and near-zero emission on-road heavy-duty vehicles, locomotives, and cargo handling equipment. There were measures for the deployment of cleaner commercial harbor craft, cleaner ocean-going marine vessels, cleaner off-road equipment, and cleaner aircraft engines.

The 2012 AQMP proposed the following mobile source implementation measures:

- On-road mobile sources:
  - Accelerated penetration of partial zero-emission and zero-emission vehicles. This measure proposed to continue incentives for the purchase of zero-emission vehicles and hybrid vehicles with a portion of their operation in an all-electric range mode. The state Clean Vehicle Rebate Pilot program was proposed to continue from 2015 to 2023 with a proposed funding for up to $5,000 per vehicle. The measure seeks to provide funding assistance for up to 1,000 zero-emission or partial-zero emission vehicles per year.
  - Accelerated penetration of partial zero-emission and zero-emission light-heavy and medium-heavy duty vehicles through funding assistance for purchasing the vehicles. The objective of the proposed action was to accelerate the introduction of advanced hybrid and zero-emission technologies for Class 4 through 6 heavy-duty vehicles. The state is currently implementing a Hybrid Vehicle Incentives Project program to promote zero-emission and hybrid heavy-duty vehicles. The proposed measure aims to continue the program from 2015 to 2023 to deploy up to 1,000 zero- and partial-zero emission vehicles per year with up to $25,000 funding assistance per vehicle. Zero-emission vehicles and hybrid vehicles with a portion of their operation in an all-electric range mode would be given the highest priority.
  - Accelerated retirement of older light-, medium-, and heavy-duty vehicles through funding incentives.

  - Further emission reductions from heavy-duty vehicles serving near-dock rail yards This proposed control measure called for a requirement that any cargo container moved between the ports of Los Angeles and Long Beach to the nearby rail yards be with zero-emission technologies. The measure would be fully implemented by 2020 through the deployment of zero-emission trucks or any alternative zero-emission container movement system such as a fixed guideway system. The measure called for the CARB to either adopt a new regulation or amend an existing regulation to require such deployment by 2020.

- Off-road mobile sources:
  - Extension of the Surplus Off-Road Opt-In for NO_x (SOON) provision for construction/industrial equipment, which provides funding to repower or replace older Tier 0 and Tier 1 equipment.
  - Further emission reductions from freight and passenger locomotives called for an accelerated use of Tier 4 locomotives in the Basin.
  - Further emission reductions from ocean-going marine vessels while at berth.
  - Emission reductions from ocean-going marine vessels.

The 2012 AQMP also relied upon the SCAG regional transportation strategy, which is in its adopted 2012–2035 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) and 2011 Federal Transportation Improvement Program (FTIP), which contains the following sections:

1. Linking regional transportation planning to air quality planning and making sure that the regional transportation plan supports the goals and objectives of the AQMP/SIP.
2. Regional transportation strategy and transportation control measures: The RTP/SCS contains improvements to the regional multimodal transportation system including the following: active transportation (non-motorized transportation, e.g., biking and walking); transportation demand management; transportation system management; transit; passenger and high-speed rail; goods movement; aviation and airport ground access; highways; arterials; and operations and maintenance.
3. Reasonably available control measure analysis.

2016 AQMP. On March 3, 2017, SCAQMD approved the Final 2016 Air Quality Management Plan (2016 AQMP) that demonstrates attainment of the 1-hr and 8-hr ozone NAAQS as well as the latest 24-hr and annual $PM_{2.5}$ standards. Currently, the 2016 AQMP is being reviewed by the U.S. EPA and CARB. Until the approval of the EPA and CARB, the current regional air quality plan is the Final 2012 Air Quality Management Plan (AQMP) adopted by the SCAQMD on December 7, 2012.The Final 2016 AQMP includes the integrated strategies and measures needed to meet the NAAQS.

The 2016 AQMP seeks to achieve multiple goals in partnership with other entities promoting reductions in criteria pollutant, greenhouse gases, and toxic risk, as well as efficiencies in energy use, transportation, and goods movement. The most effective way to reduce air pollution impacts on the health of our nearly 17 million residents, including those in disproportionally impacted and environmental justice communities that are concentrated along our transportation corridors and goods movement facilities, is to reduce emissions from mobile sources, the principal contributor to our air quality challenges. For that reason, the SCAQMD worked closely with CARB and the U.S. EPA who have primary responsibility for these sources. The Plan recognized the critical importance of working with other agencies to develop new regulations, as well as secure funding and other incentives that encourage the accelerated transition of vehicles, buildings, and industrial facilities to cleaner technologies in a manner that benefits not only air quality, but also local businesses and the regional economy. These “win-win” scenarios will be key to implementation of this Plan with broad support from a wide range of stakeholders. The 2016 AQMP also includes transportation control measures (TCMs) developed by SCAG from the 2016 RTP/SCS.

The RTP/SCS and FTIP were developed in consultation with federal, state and local transportation and air quality planning agencies and other stakeholders. The four County Transportation Commissions (CTCs) in the South Coast Air Basin, namely Los Angeles County Metropolitan Transportation Authority, Riverside County Transportation Commission, Orange County Transportation Authority and the San Bernardino Associated Governments, were actively involved in the development of the regional transportation measures. In the South Coast Air Basin, TCMs include the following three main categories of transportation improvement projects and programs that have funding programmed for right-of-way and/or construction in the first two years of the 2015 FTIP:

- Transit, Intermodal Transfer, and Active Transportation Measures;
- High Occupancy Vehicle (HOV) Lanes, High Occupancy Toll (HOT) Lanes, and their pricing alternatives; and
- Information-based Transportation Strategies.

Diesel Regulations. The Ports of Long Beach and Los Angeles and the CARB have adopted regulations aimed at reducing the amount of diesel particulate. These programs are the Ports of Los Angeles and Long Beach “Clean Truck Program” (POLA, 2018), the CARB Drayage Truck Regulation (CARB, 2017b), and the CARB statewide On-road Truck and Bus Regulation (CARB, 2017c). Each of these regulatory programs will require an accelerated introduction of “clean trucks” into the statewide truck fleet that will result in substantially lower diesel emissions during the 2008 to 2020 timeframe. Additionally, the Ports of Long Beach and Los Angeles updated the Clean Air Action Plan in 2017, providing new strategies and emission targets supporting zero-emissions and freight efficiency targets (POLA and POLB, 2017).

Toxic Air Contaminants. A toxic air contaminant (TAC) is defined as an air pollutant that may cause or contribute to an increase in mortality (death) or serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; however, their high toxicity or health risk may pose a threat to public health even at low concentrations. Hazardous Air Pollutants (HAPs) and TACs are used interchangeably in this discussion. HAPs are regulated by the EPA under the Federal Clean Air Act. TAC is the term used under the California Clean Air Act to regulate the same hazardous pollutants. These contaminants tend to be localized and are found in relatively low concentrations in ambient air. However, they can result in adverse chronic health effects if exposure to low concentrations occurs for periods of several years. Many of these contaminants originate from human activities, such as fuel combustion and solvent use.

In general, for those TACs that may cause cancer, there is no concentration that does not present some risk. In other words, there is no threshold level below which adverse health impacts are not expected to occur. This contrasts with the criteria pollutants carbon dioxide, nitrogen dioxide, particulate matter, and ozone for which acceptable levels of exposure can be determined and for which the State and federal governments have set ambient air quality standards. For this reason, thresholds for TAC impacts for regulatory purposes and for CEQA thresholds have been set based on the increase in risk of cancer of a specific amount at sensitive receptors located near the source of TAC emissions.

The California Almanac of Emissions and Air Quality presents the relevant concentration and cancer risk data for the ten TACs that pose the most substantial health risk in California based on available data. These TACs are as follows: acetaldehyde, benzene, 1.3-butadiene, carbon tetrachloride, hexavalent chromium, paradichlorobenzene, formaldehyde, methylene chloride, perchloroethylene, and diesel particulate matter (diesel PM).

TAC measurements, available at the SCAQMD Riverside Rubidoux monitoring station (14 miles northwest of the project site) can be used to characterize the "background" health risks from regional TAC emission sources. Table 4.3-4 provides this summary of TAC levels in the project area and health risk information. This table lists the air concentration levels and associated health cancer risks for eight of the nine TACs reported by the CARB in its Almanac as measured at the Riverside-Rubidoux air monitoring station. Note that since diesel PM cannot be measured directly, the table does not provide estimates of either measured diesel PM or the cancer risk associated with diesel PM.

Past studies have indicated that diesel PM poses the greatest health risk among the TACs listed in Table 4.3-4. The principal concern regarding exposures to diesel PM lies in its small size and thus its ability to penetrate deep into lung tissues when inhaled. Diesel exhaust has been found to cause health effects from short-term or acute exposures and from long-term chronic exposures, such as repeated occupational exposures. The type and severity of health effects depends upon several factors including the amount of chemical you are exposed to and the length of time you are exposed. Individuals also react differently to different levels of exposure. There is limited information on exposure to just diesel PM but there is enough evidence to indicate that inhalation exposure to diesel exhaust causes acute and chronic health effects.

Long-term (chronic) exposure to diesel exhaust is likely to occur when a person works in a field where diesel is used regularly or experiences repeated exposure to diesel fumes over a long period of time. Human health studies demonstrate a correlation between exposure to diesel exhaust and increased lung cancer rates in occupational settings. Experimental animal inhalation studies of chronic exposure to diesel exhaust have shown that a range of doses causes varying levels of inflammation and cellular changes in the lungs. Human and laboratory studies have also provided considerable evidence that diesel exhaust is a likely carcinogen.

Several occupational and ambient studies have documented the health effects due to exposure to diesel PM. The California Office of Environmental Health Hazards Assessment (OEHHA), in its role in assessing risk from environmental factors reviews such studies and makes recommendations on the way environmental risk should be evaluated through programs like the AB2588 Hot Spot Program. In its comprehensive assessment of diesel exhaust, OEHHA analyzed more than 30 studies of people who worked around diesel equipment, including truck drivers, 1950's era railroad workers, and equipment operators. The studies showed these workers were more likely to develop lung cancer than workers who were not exposed to diesel emissions. These studies provide strong evidence that long-term occupational exposure to diesel exhaust increases the risk of lung cancer. However, all of these studies were based on exposure to exhaust from traditional diesel engines and prior to the advent of highly efficient emissions controls like the diesel particulate filter. Based on these studies, CARB identified diesel exhaust a toxic air contaminant in 1998.

In 2014, the SCAQMD released the fourth iteration of the Multiple Air Toxics Exposure Study (MATES-IV). The MATES-IV is a follow up to the previous MATES studies and included an updated toxics air emission inventory, new air toxics air dispersion modeling, and enhanced air toxics monitoring. A key conclusion reached in the MATES-IV study was that the population weighted cancer risk in the Basin decreased by 57 percent from the MATES-III period in 2005 to the MATES-IV period in 2012 indicating that overall, cancer risks are declining in the Basin as a result of the implementation of emission controls principally on large diesel trucks. The MATES-IV study also concluded that diesel PM contributed 68 percent to the total cancer risk in the Basin with benzene and 1.3 Butadiene also making important contributions to cancer risk.

Table 4.3-4: Toxic Air Contaminant Concentration Levels and Associated Health Effects (Riverside, California)

TAC	Concentration[A] / Health Risk[B]	2015	2016	2017	Health Effects
Acetaldehyde	Mean	1.48	1.44	1.08	Acetaldehyde is a carcinogen that also causes chronic non-cancer toxicity in the respiratory system. Symptoms of chronic intoxication of acetaldehyde in humans resemble those of alcoholism. The primary acute effect of inhalation exposure to acetaldehyde is irritation of the eyes, skin, and respiratory tract in humans. At higher exposure levels, erythema, coughing, pulmonary edema, and necrosis may also occur. Acute inhalation of acetaldehyde resulted in a depressed respiratory rate and elevated blood pressure in experimental animals.
	Health Risk	22	21	16	
Benzene	Mean	ID	0.27	0.271	Benzene is highly carcinogenic and occurs throughout California. Benzene also has non-cancer health effects. Brief inhalation exposure to high concentrations can cause central nervous system depression. Acute effects include central nervous system symptoms of nausea, tremors, drowsiness, dizziness, headache, intoxication, and unconsciousness. Neurological symptoms of inhalation exposure to benzene include drowsiness, dizziness, headaches, and unconsciousness in humans. Ingestion of large amounts of benzene may result in vomiting, dizziness, and convulsions in humans. Exposure to liquid and vapor may irritate the skin, eyes, and upper respiratory tract in humans. Redness and blisters may result from dermal exposure to benzene. Chronic inhalation of certain levels of benzene causes disorders in the blood in humans. Benzene specifically affects bone marrow (the tissues that produce blood cells). Aplastic anemia, excessive bleeding, and damage to the immune system (by changes in blood levels of antibodies and loss of white blood cells) may develop. Increased incidence of leukemia (cancer of the tissues that form white blood cells) has been observed in humans occupationally exposed to benzene.
	Health Risk	ID	85	70	
Chromium Hex	Mean	0.083	0.045	ID	In California, hexavalent chromium has been identified as a carcinogen. There is epidemiological evidence that exposure to inhaled hexavalent chromium may result in lung cancer. The principal acute effects are renal toxicity, gastrointestinal hemorrhage, and intravascular hemolysis. The respiratory tract is the major target organ for chromium (VI) following inhalation exposure in humans. Other effects noted from acute inhalation exposure to very high concentrations of chromium (VI) include gastrointestinal and neurological effects, while dermal exposure causes skin burns in humans. Chronic inhalation exposure to chromium (VI) in humans results in effects on the respiratory tract, with perforations and ulcerations of the septum, bronchitis, decreased pulmonary function, pneumonia, asthma, and nasal itching and soreness reported. Chronic human exposure to high levels of chromium (VI) by inhalation or oral exposure may produce effects on the liver, kidneys, gastrointestinal and immune systems, and possibly the blood.
	Health Risk	34	19	ID	
Para-Dichlorobenzene	Mean	ID	ID	ID	In California, para-dichlorobenzene has been identified as a carcinogen. Acute exposure to 1,4-dichlorobenzene via inhalation results in irritation to the eyes, skin, and throat in humans. In addition, long-term inhalation exposure may affect the liver, skin, and central nervous system in humans (e.g., cerebellar ataxia, dysarthria, weakness in limbs, and hyporeflexia).
	Health Risk	ID	ID	ID	
Formaldehyde	Mean	3.52	3.64	3.35	The major toxic effects caused by acute formaldehyde exposure via inhalation are eye, nose, and throat

Table 4.3-4: Toxic Air Contaminant Concentration Levels and Associated Health Effects (Riverside, California)

TAC	Concentration[A] / Health Risk[B]	2015	2016	2017	Health Effects
	Health Risk	70	76	70	irritation and effects on the nasal cavity. Other effects seen from exposure to high levels of formaldehyde in humans are coughing, wheezing, chest pains, and bronchitis. Chronic exposure to formaldehyde by inhalation in humans has been associated with respiratory symptoms and eye, nose, and throat irritation. Animal studies have reported effects on the nasal respiratory epithelium and lesions in the respiratory system from chronic inhalation exposure to formaldehyde. Occupational studies have noted statistically significant associations between exposure to formaldehyde and increased incidence of lung and nasopharyngeal cancer. This evidence is considered "limited" rather than "sufficient" due to possible exposure to other agents that may have contributed to the excess cancers. EPA considers formaldehyde to be a probable human carcinogen (cancer-causing agent) and has ranked it in EPA's Group B1. In California, formaldehyde has been identified as a carcinogen.
Methylene Chloride	Mean	ID	48.2	12.3	Case studies of methylene chloride poisoning during paint-stripping operations have demonstrated that inhalation exposure to extremely high levels can be fatal to humans. Acute inhalation exposure to high levels of methylene chloride in humans has resulted in effects on the central nervous system, including decreased visual, auditory, and psychomotor functions, but these effects are reversible once exposure ceases. Methylene chloride also irritates the nose and throat at high concentrations. The major effects from chronic inhalation exposure to methylene chloride in humans are effects on the central nervous system, such as headaches, dizziness, nausea, and memory loss. In addition, chronic exposure can lead to bone marrow, hepatic, and renal toxicity. EPA considers methylene chloride to be a probable human carcinogen and has ranked it in EPA's Group B2. California considers methylene chloride to be carcinogenic.
	Health Risk	ID	477	122	
Perchloroethylene	Mean	ID	0.018	0.013	In California, perchloroethylene has been identified as a carcinogen. Perchloroethylene vapors are irritating to the eyes and respiratory tract. Following chronic exposure, workers have shown signs of liver toxicity, as well as kidney dysfunction and neurological disorders.
	Health Risk	ID	2	2	
Diesel PM	Mean	No Monitoring Data Available			In its comprehensive assessment of diesel exhaust, OEHHA analyzed more than 30 studies of people who worked around diesel equipment, including truck drivers, railroad workers, and equipment operators. The studies showed these workers were more likely to develop lung cancer than workers who were not exposed to diesel emissions. These studies provided strong evidence that long-term occupational exposure to diesel exhaust increases the risk of lung cancer. Exposure to diesel exhaust can have immediate health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks. This research was based on studies prio to the advent of modern diesel engines with high efficiency emissions controls. Note: Since then the Health Effects Institute study clearly demonstrates that the application of new emissions control technology to diesel engines has virtually eliminated the health impacts of diesel exhaust.
	Health Risk				

Table 4.3-4: Toxic Air Contaminant Concentration Levels and Associated Health Effects (Riverside, California)

TAC	Concentration[A] / Health Risk[B]	2015	2016	2017	Health Effects

ID = Insufficient data

A = Concentrations for Hexavalent Chromium are expressed as µg/m^3, and concentrations for Diesel PM are expressed as µg/m^3. Concentrations for all other TACs are expressed as ppb.

B = Health Risk represents the number of excess cancer cases per million people based on a lifetime (70-year) exposure to the annual average concentration. Total Health Risk represents only those compounds listed in this table and only those with data for the year. There may be other significant compounds for which monitoring and/or health risk information are not available

Source: CARB, 2018 for the SCAQMD Riverside-Rubidoux air monitoring station.

In addition to increasing the risk of lung cancer, exposure to diesel exhaust can have other health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. Diesel exhaust has been a major source of fine particulate pollution as well, and studies have linked elevated particle levels in the air to increased hospital admissions, emergency room visits, asthma attacks, and premature deaths among those suffering from respiratory problems.

Diesel PM differs from other TACs in that it is not a single substance but a complex mixture of hundreds of substances. Although diesel PM is emitted by diesel-fueled, internal combustion engines, the composition of the emissions varies, depending on engine type, operating conditions, fuel composition, lubricating oil, and whether an emission control system is present. Unlike the other TACs, however, no ambient monitoring data are available for diesel PM because no routine measurement method currently exists. The CARB has made preliminary concentration estimates based on a diesel PM exposure method. This method uses the CARB emissions inventory's PM_{10} database, ambient PM_{10} monitoring data, and the results from several studies to estimate concentrations of diesel PM. Within the Basin, in addition to diesel PM, there are emissions of benzene, formaldehyde, acetaldehyde, naphthalene, ethylbenzene, acrolein, toluene, hexane, propylene, and xylene from a variety of sources located within the Basin that contribute to health risks.

In January 2015, a major new study evaluated the health impacts of "new technology diesel exhaust" (NTDE). Beginning in 2001, USEPA and CARB began issuing a series of regulations that require new diesel-powered vehicles and equipment to use the latest emissions control technology. This technology relies on two components. The first is a diesel particulate filter, which is capable of reducing particulate matter emissions by over 90% (required for new engines beginning in 2007). The second technology is selective catalytic reduction, which reduces emissions of nitrogen oxides by over 90% (required for new engines beginning in 2010). Diesel emissions from engines equipped with this technology is referred to as New Technology Diesel Exhaust (NTDE). As a result of the advances in emission control technology, USEPA, CARB, and other government and industry stakeholders commissioned a series of studies called the Advanced Collaborative Emissions Study (ACES). ACES has been guided by an ACES Steering Committee consisting of representatives of the Health Effects Institute (HEI) and the Coordinating Research Council (CRC: a nonprofit organization that directs engineering and environmental studies on the interaction between automotive or other mobility equipment and petroleum products), along with the U.S. Department of Energy, U.S. EPA, engine manufacturers, the petroleum industry, CARB, emission control manufacturers, the National Resources Defense Council, and others. The HEI, funded in part by USEPA, was selected to oversee Phase 3 of ACES.

Phase 3 of ACES evaluated whether emissions from new technology diesel engines cause cancer or other health effects. Specifically, it evaluated the health impacts of a 2007-compliant engine equipped with a diesel particulate filter. HEI found chronic exposure to NTDE did not induce tumors or pre-cancerous changes in the lung and did not increase tumors that were considered to be related to NTDE in any other tissue in laboratory rats. The study also confirmed that the concentrations of particulate matter and toxic air pollutants emitted from NTDE are more than 90% lower than emissions from traditional older diesel engine. Rats are the most sensitive laboratory animal species for evaluation of older technology diesel engines (pre-model year 2007), because of their sensitivity to high concentrations of particles (present in older technology diesel engines), compared with other species (including humans).

The HEI study clearly demonstrates that the application of new emissions control technology to diesel engines have virtually eliminated the health impacts of diesel exhaust (McDonald et al, 2015).

Conservative Nature of Health Risk Assessments. Moreover, the current methodological protocols required by the SCAQMD and CARB when studying the health risk posed by diesel PM assume the following (CAPCOA, 2009): (1) 24-hour constant exposure; (2) 350 days a year; (3) for a continuous period lasting 30 years. These are overly conservative assumptions that are not replicated in reality. Most people are indoors for 18–20 hours a day (at their place of employment or home) and most people do not live in the same location for a 30-year period. In fact, less than 10 percent of the population has a continuous residency at the same location of greater than 30 years (American Community Survey, 2011). Thus, the health risk assessments prepared pursuant to the current protocols overestimate the risk of cancer associated with diesel PM exposure.

Alternate Views on Diesel PM Risk. Some researchers, such as Dr. James E. Enstrom (Enstrom, 2008), believe that the risk from diesel PM is exaggerated. Enstrom calls into question some of the basic research on the declaration of diesel exhaust as a toxic air contaminant. In particular, the article states the following:

> *There is substantial new epidemiologic evidence relevant to the health effects of diesel exhaust that was not considered when the 1998 toxic air contaminant declaration was made. For instance, the 2007 paper by Francine Laden et al. measured death rates during 1985–2000 among 54,000 members of the unionized U.S. trucking industry. … This cohort, which included 36,000 diesel truck drivers, had death rates from all causes and all cancer that were substantially below the rates among US males. Furthermore, unlike earlier evidence that was used in the TAC declaration, this cohort did not have a substantially elevated lung cancer death rate.*

Dr. Enstrom also indicates that the premature mortality calculation in the report, "Quantification of the Health Impacts and Economic Valuation of Air Pollution from Ports and Goods Movement in California," is exaggerated. Dr. Enstrom's analysis "found no relationship between $PM_{2.5}$ and mortality in elderly Californians during 1983–2002."

4.3.3 METHODOLOGY

The *Air Quality, Greenhouse Gas, and Health Risk Assessment Report* for this revised section of the FEIR (ESA Associates, 2018) evaluated the air quality impacts associated with the development of the World Logistics Center project including the following:

- Determined the short-term construction air quality and health risk impacts on both on-site and off-site sensitive receptors based on SCAQMD and OEHHA assessment methodologies and significance thresholds;
- Determined the long-term air quality and health risk impacts, including vehicular traffic, on both on-site and off-site sensitive uses based on SCAQMD and OEHHA assessment methodologies and significance thresholds; and
- Determined the required mitigation measures to reduce short-term and long-term on-site air quality and health risk impacts from all sources.

An Air Quality, Greenhouse Gas, and Health Risk Assessment Report was prepared by ESA Associates (ESA Associates, 2018) in June 2018, included as Appendix A of this Revised Sections of the FEIR, which estimated the impacts associated with the interim and horizon opening years. The methodology used in the analysis is discussed below.

4.3.3.1 Construction

Construction-related emissions are expected from various activities associated with the construction of the project such as rough grading, infrastructure construction, asphalt paving, building construction, architectural coatings, and construction workers commuting. Construction emissions for construction worker vehicles traveling to and from the project site, in addition to vendor trips (construction materials delivered to the project site) and haul trips (dump trucks and concrete trucks) were also accounted for in the analysis. Localized air quality in the project area would be affected by both heavy-duty construction equipment usage on site as well as local traffic due to the equipment delivery and construction worker commuting. The anticipated construction equipment and construction schedule are identified in Appendix A. The SCAQMD CEQA methodology (SCAQMD, 1993) was used to analyze the criteria pollutant emissions from these activities.

A summary of the construction assumptions is included below. For a detailed description of assumptions, please refer to Appendix A.

- *Version of CalEEMod.* The construction emissions were estimated utilizing the latest version of CalEEMod (version 2016.3.2), which uses mobile source emissions from EMFAC2014.
- *Construction Period.* Construction was assumed to occur over 16 years from the year 2020 to 2035.[2] Although buildout of the project would depend on market conditions, the project could be built out as early as 2035. Therefore, to provide a conservative air quality analysis, construction was assumed to be completed over a 16-year period that provides for phase overlap and the use of less efficient construction equipment.
- *Building Phasing.* Building construction activity was subdivided into the following sub-phases: building-concrete; building-wet utilities; building-electrical; and building-landscaping to accurately describe construction activities.
- *Mass Grading Duration.* Each planning area was assumed to be graded separately over a total of approximately 58 months to reflect a realistic grading plan.
- *On-Site On-road Vehicle Emissions.* On-site travel and idling emissions from concrete trucks, haul trucks, service/support trucks, and delivery trucks were included in this analysis.
- *Equipment for Grading.* The construction equipment and haul truck deliveries for the mass excavation and fine grading phases vary per planning area (since there are varying sizes of each planning area).
- *Onsite Equipment Fleet for Non-Grading Phases.* The peak number of equipment was based on the size of each planning area and duration of construction.
- *Onsite Equipment Hours per Day.* The analysis assumed that the onsite equipment would be in the on position for 10 hours per day as a project design feature. This is a conservative scenario as the CalEEMod default assumes construction equipment would be on for 6 to 8 hours per day. This was used to calculate maximum daily emissions which are required for the regional analysis, because project emissions can occur on any day of the week.

---

[2] *Full build out of the Project is expected to take 15 to 20 years, dependent on market forces. The TIA analyzes full project buildout in 2040, which is worst case for traffic analysis purposes as it accounts for greater regional growth in non-project traffic. However, for purposes of a conservative construction impact analysis, the fifteen-year buildout (ending in 2035) is analyzed. An accelerated construction schedule occurring in earlier years would account for greater overlap of construction activity and the use of dirtier construction equipment (i.e. subject to less stringent emission standards).*

Concrete pouring would likely occur during nighttime hours due to limitations high temperatures pose for concrete work during the day. On-site equipment used during concrete pouring would involve daytime prep with actual concrete pouring occurring during the nighttime hours. On average, the total hours of operation for each piece of equipment during the concrete phase would be approximately 10 hours. Therefore, the analysis assumes a realistic average use of construction equipment by assuming that the maximum equipment would be used for five days per week occurring for 10 hours per day (including the concrete pouring phase). In this way, an annual average and daily emission inventories were estimated.

- *Tier 4 Equipment.* The analysis assumed that for the mitigated emissions, all equipment over 50 horsepower would be Tier 4 as required by a revised mitigation measure.

4.3.3.2 Operation

Air quality in the project area would be affected by long-term air emissions from stationary sources and mobile sources related to the World Logistics Center project once it commences operations. The stationary source emissions would come from consumption of natural gas and emergency generators while mobile source emissions would come from vehicular emissions from automobiles and trucks traveling to, from, and within the project site and from on-site forklifts and yard trucks.

A key piece of information required to estimate the project's operational emissions deals with an estimate of the number of trips and types of vehicles (i.e., cars and trucks) generated by the project during a peak hour and on a daily basis. To determine mobile source emissions associated with the project, the trip generation rates were derived from the *Traffic Impact Analysis Report* (TIA) for the project prepared by WSP USA.

Working jointly with the National Association of Industrial and Office Properties (NAIOP), the SCAQMD conducted a trip generation study for high-cube warehouses, the predominant form of land use for the project, *High-Cube Warehouse Vehicle Trip Generation Analysis* (ITE, 2016). The study replaces the earlier, smaller studies that produced conflicting results and created uncertainty regarding the amount of traffic generated by the newer, more automated type of high-cube warehouse proposed for the project. The results of the study for high-cube warehouse trip generation has been incorporated into the 10th edition of the Institute of Traffic Engineers (ITE) *Trip Generation Manual.* The trip generation rates included in this study for high-cube warehouse uses and trip rates from the 10th edition of the ITE *Trip Generation Manual* have been used for other proposed land uses.

For purposes of the TIA and worst case traffic growth assumptions, project operations were analyzed based on two buildout years: 2025 Phase 1 buildout year and 2040 full buildout year. Forecasted trip generation and vehicle miles traveled (VMT) contained in the TIA were used to estimate the project's motor vehicle emissions for the Phase 1 and full buildout scenarios. The traffic model provided estimates of project traffic volumes segregated by vehicle class as passenger cars, light heavy duty trucks, medium heavy duty trucks, and heavy-heavy duty trucks. The TIA provides VMT attributable to the project based on the net effect the project has on regional travel as well as project VMT without consideration of a net effect. The net effect includes consideration that creation of a job center (the project) would redistribute existing regional travel and result in shorter employee trips. Freeway and non-freeway VMT and speed data, as provided by WSP, were utilized to determine the appropriate emission factors to apply to project trips from the EMFAC2014 model. In calculating the operational traffic emissions, the VMT per speed was based on daily speed data provided by WSP. Emissions factors vary by speed bin. Therefore, accounting for variations in speed attributable to slow downs occurring during peak hours provides a realistic representation of project mobile emissions.

Mobile emissions utilized EMFAC2014's projected vehicle fuel mix for Phase 1 buildout year 2025 and project buildout year 2040. EMFAC2014 does not include population assumptions for electric or natural gas-fueled trucks. Section 6.17, *Energy*, of this EIR addresses the potential penetration of electric trucks and potential use in association with the project. Although the State has set targets for zero-emission vehicles, it would be speculative to assume that the High Penetration scenario discussed in Section 6.17 would be practicable or feasible by 2025 or by 2040. The Low, Medium, and High Penetration scenarios discussed in Section 6.17 are possible; however, as a worst-case analysis, the air quality analysis included herein did not take factor in any potential emissions reductions provided by electric or natural gas-fueled trucks.

Emission factors for the year 2018 were used for the "worst-case" scenario. Phase 1 of the project used emission factors from the year 2025, and Phase 2 of the project used emission factors for the year 2040. For the mitigated scenario, the emission factors were modified to reflect the mitigation measure that requires the use of model year 2010 or newer trucks for all diesel trucks associated with the project. Note that emissions from the existing on-site residence and fugitive dust that would be removed were not included in this analysis as a worst-case scenario.

4.3.3.3 Localized Construction/Operation

SCAQMD has developed the Localized Significance Threshold (LST) methodology that can be used to determine whether or not a project may generate significant adverse localized air quality impacts that substantially affect sensitive receptors. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable Federal or State AAQS and are developed based on the ambient concentrations of that pollutant for each source receptor area identified by the SCAQMD. SCAQMD's current guidelines, *Final Localized Significance Threshold Methodology* (SCAQMD, 2003) and subsequent additions, were adhered to in the assessment of local air quality impacts from the World Logistics Center project. The local emissions of concern from construction and operational activities as defined by the SCAQMD are NO_X, CO, PM_{10}, and $PM_{2.5}$ combustion emissions from construction equipment and fugitive PM_{10} dust from construction site preparation activities. A summary of assumptions for the localized assessment is included below. For detailed assumptions, refer to Appendix A.

- *Construction Schedule.* Construction was assumed to occur over 16 years from the year 2020 to 2035.[3] Although buildout of the project would depend on market conditions, the project could be built out as early as 2035. Therefore, to provide a conservative air quality analysis, construction was assumed to be completed over a 16-year period that provides for activity overlap and the use of older construction equipment.
- *Emission Source Configuration.* The analysis represented the off-road construction exhaust emission source as a series of contiguous volume sources, which is consistent with the SCAQMD methodology for LST assessments.
- *Operational Truck Idling.* Each truck was assumed to idle for 5 minutes per day consistent with the California Air Resources Board's Air Toxic Control Measure that limits such idling to 5 minutes and requirements specified in the World Logistics Center Specific Plan. Although project

---

[3] *Full build out of the Project is expected to take 15 to 20 years, dependent on market forces. The TIA analyzes full project buildout in 2040, which is worst case for traffic analysis purposes as it accounts for greater regional growth in non-project traffic. However, for purposes of a conservative construction impact analysis, the fifteen-year buildout (ending in 2035) is analyzed. An accelerated construction schedule occurring in earlier years would account for greater overlap of construction activity and the use of dirtier construction equipment (i.e. subject to less stringent emission standards)*

mitigation limits idling to 3 minutes per day per truck, this reduction in emissions has not been accounted for to provide a worst-case analysis.

The localized significance threshold analysis evaluated three conditions:

- Project Phase 1 (2018): this condition assumed that Phase 1 of the project is fully built out in 2018.
- Project Phase 1 and Phase 2 Full Build Out (2018): this condition assumes that Phase 1 and Phase 2 of the project are fully built out in 2018.
- Proposed Development Schedule: this condition examined the proposed development schedule of the two-phased project. Three analysis years were examined under this condition for potential localized air quality impacts:
  - 2025, the earliest year Phase 1 is assumed to be fully operational. When the projected construction schedule would result in construction activities in the southern portion of the project adjacent to Alessandro Boulevard and east of the existing residential areas along Merwin Street, and when all of Phase I operations would occur (approximately 57 percent of entire project floor space);
  - 2032, the year when the project emissions from both project construction and operation are at their highest combined levels for several pollutants; and when construction activities would occur adjacent to the existing residences along Gilman Springs Road (eastern portion of site); and
  - 2040[4] when the Phase 1 and Phase 2 of the project are fully operational.

Project Phase 1 (2018) represents an interim step during which Phase 1 of the project (approximately 57 percent of the total size of the project) is completely built out in 2018. This analysis simply looked at the situation of what would happen if Phase 1 of the project were built in its entirety with no reductions in motor vehicle emissions that would occur in the future as a result of emission control programs that have already been adopted. This assessment also provided consistency with the TIA and noise reports which examine the Project Phase 1 (2018) condition. The project impact results were compared to the existing air quality levels in 2018 and only consider the project's operational emissions and not construction emissions.

Project Phase 1 and 2 Full Build Out 2018 represents a worst-case scenario since the project could not be physically built out in its entirety in a single year and does not reflect the fact that the project would be developed over a time period of 16 years depending on market demands for warehouse space. This assumption also does not account for the fact that emissions from mobile sources, prior to mitigation, particularly from heavy duty diesel trucks are expected to decline significantly over time as emissions control technologies continue to improve. This assessment also provided consistency with the TIA and noise reports which examine the full Project Phase 1 and Phase 2 (2018) Build Out

---

[4] *In some circumstances, references are made to the year 2035. The year 2035 is the year the construction schedule assumes full completion of project construction. Assuming earlier construction years would result in a more conservative analysis because the use of less efficient construction equipment is assumed. However, detailed traffic volumes were provided by the project traffic consultant for the long-term planning year 2040. For purposes of this assessment, the project buildout year is referred to as year 2040 to remain consistent with the TIA.*

condition. The project impact results were compared to the existing air quality levels in 2018 and only consider the project's operational emissions and not construction emissions.

The Project Development condition represents the project development including the localized impacts during construction and operation over the time period of 2020 to 2040. These results were compared to the existing air quality levels in 2018.

4.3.3.4 Health Risk Assessment

A Health Risk Assessment (HRA) is a guide that helps to determine whether current or future exposures to a chemical or substance in the environment could affect the health of a population. In general, risk depends on the following factors:

- How much of a chemical is present in an environmental medium (e.g., air);
- How much contact (exposure) a person has with the contaminated environmental medium; and
- The inherent toxicity of the chemical.

The assessment of health impacts is a continuing evolution of science and regulation. Since December 2014, three major scientific and regulatory activities have come forward that will affect how such assessments are performed and what such impacts mean to society as described below.

On December 30, 2014, the ARB released its update to the Emissions Factor Model, EMFAC2014, which is used to estimate emissions from motor vehicles in California. The EFAC2014 model represents the ARB's current understanding of motor vehicle technologies and regulatory implementation of rules aimed at reducing air emissions from motor vehicles. Of significance in this regard are the new projections of air emissions from heavy duty diesel engines. Based on the results of the EMFAC2014 model, emissions of diesel particulate matter range from 50 to 80 percent lower than previously estimated using the previous version of the EMFAC model, EMFAC2011. Since heavy duty trucks constitute nearly all of the project's diesel PM emissions, the incorporation of the emission information from the EMFAC2014 model is important in estimating the amount of diesel PM and in assessing the project's health risk impacts resulting from these emissions

On January 27, 2015, the HEI, a joint private-government partnership, released a major peer-reviewed scientific report entitled *Effects of Lifetime Exposure to Inhaled New-Technology Diesel Exhaust in Rats* (McDonald et al, 2015). This is the first study to conduct a comprehensive evaluation of lifetime inhalation exposure to emissions from heavy-duty 2007-compliant engines (referred to as "new technology diesel exhaust," or NTDE). The study evaluated the long-term effects of multiple concentrations of inhaled NTDE, which has greatly reduced particle emissions compared with "traditional-technology diesel exhaust" (TDE) in male and female rats on more than 100 different biologic endpoints, including tumor development, and compared the results with biologic effects seen in earlier studies in rats after exposure to TDE. Lifetime inhalation exposure of rats exposed to one of three levels of NTDE from a 2007-compliant engine, for 16 hours per day, 5 days a week, with use of a strenuous operating cycle that more accurately reflected the real-world operation of a modern engine than cycles used in previous studies, did not induce tumors or pre-cancerous changes in the lung and did not increase tumors that were considered to be related to NTDE. The importance of this study is that diesel PM emissions from new technology diesel engines does not cause any increase in the risk of lung cancer or other significant adverse health effects in study animals that, in fact are more sensitive to toxics exposures than humans. While this study focused on heavy duty truck emissions, the new clean diesel technology has the potential for impacting all sectors, including passenger cars, agriculture, construction, maritime and transportation. Previous studies directed at studying the effects of diesel PM on health were based on exposure studies that date 15 to 20 years ago when diesel emissions were significantly higher than the NTDE. It is also important to highlight that the U.S. Environmental Protection Agency (EPA), the California Air Resources Board, the U.S. Department of Energy (DOE) and the U.S. Federal Highway Administration are sponsors and/or reviewers of this study in conjunction with the manufacturers of emissions control equipment.

On March 6, 2015, the OEHHA adopted a new guidance for estimating health risks from toxic air contaminants that incorporated the importance of early-in-life sensitivities of young children to exposures to toxics air contaminants and recommends a lifetime exposure duration of 30-years. Within the context of this assessment, this new assessment guidance is referred to as the "Current OEHHA Guidance". The new guidance updates earlier guidance recommended by OEHHA and SCAQMD referred to in this assessment as the "Former OEHHA Guidance", which was used in the Draft EIR. The "Former OEHHA Guidance" is based on a lifetime exposure of 70 years and does not incorporate early-in-life age sensitivity factors. The importance of the "Current OEHHA Guidance" is that the guidance produces much more conservative estimates of cancer risks from toxic air contaminant exposures than the "Former OEHHA Guidance".

The HRA has been conducted to allow decision makers to see the cancer-related impacts of the World Logistics Center project with the assumption that new technology diesel exhaust cause cancer, contrary to what was found by the HEI study. The following information summarizes the main assumptions utilized in preparation of the HRA. For more detailed discussion of assumptions and methodology, refer to Appendix A.

Traffic Volumes. The HRA used the construction and operational emission values as described above in the air quality study. Note that with respect to the operational emissions, since the project may change the traffic distribution in the region, net trips and associated net emissions on each project-impacted roadway segment was calculated using the difference between the trip rates for the 2018 (baseline year) with-project scenario and without-project scenario. The TIA studied three with-project and without-project scenarios, based on existing (year 2018), interim year 2025, and horizon year 2040; the HRA analysis is based on the 2018 traffic scenario because it has the highest certainty with regard to pre-project conditions than the 2025 and 2040 traffic scenarios (i.e., the pre-project traffic conditions for those future year traffic scenarios are speculative in nature). To be conservative, for segments that have net negative trips (i.e., where the project causes reduction in trip rates on some roadway segments due to traffic redistribution in the region), the HRA used a zero emission value instead of taking credit for the trip rate reductions.

Vehicle Speeds. In calculating the operational traffic emissions, the VMT per speed was based on daily speed data provided by the traffic consultant (WSP). Speed data accounts for variations in speed attributable to slow downs occurring during peak hours.

Organic Gas Emissions. The assessment of acute non-cancer hazards examined the impacts of the toxic components of the project's organic gas and PM emissions from construction equipment during project construction, and total organic gas and PM emissions from gasoline and diesel vehicles during project operation.

Calculated Cancer Population Burden. The health risk assessment included the computation of cancer population burden attributed to the project's diesel PM emissions.

Maximum Exposure Duration for Sensitive/Residential Receptors. The HRA used the SCAQMD recommended intake rate percentiles - RMP using the Derived Method, which applies to multi-pathway risk assessments in which two dominant exposure pathways use the high-end point-estimates of exposure. Furthermore, since cancer risk calculation is based on 30-year exposure duration, the HRA assumed exposure starts at the beginning of construction (Construction + Operation HRA). The revised HRA also analyzed the 30-year exposure scenario that assumed exposure starts at the beginning of full project operation (Operational HRA). The Operational HRA assumed that a receptor starts exposure at the beginning of the full project operational year of 2040 and exposure lasts for 30 years until 2069. The Operational HRA also conservatively used the 2040 emission rate for each of the 30 years of exposure.

Maximum Exposure Duration for Worker Receptors. The cancer risk impacts are presented in accordance with "Current OEHHA Guidance", which assumes an exposure duration of 25 years for worker receptors, which is based on labor statistics showing 95 percent of workers stay in the same job for 25 years or less.

School Receptors. The assessment of cancer risks at local school receptors was included based on "Current OEHHA Guidance".

The HRA methodology applied a risk characterization model to the results from an air dispersion model to estimate potential health risks at each sensitive receptor location. Because of the pervasive nature of diesel particulate matter (diesel PM) in contributing to estimated health risks in California, the focus of this assessment was on estimating the health risks from diesel PM. While the project activities may result in the emission of other TACs (e.g., Total Organic Gases (TOG) from diesel and gasoline-powered vehicles), diesel PM from the project was found to contribute approximately 98 percent of the total cancer risk from project operations (see the *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, Appendix A of the Revised FEIR). Reactive Organic Gases (ROG) and PM exhaust emissions from construction equipment and TOG and PM emissions from diesel and gasoline vehicles of project operation were, however, included in the assessment of acute non-cancer hazards.

The health risk calculation methodology in this HRA is consistent with *SCAQMD Health Risk Assessment Guidance* (SCAQMD, 2016) and the "Current OEHHA Guidance" set forth in the 2015 OEHHA *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*. The estimation of cancer risk involves the specification of several parameters including the concentration level of the toxic air contaminant (for purposes of this assessment diesel PM_{10} exhaust), the rate of inhalation of the toxic, the exposure frequency (number of days per year), the exposure duration in years, the time period over which the exposure takes place, what is termed a slope factor that represents an upper bound on the increased cancer risk from a lifetime exposure to a toxic by ingestion or inhalation and early-in-life age sensitivity factors. The values of these parameters depend on the type of receptor, i.e., sensitive/residential, worker, and student as discussed below.

Cancer Risk Exposure Assumptions. The principal focus of this HRA was on the potential health impacts to sensitive/residential receptors located within and surrounding the project site. Sensitive receptors include hospitals, schools, daycare facilities, elderly housing and convalescent facilities. Residences are also considered sensitive receptors. An important parameter necessary to estimate cancer risk is the duration of exposure of an individual to toxic air contaminants. An assessment of population mobility can assist in determining the length of time a residential receptor is exposed in a particular location. For example, the duration of exposure to a source of toxic air contaminants will be directly related to the period of time residents live near the source of the emissions.

Table 4.3-5 summarizes the primary exposure assumptions used in this HRA to calculate individual cancer risk by receptor type, which is based on the SCAQMD HRA Guidance and the "Current OEHHA Guidance".

The underlying factors used in the analysis exemplify the conservative nature of utilizing the exposure scenarios and the underlying assumptions:

- The residential cancer risk calculation assumed that each resident will be exposed to diesel particulate matter (diesel PM) and organic gases for 24 hours a day for 350 days a year at the location of his or her home throughout the entire 30-year residential exposure period.
- The worker and student cancer risk calculations assumed that workers or students are exposed to diesel PM for 8 hours a day, next to, but outside of the buildings in which they work or study.
- The atmospheric dispersion model and traffic model that were used to estimate risks generally provide impact estimates that are over-estimated based on the use of conservative model assumptions.

Table 4.3-5: Exposure Assumptions for Cancer Risk

Type of Guidance	**Receptor Type**	**Exposure Frequency**		**Exposure Duration (years)**	**Age Sensitivity Factors**	**Time at Home Factor (%)**	**Daily Breathing Rate (L/kg-day)**
		Hours/ day	**Days/ year**				
Current OEHHA Guidance	Sensitive/Residential:						
	3rd Trimester	24	350	0.25	10	85	361
	0-2 years	24	350	2	10	85	1090
	2-16 years	24	350	14	3	72	572
	Older than 16 years	24	350	14	1	73	261
	Student	8	180	9	3	NA	640
	Worker	8	250	25	1	NA	230

Time at home factor is 1 if there is a school receptor within the 1 in a million (or greater) cancer risk isopleth, which was the case for this project's unmitigated scenario for the Construction + Operation HRA.
(L/kg-day) = liters per kilogram body weight per day; NA = not applicable.
The daily breathing rates shown are RMP using the Derived Method for residential as recommended by the SCAQMD and the 95th percentile rate for other receptors as recommended by the OEHHA.
Source: OEHHA, 2015; SCAQMD, 2016.

Other Factors that Influence Health Risk Estimates: Conservative Trip Estimates. It should also be noted that the TIA used a conservative estimate of the number of truck trips after the project begins operation. The number of truck trips is important because diesel PM emissions are directly related to both the number of trucks and the vehicle miles traveled. As mentioned above, the TIA in the Revised Sections of the FEIR uses the traffic generation rate for high-cube warehouses from the 10th edition of the Institute of Traffic Engineers' (ITE) Trip Generation Manual which is based on the *High-Cube Warehouse Vehicle Trip Generation Analysis* prepared jointly by SCAQMD and National Association of Industrial and Office Properties (NAOIP).

Cancer Burden. Whereas cancer risk represents the probability that an individual will develop cancer, cancer burden multiplies the cancer risk by the exposed population to estimate the number of individuals that would be expected to contract cancer from the project. The exposed population is defined as the number of persons within a facility's zone of impact, which is typically the area exposed to an incremental cancer risk of one in a million from the project. Consistent with this definition, cancer burden was calculated by first identifying all population census tracts[5] located within the project's zone of impact, multiplying the estimated incremental project cancer risk impact in the census tract by the population of the census tract and then summing all of products of population times estimated cancer risk in the zone of impact. Note that each census tract contributes to the cancer burden in proportion to its population and risk. For example, if a census tract has a relatively high estimated cancer risk, but no people living there, it will not contribute to the estimation of the cancer burden. In accordance with "Current OEHHA Guidance", the cancer burden was calculated assuming a 30-year exposure duration along with the appropriate exposure frequency, daily breathing rates, age sensitivity factors, and time at home factors appropriate to each age group (OEHHA, 2015). A cancer burden greater than 0.5 is considered a significant cancer burden.

Non-cancer Hazards. Separate from cancer risk impacts, exposures to TACs such as diesel PM can also cause chronic (long-term) and acute (short-term) related non-cancer illnesses such as reproductive effects, respiratory effects, eye sensitivity, immune effects, kidney effects, blood effects, central nervous system, birth defects, or other adverse environmental effects. Risk characterization for non-cancer health risks from TACs is expressed as a HI. The HI is a ratio of the predicted concentration of a project's emissions to a concentration considered acceptable to public health professionals, termed the Reference Exposure Level (REL). This is a separate and distinct analysis from the analysis conducted for cancer risk. A significant risk is defined by the SCAQMD as an HI of 1 or greater. The California OEHHA has assigned a chronic non-cancer REL of 5 $\mu g/m^3$ for diesel PM (OEHHA, 2015). Diesel PM has effects on the respiratory system, which accounts for essentially all of its potential chronic non-cancer hazards. Therefore, the only HI calculated was for the respiratory system.

Exposures to TACs can also have short-term or acute non-cancer effects, typically dealing with exposures over an hour or so. OEHHA has not defined a REL for diesel PM appropriate for estimating acute non-cancer hazards from diesel PM. Therefore, to estimate the potential acute non-cancer impacts from the project, it was necessary to examine the various individual chemical components (or chemical species) that comprise the emissions from both diesel vehicles and gasoline vehicles. For this purpose, use was made of emission source profiles that provide estimates of the various chemical components that comprise the exhaust from diesel and gasoline vehicles. From this information, an estimate was made of the maximum one-hour average concentration levels of the project's various chemical species from which an acute non-cancer HI can be determined.

Morbidity and Mortality. Respirable particulate matter is a public health concern as it is known to impact both the respiratory and cardiovascular systems. Respirable particulate matter deposition in the lungs and penetration into the bloodstream (for the smallest particles) triggers a range of inflammation responses and exacerbates health problems such as asthma and chronic bronchitis. Individuals susceptible to higher health risks from exposure to airborne particulate matter (PM_{10} and $PM_{2.5}$) include children, the elderly, smokers, and people of all ages with low pulmonary/ cardiovascular function. The CARB reviewed and summarized the toxic health effects (i.e., mortality and morbidity) of PM exposure and presented a health effect model attempting to quantify these impacts based on concentration-response functions (C-R functions) (CARB, 2008a). This CARB

---

[5] A census tract is a geographic region defined for the purpose of taking a census. Usually these regions coincide with the limits of cities, towns, or other administrative areas. Each tract has a unique numeric code and averages about 4,000 inhabitants. The census tract centroid is the geographic center of the tract based on a weighted distribution of the population within the tract using the census blocks that comprise the tract. A census block is the smallest geographic unit used to tabulate population and each tract can be comprised of several blocks.

model has been used, for example, to estimate the number of cases of disease and premature deaths linked to PM and ozone exposure from ports and goods movement in California.

The CARB model has also been used to quantitatively assess project-specific incremental levels of public mortality and morbidity, however, such calculations are subject to significant uncertainty. Sources of uncertainty include emission estimates, population exposure estimates, concentration-response functions, baseline rates of mortality and morbidity that are entered into C-R functions, and occurrence of additional not-quantified adverse health effects. It should be noted that the nature of PM as a complex mixture of various pollutants, as well as the confounding health effects of pollutants such as sulfur dioxide, NO_2, CO, and O_3 that tend to co-occur with PM in ambient air, greatly increase the complexity of deriving accurate PM concentration-response functions. Health risk estimates derived in the presence of significant uncertainty tend to rely on very conservative assumptions that may greatly overestimate the potential adverse health effects. Risk assessment has various uncertainties in the methodology and is therefore deliberately designed so that risks are not under predicted. For estimates mortality and morbidity impacts, the following C-R function is used:

$$\Delta Y = -Y_O [\exp(-\beta * \Delta PM) - 1] * \text{population}$$

Where:

- ΔY: changes in the incidence of a health risk endpoint (in this case changes in mortality or morbidity) corresponding to a particular change in DPM.
- Y_O: baseline occurrence of the health risk endpoint rate per person for the South Coast Air Basin.
- β: the coefficient based on the relative risk that is associated with a particular concentration and varies from one study to another.
- ΔPM: change in DPM concentration estimated by the project's air dispersion modelling ($\mu g/m^3$).
- Population = population of the impacted census tracts and population subgroup exposed to the change in DPM.

To use a C-R function from an epidemiological study to estimate changes in the incidence of a health endpoint corresponding to a particular change in PM in a location, it is important to use appropriate values of parameters for the C-R function, which are the measure of PM, the type of population, and the characterization of the health endpoint should be the same as or as close as possible to those used in the study that estimated the C-R function.

The form of the C-R function was used to predict the effect of changes in ambient PM concentrations on health effects such as premature deaths, cardiac and respiratory hospitalizations, asthma and other lower respiratory symptoms, etc. The parametric values for the variables Y_O and β are provided in Table 4.3-6 along with the averaging time for the estimate of the health risk endpoint.

Table 4.3-6: Parameter Values

Health Risk Endpoint	Averaging Time	Affected Population	Baseline Occurrence (Y_O)	Relative Incidence (β)	Health Risk Endpoint
Long Term Mortality	Annual	Ages 30 years and older	0.001768	0.005827	Long Term Mortality
Chronic Illness: Chronic Bronchitis	Annual	Ages 27 years and older	0.00378	0.0132	Chronic Illness: Chronic Bronchitis

Table 4.3-6: Parameter Values

Health Risk Endpoint	Averaging Time	Affected Population	Baseline Occurrence (Y_O)	Relative Incidence (β)	Health Risk Endpoint
Hospitalization: Chronic Obstruction Pulmonary Disease	Daily	Ages 65 years and older	0.0000259	0.00288	Hospitalization: Chronic Obstruction Pulmonary Disease
Hospitalization: Pneumonia	Daily	Ages 65 years and older	0.0000516	0.00207	Hospitalization: Pneumonia
Hospitalization: Cardiovascular	Daily	Ages 65 years and older	0.000158	0.00119	Hospitalization: Cardiovascular
Hospitalization: Asthma	Daily	Ages 0 to 64 years old	0.00000263	0.00205	Hospitalization: Asthma
Emergency Room Visits for Asthma	Daily	Ages 0 to 64 years old	0.00000448	0.00367	Emergency Room Visits for Asthma

Source: CARB, 2002.

The basic procedure for determining exposures is based on the methods published by the CARB in its development of the technical support to consider amendments to the ambient air quality standards for particulate matter and sulfates (CARB, 2002). Within this assessment, the following information is required to make the relevant health risk endpoint estimates in addition to the C-R function shown in the above equation and the parametric information shown in Table 4.3-6:

- Air pollutant concentrations (represented as the incremental diesel PM impacts from the population affected.)

The incremental air pollutant concentrations of DPM resulting from the project were determined using the USEPA AERMOD air dispersion model and associated emission estimates of DPM. The dispersion model predicted annual estimates of DPM at locations surrounding the project corresponding to the location of population census tracts from the US Census Bureau. To provide estimates of 24-hour DPM, the annual average DPM concentration values calculated by the air dispersion model were multiplied by a factor of 6 which corresponds to the ratio of 24-hour average to annual average air concentrations recommended by the California Office of Environmental Health Hazard Assessment (OEHHA, 2015). The breakdown of the total population by age group for use in the concentration-response functions was accomplished using the 2010 US Census for California age breakdown as shown in Table 4.3-7. This population breakdown was assumed to apply to all census tract receptors to determine the affected population in each census tract.

Table 4.3-7: California Age Breakdown in 2010

Age	Percent of Total Population
<5	7.3%
5-9	8.0%
10-14	7.6%
15-19	7.2%
20-24	7.0%
25-34	15.5%
35-44	16.2%
45-54	12.8%

Table 4.3-7: California Age Breakdown in 2010

Age	Percent of Total Population
55 to 59	4.3%
60 to 64	3.4%
65-74	5.6%
75-84	3.8%
>=85	1.6%

Source: USCB, 2014.

Despite a number of uncertainties in the analysis methodology, the expected increase in mortality and morbidity was calculated for the project's toxic air emissions.

Geographic Scope of the Health Risk Assessment. The HRA is characterized by two important differences from the localized significance threshold assessment for criteria pollutants. According to the SCAQMD localized significance threshold assessment methodology, the assessment of localized impacts addresses only those emissions that are generated "onsite", that is for the purposes of this project, emissions generated from within or along the boundaries of the Specific Plan. However, for the HRA, both the universe of the project's emission sources and air dispersion model receptors were expanded to assess the off-site impact of the project's emissions of toxics. Besides onsite emission sources and receptors, the HRA included a receptor grid that extends up to 5 kilometers (km) from the project boundary and the roadway network that extends 10 km from the project boundary (e.g., including 18 miles on SR-60. This study area reasonably captured the most extensive emissions from project-generated vehicles on the roadway network, since all trips to and from the project would travel on the roadway segments and freeway segments (SR-60) nearest the project site regardless of origin or destination. Since project activity is highest onsite, the project's emissions and associated health impact decreases with distance from the project site. Thus, the selected study area was capable of capturing the project's maximum impact. If the maximum risk from the study area is less than significant, project health risk impacts will be less than significant for receptors further away.

The generation of emissions from traffic traveling along the various arterial and freeway mainline roadway segments requires information on traffic volumes, length of segment, and emission factors. The emission factors, in turn, depend on vehicle type, speed, calendar year, and fuel type. Estimates of peak hour vehicle volumes and types (passenger cars, light heavy duty trucks, medium heavy duty trucks, and heavy-heavy duty trucks) were provided by the traffic consultant for each roadway segment analyzed. The TIA also provided daily vehicle volumes for freeway segments, but not for non-freeway segments. For use in the cancer risk and chronic non-cancer hazard calculations, the daily vehicle volumes for non-freeway segments were assumed to be 10 times that of the peak hour vehicle volumes. The physical length and width of each roadway segment were estimated using the segment location as provided by the traffic consultant and aerial photographs available from Google Earth. Vehicle speeds for each roadway segment and vehicle type were based on the speed groups provided by the traffic consultant.

The health risk analysis examined the following condition:

- Project Development condition which examined the effect of project-related construction and operational traffic diesel PM emissions as if the project were built out in accordance with its proposed phased construction and operational buildout schedule commencing with the construction of Phase 1 in 2020 and the final full build out in 2035.[6] This condition forms the basis for quantifying the incremental impacts from the project.

Annual average diesel PM emissions and impacts were calculated for each year starting from 2020 based on the assumption that diesel exhaust can cause cancer. Specifically, annual average diesel PM concentrations were estimated from the diesel PM construction emissions for each year of construction from 2020 to 2035 according to the construction schedule and equipment usage projected for each year of construction. Project Development examines project impacts resulting from the proposed construction and operation of the project from the commencement of construction in 2020 for a 30-year duration for sensitive/residential receptors, 25-year for worker receptors, and 9-year exposure time periods for school-site student receptors. Annual average diesel PM emissions and impacts during operation were estimated for the Phase 1 build out year and the final full build out year, years for which detailed traffic information was available from the TIA. The annual average operational diesel PM impacts were then interpolated among operational years between 2020 and 2035.

During years when both construction and operations occur simultaneously (2021 to 2035), the annual diesel PM concentrations at the sensitive receptors from construction were added to the annual diesel PM concentrations from operations to provide a total impact assessment of all diesel PM emissions from the project during each year. The resulting total annual average diesel PM concentrations calculated each year for the exposure time period (individual annual averages) multiplied by the requisite daily breathing rates, age sensitivity factors, and time-at-home factors for each year of exposure. The HRA assumed that a fetus in the 3rd trimester (within the mother’s womb) commences its lifetime exposure with exposure starting in year 2020 (construction start year) for construction + operation and in year 2040 for full operational. The HRA is being provided to allow decision makers to see the cancer-related impacts of the World Logistics Center project in the assumption that new technology diesel exhaust cause cancer, contrary to what was found by the HEI study. The mitigation conditions require that all diesel trucks accessing the project during operation be model year 2010 or newer and that all on-site equipment be Tier 4.

4.3.4 THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the *CEQA Guidelines*, air quality impacts would occur if the World Logistics Center project would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Violate any air quality standard or contribute substantially to an existing or projected air quality violation;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors); and/or
- Expose sensitive receptors to substantial pollutant concentrations.

---

[6] In some circumstances, references are made to the year 2035. The year 2035 is the year the conservative construction schedule assumes full completion of project construction. However, detailed traffic volumes were provided by the project traffic consultant for the long-term planning year 2040. Similar to the Phase 1 buildout year, and for purposes of this assessment, the project buildout year is referred to as year 2040 to remain consistent with the TIA.

In addition to the Federal and State AAQS, there are daily emissions thresholds for construction and operation of a project in the Basin. The Basin is administered by the SCAQMD, and guidelines and emissions thresholds established by the SCAQMD in its *CEQA Air Quality Handbook* (SCAQMD, 1993) and subsequent additions to the Handbook were used in this analysis. It should be noted that the emissions thresholds were established based on the attainment status of the air basin with regard to air quality standards for specific criteria pollutants. Because the concentration standards were set at a level that protects public health with an adequate margin of safety, these emissions thresholds are regarded as conservative and would overstate an individual project's contribution related to air quality and health risks.

4.3.4.1 Thresholds for Construction Emissions

The following CEQA significance thresholds for regional construction emissions have been established by the SCAQMD for the Basin:

- 75 pounds per day of VOC, also known as reactive organic compounds (ROC).
- 100 pounds per day of NO_X.
- 550 pounds per day of CO.
- 150 pounds per day of PM_{10}.
- 150 pounds per day of SO_X.
- 55 pounds per day of $PM_{2.5}$.

Projects in the Basin with construction-related emissions that exceed any of the emission thresholds are considered to be significant under CEQA.

4.3.4.2 Thresholds for Operational Emissions

Projects with regional operation-related emissions that exceed any of the regional emission thresholds listed below are considered significant under the SCAQMD guidelines.

- 55 pounds per day of VOC, also known as ROC.
- 55 pounds per day of NO_X.
- 550 pounds per day of CO.
- 150 pounds per day of PM_{10}.
- 150 pounds per day of SO_X.
- 55 pounds per day of $PM_{2.5}$.

4.3.4.3 Air Pollutant Standards for CO with Localized Effects

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and Federal CO standards (previously referenced Table 4.3-1). If ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a State or Federal standard, project emissions are considered significant if they increase one-hour CO concentrations by 1.0 ppm or more or eight-hour CO concentrations by 0.45 ppm or more. The Basin meets State and Federal attainment standards for CO; therefore, the project would have a significant CO impact if project emissions result in an exceedance of State or Federal one-hour or eight-hour standard. The following emission concentration standards for CO, based on the SCAQMD *CEQA Air Quality Handbook* (1993), apply to the project:

- California State one-hour CO standard of 20.0 ppm.
- California State eight-hour CO standard of 9.0 ppm.

4.3.4.4 Localized Significance Thresholds

The SCAQMD published its *Final Localized Significance Threshold Methodology* in June 2003 (SCAQMD, 2003), revised July 2008 and *Final Methodology to Calculate Particulate Matter (PM) 2.5 and PM$_{2.5}$ Significance Thresholds* (SCAQMD, 2006), recommending that all air quality analyses include a localized assessment of both construction and operational impacts on the air quality of nearby sensitive receptors. LSTs represent the maximum emissions from a project site that are not expected to result in an exceedance of Federal or State AAQS. LSTs are based on the ambient concentrations of that pollutant within the Source Receptor Area (SRA) where a project is located and the distance to the nearest sensitive receptor. The project site is located in the northern portions of SRAs 24 (Moreno Valley) and 28 (San Jacinto).

In the case of CO and NO$_2$, if ambient levels are below the air standards for these pollutants, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a State or Federal standard, then project emissions are considered significant if they increase ambient concentrations by a measurable amount. This would apply to PM$_{10}$ and PM$_{2.5}$, both of which are nonattainment pollutants in the Basin. For these latter two pollutants, the significance criteria are the pollutant concentration thresholds presented in SCAQMD Rules 403 and 1301. The Rule 403 threshold of 10.4 $\mu g/m^3$ applies to construction emissions (and may apply to operational emissions at aggregate handling facilities). The Rule 1301 threshold of 2.5 $\mu g/m^3$ applies to non-aggregate handling operational activities.

Sensitive receptors include residences, schools, hospitals, and similar uses that are sensitive to adverse air quality. There are currently six occupied single-family homes and associated ranch/farm buildings in various locations on the World Logistics Center project site. These residences are existing on-site sensitive receptors. The nearest off-site existing sensitive receptors in the vicinity of the project site are the residences located along Bay Avenue, Merwin Street, and west of Redlands Boulevard, and scattered residences along Gilman Springs Road.

Following the SCAQMD LST methodology, for sites larger than 5 acres, air dispersion modeling needs to be conducted. Because the project site greatly exceeds 5 acres, the localized significance for project air pollutant emissions was determined by performing dispersion modeling to determine if the pollutant concentrations would exceed relevant significance thresholds established by the SCAQMD.

The following LSTs were applied to the construction and operation of the project:

- 0.18 ppm (State 1-hour); 0.100 ppm (Federal 1-hour); and 0.03 ppm (Annual) of NO$_2$ for construction or operations.
- 20 ppm (1-hour) and 9.0 ppm (8-hour) of CO for construction or operation.
- 10.4 $\mu g/m^3$ (24-hour) and 1 $\mu g/m^3$ of PM$_{10}$ (Annual) for construction.
- 2.5 $\mu g/m^3$ (24-hour) and 1.0 ppm (Annual) of PM$_{10}$ for operations.

- 10.4 µg/m^3 (24-hour) of $PM_{2.5}$ for construction.
- 2.5 µg/m^3 (24-hour) of $PM_{2.5}$ for operation.

Note that when construction and operational activities occur at the same time, the SCAQMD recommends application of the significance thresholds for operation apply in determining emission significance

4.3.4.5 Health Risk Significance Thresholds

For pollutants without defined significance standards or air contaminants not covered by the standard criteria cited above, the definition of substantial pollutant concentrations varies. For toxic air contaminants (TAC), "substantial" is taken to mean that the individual cancer risk exceeds a threshold considered to be a prudent risk management level.

The SCAQMD has defined several health risk significance thresholds that it recommends to Lead Agencies in assessing a project's health risk impacts. The City of Moreno Valley has not adopted its own set of thresholds. Therefore, the following SCAQMD thresholds were adopted for the project.

- **Maximum Individual Cancer Risk (MICR)and Cancer Burden.** MICR is the estimated increase in lifetime probability of the maximally exposed individual contracting cancer as a result of exposure to TACs over the applicable exposure period. Cancer burden multiples the cancer risk by the exposed population to estimate the number of individuals that would be expected to contract cancer from the project.

  A significant impact would occur for:

  (A) An increased MICR greater than 10 in 1 million at any receptor location; or

  (B) A cancer burden greater than 0.5

- **Chronic Hazard Index (HI).** This is the ratio of the estimated long-term level of exposure to a TAC for a potential maximally exposed individual to its chronic reference exposure level. A reference exposure level is the exposure level below which an adverse health effect will not occur as determined by health professionals The chronic HI calculations include multi-pathway consideration, when applicable.

  A significant impact would occur if the increase in total chronic HI for any target organ system due to exposure to total TAC emissions from the project exceeds 1.0 at any receptor location.

- **Acute Hazard Index (HI).** This is the ratio of the estimated maximum one-hour concentration of a TAC for a potential maximally exposed individual to its acute reference exposure level, the exposure level below which an adverse health effect will not occur as determined by health professionals (see Section 4.3.2.3).

  A significant impact would occur if the increase in total acute HI for any target organ system due to exposure to total TAC emissions from the project exceeds 1.0 at any receptor location.

4.3.5 LESS THAN SIGNIFICANT IMPACTS

The following impact was determined to be less than significant (therefore, no mitigation would be required) or adherence to established regulations, standards, and policies would reduce potential impacts to a less than significant level.

4.3.5.1 Long-Term Microscale (CO Hot Spot) Emissions

Impact 4.3.5.1: The World Logistics Center project would not violate any air quality standard or contribute substantially to an existing or projected air quality violation for CO.

Threshold	Would the proposed project violate any air quality standard or contribute substantially to an existing or projected air quality violation?
	For CO, the applicable thresholds are:
	- California State one-hour CO standard of 20.0 ppm; and
	- California State eight-hour CO standard of 9.0 ppm.

Vehicular trips associated with the development of the World Logistics Center project could contribute to congestion at intersections and along roadway segments in the project vicinity resulting in potential local CO “hot spot” impacts. The primary mobile source pollutant of local concern is CO, which is a direct function of vehicle travel speeds and idling time and, thus, traffic flow conditions. CO transport is extremely limited; it disperses rapidly with distance from the source under normal meteorological conditions. However, under certain extreme meteorological conditions, CO concentrations proximate to a congested roadway or intersection may reach unhealthful levels affecting local sensitive receptors (residents, schoolchildren, etc.). High CO concentrations are typically associated with roadways or intersections operating at unacceptable levels of service or with very high traffic volumes. In areas with high ambient background CO concentrations, modeling is recommended to determine a project’s effect on local CO levels.

Carbon monoxide (CO) “hot spot” thresholds ensure that emissions of CO associated with traffic impacts from a project in combination with CO emissions from existing and forecast regional traffic do not exceed State or Federal standards for CO at any traffic intersection affected by the project. Project concentrations may be considered significant if a CO hot spot intersection analysis determines that project-generated CO concentrations cause a localized violation of the State CO 1-hour standard of 20 ppm, State CO 8-hour standard of 9 ppm, Federal CO 1-hour standard of 35 ppm, or Federal CO 8-hour standard of 9 ppm.

A CO hot spot is a localized concentration of CO that is above the State or Federal 1-hour or 8-hour CO ambient air standards. Localized high levels of CO are associated with traffic congestion and idling or slow-moving vehicles. To provide a worst-case scenario, CO concentrations are estimated at project-impacted intersections where the concentrations would be the greatest.

This analysis follows guidelines recommended by the CO Protocol (University of California, Davis, 1997) and the SCAQMD. According to the CO Protocol, intersections with Level of Service (LOS) E or F require detailed analysis. In addition, intersections that operate under LOS D conditions in areas that experience meteorological conditions favorable to CO accumulation require a detailed analysis. The LOS for intersections is determined in the TIA (refer to Section 4.15 of this Revised FEIR, Traffic and Circulation). The SCAQMD recommends that a local CO hot spot analysis be conducted if the intersection meets one of the following criteria: (1) the intersection is at LOS D or worse and where the project increases the volume to capacity ratio by 2 percent, or (2) the project decreases LOS at an intersection from C to D. A decrease in LOS, i.e., from C to D, means that there is more traffic and more delay at the intersection.

For this project analysis, the intersections with the highest traffic volumes and the LOS E or F before mitigation were identified for 2025 using information from the table in the TIA "Intersection LOS under 2025 Plus Phase 1 Conditions." The intersections with the greatest LOS before mitigation were also identified for 2040 using information from the table in the TIA "Intersection LOS under 2040 Plus Build-out Conditions."

The CO concentrations were estimated using the CALINE4 model using 2025 and 2040 emission factors. The emission factors are for "all" vehicle classes and are not adjusted for a project-specific fleet to provide a worst-case scenario. In addition, the emission factors do not take into account the project mitigation reductions from requiring that all diesel trucks are model year 2010 or newer.

Table 4.3-8 shows estimated CO concentrations at year 2025 plus project traffic conditions. The estimated CO concentrations at year 2040 are shown in Table 4.3-9. As shown in the tables, the estimated 1-hour and 8-hour average CO concentrations from project-generated and cumulative traffic plus the background concentrations are below the State and Federal standards. No CO hot spots are anticipated because of traffic-generated emissions by the project in combination with other anticipated development in the area. Therefore, the mobile emissions of CO from the project are not anticipated to contribute substantially to an existing or projected air quality violation of CO. Therefore, according to this criterion, air pollutant emissions during operation would result in a less than significant impact. No mitigation is required.

Table 4.3-8: Carbon Monoxide Concentrations at Intersections, 2025

Intersection	Peak Hour	CO Concentration (ppm)		Significant Impact?
		1 Hour	8 Hour	
Alessandro Boulevard and Chicago Avenue	PM	5.2	3.5	No
Alessandro Boulevard and Canyon Crest Drive	PM	4.8	3.2	No
Alessandro Boulevard and Mission Grove Parkway	PM	4.3	2.9	No
Arlington Avenue and Victoria Avenue	PM	4.3	2.9	No
Alessandro Boulevard and Sycamore Canyon Boulevard	AM	4.3	2.9	No

- ppm = parts per million
- A significant impact would occur if the estimated CO concentration is over the 1-hour State standard of 20 ppm or the 8-hour State/Federal standard of 9 ppm.

4.3.6 SIGNIFICANT IMPACTS

The following impacts were determined to be potentially significant. In each of the following issues, mitigation measures have been recommended to reduce the significance of the identified impacts.

4.3.6.1 Air Quality Plan Management Plan Consistency

Impact 4.3.6.1: *Implementation of the World Logistics Center project has the potential to conflict with implementation of the SCAQMD 2012 AQMP.*

Threshold	Would the proposed project conflict with or obstruct implementation of the applicable air quality plan?

According to the 1993 SCAQMD Handbook, there are two key indicators of consistency with the Air Quality Management Plan (AQMP):

1. Indicator: Whether the project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.
2. Indicator: A project would conflict with the AQMP if it would exceed the assumptions in the AQMP in 2012 or increments based on the year of project buildout and phase. The Handbook indicates that key assumptions to use in this analysis are population number and location and a regional housing needs assessment. The parcel-based land use and growth assumptions and inputs used in the Regional Transportation Model run by the Southern California Association of Governments that generated the mobile inventory used by the SCAQMD for AQMP are not available and assumed not to include the project; therefore, the SCAQMD's significance thresholds are used to determine if the project exceeds the assumptions in the AQMP.

Considering the recommended criteria in the SCAQMD's 1993 Handbook, this analysis utilizes the following criteria to address this potential impact:

- Project's contribution to air quality violations (SCAQMD's first indicator, 1 as listed above);
- Assumptions in AQMP (SCAQMD's second indicator, 2, as listed above); and
- Compliance with applicable emission control measures in the AQMPs.

Project's Contribution to Air Quality Violations and Assumptions in AQMP. According to the SCAQMD, the project is consistent with the AQMP if the project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the

AQMP (SCAQMD, 1993, page 12-3). As shown in analyses in Impacts 4.3.6.2, 4.3.6.3, and 4.3.6.4, the project could violate an air quality standard and therefore could contribute substantially to an existing or projected air quality violation.

If a project's emissions exceed the SCAQMD regional thresholds for NO_X, VOC, PM_{10}, or $PM_{2.5}$, it follows that the emissions could cumulatively contribute to an exceedance of a pollutant for which the Basin is in nonattainment (ozone, PM_{10}, and $PM_{2.5}$) at a monitoring station in the Basin. The thresholds are criteria for determining environmental significance and are discussed in the SCAQMD's 1993 Handbook for Air Quality Analysis. An exceedance of a nonattainment pollutant at a monitoring station would not be consistent with the goals of the AQMP—to achieve attainment of pollutants. As discussed in the analyses below (Impact 4.3.6.2, Construction Emissions, and Impact 4.3.6.4, Long-Term Operational Emissions), the project would exceed the regional emission significance thresholds for VOC, NO_X, CO, PM_{10}, and/or $PM_{2.5}$ prior to the application of mitigation. This means that project emissions could combine with other sources and could result in an ozone, PM_{10}, or $PM_{2.5}$ exceedance at a nearby monitoring station. The Basin in which the project is located is in nonattainment for these pollutants; therefore, according to this criterion, the project would not be consistent with the AQMP. The regional emissions assume a zero baseline for existing emissions on the project site and therefore assumes that the AQMP had no emissions for the project site. The regional significance thresholds can be interpreted to mean that if project emissions exceed the thresholds, then the project would also not be consistent with the assumptions in the AQMP. Therefore, based on this criterion, the project could contribute to air quality violations and would not be consistent with the AQMP.

Compliance with Emission Control Measures. The second indicator of whether the project could conflict with or obstruct implementation of the AQMP is by assessing the project's compliance with the control measures in the AQMPs and the State Implementation Plan (SIP).

2012 AQMP. The project would comply with all applicable rules and regulations enacted as part of the AQMP. In addition, the AQMP relies upon the SCAG regional transportation strategy, which is in its adopted 2012–2035 RTP/SCS and 2011 FTIP. Included in the RTP/SCS are transportation control measures including active transportation (non-motorized transportation, e.g., biking and walking); transportation demand management; transportation system management; transit; passenger and high-speed rail; goods movement; aviation and airport ground access; highways; arterials; and operations and maintenance.

2016 AQMP. As stated previously, the SCAQMD recently approved on March 3, 2017 the Final 2016 AQMP. Currently, the 2016 AQMP is being reviewed by the U.S. EPA and CARB. Until the approval of the EPA and CARB, the current regional air quality plan is the Final 2012 AQMP adopted by the SCAQMD on December 7, 2012. Therefore, consistency analysis with the 2016 AQMP has not been included. Nonetheless, the project would comply with all applicable rules and regulations enacted as part of the 2016 AQMP, including transportation control measures from the 2016 RTP/SCS.

State Implementation Plans. Geographical areas in the State that exceed the Federal air quality standards are called nonattainment areas. The project area is in nonattainment for ozone, PM_{10}, and $PM_{2.5}$. SIPs show how each area will attain the Federal standards. To do this, the SIPs identify the amount of pollutant emissions that must be reduced in each area to meet the standard and the emission controls needed to reduce the necessary emissions. On September 27, 2007, the CARB adopted its State Strategy for the 2007 SIP. In 2009, the SIP was revised to account for emissions reductions from regulations adopted in 2007 and 2008 and clarifies CARB's legal commitment. Additional recent revisions to the SIP are as follows:

- In 2008, the EPA revised the lead[7] national ambient air quality standard by reducing it to 0.15 $\mu g/m^3$. On December 31, 2010, the Los Angeles County portion of the Basin was designated as nonattainment for the 2008 lead national standard as a result of exceedances measured near a large lead-acid battery recycling facility. The 2012 Lead SIP for Los Angeles County was prepared by the SCAQMD and addresses the recent revision to the lead national standard, and outlines the strategy and pollution control activities that demonstrate attainment of the lead national standard before December 31, 2015. The 2012 Lead SIP was approved May 4, 2012.
- A SIP revision for the federal nitrogen dioxide standard was prepared in 2012, to address the new 1-hour federal ambient air quality standard for nitrogen dioxide.
- The proposed California Infrastructure SIP revision was considered by the CARB on January 23, 2014. The proposed Infrastructure SIP revision is administrative in nature and covers the National Ambient Air Quality Standards (federal standards) for ozone (1997 and 2008), fine particulate matter ($PM_{2.5}$; 1997, 2006, and 2012), lead (2008), nitrogen dioxide (2010), and sulfur dioxide (2010). The proposed revision describes the infrastructure (authorities, resources, and programs) California has in place to implement, maintain, and enforce these federal standards. It does not contain any proposals for emission control measures.

The SIP takes into account CARB rules and regulations. The project will comply with applicable rules and regulations as identified in the AQMPs and SIPs and therefore, complies with this criterion.

Summary. Although the project would be consistent with the policies, rules, and regulations in the AQMPs and SIPs, the project must meet all the criteria listed above to be consistent with the AQMPs. The project could impede AQMP attainment because its construction and operation emissions exceed the SCAQMD regional significance thresholds, so the project is considered to be inconsistent with the AQMP.

Mitigation Measures. Applicable SCAQMD regulatory requirements are restated in the mitigation measures identified below in Section 4.3.6.2 and 4.3.6.3. These measures shall be incorporated in all project plans, specifications, and contract documents. **Mitigation Measures 4.3.6.2A, 4.3.6.2B, 4.3.6.2C, 4.3.6.2D, 4.3.6.3A, 4.3.6.3B, 4.3.6.3C, 4.3.6.3D,** and **4.3.6.4A** are required.

Level of Significance After Mitigation. Implementation of the World Logistics Center project would exceed applicable thresholds for all criteria pollutants, with the exception of SO_X, as noted below. Despite the implementation of mitigation measures, emissions associated with the project cannot be reduced below the applicable thresholds. Construction and operational emissions would be reduced to the extent feasible through implementation of mitigation measures listed above and described below. Construction emissions would be reduced through implementation of mitigation measures that require the use of Tier 4 construction equipment, reduced idling time, use of non-diesel equipment where feasible, low-VOC paints and cleaning solvents, and dust suppression measures. Operational emissions would be reduced through implementation of mitigation measures that require reduced vehicle idling, use of non-diesel on-site equipment, meeting or exceeding 2010 engine emission standards for all diesel trucks entering the site, electric vehicle charging stations, and prohibition of refrigerated warehouses. In the absence of further feasible mitigation to reduce the project's emission

---

[7] Lead referred to here is a chemical element; a heavy metal.

of criteria pollutants to below SCAQMD thresholds, potential air quality impacts resulting from exhaust from construction equipment will remain significant and unavoidable.

4.3.6.2 Regional Construction Emissions

Impact 4.3.6.2: *Construction of the World Logistics Center project has the potential to exceed applicable daily thresholds that may affect sensitive receptors.*

Threshold	Would the proposed project violate any AAQS or contribute to an existing or projected air quality violation; or expose sensitive receptors to pollutants?
	For construction operations, the applicable daily thresholds are:
	- 75 pounds per day of ROC/VOC;
	- 100 pounds per day of NO_X;
	- 550 pounds per day of CO;
	- 150 pounds per day of PM_{10};
	- 150 pounds per day of SO_X; and
	- 55 pounds per day of $PM_{2.5}$.

Grading and other construction activities produce combustion emissions from various sources such as site grading, utility engines, on-site heavy-duty construction vehicles, equipment hauling materials to and from the site, asphalt paving, and motor vehicles transporting the construction crew. Exhaust emissions during these construction activities will vary daily as construction activity levels change. The use of construction equipment on site would result in localized exhaust emissions. Activity during peak grading days typically generates a greater amount of air pollutants than other project construction activities.

While the actual details of the future construction schedule are not known, it is expected that project construction would occur in two phases with seven discrete activities in Phase 1 and eight discrete activities in Phase 2. For Phase 1, the following activities are assumed to occur over the course of seven years in the analysis: 1) rough grading, which includes mass site grading; 2) finish grading; 3) building construction; 4) infrastructure construction which includes utility installation; 5) curb, gutter, sidewalk, subgrade preparation, drop rock, and paving activities; 6) asphalt paving; and 7) landscaping. For Phase 2, the same activities are assumed to occur over the course of nine years in the analysis, and includes interchange construction as the eighth activity. Within the "building construction" phase, it is assumed that there would also be subphases of concrete pouring, installation of wet utilities, electrical installation, and landscaping. Appendix A of this Revised Sections of the FEIR includes details of the emission factors and other assumptions.

Table 4.3-10 identifies projected emissions resulting from grading and construction activities for the World Logistics Center project and shows the estimated maximum daily construction emissions over the course of project construction prior to the application of mitigation.

SCAQMD Threshold	**75**	**100**	**550**	**NA**	**NA**	**150**	**NA**	**NA**	**55**
Exceeds Threshold?	**Yes**	**Yes**	**Yes**	**NA**	**NA**	**Yes**	**NA**	**NA**	**Yes**

- Sulfur oxide (SOx) emissions are contained in the CalEEMod output; the maximum emissions would be 2 pounds per day, substantially under the threshold of 150 pounds per day.
- Dust plus exhaust emissions may not add up to total emissions for both PM10 and PM2.5 because the numbers included in this table are the maximum emissions between winter and summer model outputs for each of the three categories.
- The emissions assume all construction activities (mass grading, fine grading, building, utilities, curbing, landscaping, painting, paving, and/or interchange) occur on the same day, depending on the year in which the activity occurs.
- Emissions assume compliance with SCAQMD Rule 403.

VOC = volatile organic compounds NO_X = nitrogen oxides CO = carbon monoxide PM_{10} and $PM_{2.5}$ = particulate matter
NA = not applicable as there is no separate threshold for dust/exhaust
Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018.

The construction emissions estimates summarized in Table 4.3-10 are based on the assumed construction scenario described in Appendix A, of this Revised Sections of the FEIR. Using emission factors from the CalEEMod model, Table 4.3-10 indicates that construction emissions of criteria pollutants would exceed the SCAQMD daily emission thresholds for all criteria pollutants (VOC, NOx, CO, PM_{10}, and $PM_{2.5}$), with the exception of SO_X.[8] This is a significant impact requiring mitigation.

Fugitive dust emissions are generally associated with land clearing and exposure of soils to the air and wind, and cut-and-fill grading operations. Dust generated during construction varies substantially by project, depending on the level of activity, the specific operations and equipment, local soils, and weather conditions at the time of construction. The World Logistics Center project will be required to comply with SCAQMD Rules 402 and 403 to control fugitive dust. There are a number of feasible

---

[8] The project would emit SO_X from construction equipment exhaust; however, the maximum emissions (2 pounds per day) are less than significant as they are far below the threshold of 150 pounds per day.

control measures that can be reasonably implemented to significantly reduce PM_{10} emissions from construction.

As identified in Table 4.3-10, fugitive dust and exhaust emissions during the anticipated peak construction day for the World Logistics Center project would exceed SCAQMD daily construction thresholds. The percentage of dust and exhaust varies by year but for PM_{10} is an average of 88 percent dust and 12 percent exhaust. $PM_{2.5}$ has an average of 50 percent dust and 50 percent exhaust.

Concrete pouring would likely occur during nighttime hours due to limitations high temperatures pose for concrete work during the day. On-site equipment used during concrete pouring would involve daytime prep with actual concrete pouring occurring during the nighttime hours. On average, the total hours of operation for each piece of equipment during the concrete phase would be approximately 10 hours. Therefore, maximum daily emissions presented in Table 4.3-10 represent the average concrete pour day. However, under rare occurrences, extended concrete pour days may be required. Table 4.3-11 summarizes daily maximum emissions for each year of construction associated with 24-hour operation of on-site building concrete equipment. As shown in Table 4.3-11, maximum 24-hour concrete pour days would exceed SCAQMD thresholds for NO_X. However, all maximum daily emissions are less than those for the worst-case construction day as summarized in Table 4.3-10. Therefore, rare 24-hour concrete pour days would be within the estimated worst-case construction day assumptions. No further analysis of 24-hour concrete pour days is required.

Similar to extended concrete pouring days, other phases of construction such as utility installation and building construction may require an occasional extended construction day based on the task at hand and schedule goals. Occasional extended construction hours would occur for specific tasks within specific planning areas as needed (determined on a day-to-day basis) and would not occur site-wide throughout the 16-year construction period. Therefore, it is anticipated that estimated yearly maximum construction day emissions, as summarized in Table 4.3-10, represent the realistic worst-case regional construction emissions for the 16-year construction duration. Therefore, no further analysis of potential extended construction days is required.

Table 4.3-11: Short-Term Regional 24-hour Concrete Pour Emissions–Without Mitigation

Year	Maximum Daily Pollutant Emissions (lbs/day)

The World Logistics Center project is required to comply with regional rules that assist in reducing short-term air pollutant emissions. SCAQMD Rule 402 requires implementation of dust-suppression techniques to prevent fugitive dust from creating a nuisance off site. SCAQMD Rule 403 requires that fugitive dust be controlled with best available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, SCAQMD Rule 403 requires implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site. Applicable dust suppression techniques from Rule 403 are summarized below. Implementation of these dust suppression techniques can reduce the fugitive dust generation (and thus the PM_{10} component). Compliance with these rules would reduce impacts on nearby sensitive receptors. The applicable Rule 403 measures are as follows:

- All clearing, grading, earthmoving, or excavation activities shall cease when winds exceed 25 miles per hour per SCAQMD guidelines in order to limit fugitive dust emissions.
- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the project are watered at least three times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.
- Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 0.6 meter (2 feet) of freeboard (vertical space between the top of the load and top of the trailer) in accordance with the requirements of California Vehicular Code Section 23114.
- The contractor shall ensure that traffic speeds on unpaved roads and project site areas are 15 miles per hour or less to reduce fugitive dust haul road emissions.

As previously discussed, SCAQMD Rule 1113 regulates the sale and application of architectural coatings. Rule 1113 is applicable to any person who applies or solicits the application of any architectural coating within the Basin. Rule 1113 sets limits on the amount of ROG or VOC emissions allowed for all types of architectural coatings. Compliance with Rule 1113 means that architectural coatings used during construction would have ROG or VOC emissions that comply with these limits.

Mitigation Measures. The following measures are recommended to reduce the level of emissions of criteria pollutants:

4.3.6.2A Construction equipment maintenance records (including the emission control tier of the equipment) shall be kept on site during construction and shall be available for inspection by the City of Moreno Valley.

a) Off-road diesel-powered construction equipment greater than 50 horsepower shall meet United States Environmental Protection Agency Tier 4 off-road emissions standards. A copy of each unit's certified tier specification shall be available for inspection by the City at the time of mobilization of each applicable unit of equipment.

b) During all construction activities, off-road diesel-powered equipment may be in the "on" position not more than 10 hours per day.

c) Construction equipment shall be properly maintained according to manufacturer specifications.

d) All diesel powered construction equipment, delivery vehicles, and delivery trucks shall be turned off when not in use. On-site idling shall be limited to three minutes in any one hour.

e) Electrical hook ups to the power grid shall be provided for electric construction tools including saws, drills and compressors, where feasible, to reduce the need for diesel-powered electric generators. Where feasible and available, electric tools shall be used.

f) The project shall demonstrate compliance with South Coast Air Quality Management District Rule 403 concerning fugitive dust and provide appropriate documentation to the City of Moreno Valley.

g) All construction contractors shall be provided information on the South Coast Air Quality Management District Surplus Off-road Opt-In "SOON" funds which provides funds to accelerate cleanup of off-road diesel vehicles.

h) Construction on-road haul trucks shall be model year 2010 or newer if diesel-fueled.

i) Information on ridesharing programs shall be made available to construction employees.

j) During construction, lunch options shall be provided onsite.

k) A publicly visible sign shall be posted with the telephone number and person to contact regarding dust complaints per AQMD Standards.

l) Off-site construction shall be limited to the hours between 6 a.m. to 8 p.m. on weekdays only. Construction during City holidays shall not be permitted.

4.3.6.2B Prior to issuance of any grading permits, a Construction Staging Plan shall be submitted to and approved by the City of Moreno Valley that describes in detail the location of equipment staging areas, stockpiling/storage areas, construction parking areas, safe detours around the project construction site, as well as provide temporary traffic control (e.g., flag person) during construction-related truck hauling activities. Construction trucks shall be rerouted away from sensitive receptor areas. Trucks shall use State Route 60 using World Logistics Center Parkway (formerly Theodore Street), Redlands Boulevard (north of Eucalyptus Avenue), and Gilman Springs Road. In addition to its traffic safety purpose, the Construction Staging Plan can minimize traffic congestion and delays that increase idling emissions. A copy of the approved Traffic Control Plan shall be retained on site in the construction trailer.

4.3.6.2C The following measures shall be applied during construction of the project to reduce volatile organic compounds (VOC):

a) Non-VOC containing paints, sealants, adhesives, solvents, asphalt primer, and architectural coatings (where used), or pre-fabricated architectural panels shall be used in the construction of the project to the maximum extent practicable. If such products are not commercially available, products with a VOC content of 100 grams per liter or lower for both interior and exterior surfaces shall be used.

b) Leftover paint shall be taken to a designated hazardous waste center.

c) Paint containers shall be closed when not in use

d) Low VOC cleaning solvents shall be used to clean paint application equipment.

e) Paint and solvent-laden rags shall be kept in sealed containers.

4.3.6.2D No grading shall occur on days with an Air Quality Index forecast greater than 150 for particulates or ozone as forecasted for the project area (Source Receptor Area 24).

Level of Significance After Mitigation. Significant and unavoidable. As shown in Table 4.3-12, construction emissions are still significant after mitigation, with the exception of $PM_{2.5}$. The reduction in $PM_{2.5}$ emissions is by a reduction in exhaust from the application of Tier 4 off-road equipment. PM_{10} emissions are still significant because emissions in 2024 exceed the threshold; however, emissions of PM_{10} during all other years of construction are less than significant. Although mitigation reduces emissions of all pollutants during construction, potential air quality impacts resulting from exhaust from construction equipment and fugitive dust will remain significant and unavoidable.

The results of this regional construction analysis indicate that during project construction, project emissions combined with regional emissions within the South Coast Air Basin, would result in the following cumulative health effects from ozone exposure:[9]

- Irritation of respiratory system; reduction in lung function; changes in breathing patterns; reduction of breathing capacity; inflammation of and damage to cells that line the lungs; increase in lung susceptibility to infection; aggravation of asthma; aggravation of other chronic lung diseases; permanent lung damage; some immunological changes; and/or increased mortality risk.

---

[9] Although carbon monoxide emissions are over the threshold, it is primarily a localized pollutant. The localized analyses demonstrated that concentrations would not exceed the ambient air quality standards for carbon monoxide; therefore, less than significant health effects are anticipated.

Table 4.3-12: Mitigated Short-Term Regional Construction Emissions

Year	**Maximum Daily Pollutant Emissions (lbs/day)**				
	VOC	**NO$_X$**	**CO***	**PM$_{10}$**	**PM$_{2.5}$**
2020	149	178	452	102	15

2035	155	133	636	119	16
SCAQMD Threshold	**75**	**100**	**550**	**150**	**55**
Exceeds Threshold?	**Yes**	**Yes**	**Yes**	**Yes**	**No**

* There is an error in the way CalEEMod estimates the effect of a higher tier (such as Tier 3 or 4) on mitigated CO; therefore, the mitigated CO values are greater than unmitigated values.

- Sulfur oxide (SOx) emissions are contained in the CalEEMod output in Appendix A of the Air Quality, Greenhouse Gas, and Health Risk Assessment Report; the maximum emissions would be approximately 2 pounds per day after mitigation, substantially under the threshold of 150 pounds/day.
- Mitigation Measure 4.3.6.2A(a) was estimated by CalEEMod using its mitigation module by assuming Tier 4 off-road equipment for equipment greater than 50 horsepower.
- Mitigation Measure 4.3.6.2A(b) restricts equipment from operating more than 10 hours per day in the on position, which is estimated in CalEEMod in both the unmitigated and mitigated estimates.
- Mitigation Measures 4.3.6.2A(c) through (e), 4.3.6.2A(g) through (m), 4.3.6.2B, and 4.3.6.2D are not quantified.
- Mitigation Measure 4.3.6.2A(f) is assumed in the unmitigated and mitigated estimates (Rule 403).
- Mitigation Measure 4.3.6.2A(i) requires that construction haul trucks be 2007 model year or greater. CalEEMod does not have a mitigation measure embedded in the model to quantify the reduction from this measure. Therefore, this reduction quantification was not provided.
- Mitigation Measure 4.3.6.2C reduces VOC emissions during painting and is calculated as demonstrated in the spreadsheets in Appendix A of the Air Quality, Greenhouse Gas, and Health Risk Assessment Report.

VOC = volatile organic compounds NO$_X$ = nitrogen oxides CO = carbon monoxide PM$_{10}$ and PM$_{2.5}$ = particulate matter

Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018.

4.3.6.3 Localized Construction and Operational Air Quality Impacts

Impact 4.3.6.3: *Construction and operation of the World Logistics Center project has the potential to exceed localized daily thresholds that may affect sensitive receptors.*

Threshold Would the proposed project violate any AAQS or contribute to an existing or projected air quality violation; or expose sensitive receptors to pollutants?

The applicable localized thresholds are:

- 20 ppm (1 hour) and 9 ppm (8 hours) of CO during construction or operation;
- 0.18 ppm (State 1 hour), 0.100 ppm (National 1 hour), and 0.030 ppm (Annual) of NO_X during construction or operation;
- 10.4 µg/m^3 (24 hours) 1.0 µg/m^3 (Annual) of PM_{10} during construction
- 2.5 µg/m^3 (24 hours) and 1.0 µg/m^3 (Annual) of PM_{10}; during operation and
- 2.5 µg/m^3 (24 hours) of $PM_{2.5}$ during operation

- During time periods when construction and operational activities occur at the same time, the SCAQMD recommends application of the significance thresholds for operations to assess the significance of the activities

The localized analysis focused on three potential scenarios:

1. Project Phase 1 (2018), which evaluates the air quality impacts if Phase 1 of the project (approximately 57 percent of the square footage) was built out in full in 2018[10] and no other changes occurred to land uses or the roadway system;
2. Project Phase 1 and Phase 2 Full Build Out (2018), which evaluates what air quality impacts would arise if the entire project, both Phase 1 and Phase 2, were built out in full in 2018 and no other changes occurred to land uses or the roadway system; and
3. Project Development Schedule, which evaluates the air quality impacts from the following scenarios:

    a. 2025, the earliest year Phase 1 is assumed to be fully operational. When the projected construction schedule would result in construction activities in the southern portion of the project adjacent to Alessandro Boulevard and east of the existing residential areas along Merwin Street, and when all of Phase I operations would occur (approximately 57 percent of entire project floor space);

    b. 2032, the year when the project emissions from both project construction and operation are at their highest combined levels for several pollutants; and when construction activities would occur adjacent to the existing residences along Gilman Springs Road (eastern portion of site); and

    c. 2040[11] when the Phase 1 and Phase 2 of the project are fully operational.

---

[10] 2018 is the CEQA Baseline year for purposes of this analysis.

[11] *In some circumstances, references are made to the year 2035. The year 2035 is the year the construction schedule assumes full completion of project construction. However, detailed traffic volumes were provided by the project traffic consultant for the long-term planning year 2040. Similar to the Phase 1 buildout year, and for purposes of this assessment, the project buildout year is referred to as year 2040 to remain consistent with the TIA.*

The Project Phase 1 (2018) and Project Phase 1 and Phase 2 Full Build Out (2018) conditions represents hypothetical worst-case conditions in that the project physically could not be built-out in 2018 or, in fact, in any single year due to the size of the project. These conditions have been included in this assessment to correspond to the analysis scenarios examined in the project TIA. These conditions also do not account for the fact that vehicle emissions are expected to decline over time as vehicle emission control technologies improve. Thus, consideration of these conditions will significantly overestimate the project's potential air quality impacts. The Project Development condition represents the logical and realistic development of the project over a period of 16 years as represented by the project applicant. The LST analysis is presented for each condition below.

Pursuant to the SCAQMD's LST methodology, only emissions generated from emission sources located within and along the project boundaries are included in the LST assessment. These emission sources include vehicle travel on the roadway network within and along the borders of the project and emissions from support equipment including forklifts, yard/hostler trucks, and emergency standby electric generators.

The project's emissions then served as input into the AERMOD air dispersion model to derive estimate of the project's localized air quality impacts for each condition.

Project Phase 1 (2018) LST Assessment

The project's on-site emissions were estimated from the traffic-generated by the various project vehicles as provided by the TIA. Vehicle emissions were assumed to be representative of the calendar year 2018 vehicle fleet. Also included were emissions from various support equipment including forklifts, yard trucks, and standby emergency generators. The localized assessment results for the Project Phase 1 (2018) condition are provided in Table 4.3-13 for receptors located within the project boundaries and in Table 4.3-14 for receptors located outside the project's boundaries along with a comparison to the SCAQMD's localized significance thresholds. The significance thresholds for CO and nitrogen dioxide are derived from the measured ambient air quality data from the SCAQMD Riverside air monitoring station and serve as the measure of existing air quality.[12]

As noted from Table 4.3-13, the project would not exceed the SCAQMD's localized significance thresholds for any of the pollutants studied at receptors located within the project boundaries. As shown in Table 4.3-14, the significance thresholds would not be exceeded at any sensitive receptor located outside of the project boundaries.

Table 4.3-13: Localized Assessment of Project Phase 1 (2018) Emissions Maximum Impacts Within the Project Boundaries (without mitigation)

Pollutant	Averaging Time, Units	Existing Background[1]	Air Concentration[2]		Standard/ Threshold	Total Impact Exceeds Threshold

The Project Phase 1 and Phase 2 Full Build Out (2018) LST Assessment

The localized assessment results for the Project Phase 1 and Phase 2 Full Build Out (2018) condition are provided in Table 4.3-15 for receptors located within the project boundaries and in Table 4.3-16 for receptors located outside the project's boundaries along with a comparison to the SCAQMD's localized significance thresholds. The significance thresholds for CO and nitrogen dioxide are derived from the measured ambient air quality data from the SCAQMD Riverside air monitoring station and serve as the measure of existing air quality.

As noted from Table 4.3-15, the project would exceed the SCAQMD's significance thresholds for the annual PM_{10} threshold for receptors located within the project's boundaries. As shown in Table 4.3-16, the significance thresholds would not be exceeded at any sensitive receptor located outside of the project boundaries.

It is important to note the Project Phase 1 (2018) and Project Phase 1 and Phase 2 Full Build Out (2018) conditions assume that the project's emissions are at the levels that would occur in 2018. The majority of the project's operational emissions are from on-road mobile sources, more particularly, heavy-duty trucks that contribute a disproportionate amount of emissions compared to passenger vehicles. Emissions from on-road mobile sources are regulated at the State and Federal levels and, therefore, are outside of the control of local agencies such as the City and the SCAQMD. For example, the CARB is working closely with the USEPA, engine and vehicle manufacturers, and other interested parties to identify programs that will reduce emissions from heavy-duty diesel vehicles in California. Emission reductions arise from a combination of measures including the use of ultra-low sulfur diesel fuel, new emission standards for large diesel engines, restrictions on diesel engine idling, addition of post-combustion filter and catalyst equipment, and retrofits for business and government diesel truck fleets. The implementation of these emission reductions will also result in reductions of other pollutants such as NO_X, VOC, and CO. As these emission reduction programs are implemented and there is a turnover in the use of older vehicles with newer and cleaner vehicles, the project's operational emissions are expected to decline significantly in the future.

Table 4.3-15: Localized Assessment of Project Phase 1 and Phase 2 Full Build Out (2018) Emissions Maximum Impacts Within the Project Boundaries (without mitigation)

Pollutant	Averaging Time, Units	Existing Background[1]	Air Concentration[2]		Standard/ Threshold	Total Impact Exceeds Threshold
			Project Local Increase	Total (Background + Project)		
Carbon Monoxide	1 hour, ppm	2.2	0.02	2.2	20	No
	8 hour, ppm	1.6	0.01	1.6	9.0	No
Nitrogen Dioxide	State 1 hour, ppm	0.064	0.02	0.08	0.18	No
	National 1 hour, ppm	0.053	0.01	0.07	0.100	No
	Annual, ppm	0.015	0.005	0.02	0.030	No
PM_{10}	24 hour, μg/m³	NA	1.6	1.6	2.5	No

Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018.

Emission controls on mobile source vehicles already adopted by the CARB particularly dealing with NO_X and PM_{10} controls on heavy duty trucks will reduce truck emissions significantly over time. As an example, in the South Coast Air Basin, the per-mile running exhaust rate of NO_X emissions from the largest category of heavy duty diesel trucks is estimated to decline from an average of 5.4 grams/mile in 2018 to 2.5 grams/mile by 2025, a decline of 53 percent from 2018 levels and to 2.22 grams/mile in 2040, a decrease of 59 percent from 2018 levels. Similarly, the per-mile running exhaust rate of PM_{10} emissions from the largest category of heavy duty diesel trucks is estimated to decline from an average of 0.09 gram/mile in 2018 to 0.020 gram/mile in 2025, a decline of 79 percent from 2018 levels and decline to 0.018 grams/mile in 2040, a decline of 81 percent from 2018 levels. Thus, two Project (2018) conditions represent highly conservative estimates, in terms of overestimating of the project's operational impacts.

Project Development Schedule LST Assessment

The final localized threshold assessment condition examined potential local project impacts considering the proposed construction and build out schedule of the project over a time period of 16 years from the commencement of construction in 2020 to the final build out in 2040. This condition examined three specific time periods:

- The year 2025: the earliest year Phase 1 is assumed to be fully operational. When the projected construction schedule would result in construction activities in the southern of the project adjacent to Alessandro Boulevard and east of the existing residential areas along Merwin Street and when all of Phase I operations would occur (approximately 57 percent of entire project floor space); These residences are the closest sensitive receptors outside of the project's boundaries. According to the conceptual construction schedule provided by the applicant, extensive building construction is expected to take place within the southern portion of the site, south of Alessandro Boulevard, as well on both sides of World Logistics Center Parkway during the completion of Phase 1 construction and the beginning of Phase 2 construction. This scenario also corresponds to the complete operations of Phase 1 and the attendant operational emissions. The project's onsite maximum daily and annual construction emissions were estimated using the CalEEMod land use emission model and the construction equipment inventory and activities provided by the applicant. The project's onsite operational emissions, principally from the project's mobile sources, were derived from detailed traffic volume data provided by the project's TIA that reflects a completely operational Phase 1. The TIA applied a comprehensive regional transportation model to develop daily and peak hour traffic volumes for 2025 and 2040 from the project's mobile sources. Peak hour and daily project traffic volumes were developed for each year from 2020 to buildout for roadway segments within and along the boundaries of the project using the following assumptions:

  - Project operational traffic volumes were assumed to be zero in 2020, the year that project construction would commence.
  - Traffic volumes for the years 2021 to 2025 (the completion year for Phase 1 operations) were interpolated from 2021 to 2025 by applying the annual project occupancy schedule to the 2025 traffic volumes.
  - Traffic volumes for the years 2025 to buildout were interpolated from the provided traffic volumes in 2025 and 2040 by applying the annual project occupancy schedule.

- The year 2032, when the project's total daily on-site construction and operational emissions would be the highest for several air pollutants and construction and operations would occur along the eastern portion of the project potentially impacting the existing residences across from the project along Gilman Springs Road; and
- The year 2040, which is the long term planning year analyzed in the TIA and representative of the complete build out of the project.

Localized Impact Analysis, 2025. The localized impacts for the short-term construction and operational activities were analyzed using an air dispersion model (EPA AERMOD Model) to simulate the transport and dispersion of project-related emissions through the air. These impacts were then compared to the applicable SCAQMD localized concentration thresholds.

The estimated maximum localized air quality impacts from the construction and operation of the project at Phase 1 buildout are summarized in Table 4.3-17 for locations within the project's boundaries. These maximum impacts were found at the locations of the existing residences within the project boundaries. Table 4.3-18 summarizes the highest air quality impacts for sensitive receptors located outside of the project boundaries. As noted from these two tables, project impacts would exceed the significance thresholds for PM_{10} for locations within the project boundaries, thus represents a significant impact without mitigation. Project impacts would not exceed localized thresholds for receptors located outside the project boundaries.

Table 4.3-17: Localized Assessment – Construction and Operation, Year 2025 Maximum Impacts Within the Project Boundaries (without Mitigation)

Pollutant	Averaging Time, Units	Existing Background [1]	Air Concentration		Standard/ Threshold	Total Impact Exceeds Threshold?
			Project Local Increase	Total (Background + Project)		
Carbon Monoxide	1 hour, ppm	2.2	0.05	2.2	20	No
	8 hour, ppm	1.6	0.02	1.6	9.0	No
Nitrogen Dioxide	State 1 hour, ppm	0.064	0.03	0.09	0.18	No
	National 1 hour, ppm	0.053	0.02	0.08	0.100	No

Table 4.3-17: Localized Assessment – Construction and Operation, Year 2025 Maximum Impacts Within the Project Boundaries (without Mitigation)

Pollutant	Averaging Time, Units	Existing Background [1]	Air Concentration		Standard/ Threshold	Total Impact Exceeds Threshold?
			Project Local Increase	Total (Background + Project)		
	Annual, ppm	0.015	0.003	0.02	0.030	No
PM_{10}	24 hour, µg/m^3	NA	3.3	3.3	2.5[2]	Yes
	Annual, µg/m^3	NA	1.6	1.6	1.0	Yes
$PM_{2.5}$	24 hour, µg/m^3	NA	0.8	0.8	2.5[2]	No

µg/m^3 = micrograms per cubic meter (a concentration unit), ppm = parts per million (a concentration unit)
NA = Not Applicable, the SCAQMD threshold methodology does not require a background for PM_{10} or $PM_{2.5}$
[1] Background data for CO and nitrogen dioxide derived as the highest air quality measured data over a 3-year rolling average from 2014-2017. [2] During periods when both construction and operation overlap the SCAQMD recommends the operational significance thresholds for PM_{10} and $PM_{2.5}$ as opposed to the construction thresholds which are 10.4 ug/m^3 for PM_{10} and $PM_{2.5}$. This provides a very conservative threshold for determining the significance of project impacts.
Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018.

Localized Air Quality Impact Analysis, 2032. The year 2032 was selected for the LST Analysis for two principal reasons: 1) the year 2032 corresponds to the year with the highest combined total onsite construction and operational emissions of NO_x and CO and the third or fourth highest onsite emissions of PM_{10} and $PM_{2.5}$ during the time period of 2020 to 2035; and 2) the location of the building construction in 2032 places the construction emissions adjacent to the existing residences located on the eastern side of the project across Gilman Springs Road.

Table 4.3-18: Localized Assessment – Construction and Operation, Year 2025 Maximum Impacts Outside the Project Boundaries (without Mitigation)

Pollutant	Averaging Time, Units	Existing Background [1]	Air Concentration		Standard/ Threshold	Total Impact Exceeds Threshold?
			Project Local Increase	Total (Background + Project)		
Carbon Monoxide	1 hour, ppm	2.2	0.04	2.2	20	No
	8 hour, ppm	1.6	0.01	1.6	9.0	No
Nitrogen Dioxide	State 1 hour, ppm	0.064	0.02	0.09	0.18	No
	National 1 hour, ppm	0.053	0.02	0.08	0.100	No
	Annual, ppm	0.015	0.001	0.02	0.030	No
PM_{10}	24 hour, µg/m^3	NA	2.1	2.1	2.5[2]	No
	Annual, µg/m^3	NA	0.7	0.7	1.0	No
$PM_{2.5}$	24 hour, µg/m^3	NA	0.5	0.5	2.5[2]	No

µg/m^3 = micrograms per cubic meter (a concentration unit), ppm = parts per million (a concentration unit)
NA = Not Applicable, the SCAQMD threshold methodology does not require a background for PM_{10} or $PM_{2.5}$
[1] Background data for CO and nitrogen dioxide derived as the highest air quality measured data over a 3-year rolling average from 2014-2017. [2] During periods when both construction and operation overlap the SCAQMD recommends the operational significance thresholds for PM_{10} and $PM_{2.5}$ as opposed to the construction thresholds which are 10.4 ug/m^3 for PM_{10} and $PM_{2.5}$. This provides a very conservative threshold for determining the significance of project impacts.
Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018.

The project's maximum combined impacts from construction and operations during 2032 are shown in Table 4.3-19 for the existing sensitive receptors located within the project boundaries along with the SCAQMD-recommended significance thresholds. Table 4.3-20 shows the maximum combined impacts for sensitive receptors located outside of the project boundaries. These latter impacts were found within the residential areas located to the east of the project across Gilman Springs Road. As shown in these tables, the project would exceed the SCAQMD's significance thresholds for PM_{10} at locations within the project boundary and outside of the project boundary.

Localized Air Quality Impact Analysis, 2040. The year 2040 represents a long-term planning year when both phases of the project would be fully in operation. Operational emissions during 2040 were estimated based on the project's trip generation and project-related travel along the local roadway network within and along the project boundaries. Table 4.3-21 shows the maximum localized air quality impacts for 2040 relative to the background air quality levels at the existing sensitive receptors located within the project boundaries. Table 4.3-22 identifies the highest localized impacts for sensitive receptors located outside of the project boundaries. As shown in Table 4.3-21 and Table 4.3-22, the project would exceed PM_{10} LSTs for receptors within and outside the project boundary, and would, therefore, represent a significant impact without mitigation.

Summary. The localized significance analysis demonstrates that without mitigation, the project would exceed the localized significance thresholds for PM_{10} for one or more of the LST assessment years (2025, 2032, or 2040) analyzed. Therefore, according to this criterion, the air pollutant emissions would result in a significant impact and could exceed or contribute to an exceedance of the annual and 24-hour PM_{10} ambient air quality standards.

Table 4.3-19: Localized Assessment – Construction and Operation, Year 2032 Maximum Impacts Within the Project Boundaries (without Mitigation)

Pollutant	Averaging Time, Units	Existing Background[1]	Air Concentration[2]		Standard/ Threshold	Total Impact Exceeds Threshold?
			Project Local Increase	Total (Background + Project)

Mitigation Measures. Mitigation measures identified previously under Impact 4.3.6.2 (**Mitigation Measures 4.3.6.2A**, **4.3.6.2B**, and **4.3.6.2D**) to reduce construction emissions of criteria pollutants are required. The project will also be required to comply with SCAQMD Rules 402 and 403. Additionally, the following mitigation measures are required to reduce emissions of criteria pollutants during project operations.

Table 4.3-21: Localized Assessment – Project Operation Full Build Out, Year 2040 Maximum Impacts Within the Project Boundaries (without Mitigation)

Pollutant	Averaging Time, Units	Existing Background[1]	Air Concentration		Standard/ Threshold	Total Impact Exceeds Threshold?

4.3.6.3A Prior to issuance of occupancy permits for each warehouse building within the WLCSP, the developer shall demonstrate to the City that vehicles can access the building using paved roads and parking lots.

4.3.6.3B The following shall be implemented as indicated:

Prior to Issuance of a Certificate of Occupancy

a) Signs shall be prominently displayed informing truck drivers about the California Air Resources Board diesel idling regulations, and the prohibition of parking in residential areas.

b) Signs shall be prominently displayed in all dock and delivery areas advising of the following: engines shall be turned off when not in use; trucks shall not idle for more than three consecutive minutes; telephone numbers of the building facilities manager and the California Air Resources Board to report air quality violations.

c) Signs shall be installed at each exit driveway providing directional information to the City's truck route. Text on the sign shall read "To Truck Route" with a directional arrow. Truck routes shall be clearly marked per the City Municipal Code.

On an Ongoing Basis

d) Tenants shall maintain records on fleet equipment and vehicle engine maintenance to ensure that equipment and vehicles are maintained pursuant to manufacturer's specifications. The records shall be maintained on site and be made available for inspection by the City.

e) Tenant's staff in charge of keeping vehicle records shall be trained/certified in diesel technologies, by attending California Air Resources Board approved courses (such as the free, one-day Course #512). Documentation of said training shall be maintained on-site and be available for inspection by the City.

f) Tenants shall be encouraged to become a SmartWay Partner.

g) Tenants shall be encouraged to utilize SmartWay 1.0 or greater carriers.

h) Tenants' fleets shall be in compliance with all current air quality regulations for on-road trucks including but not limited to California Air Resources Board's Heavy-Duty Greenhouse Gas Regulation and Truck and Bus Regulation.

i) Information shall be posted in a prominent location available to truck drivers regarding alternative fueling technologies and the availability of such fuels in the immediate area of the World Logistics Center.

j) Tenants shall be encouraged to apply for incentive funding (such as the Voucher Incentive Program [VIP], Carl Moyer, etc.) to upgrade their fleet.

k) All yard trucks (yard dogs/yard goats/yard jockeys/yard hostlers) shall be powered by electricity, natural gas, propane, or an equivalent non-diesel fuel. Any off-road engines in the yard trucks shall have emissions standards equal to Tier 4 Interim or greater. Any on-road engines in the yard trucks shall have emissions standards that meet or exceed 2010 engine emission standards specified in California Code of Regulations Title 13, Article 4.5, Chapter 1, Section 2025.

l) All diesel trucks entering logistics sites shall meet or exceed 2010 engine emission standards specified in California Code of Regulations Title 13, Article 4.5, Chapter 1, Section 2025 or be powered by natural gas, electricity, or other diesel alternative. Facility operators shall maintain a log of all trucks entering the facility to document that the truck usage meets these emission standards. This log shall be available for inspection by City staff at any time.

m) All standby emergency generators shall be fueled by natural gas, propane, or any non-diesel fuel.

n) Truck and vehicle idling shall be limited to three (3) minutes.

4.3.6.3C Prior to the issuance of building permits for more than 25 million square feet of logistics warehousing within the Specific Plan area, a publically-accessible fueling station shall be operational within the Specific Plan area offering alternative fuels (natural gas, electricity, etc.) for purchase by the motoring public. Any fueling station shall be placed a minimum of 1000 feet from any off-site sensitive receptors or off-site zoned sensitive uses. This facility may be established in connection with the convenience store required in Mitigation Measure 4.3.6.3D.

4.3.6.3D Prior to the issuance of building permits for more than 25 million square feet of logistics warehousing within the Specific Plan area a site shall be operational within the Specific Plan area offering food and convenience items for purchase by the motoring public. This facility may be established in connection with the fueling station required in Mitigation Measure 4.3.6.3C.

4.3.6.3E Refrigerated warehouse space is prohibited unless it can be demonstrated that the environmental impacts resulting from the inclusion of refrigerated space and its associated facilities, including, but not limited to, refrigeration units in vehicles serving the logistics warehouse, do not exceed any environmental impact for the entire World Logistics Center identified in the Revised Sections of the FEIR. Such environmental analysis shall be provided with any warehouse plot plan proposing refrigerated space. Any such proposal shall include electrical hookups at dock doors to provide power for vehicles equipped with Transportation Refrigeration Units (TRUs).

Level of Significance After Mitigation. Significant and unavoidable. Table 4.3-23 compares the project impacts before and after mitigation for those assessment conditions and pollutants that indicated a significant impact before mitigation. After application of mitigation, the project would continue to exceed the localized significance thresholds at one or more of the existing residences located within the project boundaries for PM_{10} (24-hour and annual). In addition, the project would continue to exceed the localized significance thresholds at offsite receptors for PM_{10} (24-hour and annual).

In summary, those residents inside and outside the project boundaries could be exposed to significant short-term and long-term PM_{10} concentrations on an ongoing basis. The health effects from particulate matter were discussed earlier and could include the following:

- Particulate matter can cause the following health effects from short-term (24-hour) exposure: irritation of the eyes, nose, throat; coughing; phlegm; chest tightness; shortness of breath; aggravate existing lung disease, causing asthma attacks and acute bronchitis; and/or those with heart disease can suffer heart attacks and arrhythmias.
- Particulate matter can cause the following health effects from long-term exposure (annual): reduced lung function; chronic bronchitis; changes in lung morphology; and/or death.

Table 4.3-23: Comparison of Local Project Air Quality Impacts Before and After Mitigation

Assessment Condition	Location	Pollutant, Averaging Time, Units	Total Impact Before Mitigation[1]	Total Impact After Mitigation	Significance Threshold	Exceeds Threshold After Mitigation?
Project Phase 1 and Phase 2 Full Build Out (2018)	Inside Project Boundaries	PM_{10}, Annual, µg/m³	1.02	0.97	1.0	No
Project Development Schedule Year 2025	Inside Project Boundaries	PM_{10} 24-hour, µg/m³	3.30	3.23	2.5	Yes
		PM_{10}, Annual, µg/m³	1.57	1.56	1.0	Yes
Project	Inside	PM_{10} 24-hour, µg/m³	3.90	3.89	2.5	Yes

Table 4.3-23: Comparison of Local Project Air Quality Impacts Before and After Mitigation

Assessment Condition	Location	Pollutant, Averaging Time, Units	Total Impact Before Mitigation[(1)]	Total Impact After Mitigation	Significance Threshold	Exceeds Threshold After Mitigation?
Development Schedule Year 2032	Project Boundaries	PM_{10} Annual, $\mu g/m^3$	1.7	1.7	1.0	Yes
	Outside Project Boundaries	PM_{10} 24-hour, $\mu g/m^3$	4.7	4.6	2.5	Yes
		PM_{10} Annual, $\mu g/m^3$	1.5	1.4	1.0	Yes
Project Development Schedule Year 2040 Build Out	Inside Project Boundaries	PM_{10} 24 hour, $\mu g/m^3$	2.9	2.9	2.5	Yes
		PM_{10} Annual, $\mu g/m^3$	1.8	1.8	1.0	Yes
	Outside Project Boundaries	PM_{10} Annual, $\mu g/m^3$	1.3	1.3	1.0	Yes

Notes: $\mu g/m^3$ = micrograms per cubic meter (a unit of concentration); ppm = parts per million (a unit of concentration)

(1) Total Impacts include the incremental impacts from the project plus the pollutant background; see Tables 4.3-13 to 4.3-22 for the total impacts for the various assessment conditions prior to the application of mitigation.

Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018.

4.3.6.4 Long-Term Operational Emissions

Impact 4.3.6.4: *Implementation of the World Logistics Center project may have the potential to exceed applicable daily thresholds for operational activities.*

Threshold Would the proposed project violate any AAQS or contribute to an existing or projected air quality violation; or expose sensitive receptors to pollutants?

For long-term operations, the applicable daily thresholds are:

- 55 pounds of VOC;
- 55 pounds of NO_X;
- 550 pounds of CO;
- 150 pounds of PM_{10};
- 55 pounds of $PM_{2.5}$; and
- 150 pounds of SO_X.

Long-term air pollutant emission impacts that would result from the World Logistics Center project are those associated with stationary sources (generators, boilers, etc.), area sources (landscaping and maintenance activities), and mobile sources (e.g., emissions from the use of motor vehicles by project-generated traffic). As discussed above in Section 4.3.3.2, the TIA provides VMT attributable to the project based on the net effect the project would have on regional travel as well as project VMT without consideration of a net effect. The emissions from the net effect on VMT, in conjunction with the proposed stationary and area sources, are shown in the tables below for determination of significance. For informational purposes only the *Air Quality, Greenhouse Gas, and Health Risk Assessment Report* (Appendix A) of this revised section of the FEIR includes operational mobile emissions without consideration of a net effect in regional traffic volumes.

Worst-Case Scenario. Projected emissions resulting from operational activities of the project under the worst-case scenario are identified in Table 4.3-24.

There may be minor emissions of VOC from the fueling station, depending on what type of fuel is used. However, details regarding the fueling station are currently unknown so the emission source is not estimated. This is a worst-case analysis because it assumes that the entire project would be built-out in 2018. The motor vehicle and truck emission factors are from 2018, which assumes a "dirtier" fleet than would be the case in later years. In addition, no reductions are taken for mitigation measures.

Table 4.3-24: Operational Regional Air Pollutant Emissions (Worst-Case Scenario)

Scenario	Source	Emissions (pounds per day)				
		VOC	**NO_X**	**CO**	**PM_{10}**	**$PM_{2.5}$**
Phase 1 2018 emission factors	Mobile	107	2,078	579	386	116
	Area	175	<1	2	<1	<1
	Onsite equipment	5	138	51	1	1
	Total	**287**	**2,216**	**632**	**388**	**117**
Buildout 2018 emission factors	Mobile	241	3,958	1,472	898	274
	Area	311	<1	4	<1	<1
	Onsite equipment	9	245	89	2	2
	Total	**561**	**4,202**	**1,565**	**901**	**276**
Significance Threshold		55	55	550	150	55
Significant Impact?		Yes	Yes	Yes	Yes	Yes

Notes: VOC = volatile organic compounds; NOx = nitrogen oxides; CO = carbon monoxide
PM_{10} and $PM_{2.5}$ = particulate matter <1 = less than one
Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018.

As identified in Table 4.3-24, operational emissions for the project would exceed SCAQMD daily operational thresholds for all criteria pollutants with the exception of SO_X for the "worst-case" 2018 scenario.

Operational Regional Emissions. Table 4.3-25 shows the detailed operational emission sources generated both on site and off site for Phase 1 and buildout. The table shows particulate matter (PM_{10} and $PM_{2.5}$) divided into dust and exhaust sources. As shown in the table, emissions of VOC, NOx, CO, PM_{10}, and $PM_{2.5}$ are significant after completion of Phase 1 and after full buildout.

Table 4.3-26 shows the operational emissions year by year using future year emission factors. The VOC, NOx, CO, PM_{10}, and $PM_{2.5}$ emissions would be over the SCAQMD's significance thresholds for most years beginning as early as year 2021 for NO_X, 2023 for VOC, 2024 for PM_{10} and $PM_{2.5}$, and 2029 for CO. The emissions demonstrate that although the number of vehicles and trucks would increase year by year, the emissions do not increase dramatically because the per-vehicle emission factors decrease over time as cleaner vehicles enter the fleet over time.

Combined Construction and Operation. There would be overlapping of construction and operational emissions with project implementation. The maximum daily operational emissions were added to the maximum daily construction emissions and are shown in Table 4.3-27, which shows all pollutants for all years exceed the SCAQMD thresholds, with the exception of SO_X emissions. SO_X are not shown in the table as they are far below the significance threshold of 150 pounds per day.

As identified in the preceding tables, project-related air quality impacts for all criteria pollutants, with the exception of SO_X, would be significant and mitigation measures are required.

Table 4.3-25: Operational Regional Air Pollutant Emissions (Detail, Unmitigated)

Phase	Source	Emissions (pounds/day)

Significant?	**Yes**	**Yes**	**Yes**	**No**	**Yes**	**Yes**

- Emissions are from local vehicles, trucks, natural gas, emergency generators, forklifts, yard trucks, painting, and consumer products. There is no reduction from existing onsite emissions.
- Operational emissions are assumed to be zero in 2020 when project construction commences.
- PM_{10} and $PM_{2.5}$ emissions include exhaust and road dust.
- Landscaping emissions are negligible.

* Sulfur dioxide emissions as estimated are substantially less than the threshold of 150 pounds per day. Thus, emissions reflecting decreased vehicle miles traveled would also be less than significant.

VOC = volatile organic compounds; NO_X = nitrogen oxides; SO_2 = sulfur dioxide; CO = carbon monoxide; PM_{10} and $PM_{2.5}$ = particulate matter

Mitigation Measures. The mitigation measures previously identified under Impact 4.3.6.3 (**Mitigation Measures 4.3.6.3A** through **4.3.6.3E**) would reduce operational emissions of criteria pollutants associated with the project

Additionally, the following mitigation measure is required:

4.3.6.4A The following measures shall be incorporated as conditions to any Plot Plan approval within the Specific Plan:

a) All tenants shall be required to participate in Riverside County's Rideshare Program.

b) Storage lockers shall be provided in each building for a minimum of three percent of the full-time equivalent employees based on a ratio of 0.50 employees per 1,000 square feet of building area. Lockers shall be located in proximity to required bicycle storage facilities.

c) Class II bike lanes shall be incorporated into the design for all project streets.

d) The project shall incorporate pedestrian pathways between on-site uses.

e) Site design and building placement shall provide pedestrian connections between internal and external facilities.

f) The project shall provide pedestrian connections to residential uses within 0.25 mile from the project site.

g) A minimum of two electric vehicle-charging stations for automobiles or light-duty trucks shall be provided at each building. In addition, parking facilities with 200 parking spaces or more shall be designed and constructed so that at least six percent of the total parking spaces are capable of supporting future electric vehicle supply equipment (EVSE) charging locations. Sizing of conduit and service capacity at the time of construction shall be sufficient to install Level 2 Electric Vehicle Supply Equipment (EVSE) or greater.

h) Each building shall provide indoor and/or outdoor - bicycle storage space consistent with the City Municipal Code and the California Green Building Standards Code. Each building shall provide a minimum of two shower and changing facilities for employees.

i) Each building shall provide preferred and designated parking for any combination of low-emitting, fuel-efficient, and carpool/vanpool vehicles equivalent to the number identified in California Green Building Standards Code Section 5.106.5.2 or the Moreno Valley Municipal Code whichever requires the higher number of carpool/vanpool stalls.

j) The following information shall be provided to tenants: onsite electric vehicle charging locations and instructions, bicycle parking, shower facilities, transit availability and the schedules, telecommunicating benefits, alternative work schedule benefits, and energy efficiency.

It is important to note that, in addition to the operational activity mitigation measures identified previously, future development would need to incorporate physical attributes and operational programs that will act to generally reduce operational-source pollutant emissions including GHG emissions. These project characteristics are identified in Section 4.7, *Climate Change and Greenhouse Gas Emissions*, and Section 4.17, *Energy*, of this revised FEIR.

Level of Significance after Mitigation. Significant and unavoidable. Mitigated operational emissions for full buildout are shown in Table 4.3-28. Note that the emissions are based on conservative assumptions and does not subtract existing emissions that would cease to exist (i.e., assumes all emissions are net new). As shown on Table 4.3-28, even with implementation of the mitigation measures, emissions are still significant. Despite implementation of mitigation measures, emissions of criteria pollutants would still exceed SCAQMD significance thresholds resulting in a significant and unavoidable operational air quality impact.

Table 4.3-28: Operational Regional Air Pollutant Emissions (Mitigated)

		Emissions (pounds per day)				
Scenario	**Source**	**VOC**	**NO_X**	**CO**	**PM_{10}**	**$PM_{2.5}$**
Buildout	Vehicles: Local and trucks	97	802	773	945	256
	Area	311	<1	4	<1	<1
	Onsite Equipment	8	91	107	<1	<1
	Total Project Emissions	**416**	**893**	**883**	**946**	**257**
	Significance Threshold	55	55	550	150	55
	Significant Impact?	Yes	Yes	Yes	Yes	Yes

- PM_{10} and $PM_{2.5}$ emissions include exhaust and road dust.
- Landscaping emissions are negligible.
- Sulfur oxides emissions are under the 150 pounds per day significance threshold and at buildout would be less than 23 pounds per day.

VOC = volatile organic compounds NO_X = nitrogen oxides CO = carbon monoxide PM_{10} and $PM_{2.5}$ = particulate matter
On-site equipment emissions include emissions from yard trucks, forklifts, and stationary generators.
Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018.

Therefore, there could be cumulative health effects from ozone, PM_{10}, and $PM_{2.5}$ as described earlier in this section and summarized as follows:

- Ozone can cause the following health effects: irritate respiratory system; reduce lung function; breathing pattern changes; reduce breathing capacity; inflame and damage cells that line the lungs; make lungs more susceptible to infection; aggravate asthma; aggravate other chronic lung diseases; cause permanent lung damage; some immunological changes; and/or increase mortality risk.
- Particulate matter (PM_{10} and $PM_{2.5}$) can cause the following health effects from short-term (hours/days) exposure: irritation of the eyes, nose, throat; coughing; phlegm; chest tightness; shortness of breath; aggravate existing lung disease, causing asthma attacks and acute bronchitis; and/or those with heart disease can suffer heart attacks and arrhythmias.
- Particulate matter can cause the following health effects from long-term exposure: reduced lung function; chronic bronchitis; changes in lung morphology; and/or death.

During overlap of construction and operation, VOC, NO_X, CO, PM_{10}, and $PM_{2.5}$ would continue to exceed SCAQMD significance thresholds after mitigation, as shown in Table 4.3-29. Therefore, impacts are significant and unavoidable.

Table 4.3-29: Combined Construction and Operational Regional Air Pollutant Emissions (Year by Year, pounds per day) – Mitigated

Year	**VOC**	**NO_X**	**CO**	**PM_{10}**	**$PM_{2.5}$**

Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*, 2018

4.3.6.5 Impacts to Sensitive Receptors

Impact 4.3.6.5: *Implementation of the World Logistics Center project may have the potential to result in impacts to sensitive receptors.*

Threshold Would the proposed project expose sensitive receptors to substantial pollutant concentrations?

For localized air quality impacts, the applicable thresholds are:

- 20 ppm (1 hour) and 9 ppm (8 hours) of CO during construction and operation;
- 0.18 ppm (State 1 hour), 0.100 ppm National 1 hour), and 0.030 ppm (Annual) of NO_X during construction and operation;
- 10.4 $\mu g/m^3$ (24-hours) and 1 $\mu g/m^3$ (Annual) of PM_{10} during construction
- 2.5 $\mu g/m^3$ (24 hours) and 1.0 $\mu g/m^3$ (Annual) of PM_{10} during operations; and
- 2.5 $\mu g/m^3$ (24 hours) of $PM_{2.5}$ during operations.
- During time periods when construction and operational activities occur at the same time, the SCAQMD recommends application of the significance

threshold for operations.

For health risk impacts, the applicable thresholds are:

- Maximum Individual Cancer Risk: An increased cancer risk greater than 10 in 1 million at any receptor location;
- Cancer burden: An increase in cancer burden of 0.5 or
- Non-cancer chronic hazard indices (HI): A cumulative increase for any target organ system exceeding 1.0 at any receptor location.

Acute and Chronic Health Risk Impacts. Acute and chronic health risk impact analyses examine the increased risk for non-cancer health outcomes associated with project-related air pollutant emissions. Since these are non-cancer health impacts, as described below, the impacts are analyzed separately from increased cancer risk associated with air pollution.

The construction and operation of the project would not emit any toxic chemicals in any significant quantity other than vehicle exhaust. While there may be other toxic substances in use on site, risk would be negligible due to intermittent use (i.e., chemicals from periodic maintenance), dispersion of chemicals throughout the project site, and compliance with State and Federal handling regulations.

Exposure to diesel exhaust can have immediate (acute) health effects, such as irritation of the eyes, nose, throat, and lungs, and can cause coughs, headaches, light headedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks. However, according to the rulemaking on *Identifying Particulate Emissions from Diesel-Fueled Engines as a Toxic Air Contaminant* (CARB 1998), the available data from studies of humans exposed to diesel exhaust are not sufficient for deriving an acute non-cancer REL.

The analysis, however, does derive an estimate of acute non-cancer risks by examining the acute health effects of the various toxic components that comprise diesel and gasoline emissions. There is specific guidance for estimating the acute non-cancer hazards from these toxic components based on chemical profiles established by the CARB which was used in the analysis to determine the project's acute non-cancer hazards.

To determine the project's *chronic* non-cancer hazard impact, the highest annual diesel PM concentration was determined covering the years 2020 (the commencement of project construction) to 2035 (the full build out of the project). In this regard, the highest annual average diesel PM concentration prior to mitigation determined through air dispersion modeling was 0.2 ug/m^3, at an existing residence located within the project boundaries. This diesel PM concentration was due to the impacts of diesel PM emissions from the off-road construction equipment and operation equipment. This level of diesel PM impact results in a chronic non-cancer HI of 0.04. This HI is less than the SCAQMD's significance level of 1.0, and is, therefore, less than significant.

The estimation of the *acute* non-cancer HI requires the estimation of the maximum 1-hour impacts of TAC components in organic gases and PM emissions. For project construction, estimates of the maximum 1-hour ROG and PM exhaust emissions were derived from the project's peak daily construction equipment emissions; for project operation, estimates of the project's maximum 1-hour TOG and PM emissions were derived from the project's peak hour traffic data along the nearly 230 roadway segments contained within the study area and then speciated or broken down into the various TAC components by fuel type, gasoline and diesel, and emission type (i.e., exhaust, evaporative, brake wear and tire wear). The acute non-cancer HI was determined for a worst-case condition that assumed the project would be constructed between 2020 and 2035 and full operation starts in 2040. Based on this information, the maximum acute non-cancer HI found at any receptor within the model domain prior to mitigation was 0.16 during project construction and 0.05 during full project operation, which are less than the SCAQMD's non-cancer HI of 1.0, and, therefore, is less than significant without mitigation.

Therefore, the potential for short-term acute and chronic exposure from diesel exhaust are considered to be less than significant and no mitigation is required.

Cancer Risks. As noted in Section 4.3.3, *Methodology*, the project health risk assessment examined the following condition for impacts to both sensitive/residential and worker receptors:

> *Project Development condition which evaluates the impacts of project-related construction and operational traffic diesel PM emissions as if the project were built out in accordance with its proposed phased construction and operational buildout schedule commencing with the construction of Phase 1 in 2020 and the full build out in 2035.*

This HRA is being provided to allow decision makers to see the cancer-related impacts of the World Logistics Center project in the assumption that new technology diesel exhaust causes cancer, contrary to what was found by the HEI study. The mitigation conditions require that all diesel-fueled haul trucks during construction be 2010 or newer, diesel trucks accessing the project during operation be model year 2010 or newer, and that all on-site equipment greater than 50 horsepower be Tier 4 (see MM 4.3.6.2A[h] and MM 4.3.6.2A[a], respectively).

To be conservative, the HRA relied on EMFAC2014 to determine the breakdown of vehicle types and fuel types and did not consider the potential reductions in TACs emissions and health risks from increased penetration of zero emission vehicles (ZEVs). The increased penetration of ZEVs is speculative, but likely given rapid technology advancement and more stringent legislation. For example, this HRA assumed that the 2040 heavy duty truck fleet would be made up of 94% diesel, 6% gasoline and 0% electric. According to the WLC Transportation Energy Technical Report (ESA, 2018), a High EV Penetration scenario projects that the heavy duty truck fleet would consist of 55.7% diesel, 4.3% gasoline, and 40% electric. Therefore, accounting for the High EV Penetration scenario would result in a greatly reduced health risk impact than what has been calculated in this analysis.

Localized Risk

Cancer Risk for Sensitive/Residential Receptors. For reference, a risk level of 1 in a million implies a likelihood that up to one person, out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the specific concentration of diesel PM over the duration of the exposure. This risk would be an excess cancer risk that is in addition to any cancer risk borne by a person not exposed to these air toxics (USEPA, 2017).

Table 4.3-30 presents the estimated cancer risks for the 30-year exposure scenario that starts from the beginning of project construction (Construction + Operation HRA), which uses updated construction and operational emissions values. The results are provided separately for project construction diesel PM emissions, operational diesel PM emissions, and the total project diesel PM emissions prior to the application of emission mitigation. Table 4.3-31 shows the estimated cancer risk for the 30-year residential exposure scenario that starts from the beginning of project full operation in 2040 (Operational HRA), which used the 2040 emission levels to represent the emissions for 2040 to 2069.

On the basis of the results shown in Table 4.3-30, the project would exceed the SCAQMD's cancer risk significance threshold of an incremental increase of 10 in a million prior to the application of mitigation and would represent a significant impact. Construction impacts contribute the greatest proportion of the total impact presented in Table 4.3-30. Table 4.3-31 shows that during full project operation, the estimated maximum cancer risk anywhere in the model domain is less than the 10 in a million threshold, impact will therefore be less than significant without mitigation. Overall, without mitigation, the project is expected to have a significant impact mainly due to diesel PM emissions from construction activities.

Figures 4.4-3 and 4.3-4 show the incremental cancer risks for the project location. The figures show the results prior to the application of mitigation.

Estimates of Cancer Risk for School Site Receptors. Cancer risk estimates at school sites in the area are provided in Appendix D. Prior to the application of the mitigation, the maximum cancer risk is at Ridgecrest Elementary School and would be less than 2 in a million. Therefore, impacts at schools are less than the 10 in one million significance threshold prior to mitigation and are less than significant.

Estimates of Cancer Risk for Worker Receptors. Estimates of worker exposures were prepared based on the assumption of a 25-year exposure duration for 250 days per year and 8 hours per day as described in the methodology section above. Note that the OEHHA early-in-life age factors do not apply to worker receptors. The highest worker cancer risk estimates prior to the application of mitigation is less than 5 in one million for the construction + operational scenario and 0.6 in one million for the full operational scenario, both at one onsite location. Therefore, cancer risk for worker receptors anywhere in the revised HRA's study area is less than the 10 in one million significance threshold. Projected impacts are less than significant without mitigation.

This analysis is based on the assumption that new technology diesel exhaust cause cancer, contrary to what was found by the HEI study and discussed in more detail below.

Estimates of Cancer Burden. The cancer burden calculation provides an estimate of the increased number of cancer cases as a result of exposures to TAC emissions. The total cancer burden is the product of the number of persons in a population area (such as a census tract) and the estimated individual risk from TACs in that population area and then summed over all population areas. The SCAQMD indicates that the burden calculation includes those population units having an incremental cancer risk of 1 in a million or greater.

Cancer risks were estimated at the geographical center (centroid) of census tracts that are within the study area of the HRA. For the 30-year exposure duration in accordance with "Current OEHHA Guidance", the cancer burden is estimated to be 0.09 out of a population of about 63,090 individuals that were estimated to have a cancer risk of 1 in a million or more. The SCAQMD has established a threshold for cancer burden of 0.5. Therefore, the project would not exceed the SCAQMD's cancer burden significance threshold prior to the application of mitigation.

Table 4.3-30: Estimated Cancer Risks, 30-Year Exposure Duration for Sensitive/Residential Receptors Starting from Beginning of Project Construction (Construction and Operation HRA), Without Mitigation

Receptor Location	**Incremental Increase in Cancer Risk During Project Construction (risk/million)**	**Incremental Increase in Cancer Risk During Project Operation (risk/million)**	**Total Incremental Increase in Cancer Risk[1] (risk/million)**	**SCAQMD Cancer Risk Significance Threshold (risk/million)**	**Exceeds Threshold?**
Maximum risk anywhere in the modeling domain[2]	54.1	3.9	57.5	10	Yes
Maximum risk within the project boundaries[3]	54.1	3.9	57.5	10	Yes
Maximum risk at any area outside of the project boundaries[4]	14.9	1.1	16.0	10	Yes

Notes:

[1] Conservatively assumed all receptors in the studied domain are residential receptors and will have 30-year average exposures from 2020 to 2049 (includes diesel PM emissions from construction and operation); cancer risk estimates derived from the updated construction emission estimate, TIA, EMFAC2014 emission model, SCAQMD HRA guidance and "Current OEHHA Guidance" for estimating cancer risks

Regional Freeway Network Risk

As mentioned in the methodology section, the HRA study area was focused on the most extensive emissions from project related activities. Because project activity is highest on-site, the project's emissions and associated health impact decreases with an increase in distance from the project site, as demonstrated by the cancer risk contours in Figures 4.3-3 and 4.3-4. The HRA study area included approximately 18 miles of freeway segments along SR60 that extend from north of the project boundary 8.6 miles toward west (toward Port of Long Beach) and 9 miles toward east (toward Palm Springs), and the HRA receptor grids include receptors along the SR-60 freeway. Based on the results shown in Figure 4.3-3 for the construction plus operation scenario, without mitigation, only a small segment (approximately one mile) along SR-60 that is immediately north of the project boundary will potentially have an incremental cancer risk exceeding the SCAQMD 10 in one million threshold; at an approximate distance of 2.5 miles away from the project boundary, the potential increment cancer risk along SR60 would be less than 2 in one million. Based on results shown in Figure 4.3-4 for 30 years of the full project buildout scenario, without mitigation, no segment along SR-60 would exceed the 10 in one million cancer risk threshold; at a distance of less than two miles from the project boundary, the incremental cancer risk is less than 2 in one million. The project's mitigation conditions require that all construction equipment over 50 horsepower would be Tier 4, all diesel trucks accessing the project during operation be model year 2010 or newer, that all on-site equipment be Tier 4. As shown in Figures 4.3-5 and 4.3-6, with mitigation, the incremental cancer risk along SR-60 will be less than 10 in one million and less than significant. Because project-generated vehicle trips and associated impacts decrease with an increase in distance from the project site, the project impact along the regional freeway network that is outside the HRA's study area will be less than those presented in Figures 4.3-3 and 4.3-4. The project impact to regional freeway network will be the greatest during project full operation, as shown in Tables 4.3-31 and Tables 4.3-34, the maximum cancer risk for receptors along the SR-60 freeway would be 3.4 without mitigation and 3.2 with mitigation (less than the 10 in one million threshold). Therefore, the project health impact along the regional freeway network will be less than significant.

Of note, results in Figure 4.3-3 is based on project construction overlapping with project operations (partial project operation since project is not built out yet) while Figure 4.3-4 is based on full project operation. The difference between the two sets of results indicate that the incremental cancer risk in Figure 4.3-3 is mainly driven by the DPM emissions from onsite construction equipment. Therefore, the impact would be localized near the project site and will disappear once construction completes.

Informational Purposes: Morbidity and Mortality

There is no established threshold or approved methodology for calculating morbidity and mortality. For purposes of this assessment, morbidity is a term for describing how an external effect such as air pollution would exacerbate an existing illness and other health effect. Mortality is another term for death. The following represents the result of the calculations for long-term mortality and various morbidity health endpoints due to DPM for the project prior to the application of mitigation. The locations for the morbidity/mortality estimations were at the location with the highest combined annual DPM concentration and census tract population such that the change in DPM would affect the greatest number of people. A cumulative total of each mortality/morbidity health endpoint was also calculated that totals the number of added cases of an identified health endpoint at each census tract location within the entire region potentially impacted by the project emissions.

(30 Years of Full Operation)

ESA

The estimates of mortality and morbidity impacts are based on the application of concentration-response functions (C-R functions) that relate the change in the number of adverse health effect incidences in a population to a change in air pollutant concentration experienced by that population. However, such estimations are subject to great uncertainty. Sources of uncertainty include emission estimates, population exposure estimates, form of C-R functions, baseline rates of mortality and morbidity that are entered into the C-R functions, and occurrence of additional not-quantified adverse health effects. It should be noted that the nature of PM as a complex mixture of various pollutants, as well as the confounding health effects of pollutants such as sulfur dioxide, NO_2, CO, and ozone that tend to co-occur with PM in ambient air, greatly increase the complexity of deriving accurate PM concentration-response functions.

Exposure to the Project’s DPM emissions prior to mitigation would result in an increase in mortality of approximately 0.00011 additional cases per year at the location where the project has its maximum impact from DPM emissions or 0.001 additional cases over all of the census tracts contained in the modeling domain.

Table 4.3-32 summarizes the estimates of the various morbidity health endpoints due to the emissions from the project without mitigation. As shown in these tables, the project would not result in a single new added case of a quantified health endpoint either at location where the impact would be greatest or cumulatively over the entire air dispersion modeling domain examined in this assessment.

Table 4.3-32: Estimates of Various Morbidity Health Endpoints from Project Emissions Without Mitigation

Health Endpoint	Maximum Added Occurrences (cases/year)	Cumulative Occurrences over the Entire Modeling Region (cases/year)
Long-term Mortality (Ages 30+)	0.00011	0.001
Chronic Illness: Chronic Bronchitis (Age 27+)	0.00053	0.005
Hospitalization: Chronic Obstructive Pulmonary Disease Age 65+)	0.000001	0.000008
Hospitalization: Pneumonia (Age 65+)	0.000001	0.00001
Hospitalization: Cardiovascular (Age 65+)	0.000002	0.00002
Hospitalization: Asthma (Age 0-64)	0.0000005	0.000005
Hospitalization: Asthma-related Emergency Visits (Ages 0-64)	0.000002	0.00001

Mitigation Measures. The mitigation measures previously identified under other impact sections are required (**Mitigation Measures 4.1.6.1A, 4.3.6.2A, 4.3.6.2B, 4.3.6.2D, 4.3.6.3A, 4.3.6.3B, 4.3.6.3C, 4.3.6.3D,** and **4.3.6.3E**) to reduce construction and operational emissions of criteria pollutants would reduce the estimated cancer risks associated with the project. Additionally, the following mitigation measure is required to ensure that significant health risk does not occur at on-site residential receptor.

4.3.6.5A Prior to the issuance of grading permits, the applicant shall arrange for MERV 13 air filters to be installed at the residence located at 13241 World Logistics Center Parkway.

Mitigation Measure 4.3.6.3B(l) would require that all diesel trucks that access the project site be model year 2010 or later and limits truck and vehicle idling to 3 minutes. **Mitigation Measure 4.3.6.2A(a)** would require that Tier 4 construction equipment be used on the project site. These mitigation measures would reduce the cancer risk from the project.

Mitigation Measure 4.3.6.3C may encourage alternative fueled vehicles and trucks on the project site. As discussed above, a High EV Penetration scenario assumes that up to 40 percent of the project's heavy duty trucks would be electric-powered; however, no reduction is taken. **Mitigation Measure 4.3.6.3D** may reduce vehicle miles traveled to food establishments; however, no direct reduction is taken. **Mitigation Measure 4.3.6.3E** requires that if transportation refrigeration units are to be used, electrical hookups would be required. In addition, refrigerated space is prohibited unless the impacts do not exceed any environmental impacts identified in this Revised FEIR. Therefore, it is assumed in the unmitigated and mitigated estimates that there would be no transportation refrigeration units. **Mitigation Measure 4.3.6.5A** requires that the Applicant install MERV 13 air filters at the residence located at 13241 World Logistics Center Parkway. The Applicant currently retains ownership of this property and can arrange for the installation of MERV 13 filters at this residence.

Level of Significance after Mitigation for Sensitive Receptor Cancer Risk. Less than significant. Table 4.3-33 and Figure 4.3-5 show the cancer risks for the construction and operation HRA after application of mitigation. As noted, the cancer risks are substantially lower after mitigation, and the SCAQMD cancer risk significance threshold would not be exceeded at any of the onsite or offsite receptors within the study area. The large reduction in cancer risk after mitigation is attributable principally to the reduced diesel PM associated with the commitment to Tier 4 construction equipment. The impact of this mitigation is largely felt during the first 3 to 5 years of construction when the "Current OEHHA Guidance" assigns large age sensitivity factors to the first few years of the 30-year exposure duration. Table 4.3-34 and Figure 4.3-6 show the mitigated cancer risk from the 30 year full project buildout.

Through mitigation requirements, new technology diesel engines are required for the WLC project. The mitigation conditions require that all diesel trucks accessing the project during operation be model year 2010 or newer and that all on-site equipment be Tier 4. The results of the HEI Study indicate that the project mitigation requiring the application of Model Year 2010 engines as well as the use of Tier 4-compliant off-road construction equipment are not expected to result in emissions that would be associated with the formation of cancer in exposed individuals. The HEI study clearly demonstrates that the application of new emissions control technology to diesel engines have virtually eliminated the health impacts of diesel exhaust.

Mitigation measures 4.3.6.2A(a) and 4.3.6.3B(l) require 2010-compliant trucks for operation and Tier 4 equipment for construction and require 2010-compliant trucks for operation, respectively, both of which rely on diesel particulate filters similar to those tested in the HEI study. These vehicles reduce emissions by 90% when compared to 2006 vehicles and by 99% when compared to uncontrolled diesel engines. Recent emissions testing by CARB revealed that these diesel engines are cleaner than originally estimated. These findings, which are reflected in the CARB emissions factor model EMFAC2014, are 70% cleaner than previously estimated.

Table 4.3-33: Estimated Cancer Risks, 30-Year Exposure Duration for Sensitive/Residential Receptors Starting from Beginning of Project Construction (Construction and Operation HRA), With Mitigation

Receptor Location	Incremental Increase in Cancer Risk During Project Construction (risk/million)	Incremental Increase in Cancer Risk During Project Operation (risk/million)	Total Incremental Increase in Cancer Risk[1] (risk/million)	SCAQMD Cancer Risk Significance Threshold (risk/million)	Exceeds Threshold?
Maximum risk anywhere in the modeling domain[2]	8.3	1.4	9.7	10	No
Existing residences within the project boundaries

Beginning in 2001, USEPA and CARB began issuing a series of regulations that require new diesel-powered vehicles and equipment to use the latest emissions control technology. This technology relies on two components. The first is a diesel particulate filter, which is capable of reducing particulate matter emissions by over 90% (required for new engines beginning in 2007). The second technology is selective catalytic reduction, which reduces emissions of nitrogen oxides by over 90% (required for new engines beginning in 2010). Diesel emissions from equipment equipped with this technology is referred to as NTDE. As a result of the advances in emission control technology, USEPA, CARB, and other government and industry stakeholders commissioned a series of studies called the Advanced Collaborative Emissions Study (ACES). ACES has been guided by an ACES Steering Committee consisting of representatives of HEI and the Coordinating Research Council (CRC: a nonprofit organization that directs engineering and environmental studies on the interaction between automotive or other mobility equipment and petroleum products), along with the U.S. Department of Energy, U.S. EPA, engine manufacturers, the petroleum industry, CARB, emission control manufacturers, the National Resources Defense Council, and others. The HEI, funded in part by USEPA, was selected to oversee Phase 3 of ACES.

Phase 3 of ACES evaluated whether emissions from new technology diesel engines cause cancer or other health effects. Specifically, it evaluated the health impacts of a 2007-compliant engine equipped with a diesel particulate filter. HEI found that lifetime exposure to NTDE did not cause carcinogenic lung tumors. The study also confirmed that the concentrations of particulate matter and toxic air pollutants emitted from NTDE are more than 90% lower than emissions from traditional older diesel engine.

As a result of the very low emissions from NTDE and the research conducted by HEI, it is projected that the project would not result in a significant increase in cancer health risks from the project's diesel emissions. Therefore, the project would have a less than significant health risk impact.

As discussed above, the HRA analysis assumed DPM emissions from NTDE causes cancer (contrary to the HEI findings) and used a very conservative application of the "Current OEHHA Guidance" to the World Logistics Center project (which was provided for informational purposes). Although air quality significance thresholds have been established for outdoor environments, a significant portion of human exposure to air pollutants occurs indoors where people spend more than 90 percent of their time (USEPA, 2011). One approach to reduce exposure is the installation of high efficiency panel filters inside the HVAC system. Air filters and other air-cleaning devices are designed to remove pollutants from indoor air. Some are installed in the ductwork of a home's central heating, ventilating, and air-conditioning (HVAC) system to clean the air in the entire house. In studies of the effectiveness of air filtration systems in classrooms (SCAQMD, 2003) and by the EPA in residences (USEPA, 2010), the combination of an HVAC system with a high performance panel filter reduced indoor levels of fine particulate matter, PM2.5 and smaller particles by 70 to 90 percent.

The use of a filtration system consisting of the application of filters with a rating of ASHRSE Standard 52.2 MERV-13, as required by Mitigation Measure 4.3.5.4.A, is sufficient to capture a significant portion of the diesel particulate matter. However, the filtration system would not remove the smallest of particles (less than approximately 0.01 to 0.2 micron in diameter). MERV-13 filters would, however, reduce particles in the range of 0.3 to 1 micron by up to 75 percent and particles larger than 1 micron by 90 percent (see Table 1 of the Addendum to CARB, 2013b). Based on measurement studies of the size distribution of the collected DPM, approximately 0.1 to 10 percent of the total DPM mass includes particles between 0.01 and 0.2 micrometer in diameter, particles between 0.3 and 1 micrometer in diameter comprise 70 percent of the total DPM mass, and particles above 1 micrometer comprise 5 to 20 percent of the total DPM mass (DieselNet.com, 2002).

Since the cancer risk from DPM is calculated from the mass of DPM emitted, the quantity of DPM reduced by the action of air filters would thus equate to a reduction in cancer risk. The application of MERV-13 air filter filtration system would result in a reduction of DPM exposures by approximately 70 percent, as calculated below.

DPM size:	0.01 to 0.2 µm	0.3 to 1 µm	Greater than 1 µm
Calculation:	10% mass x 0% reduction	70% mass x 75%	20% mass x 90%
Reduction:	0% reduction	52.5% reduction	18% reduction

Attributing an adjustment for time that windows might be open, residents would be outside, or for different compounds that result in the cancer risk would reduce the efficacy of the filters by about 20 percent, bringing the total cancer risk reduction from the filters to 50 percent.

The use of the filters would bring the OEHHA-calculated risk below the SCAQMD threshold eliminating any possible risk from the project on any onsite or offsite receptors within the study area. Health risk impacts are less than significant and no further mitigation is required.

In summary, the implementation of all the recommended mitigation measures, including the requirement to use 2010 diesel engine emissions standards, Tier 4 construction equipment, and installation of air filters at the identified on-site residence will reduce the OEHHA-calculated cancer risk to below 10 in one million at all sensitive receptors. Therefore, impacts would be less than significant.

Finally, note further that before mitigation, the cancer risk burden is estimated at 0.09 and is less than the SCAQMD cancer burden significance threshold of 0.5. Therefore, the project would not exceed the SCAQMD's cancer burden significance threshold.

Summary of Project-Related Air Quality Impacts

Based on the preceding analyses in Sections 4.3.5.1 through 4.3.6.5, the WLC project will have the following direct air quality impacts:

Table 4.3-35: Summary of Project-Related Air Quality Impacts

Impact	Air Quality Topic/Issue	Impact Conclusion
Project Impacts		
4.3.5.1	Odors	Less than Significant No Mitigation Required
4.3.5.2	Long-Term Micro-Scale CO Hotspot Emissions	Less than Significant No Mitigation Required
4.3.6.1	Air Quality Management Plan Consistency	Significant (inconsistent) and Unavoidable with Mitigation
4.3.6.2	Regional Construction Emissions	Significant and Unavoidable with Mitigation (VOC, NOx, CO, and PM_{10}; regional health effects from ozone and particulate matter)
4.3.6.3	Localized Construction and Operation (LSTs)	Significant and Unavoidable with Mitigation (PM_{10}) (onsite and offsite)
4.3.6.4	Regional Long-Term Operational Emissions	Significant and Unavoidable with Mitigation (VOC, NOx, CO, PM_{10}, and $PM_{2.5}$; regional health effects from ozone, PM_{10}, and $PM_{2.5}$)
4.3.6.5	Sensitive Receptors (a) Localized PM_{10}	Significant and Unavoidable for PM_{10} with Mitigation (onsite) Less than Significant with Mitigation (offsite)
	(b) Non-Cancer Acute and Chronic Health Risks	Less than Significant
	(c) Cancer Risks– Sensitive Receptors	Less than Significant with Mitigation
	(d) Cancer Burden	Less than Significant
	(e) Cancer Risks –Workers	Less than Significant
	(f) Cancer Risks – School Sites	Less than Significant

~~***NOTE TO READERS.*** *This section has been revised to reflect changes from the original DEIR as a result of the following:*~~

- ~~*Reduction of the project size by 100 acres and 1 million square feet of building space from the Specific Plan (in the southwest corner);*~~
- ~~*Commensurate changes to the Traffic Impact Assessment (TIA, see Section 4.15);*~~
- ~~*Updated trip lengths based on the revised TIA;*~~
- ~~*Updated CalEEMod computer program with updated emission factors;*~~
- ~~*Revised mitigation in response to comments;*~~
- ~~*Change in project construction phasing (from 10 to 15 years);*~~
- ~~*Updated EMFAC2014 emission factor model;*~~
- ~~*Updated OEHHA health risk methodology; and*~~
- ~~*Use of the latest Health Effects Institute (HEI) research that demonstrates that new technology diesel exhaust does not cause cancer.*~~

~~*In January 2015, the results of a 5½-year study, led by the Health Effects Institute, were published regarding the health effects of new technology diesel exhaust and particularly the risk of cancer from exposure to diesel exhaust. The study found that new technology diesel exhaust does not cause cancer.*~~

~~*The HEI study distinguishes between older Traditional Diesel Engines (TDE) (exhaust from engines that are older than model year 2007) and new technology diesel exhaust (NTDE) (exhaust from engines model year 2007 or newer), which is 90-99% cleaner than TDE. The revised mitigation measures contained in this section require that all diesel trucks accessing the project during operation be model year 2010 or newer and that all off-road equipment meet Tier 4 engine standards. The results of the HEI Study indicate that the project mitigation requiring the application of Model Year 2010 engines as well as the use of Tier 4-compliant off-road construction equipment are not expected to result in emissions that would be associated with the formation of cancer in exposed individuals.*~~

~~*The DEIR contained an air quality analysis prepared before the release of the HEI study. As a result, the DEIR analysis assumed that any diesel exhaust, including NTDE, could cause cancer. For comparison to the DEIR, the following discussion analyzes the health risks which would occur if NTDE could cause cancer, which, as noted above, it does not. This is only for informational purposes and does not reflect the health risks associated with the World Logistics Center project.*~~

~~*HEI is an independent, non-profit research institute funded by the U.S. Environmental Protection Agency (EPA) and industry, and supported by the California Air Resources Board (CARB), the U.S. Federal Highway Administration, the US Department of Energy, Engine Manufacturers Association, American Petroleum Institute and the Coordinating Research Council to provide credible, high quality science on air pollution and health for air quality decisions.*~~

~~*These changes also resulted in updates to the traffic and air quality technical studies and proposed mitigation measures In addition, this section has been revised in response to public comments received on the Programmatic DEIR.*~~

~~4.3 AIR QUALITY~~

~~This section analyzes the proposed project's potential air quality impacts and provides a discussion of the proposed project, the physical setting of the project area, and the air quality regulatory framework. The air quality analyses evaluate potential air quality impacts by examining the short-term construction as well as long-term operational impacts associated with the project and by evaluating the effectiveness of the identified mitigation measures. Modeled air quality levels are based upon vehicle data and project trip generation included in the project's *Traffic Impact Analysis* and peak turn volumes generated for the proposed project combined with emission factors from the CARB. The evaluation was prepared in accordance with appropriate standards, utilizing procedures and methodologies as recommended by the South Coast Air Quality Management District (SCAQMD), the California Office of Environmental Health Hazards Assessment (OEHHA), and CARB. Air quality data posted by the SCAQMD, CARB, and the EPA web sites are included to document the local air quality environment and are incorporated herein by reference.~~

~~For the reader's reference, this EIR and each of the technical reports and analyses contained herein have been written to address a series of planning entitlements that affect several separate, adjacent and related properties. The overall project site covers 3,818 acres in the Rancho Belago area of the City of Moreno Valley. It includes 3,714 acres of land, which is the subject of various entitlements, plus 104 acres of land affected by off-site improvements needed to support the proposed development. The proposed entitlements are summarized below.~~

~~A General Plan Amendment is proposed covering 3,714 acres, which redesignates approximately 70 percent of the area (2,610 acres) for logistics warehousing (new LD and LL zones) and the remaining 29 percent (1,104 acres) for permanent open space and public facilities. The following elements of the General Plan are included in the proposed Amendment: Community Development (land use); Circulation; Parks, Recreation, and Open Space; Safety; Conservation; and the General Plan Goals and Objectives.~~

~~A new Specific Plan (September 2014) will be adopted to govern development of the World Logistics Center for the 2,610 acres. A separate zoning amendment will also be processed and adopted to rezone 1,104 acres for open space and public facilities uses and to incorporate the Specific Plan into the City's Zoning Map.~~

~~In addition to the General Plan Amendment, Specific Plan, and Zone Change, the project includes a Tentative Parcel Map covering 1,539 acres (property owned by the project applicant, Highland Fairview) within the project site. This subdivision map is for financing purposes only and will not confer any development rights to the property owner.~~

~~The project includes pre-annexation zoning for an 85-acre parcel of land within the project area.~~

~~Finally, a Development Agreement between the City and Highland Fairview (the project applicant) is included as one of the project entitlements. The details of all the project entitlements are included in Section 3.4 of the EIR, *Project Characteristics*.~~

~~The analysis contained in this section is based on the following technical studies prepared for the proposed project:~~

- ~~*Air Quality, Greenhouse Gas, and Health Risk Assessment Report* (Michael Brandman Associates – First Carbon Solutions [MBA-FCS], original dated January 29, 2013 and revised April 2015) contained in Appendix D of this EIR; and~~
- ~~*Traffic Impact Analysis Report, The World Logistics Center,* (Parsons Brinkerhoff, Inc., original dated January 28, 2013 and revised September 2014) contained in Appendix L of this EIR.~~

~~In addition to these project-specific technical studies, the analysis contained in this section is also based on the following reference documents:~~

- ~~*CEQA Air Quality Handbook,* South Coast Air Quality Management District, 1993;~~
- ~~*Final EIR City of Moreno Valley General Plan*, July 2006;~~
- ~~*Conservation Element*, City of Moreno Valley General Plan, adopted July 11, 2005;~~
- ~~*Final 2012 Air Quality Management Plan,* South Coast Air Quality Management District ;~~
- ~~Health Effects Institute, 2015: HEI Research Report 184, Advanced Collaborative Emissions Study (ACES); Lifetime Cancer and Non-Cancer Assessment in Rats Exposed to New-Technology Diesel Exhaust, January, 2015; and~~
- ~~Other reference material, as cited herein and in the *Air Quality, Greenhouse Gas, and Health Risk Assessment Report*.~~

~~4.3.1 Existing Setting~~

~~The project site is located in the South Coast Air Basin (Basin), a geographic area that encompasses the coastal plain and connecting broad inland valleys and low hills. The Pacific Ocean forms the southwestern border of the Basin, with mountain ranges forming the remainder of the border. The Basin includes Orange County and the non-desert portions of Los Angeles County, Riverside County, and San Bernardino County. The Basin is under the jurisdiction of the SCAQMD.~~

~~*Note: The following text has been added to help the reader better understand the complex topic of air quality.*~~

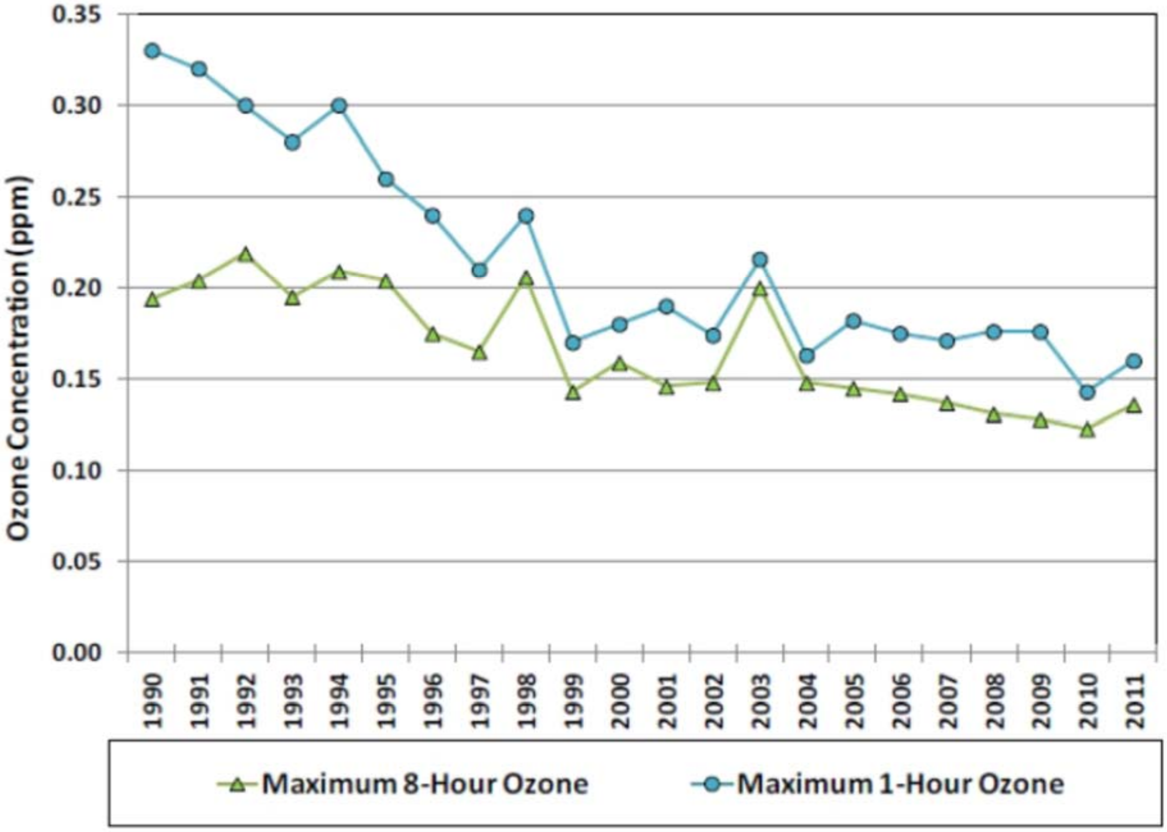
~~The air quality in the air basin has been steadily improving over the last couple of decades as measured in air pollutant concentrations by the SCAQMD. A concentration of a pollutant is a measure of the amount of a pollutant in the air. Some pollutants are measured in parts per million (ppm) and some are measured in micrograms per cubic meter (μg/m^3).~~

~~When sensitive people, such as children, pregnant women, and the elderly, breathe in air pollutants, they can experience health effects. These health effects differ based on the type of pollutant, the length of time someone is exposed, pre-existing health conditions, and the concentration of the pollutant. In general, health effects can include coughing, sore throat, chest pain, difficulty breathing, eye irritation, reduced lung function, asthma aggravation, chronic lung diseases, cancer, and lung damage.~~

~~Federal, state, and local agencies enact rules and regulations to reduce air pollutant emissions to protect the health of sensitive individuals. The EPA sets federal ambient air quality standards and the CARB sets state ambient air quality standards. When concentrations of pollutants exceed the standards, sensitive individuals may experience health effects.~~

~~Ozone is a pollutant formed in the air when emissions of volatile organic compounds (VOC) and nitrogen oxides (NOx) combine in the presence of sunlight. Ozone is a pollutant of concern in the air basin because ozone levels exceed the ozone standards.~~

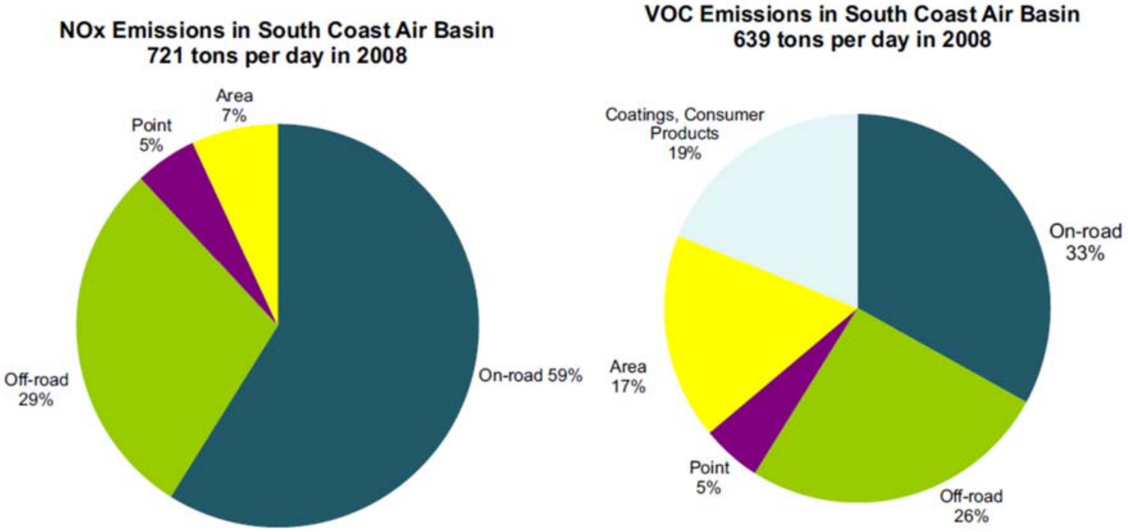
~~As shown in Figure 4.3.1, ozone concentrations in the basin have generally decreased over the past twenty years for 1-hour and 8-hour averaging time periods as defined by the State and/or federal ambient air quality standards. The 1-hour and 8-hour concentration refers to the average of the concentration over a 1-hour and 8-hour time period, respectively.~~



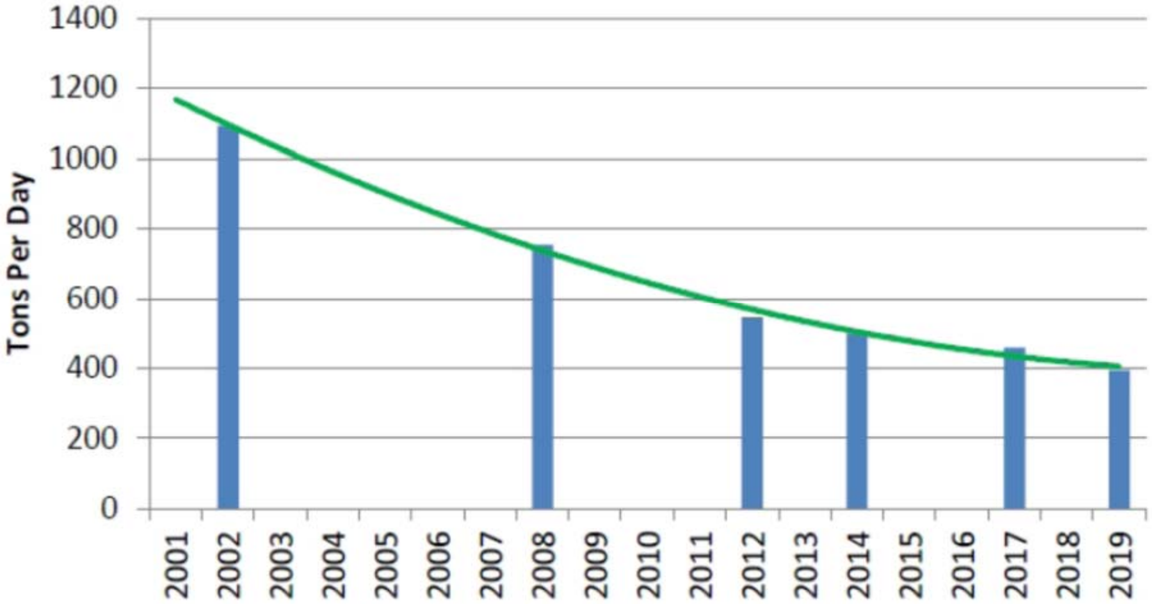
~~Figure 4.3.1: Ozone Concentration Trends in the South Coast Air Basin~~

~~As shown in Figure 4.3.2, the main source of NOx and VOC emissions in the basin are from on-road motor vehicles, not from the operation of buildings. Although vehicle miles traveled in the basin continue to increase, ozone concentrations are decreasing because of the mandated controls on motor vehicles and the replacement of older polluting vehicles with cleaner and lower-emitting vehicles. VOC and NOx are ozone precursors; therefore, if those emissions decrease, it follows that ozone concentrations would also decrease.~~

~~Emissions of NOx in the air basin are expected to decrease in the future despite future growth in population, and vehicle miles traveled, as shown in Figure 4.3.3.~~



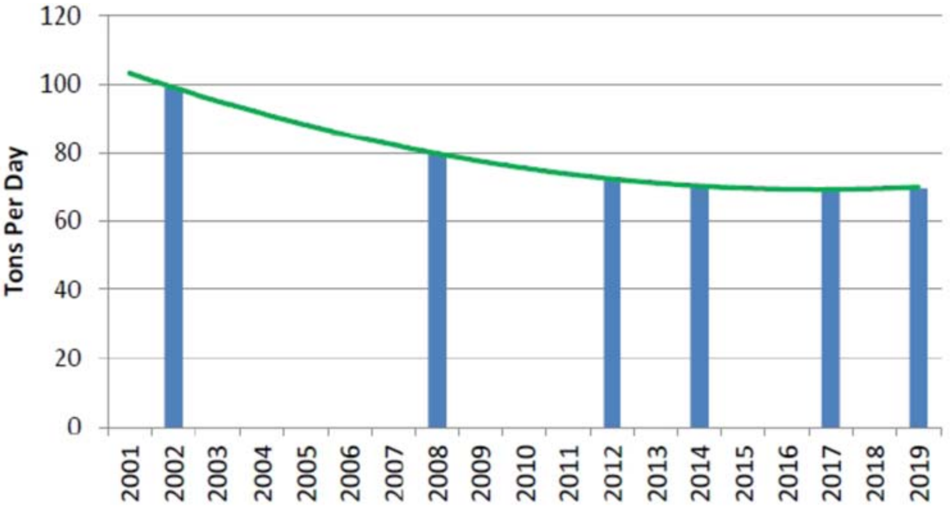
~~Figure 4.3.2: Ozone Precursor Emissions (VOC and NOx) in the South Coast Air Basin~~



~~Figure 4.3.3: NOx Emissions Forecast in the South Coast Air Basin~~

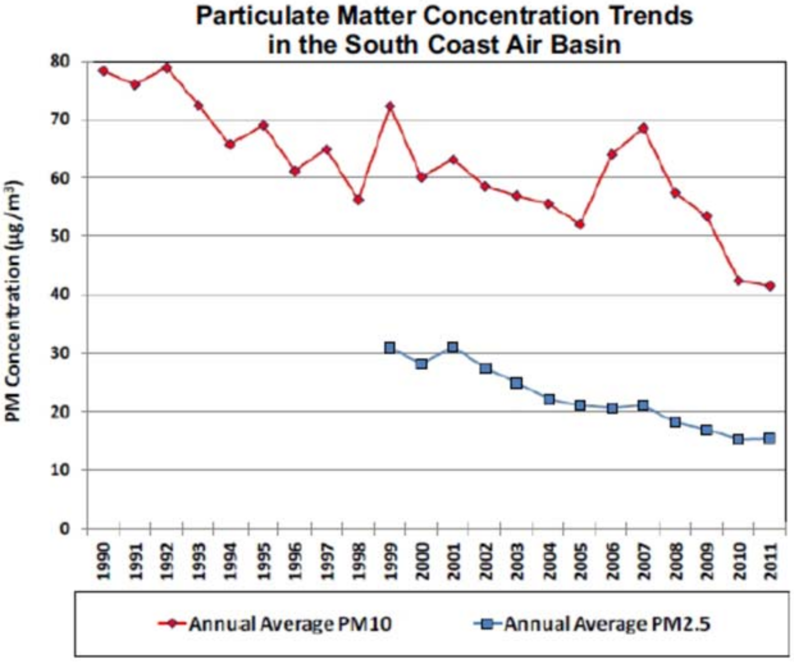
~~Another pollutant of concern is particulate matter (PM). PM is a mixture of small particles and liquid droplets suspended in the air. It is made up of components such as chemicals, metals, soil, or dust particles. The size of these particulates is linked to their potential for causing health problems. Ultrafine particles are less than 0.1 in micron in diameter, fine particles are less than 2.5 microns in diameter ($PM_{2.5}$), and coarse particles are larger than 2.5 microns and smaller than 10 microns in diameter (PM_{10}). The CARB and EPA have established standards for $PM_{2.5}$ and PM_{10} but not for ultrafine particles. $PM_{2.5}$ and PM_{10} are a concern in the air basin because sometimes the concentrations exceed the standards. $PM_{2.5}$ is often used as a marker for toxic air pollutants such as diesel PM.~~

~~As shown in Figure 4.3.4, $PM_{2.5}$ emissions are expected to decrease in the Basin and then level out after the year 2014.~~



~~Figure 4.3.4: $PM_{2.5}$ Emissions Forecast in the South Coast Air Basin~~

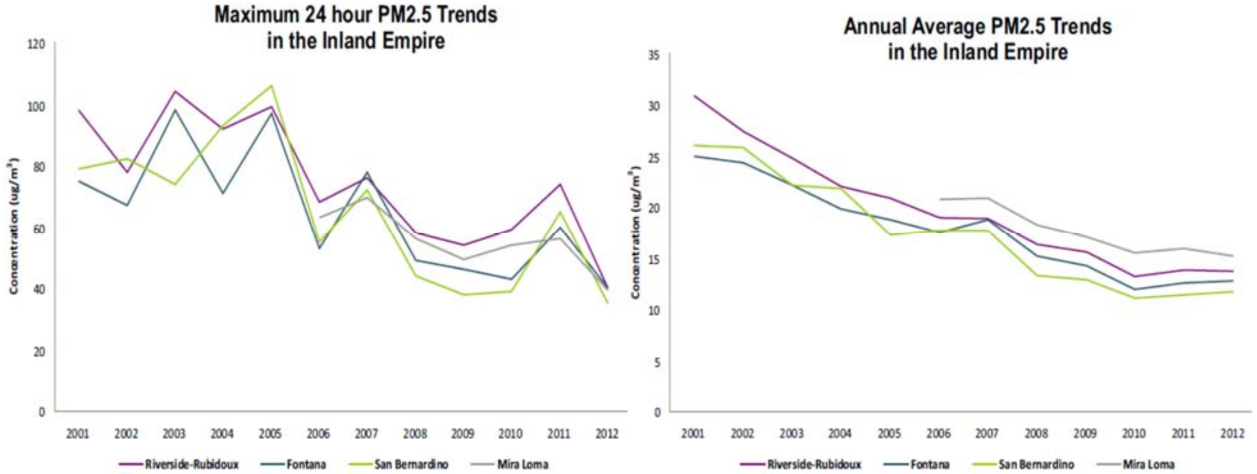
~~As shown in Figure 4.3.5, PM_{10} and $PM_{2.5}$ annual concentrations have continued to decrease since 1990 within the air basin as a whole.~~



~~Figure 4.3.5: Particulate Matter Concentration Trends in the South Coast Air Basin~~

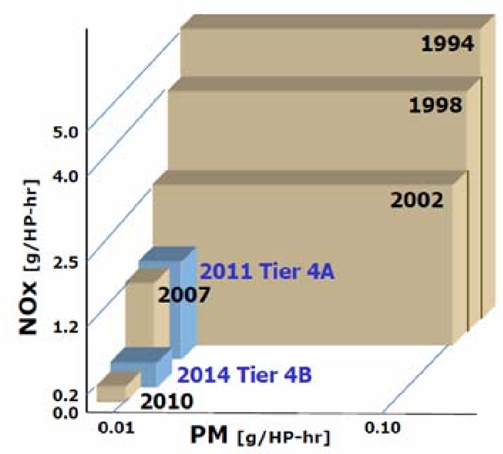
~~Figure 4.3.6 provides an additional view of $PM_{2.5}$ trends specifically in the Inland Empire. As shown, there is a marked decreasing trend in $PM_{2.5}$ concentrations in Riverside-Rubidoux, Fontana, and San Bernardino from 2001 to 2012 and at Mira Loma from 2006 to 2012. The relevance of these trends is~~

~~that $PM_{2.5}$ levels have displayed a decreasing trend in the Inland Empire despite increases in urban development including the development of large warehouse complexes since 2001.~~



~~Figure 4.3.6: $PM_{2.5}$ Concentration Trends in the Inland Empire~~

~~Part of the success in the decreasing NOx and PM emissions are standards placed on motor vehicles. Figure 4.3.7 demonstrates the changes in U.S. heavy duty diesel emission standards for NOx and PM. The project would incorporate mitigation that would require that all heavy duty diesel trucks accessing the project incorporate 2010 emissions standards. As shown below, the 2010 standards are only a fraction of the older standards, at 0.2 grams per horsepower hour (g/HP-hr) of NOx and 0.01 g/HP-hr of PM. The text in blue represents the off-road construction standards; 2011 is Tier 4 Interim and 2014 is Tier 4 Final.~~



~~Figure 4.3.7: Changes in U.S. Heavy-Duty Diesel NOx and PM Emission Standards~~

~~4.3.1.1 Climate and Meteorology~~

~~Air quality in the project area is not only affected by various emission sources (mobile, industry, etc.), but also by atmospheric conditions such as wind speed, wind direction, temperature, rainfall, and amount of sunshine. The combination of topography, low atmospheric mixing height, abundant sunshine, and emissions from the second largest urban area in the United States combine to give the Basin one of the worst air pollution problems in the nation.~~

~~Winds in the Basin are predominantly of relatively low velocities, averaging about 4.0 miles per hour (mph). These low average wind speeds, together with a persistent temperature inversion, limit the vertical dispersion of air pollutants throughout the Basin. Strong, dry, north or northeasterly winds, known as Santa Ana winds, occur during the fall and winter months, dispersing air contaminants. These conditions tend to last for several days at a time.~~

~~During periods of low inversions and low wind speeds, air pollutants generated in urbanized areas of Los Angeles County are transported predominantly inland into Riverside and San Bernardino Counties. In the winter, the greatest pollution problems are carbon monoxide (CO) and oxides of nitrogen (NO_X), because of extremely low inversions and air stagnation during the night and early morning hours that trap emissions principally from mobile sources. In the summer, the longer daylight hours and the brighter sunshine combine to cause a reaction between hydrocarbons and NO_X to form photochemical smog.~~

~~4.3.1.2 Regional Air Quality~~

~~Both the State of California and the Federal government have established health-based ambient air quality standards (AAQS) for six air pollutants. These pollutants are known as “criteria pollutants.”~~

- ~~Carbon monoxide (CO)~~
- ~~Lead (Pb)~~
- ~~Nitrogen dioxide (NO_2)~~
- ~~Ozone (O_3)~~
- ~~Particulate matter with a diameter of 10 microns or less (PM_{10})~~
- ~~Sulfur dioxide (SO_2)~~

~~Federal standards for 8-hour ozone and for fine particulate matter less than 2.5 microns in diameter ($PM_{2.5}$) have also been adopted. In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety and are listed in Table 4.3.A. Table 4.3.B lists the health effects of these criteria pollutants and their potential sources.~~

~~*Note: Episode criteria and smog alerts are no longer used by the CARB or the SCAQMD; the EPA’s Air Quality Index is now used. Therefore, the following text has been deleted and information regarding the Air Quality Index has been added.*~~

~~The **Air Quality Index** is an index developed and reported by the United States EPA for reporting daily air quality. It indicates how clean or polluted the air is and what associated health effects might be a concern. The Air Quality Index focuses on health effects that may be experienced within a few hours or days after breathing polluted air. Descriptions for the various levels in the Air Quality Index are shown in Table 4.3.C.~~

~~The federal 8-hour ambient air quality standard for ozone is 75 ppb and the California standard is 70 ppb. The California 1-hour standard for ozone is 90 ppb (there is no federal 1-hour standard). As shown in the table, to achieve the federal ambient air quality standard for ozone, the Air Quality Index would need to be below 101. To achieve the state 8-hour ambient air quality standard for ozone, the Air Quality Index would need to be below 84.~~

~~In the Moreno Valley area in 2010 and 2011, the air quality index was greater than 150 for one day for each year. That means the air was unhealthy for one day in 2010 and one day in 2011. If the future years follow that trend, then one day during each of the construction years would cease construction activities.~~

~~Indirect sources of pollution are generated when minor sources collectively emit a substantial amount of pollution. Examples of this would be the motor vehicles at intersections, malls, and on highways. The California Clean Air Act (CCAA) provides the SCAQMD with the authority to manage transportation~~

~~activities at indirect sources. The SCAQMD also regulates stationary sources of pollution throughout its jurisdictional area. Direct emissions from motor vehicles are regulated by the CARB.~~

~~The narrative below describes the pollutant characteristics, mechanisms of pollutant origination, and health effects for the criteria pollutants (i.e., pollutants specifically regulated under the Federal Clean Air Act [CAA] and/or the California Clean Air Act [CCAA]) and other pollutants of concern. Because the concentration levels of the AAQS were set with an adequate margin to protect public health and safety, these health effects will not occur unless the standards are exceeded by a large margin or for a prolonged period of time. State AAQS are more stringent than Federal AAQS. An additional discussion of health effects is contained in the~~ ~~*Air Quality, Greenhouse Gas, and Health Risk Assessment*~~ ~~(2015).~~

- ~~*Carbon Monoxide*~~
  - ~~Description and Properties: CO is colorless, odorless toxic gas produce by incomplete combustion of carbon-containing fuels (e.g., gasoline, diesel fuel, and biomass). CO is a primary pollutant, meaning it is emitted directly into the air (unlike secondary pollutants such as ozone that are formed by the reactions of other pollutants). CO levels tend to be highest during the winter months when the meteorological conditions support the accumulation of the pollutants. This occurs when relatively low inversion levels trap pollutants near the ground and concentrated the CO (EPA 2006c). Because CO is somewhat soluble in water, normal winter conditions of rainfall and fog can suppress CO conditions.~~
  - ~~Health Effects: CO is essentially inert to plants and materials but can have significant effects on human health. CO gas enters the body through the lungs, dissolves in the blood, and replaces oxygen as an attached hemoglobin. This binding reduces available oxygen in the blood and; therefore, reduces oxygen delivery to the body’s organs and tissues. Effects on humans range from slight headaches to nausea to death. Elevated levels of CO can also cause visual impairments, reduced manual dexterity, poor learning ability, reduced work capacity, and trouble performing complex tasks.~~
  - ~~Sources: The major sources of CO are on-road vehicles, aircraft, and off-road equipment, or any source that burns fuel including residential heaters and stoves. Since most of the CO sources are the indirect result of urban development, most emissions and unhealthy CO levels occur in major urban areas.~~
- ~~*Ozone*~~
  - ~~Description and Physical Properties:~~ ~~O_3~~ ~~is known as a photochemical pollutant. Ozone is not emitted directly into the atmosphere, but is formed by a complex series of chemical reactions between reactive organic gases (ROG) or volatile organic compounds (VOC),~~ ~~NO_X~~~~, and sunlight. ROG and~~ ~~NO_X~~ ~~are emitted from automobiles, solvents and fuel combustion, the sources of which are widespread throughout the SCAQMD. Significant ozone formation generally requires an adequate amount of precursors in the atmosphere and several hours in a stable atmosphere with strong sunlight. The conditions conducive to the formation of ozone include extended periods of daylight (solar radiation) and hot temperatures. These conditions are prevalent during the summer when thermal inversions are most likely to occur. As a result, summertime conditions of long periods of daylight and hot temperatures form ozone in the greatest qualities. During the summer, thermal inversions trap ozone from dispersing vertically, high concentrations of this pollutant are prevalent.~~

~~*Note: Table 4.3.C in the original DEIR was entitled “Attainment Status of Criteria Pollutants in the South Coast Air Basin” and has been moved to later in this section and renumbered Table 4.3.D.*~~

~~**Footnotes**~~

[1] ~~California standards for ozone; carbon monoxide (except Lake Tahoe); sulfur dioxide (1- and 24-hour); nitrogen dioxide; suspended particulate matter (PM$_{10}$ and PM$_{2.5}$) and visibility-reducing particles, are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.~~

[2] ~~National standards (other than ozone, particulate matter, and those based on annual averages or annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth-highest eight-hour concentration in a year, averaged over three years, is equal to or less than the standard. For PM$_{10}$, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than one. For PM$_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current federal policies.~~

[3] ~~Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.~~

[4] ~~Any equivalent procedure which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.~~

[5] ~~National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.~~

[6] ~~National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.~~

[7] ~~Reference method as described by the EPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the EPA.~~

[8] ~~To attain this standard, the 3-year average of the 98th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 0.100 ppm (effective January 22, 2010). Note that the EPA standards are in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national standards to the California standards the units can be converted from ppb to ppm. In this case, the national standards of 53 ppb and 100 ppb are identical to 0.053 ppm and 0.100 ppm, respectively.~~

[9] ~~On June 2, 2010, the U.S. EPA established a new 1-hour SO$_2$ standard, effective August 23, 2010, which is based on the 3-year average of the annual 99th percentile of 1-hour daily maximum concentrations. EPA also proposed a new automated Federal Reference Method (FRM) using the ultraviolet technology, but will retain the older pararosaniline methods until the new FRM have adequately permeated State monitoring networks. The EPA also revoked both the existing 24-hour SO$_2$ standard of 0.14 ppm and the annual primary SO$_2$ standard of 0.030 ppm, effective August 23, 2010. The secondary SO$_2$ standard was not revised at that time; however, the secondary standard is undergoing a separate review by EPA. Note that the new standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the new primary national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.~~

[10] ~~The CARB has identified lead and vinyl chloride as “toxic air contaminants” with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.~~

[11] ~~National lead standard, rolling 3-month average: final rule signed October 15, 2008.~~

~~°C = degrees Celsius~~

~~**Table 4.3.C: Air Quality Index Descriptions (new table)**~~

~~Air Quality Index Levels of Health Concern~~	~~Air Quality Index Numerical Range~~	~~Ozone Concentration for Air Quality Index (ppb)~~		~~Meaning~~
		~~8-Hour~~	~~1-Hour~~	
~~Good~~	~~Low: 0~~ ~~High: 50~~	—	—	~~Air quality is considered satisfactory, and air pollution poses little or no risk.~~
~~Moderate~~	~~Low: 51~~ ~~Std: 84*~~ ~~High: 100~~	~~Low: 59~~ ~~Std: 70*~~	~~Low: 85~~	~~Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.~~
~~Unhealthy for Sensitive Groups~~	~~Low: 101~~ ~~High: 150~~	~~Low: 75 (also the federal standard)~~	~~Low: 125~~	~~Members of sensitive groups may experience health effects. The general public is not likely to be affected. People with heart or lung disease, children, and older adults are considered sensitive and are at greater risk. For ozone, people who are active outdoors are also considered sensitive.~~
~~Unhealthy~~	~~Low: 151~~ ~~High: 200~~	~~Low: 95~~	~~Low: 165~~	~~Everyone may begin to experience health effects; members of sensitive groups may experience more serious health effects.~~
~~Very Unhealthy~~	~~Low: 201~~ ~~High: 300~~	~~Low: 115~~	~~Low: 205~~	~~Health alert: everyone may experience more serious health effects~~
~~Hazardous~~	~~Low: 301~~ ~~High: 500~~	~~Low: 374~~	~~Low: 405~~	~~Health warnings of emergency conditions. The entire population is more likely to be affected.~~

~~ppb = parts per billion (a measure of concentration) * Std = 8-hour California ozone ambient air quality standard Source: MBA-FCS 2015~~

  - ~~Health Effects: Health effects of ozone can include respiratory system irritation, reduction of lung capacity, asthma aggravation, inflammation and damage to lung cells, aggravated cardiovascular disease, and permanent lung damage. The greatest health risk is to those who are more active outdoors during smoggy periods, such as children, athletes, and outdoor workers. Ozone also damages natural ecosystems such as forests, foothill communities, and damages agricultural crops and some man-made materials such as rubber, paint, and plastics.~~

  - ~~Sources: Ozone is a secondary pollutant, thus is not emitted directly in the lower level of the atmosphere. The sources of ozone precursors (ROG and NO_X) are discussed above in the description of ozone.~~

- ~~*Oxides of Nitrogen*~~

  - ~~Description and Physical Properties: During combustion of fossil fuels, oxygen reacts with nitrogen to produce NO_X (NO, NO_2, NO_3, N_2O, N_2O_3, N_2O_4, and N_2O_5). Atmospheric deposition of NO_X occurs when atmospheric or airborne nitrogen is transferred to water, vegetation, soil, or other materials. Acid deposition involves the deposition of nitrogen and/or sulfur acidic compounds that can harm natural resources and materials. NO_X is also an ozone precursor. When NO_X and ROG are released in the atmosphere, they can also be a precursor to PM_{10} and $PM_{2.5}$.~~

  - ~~Health Effects: The EPA has concluded that the only form of NO_X that exists at a level high enough to cause public health concerns is nitrogen dioxide (NO_2) (EPA 1997). Nitrogen dioxide is a brown gas with a strong odor. NO_X can react with moisture, ammonia, and other compounds to form nitric acid and related particles. The main human health concerns of nitrogen dioxide include lung damage, increased incidence of chronic bronchitis, eye and mucus membrane damage, negative effects on the respiratory system, pulmonary dysfunction, and premature death. Small particles can penetrate deeply into the sensitive tissue of the lungs and can cause or worsen respiratory disease such as emphysema, asthma, and bronchitis, and can also aggravate existing heart disease (EPA 2005b). Because NO_X is an ozone precursor, the health effects associated with ozone are also indirect health effects associated with unhealthful levels of NO_X emissions.~~

  - ~~Sources: A major source of NO_X includes stationary source fuel combustion (i.e. manufacturing and industrial, food and agricultural processing, and service commercial uses). Additionally, NO_X emission sources include motor vehicles internal combustion engines and electric utility and industrial boilers powered by fossil fuel combustion. Natural sources of NO_X include lightning, soils, wildfires, stratospheric intrusion, and the oceans. Natural sources accounted for approximately seven percent of 1990 emissions of NO_X for the United States. On-road vehicles also contribute to NO_X emissions.~~

- ~~*Sulfur Dioxide*~~

  - ~~Description and Physical Properties: Sulfur dioxide (SO_2) is a colorless, pungent gas. At levels greater than 0.5 ppm, the gas has a strong odor, similar to rotten eggs. Sulfuric acid is formed from sulfur dioxide, which is an aerosol particle component that affects acid deposition. Sulfur oxides (SO_X) include sulfur dioxide and sulfur trioxide (SO_3). The gas can also be produced in the air by dimethylsulfide and hydrogen sulfide. Sulfur dioxide is removed from the air by dissolution in water, chemical reactions, and transfer to soils and ice caps. Historically, sulfur dioxide was a pollutant of concern. However, with the successful application of regulations at the State and local level, the levels of sulfur dioxide have been reduced dramatically in the past several decades. The CARB, the State regulatory agency charged with regulating air pollution in the State, demonstrates that sulfur dioxide levels in the State are well below the maximum standards (CARB 2006b, Page 107, 408, and 409). Although sulfur dioxide concentrations have been reduced to levels well below State and Federal standards, further reductions are desirable because sulfur dioxide is a precursor to~~

~~sulfate and PM_{10}. Sulfates are a particulate formed through the photochemical oxidation of sulfur dioxide.~~

  - ~~Health Effects: Sulfur dioxide is a soluble gas; therefore, it can be absorbed in the mucous membranes of the respiratory tract and nose. Long-term exposure of high levels of sulfur dioxide can cause irritation of existing cardiovascular disease, respiratory illness, and changes in the defenses in the lungs. When people with asthma are exposed to high levels of sulfur dioxide for short periods of time during moderate activity, effects may include wheezing, chest tightness, or shortness of breath (EPA 2000).~~
  - ~~Sources: Anthropogenic, or human caused, sources include fossil-fuel combustion, mineral ore processing, and chemical manufacturing. Volcanic emissions are a natural source of sulfur dioxide.~~

- ~~*Lead*~~
  - ~~Description and Physical Properties: Lead (Pb) is a solid heavy metal that can exist in air pollution as an aerosol particle component. An aerosol is a collection of solid, liquid, or mixed-phase particles suspended in the air. Lead was first regulated as an air pollutant in 1976. Leaded gasoline was first marketed in 1923 and was used in motor vehicles until around 1970. The exclusion of lead from gasoline helped to decrease emissions of lead in the United States from 219,000 to 4,000 short tons per year between 1970 and 1997. Even though leaded gasoline has been phased out in most countries, some still use leaded gasoline. The mechanisms by which lead can be removed from the atmosphere (sinks) include deposition to soils, ice caps, and oceans, and inhalation.~~
  - ~~Health Effects: Lead accumulates in bones, soft tissue, and blood and can affect the kidneys, liver, and nervous system. The more serious effects of lead poisoning include behavior disorders, mental retardation, and neurological impairment. Low levels of lead in fetuses and young children can result in nervous system damage, which can cause learning deficiencies and low IQs. Lead may also contribute to high blood pressure and heart disease.~~
  - ~~Sources: Lead-ore crushing, lead-ore smelting, and battery manufacturing are currently the largest sources of lead in the atmosphere in the United States. Other sources include dust from soils contaminated with lead-based paint, soil waste disposal, and crustal physical weathering.~~

- ~~*Particulate Matter (PM_{10} and $PM_{2.5}$)*~~
  - ~~Description and Physical Properties: Particulate matter is a generic term that defines a broad group of chemically and physically different particles (either liquid droplets or solids) that can exist over a wide range of sizes. Examples of atmosphere particles include those produced from combustion (diesel soot or fly ash), light produced (urban haze), sea spray produced (salt particles), and soil-like particles from re-suspended dust. In discussions of air pollution, particulate matter is typically divided up into two size categories: PM_{10} and $PM_{2.5}$ because of the adverse health effects associated the smaller-sized particles. PM_{10} refers to particulate matter that is 10 microns or less in diameter (1 micron is one-millionth of a meter, also known as a micrometer [μm]). $PM_{2.5}$ refers to particulate matter that is 2.5 microns or less in a diameter. Soil dust consists of the minerals and organic material found in soil being lifted up into the air by winds (e.g., fugitive dust).~~
  - ~~Health Effects: Particulate matter can be inhaled directly into the lungs where it can be absorbed into the bloodstream. It is a respiratory irritant and can cause direct pulmonary effects such as coughing, bronchitis, lung disease, respiratory illnesses, increased airway reactivity, and exacerbation of asthma. Relatively recent mortality studies have shown a statistically significant direct association between mortality and daily concentrations of particulate matter in the air. Non-health effect includes reduced visibility and soiling of property.~~

- ~~Sources: Particulate matter originates from a variety of stationary and mobile sources. Stationary sources include fuel combustion for electrical utilities, residential space heating, and industrial processes; construction and demolition; metals, minerals, and petrochemicals; wood products processing; mills and elevators used in agriculture; erosion from tilled lands; waste disposal and recycling. Mobile or transportation-related sources include particulate matter from highway vehicles and non-road vehicles and fugitive dust from paved and unpaved roads. Secondary particulate matter is formed in the atmosphere through chemical reactions that can involve ROG, SO_X, NO_X, and ammonia.~~

- ~~*Diesel Particulate Matter*~~
    - ~~Description and Physical Properties: Diesel particulate matter (DPM) is a source of $PM_{2.5}$ because the size of diesel particles are typically 2.5 microns and smaller. In 1998, DPM made up about 6 percent of the total $PM_{2.5}$ inventory nationwide (EPA 2002). Diesel exhaust is a complex mixture of thousands of particles and gases that is produced when an engine burns diesel fuel. DPM includes the particles-phase constituents in diesel exhaust. Organic compounds account for 80 percent of the total particulate matter mass, which is composed of compounds such as hydrocarbons and their derivatives, and polycyclic aromatic hydrocarbons (PAHs) and their derivatives. Fifteen PAHs are confirmed for carcinogenicity, a number of which are found in diesel exhaust (NTP 2005b). The chemical composition and particle sizes of diesel PM vary between different engine types (heavy-duty, light-duty), engine operating conditions (idle, accelerate, decelerate), expected load, engine emission controls, fuel formulations (high/low sulfur fuel), and the year of the engine (EPA 2002).~~

    - ~~Cancer Health Effects: Human studies on the carcinogenicity of diesel particulate matter demonstrate an increased risk of lung cancer, although the increased risk cannot be clearly attributed to diesel exhaust exposure (NTP 2005b). Several occupational and ambient studies have documented the health effects due to exposure to diesel PM. The California Office of Environmental Health Hazards Assessment (OEHHA), in its role in assessing risk from environmental factors reviews such studies and makes recommendations on the way environmental risk should be evaluated through programs like the AB2588 Hot Spot Program. In its comprehensive assessment of diesel exhaust, OEHHA analyzed more than 30 studies of people who worked around diesel equipment, including truck drivers, 1950's era railroad workers, and equipment operators. The studies showed these workers were more likely to develop lung cancer than workers who were not exposed to diesel emissions. These studies provided strong evidence that long-term occupational exposure to diesel exhaust increases the risk of lung cancer. However, all of these studies were based on exposure to exhaust from traditional diesel engines and prior to the advent of highly efficient emissions controls like the diesel particulate filter. Based on these studies, CARB identified diesel exhaust a toxic air contaminant in 1998.~~

    - ~~More recently, in January 2015, a major new study evaluated the health impacts of "new technology diesel exhaust" (NTDE). Beginning in 2001, USEPA and CARB begin issuing a series of regulations that require new diesel-powered vehicles and equipment to use the latest emissions control technology. This technology relies on two components. The first is a diesel particulate filter, which is capable of reducing particulate matter emissions by over 90% (required for new engines beginning in 2007). The second technology is selective catalytic reduction, which reduces emissions of nitrogen oxides by over 90% (required for new engines beginning in 2010). Diesel emissions from engines equipped with this technology are referred to as NTDE. As a result of the advances in emission control technology, USEPA, CARB, and other government and industry stakeholders commissioned a series of studies called the Advanced Collaborative Emissions Study (ACES). ACES has been guided by an ACES Steering Committee consisting of representatives of HEI and the Coordinating Research Council (CRC: a nonprofit organization that directs engineering and environmental studies on the interaction between automotive or other mobility equipment and petroleum products), along with the U.S. Department of Energy, U.S. EPA, engine manufacturers, the~~

~~petroleum industry, CARB, emission control manufacturers, the National Resources Defense Council, and others. The Health Effects Institute (HEI), funded in part by USEPA, was selected to oversee Phase 3 of ACES.~~

- ~~o Phase 3 of ACES evaluated whether emissions from new technology diesel engines cause cancer or other health effects. Specifically, it evaluated the health impacts of an 2007-compliant engine equipped with a diesel particulate filter. HEI found:~~
  - ~~"Lifetime inhalation exposure of rats exposed to one of three levels of NTDE from a 2007-compliant engine, for 16 hours per day, 5 days a week, with use of a strenuous operating cycle that more accurately reflected the real-world operation of a modern engine than cycles used in previous studies, did not induce tumors or pre-cancerous changes in the lung and did not increase tumors that were considered to be related to NTDE in any other tissue. A few mild changes were seen in the lungs, consistent with long-term exposure to~~ ~~NO_2~~~~, a major component of NTDE, which is being further substantially reduced in 2010-compliant engines". (Page 1)~~
  - ~~"Using appropriate statistical approaches to analyze the data from more than 100 endpoints in the broad areas of histology, serum chemistry, systemic and lung inflammation, and respiratory function, the investigators confirmed the a priori hypothesis, namely, that NTDE would not cause an increase in tumor formation or substantial toxic health effects in rats, although some biologic effects might occur". (Page 3)~~
  - ~~"The overall conclusion was that chronic exposure of rats to NTDE did not produce tumors in the lung, in marked contrast to the effects of chronic exposure to TDE observed in multiple previous rat studies, in which lung tumors, as well as inflammation and the deposition of soot in the lung, were observed. Rather, the effects of NTDE in the lung more closely resembled changes noted after long-term exposures to gaseous oxidant pollutants, in particular~~ ~~NO_2~~~~, and to TDE from which particles have been filtered out. It is possible that components of NTDE other than~~ ~~NO_2~~ ~~may have contributed to the effects reported, but the low levels of other components suggest that they would not be primarily responsible" (Page 3)~~
  - ~~"Some mild histologic changes were found in the lung; however, these were not pre-cancerous lesions, previously described in long-term exposure studies of rats to TDE. Rather, the histologic changes — periacinar epithelial hyperplasia, bronchiolization, accumulation of macrophages, and periacinar interstitial fibrosis — were confined to a small region, the centriacinus, which is involved in gas exchange." (Page 3)~~
  - ~~"The histologic changes in the lungs were consistent with previous findings in rats after long-term exposure to~~ ~~NO_2~~ ~~— a major component of the exposure atmosphere, which is being substantially further reduced in 2010-compliant engines." (Page 4)~~
  - ~~"The present findings strongly support the premise that advances in engine, fuel, and combustion technologies have substantially reduced the potential health impacts of DE and that estimates of hazard and risk based on laboratory or epidemiologic studies of the health impacts of TDE exposures most likely do not reflect either the hazards or the risks from NTDE". (Page 40)~~
  - ~~"As shown, the ACES Phase I study (Khalek et al. 2009) found that emissions from 2007-compliant engines were reduced more than 90% compared with those from a 2004 engine; emissions of hydrocarbons and other air toxics by 2007-compliant engines were also lower by more than 80% than those of older engines" (Page 154)~~
- ~~o The HEI study clearly demonstrates that the application of new emissions control technology to diesel engines have virtually eliminated the health impacts of diesel exhaust.~~
- ~~o Non-Cancer Health Effects: Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and can cause coughs, headaches, light-headedness, and~~

~~nausea. Diesel exhaust is a major source of ambient particulate matter pollution as well, and numerous studies have linked elevated particle levels in the air to increase hospital admission, emergency room visits, asthma attacks, and premature deaths among those suffering from respiratory problems (OEHHA 2002). The HEI study discussed above also evaluated non-cancer health effects. The study found NTDE would not cause an increase in substantial toxic health effects in rats, although some biologic effects might occur.~~

  - ~~Sources: Diesel exhaust.~~

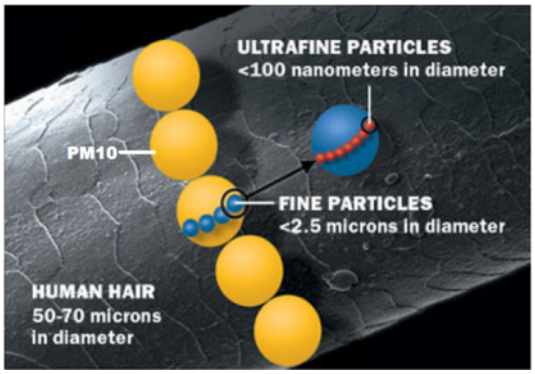
- ~~*Visibility-Reducing Particles*~~
  - ~~Description and Physical Properties: Visibility-reducing particles (VRP) are suspended particulate matter that reduces visibility. Visibility is the distance through the air that can be seen without the use of instrumental assistance. The distance that can be seen is limited by the amount of gases and aerosol particles in the way. The EPA implemented a Regional Haze Rule in 1999 to attempt to protect visibility in 156 national parks and wilderness areas in the Unites States. The regulation requires states to establish goals for improving their areas and to work together with other states as the pollution is often transported over long distances (EPA 1999).~~
  - ~~Health Effects: The human health effects of VRP are those of pollution (particulate matter, oxides of nitrogen, and sulfur dioxide) discussed above.~~
  - ~~Sources: The sources are other pollutants (particulate matter, oxides of nitrogen, and sulfur dioxide) as discussed above.~~
- ~~*Vinyl Chloride*~~
  - ~~Description and Physical Properties: Vinyl chloride, or chloroethene, is a chlorinated hydrocarbon and colorless gas with a mild, sweet odor. Most vinyl chloride is used to make polyvinyl chloride (PVC) plastic and vinyl products, including pipes, wire and cable coatings, and packaging materials. Vinyl chloride is formed when other substances such as trichloroethylene and tetrachloroethylene are broken down. This can occur when plastics containing these substances are left to decompose in solid waste landfills. Vinyl chloride has been detected near landfills, sewage plants, and hazardous waste sites due to microbial breakdown of chlorinated solvents. In 1978, the CARB established a State ambient air quality standard for vinyl chloride. The standard was set at 0.01 ppm for a 24-hour duration because that was the lowest level that could be detected at that time. In 1990, the CARB identified vinyl chloride as a toxic air contaminant and estimated a cancer unit risk factor.~~
  - ~~Health Effects: Short-term exposure to high levels of vinyl chloride in air causes central nervous system effects, such as dizziness, drowsiness, and headaches (CARB 2005). Epidemiological studies of occupationally exposed workers have linked vinyl chloride exposure to development of a rare cancer, liver angiosarcoma, and have suggested a relationship between exposure and lung and brain cancers.~~
  - ~~Sources: Manufacturing of PVC plastic and vinyl products.~~
- ~~*Hydrogen Sulfide*~~
  - ~~Description and Physical Properties: Hydrogen sulfide (H_2S) is a flammable, colorless, poisonous gas that smells like rotten eggs.~~
  - ~~Health Effects: High levels of hydrogen sulfide can cause immediate respiratory arrest. It can irritate the eyes and respiratory tract and cause symptoms like headache, nausea, vomiting, and cough. Long exposure to hydrogen sulfide can cause pulmonary edema.~~
  - ~~Sources: Hydrogen sulfide and other reduced sulfur compounds form by the anaerobic decomposition of manure some types of bacteria found in animal and human by-products produce hydrogen sulfide during reduction of sulfur-containing compounds, such as proteins. Manure, storage tanks, ponds, anaerobic lagoons, and land application sites are the primary~~

~~sources of hydrogen sulfide emissions. Anthropogenic sources include the combustion of sulfur containing fuels (oil and coal) and organic matter that undergoes putrefaction. It is used in the production of heavy water for nuclear reactors, the manufacture of chemicals, in metallurgy, and as an analytical reagent.~~

- ~~*Reactive Organic Gases and Volatile Organic Compounds*~~
  - ~~Description and Physical Properties: Reactive organic gases (ROG), or volatile organic compounds (VOC), are defined as any compound of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. ROG consist of nonmethane hydrocarbons and oxygenated hydrocarbons. Hydrocarbons are organic compounds that contain only hydrogen and carbon atoms. Nonmethane hydrocarbons are hydrocarbons that do not contain the unreactive hydrocarbon, methane. Oxygenated hydrocarbons are hydrocarbons with oxygenated functional groups attached.~~
  - ~~It should be noted that there are no State or Federal ambient air quality standard for ROG because they are not classified as criteria pollutants. They are regulated, however, because a reduction in ROG emissions reduces certain chemicals reactions that contribute to the formulation of ozone. ROG are also transformed into organic aerosols in the atmosphere, which contribute to higher PM_{10} and lower visibility.~~
  - ~~Health Effects: Although health-based standards have not been established for ROG, health effects can occur from exposures to high concentrations because of interference with oxygen uptake. In general, concentrations of ROG are suspected to cause eye, nose, and throat irritation; headaches, loss of coordination, nausea, damage to liver, kidney, and the central nervous system (EPA 2005). There are many ROG that have been classified as toxic air contaminates. A particular ROG of concern is benzene, which is described in more detail below. The EPA maintains a list of all air substances that have been classified as hazardous to humans and/or animals, and includes ROG, pesticides, herbicides, and radionuclides (EPA 2006d).~~
  - ~~Sources: The major sources of ROG are on-road motor vehicles and solvent evaporation.~~
- ~~*Benzene*~~
  - ~~Description and Physical Properties: Benzene is an ROG. It is a clear or colorless light-yellow, volatile, highly flammable liquid with a gasoline-like odor. The EPA has classified benzene as a “Group A” (human) carcinogen.~~
  - ~~Health Effects: Short-term (acute) exposure of high doses from inhalation of benzene may cause dizziness, drowsiness, headaches, eye irritation, skin irritation, and respiratory tract irritation, and at higher levels, unconsciousness can occur. Long-term (chronic) occupational exposure of high dose by inhalation has caused blood disorders, including aplastic anemia and lower levels or red blood cells (EPA 1992). Occupational exposure to benzene has been shown to cause leukemia (mainly acute myelogenous leukemia) (NTP 2005). Studies have also found that benzene exposure increased the risks of lymphatic and hematopoietic cancer (cancers of lymphatic system and of organs and tissues involved in the production of blood), total leukemia, and specific histologic types of leukemia (NTP 2005).~~
  - ~~Sources: Benzene is emitted into the air from gasoline services station (fuel evaporation), motor vehicle exhaust, tobacco smoke, and from burning oil and coal. Benzene is also used as a solvent for paints, inks, oils, waxes, plastic, and rubber. It is used in the extraction of oils from seeds and nuts. It is also manufactured for detergents, explosives, dyestuffs, and pharmaceuticals.~~

~~**Ultrafine Particles.** Ultrafine particles are particulate matter (PM) that exists in the ambient air and are less than 0.1 micrometer (µm or microns) in diameter. Ultrafine particles (UFP or PM$_{0.1}$) are included in the group called PM$_{2.5}$, particulate matter less than 2.5 micrometers in diameter.~~

~~The picture to the right displays the relative size of the particles compared with a human hair, with PM$_{10}$ (particulate matter less than 10 micrometers in diameter) indicated as yellow circles, PM$_{2.5}$ shown as blue circles, and ultrafine particles shown as red circles.~~



~~The CARB or the EPA have not set an ambient air quality standard for ultrafine particles because health effect evidence and measurements are currently limited. In its recent revisions to the national ambient air quality standards for particulate matter, the EPA states, "In considering both the currently available health effects evidence and the air quality data, the Policy Assessment concluded that this information was still too limited to provide support for consideration of a distinct PM standard for ultrafine particles" (EPA 2013,[1] page 3122).~~

~~The EPA indicates that evidence and research regarding health effects from short-term and long-term exposure to ultrafine particles are still too limited to establish a standard for ultrafine particles. In addition, the EPA reports that the studies that do exist have reported inconsistent and mixed results. The following is an excerpt from the Federal Register illustrating this point:~~

> ~~*"New evidence, primarily from controlled human exposure and toxicological studies, expands our understanding of cardiovascular and respiratory effects related to short-term ultrafine particle exposures. However, the Policy Assessment concluded that this evidence was still very limited and largely focused on exposure to diesel exhaust, for which the Integrated Science Assessment concluded it was unclear whether the effects observed are due to ultrafine particles, larger particles within the PM$_{2.5}$ mixture, or the gaseous components of diesel exhaust. In addition, the Integrated Science Assessment noted uncertainties associated with the controlled human exposure studies using concentrated ambient particle systems, which have been shown to modify the composition of ultrafine particles.*~~
>
> ~~*The Policy Assessment recognized that there are relatively few epidemiological studies that have examined potential cardiovascular and respiratory effects associated with short-term exposures to ultrafine particles. These studies have reported inconsistent and mixed results.*~~
>
> ~~*Collectively, in considering the body of scientific evidence available in this review, the Integrated Science Assessment concluded that the currently available evidence was suggestive of a causal relationship between short-term exposures to ultrafine particles and cardiovascular and respiratory effects. Furthermore, the Integrated Science Assessment concluded that evidence was inadequate to infer a causal relationship between short-term exposure to ultrafine particles and mortality as well as long-term exposure to ultrafine particles and all outcomes evaluated" (EPA 2013, page 3121).*~~

~~The Integrated Science Assessment for Particulate Matter concluded that evidence is inadequate to determine a causal relationship between short-term exposures of ultrafine particles to mortality or~~

~~[1] U.S. Environmental Protection Agency. 2013. Federal Register. National Ambient Air Quality Standards for Particulate Matter. Website: http://www.gpo.gov/fdsys/pkg/FR-2013-01-15/pdf/2012-30946.pdf. Accessed December 17, 2013.~~

~~central nervous system effects, but that the evidence is suggestive of short-term (24-hour) exposures causing cardiovascular and respiratory effects. The assessment also concluded that there is inadequate evidence linking long-term exposure (typically measured in terms of an annual concentration) of ultrafine particles to health effects, including respiratory, developmental, cancer, and mortality. Overall, epidemiological studies of atmospheric PM suggest that cardiovascular effects are associated with smaller particles, but there are few reports that make a clear link between ultrafine particle exposures and increased mortality. In January 2015, a new study[1] on the relationship of mortality to long-term exposure to fine and ultra-fine particles was released. The study found there was a relationship between morality and both fine and ultra-fine particles exposure.~~

~~In its Quantitative Health Risk Assessment for Particulate Matter, the EPA did not assess ultrafine particles, stating " that there was insufficient data to support a quantitative risk assessment for other size fractions (e.g., ultrafine particles)."[2]~~

~~The availability of measurements of ultrafine particles to support health studies is also limited:~~

> ~~*With respect to our understanding of ambient ultrafine particle concentrations, at present, there is no national network of ultrafine particle samplers; thus, only episodic and/or site-specific data sets exist. Therefore, the Policy Assessment recognized a national characterization of concentrations, temporal and spatial patterns, and trends was not possible at this time, and the availability of ambient ultrafine measurements to support health studies was extremely limited. In general, measurements of ultrafine particles are highly dependent on monitor location and, therefore, more subject to exposure error than accumulation mode particles. Furthermore, the number of ultrafine particles generally decreases sharply downwind from sources, as ultrafine particles may grow into the accumulation mode by coagulation or condensation. Limited studies of ambient ultrafine particle measurements have suggested that these particles exhibit a high degree of spatial and temporal heterogeneity driven primarily by differences in nearby source characteristics. Internal combustion engines and, therefore, roadways are a notable source of ultrafine particles, so concentrations of these particles near roadways are generally expected to be elevated. Concentrations of ultrafine particles have been reported to drop off much more quickly with distance from roadways than fine particles (EPA 2013, page 3121).*~~

~~In addition, it was hypothesized that chemical composition of PM may be a better predictor of health effects than particle size:~~

> ~~*In addressing the issue of particle composition, the Integrated Science Assessment concluded that, '[f]rom a mechanistic perspective, it is highly plausible that the chemical composition of PM would be a better predictor of health effects than particle size.' Heterogeneity of ambient concentrations of* $PM_{2.5}$ *constituents (e.g., elemental carbon, organic carbon, sulfates, nitrates) observed in different geographical regions as well as regional heterogeneity in* $PM_{2.5}$*-related health effects reported in a number of epidemiological studies are consistent with this hypothesis (EPA 2013, page 3122).*~~

~~The SCAQMD's Multiple Air Toxics Exposure Study (MATES-IV) states, "the health impact caused by exposure to UFPs [ultrafine particles] is still not well-understood." MATES-IV presents measurements of black carbon and ultrafine particles at 10 fixed sites within the Basin. The results indicate that the highest black carbon levels were at more urban sites located near major roadways. Black carbon was not measured in the previous MATES-III; however, elemental carbon levels decreased about 35~~

~~percent during from 2005 to 2012. Black carbon is a term used for elemental and graphitic components of soot.~~

~~The SCAQMD's 2012 Air Quality Management Plan (AQMP) contains a detailed chapter on near roadway exposure and ultrafine particles. The AQMP summarizes current health effect research on ultrafine particles. The potential health effects from ultrafine particle exposure are similar to those of~~ ~~$PM_{2.5}$ and PM_{10}: such as adverse cardio-respiratory responses including elevated blood pressure, and mild inflammatory and prothrombotic (obstruction of circulation) responses. The AQMP indicated that future research and assessment is needed in the following areas:~~

- ~~*Chemical Composition*. Chemical composition of ultrafine particles depends on many factors, including vehicle technology, fuel, and atmospheric chemical reactions after being emitted. Particle composition may be a factor determining particle toxicity; therefore, knowledge regarding the chemistry is important.~~
- ~~*Formation*. More research is needed regarding the processes leading to ultrafine particle formation.~~
- ~~*Standardized Measurement Methods and Procedures*. Currently, there is no standard method for conducting size-classified or particle-number measurements. Characteristics measured in ambient and emission-testing studies are highly dependent on the measurement instrument/protocol used and its setting.~~
- ~~*Measurements at Hot Spot Locations*. More measurements should be taken at "hot spots" where large numbers of vehicles are operated.~~
- ~~*Emissions Inventories*. Vehicle emission factors for different particle size ranges and for particle numbers are highly uncertain, and there are no emission inventories for ultrafine particles from motor vehicles. New estimations of ultrafine particle levels should not be derived solely from vehicle emission factors (i.e., EMFAC), but have to include predictions for formation near the tailpipe and in the atmosphere.~~
- ~~*Air Quality Modeling*. Modeling tools will need to be developed to simulate the formation and transport over a wide range of atmospheric conditions and emissions scenarios. The dispersion near the first few hundred meters of the roadway needs to be better understood.~~
- ~~*Health Effects*. New toxicological and epidemiological studies targeting exposure to controlled and uncontrolled emissions from gasoline and diesel vehicles are needed to better characterize the exposure-response relationships to ultrafine particles and to help develop health guidelines and potential regulations. The health effects of inorganic ultrafine particle emissions from vehicles are only now starting to receive significant attention.~~
- ~~*Other Sources*. More work is needed to better understand size, composition, and health impact of particles near stationary sources and other processes (rather than just motor vehicles).~~

~~**Children and Air Pollution.** Numerous studies have shown strong links between air pollution exposures and a range of health outcomes. One particular study was carried out over a 10-year experimental time period by the University of Southern California, the Children's Health Study (Gaulderman, 2000)[1]. The Children's Health Study, which began in 1992, is a large, long-term, study of the effects of chronic air pollution exposures on the health of children living in Southern California. Children may be more strongly affected by air pollution because their lungs and their bodies are still developing. Children are also exposed to more air pollution than adults since they breathe faster and spend more time outdoors in strenuous activities. About 5,500 children in twelve communities were enrolled in the study; two-thirds of them were enrolled as fourth-graders. Data on the children's~~

---

[1] ~~Gauderman, W, et. al. Peters: Association between Air Pollution and Lung Function Growth in Southern California Children. American Journal of Respiratory and Critical Medicine. Vol 162. Page 1383. 2000. Accessed October 22, 2013.~~

~~health, their exposures to air pollution, and many factors that affected their responses to air pollution were gathered annually until they graduated from high school. The major conclusions reached in the University of Southern California's Children's Health Study are shown below. Note however, that the conclusions provided below were developed based on measurements made in the 1990's when levels of air pollution in the Basin were substantially higher than current levels as shown earlier in Figures 4.3.1 to 4.3.6 and as noted further in Section 4.3.1.4 below and new technology diesel vehicles had not yet been introduced.~~

- ~~Children exposed to higher levels of particulate matter, nitrogen dioxide, acid vapor and elemental carbon, had significantly lower lung function at age 18, an age when the lungs are nearly mature and lung function deficits are unlikely to be reversed.~~
- ~~Children who were exposed to current levels of air pollution had significantly reduced lung growth and development when exposed to higher levels of acid vapor, ozone, nitrogen dioxide, and particulate matter, which is made up of very small particles that can be breathed deeply into the lungs.~~
- ~~Children living in communities with higher concentrations of nitrogen dioxide, particulate matter, and acid vapor had lungs that both developed and grew more slowly and were less able to move air through them. This decreased lung development may have permanent adverse effects in adulthood.~~
- ~~Children who moved away from study communities had increased lung development if the new communities had lower particulate matter levels, and had decreased lung development if the new communities had higher particulate matter levels.~~
- ~~Days with higher ozone levels resulted in significantly higher school absences due to respiratory illness. Children with asthma who were exposed to higher concentrations of particulate matter were much more likely to develop bronchitis.~~

- ~~In the most recent update to the Children's Health Study , researchers discovered that improvements in regional air quality contributed to improved children's lung function. Specifically, combined exposure to two harmful pollutants, nitrogen dioxide (NO2) and fine particulate matter, fell approximately 40 percent for children in the third study group (2007-2011) compared to the first study group (1994-98). The study followed children from Long Beach, Mira Loma, Riverside, San Dimas and Upland.~~
- ~~Children's lungs grew faster as air quality improved. Lung growth from age 11 to 15 was more than 10 percent greater for children breathing the lower levels of NO2 from 2007 to 2011 compared to those breathing higher levels from 1994 to 1998.~~
- ~~The percentage of children in the study with abnormally low lung function at age 15 dropped from nearly 8 percent for the 1994-98 group, to 6.3 percent in 1997-2001, to just 3.6 percent for children followed between 2007 and 2011.~~

~~4.3.1.3 Air Pollution Constituents and Attainment Status~~

~~The CARB has many responsibilities with respect to air quality, including the following:~~

- ~~Coordination and oversight of State and Federal air pollution control programs in California;~~
- ~~Oversight activities of local air quality management agencies (e.g., the SCAQMD);~~
- ~~Responsibility for incorporating air quality management plans for local air basins into a State Implementation Plan (SIP) for EPA approval; and~~
- ~~Maintaining air quality monitoring stations throughout the State in conjunction with local air districts.~~

~~The CARB has divided the State into 15 air basins based on meteorological and topographical factors that affect air pollution. An air basin generally has similar meteorological and geographic conditions throughout. The CARB and EPA use the data collected at monitoring stations to classify air basins as attainment, nonattainment, nonattainment transitional, or unclassified, based on air quality data for the most recent three calendar years compared with the AAQS. Nonattainment areas are imposed with additional restrictions, as required by the EPA to attain and maintain air quality standards. The air quality data are also used to monitor progress in attaining and maintaining air quality standards.~~

~~Significant authority for air quality control within the various air basins has been given to local air districts that regulate stationary source emissions and develop local nonattainment plans. Table 4.3.D identifies the attainment status[1] for the criteria pollutants in the Basin. The State AAQS are more stringent than the Federal AAQS.~~

~~Table 4.3.D: Attainment Status of Criteria Pollutants in the South Coast Air Basin~~

~~Pollutant~~	~~State~~	~~Federal~~
~~O_3 1-hour~~	~~Nonattainment~~	~~N/A~~
~~O_3 8-hour~~	~~Nonattainment~~	~~Extreme Nonattainment~~
~~PM_{10}~~	~~Nonattainment~~	~~Maintenance – serious (San Bernardino County is in nonattainment)~~
~~$PM_{2.5}$~~	~~Nonattainment~~	~~Nonattainment~~
~~CO~~	~~Attainment~~	~~Attainment/Maintenance~~
~~NO_2~~	~~Attainment~~	~~Attainment/Maintenance~~
~~SO_2~~	~~Attainment~~	~~Attainment~~
~~Pb~~	~~Attainment~~	~~Attainment~~
~~All others~~	~~Attainment/Unclassified~~	~~Attainment/Unclassified~~

~~Unclassified designation: a pollutant that is designated unclassified if the data are incomplete and do not support a designation of attainment or nonattainment.~~

~~Attainment designation: a pollutant is designated attainment if the State standard for that pollutant was not violated at any site in the area during a 3-year period.~~

~~Nonattainment: a pollutant is designated nonattainment if there was at least one violation at any site in the area during a 3-year period.~~

~~Source: *Air Quality, Greenhouse Gas, and Health Risk Assessment*, 2015~~

~~4.3.1.4 Regional Air Quality Improvements~~

~~The SCAQMD website (aqmd.gov) includes historical air quality data dating back to 1994; the year after air pollution emissions thresholds were established. As described on the SCAQMD website,[2] in 1994 pollutant concentrations in the Basin exceeded three of the six Federal ambient air quality standards. The state sulfate standard was exceeded in some Basin areas. The state lead standard was exceeded in one localized area immediately adjacent to a source of lead emissions. No areas of the Basin exceeded standards for nitrogen dioxide or sulfur dioxide. The Los Angeles and Riverside County areas of the Southeast Desert Air Basin (SEDAB) served by the District exceeded standards for ozone and PM_{10}. No other standards were exceeded in the District SEDAB areas. The Federal standards were exceeded at one or more locations in the Basin during 142 days in 1994.~~

---

[1] ~~Unclassified designation: a pollutant that is designated unclassified if the data are incomplete and do not support a designation of attainment or nonattainment; Attainment designation: a pollutant is designated attainment if the State standard for that pollutant was not violated at any site in the area during a 3-year period. Nonattainment: a pollutant is designated nonattainment if there was at least one violation at any site in the area during a 3-year period.~~

[2] ~~Historical Air Quality, Summary of 1994 Air Quality, http://aqmd.gov/smog/AirQualityStandardsComplianceReport/AirQualitySummary94.html, website accessed December 17, 2012.~~

~~Although both Federal and State standards were exceeded for three criteria pollutants during 1994, current air quality represents substantial improvement over historical air quality. Between 1982–1984 and 1992–1994, the number of days on which the Federal ozone standard was exceeded dropped by one third, from 33 percent to 22 percent of days, in the East San Gabriel Valley area, which is exceeded most frequently. Exceedances of the Federal carbon monoxide standard decreased from 11 percent of days in 1982–1984 to 7 percent of days in 1992–1994. A comparison for the same periods cannot be made for PM$_{10}$ since the first full year of monitoring was 1985. However, between 1985–1987 and 1992–1994, the percent of days exceeding the Federal 24-hour standard decreased from 13 percent to 3 percent.[1]~~

~~Exceedances of the State nitrogen dioxide standard decreased from 1 percent of days in 1982–1984 to 0.1 percent of days in 1992–1994. The Federal nitrogen dioxide standard has not been exceeded in any area since 1991. There have been no exceedances of lead standards at regular air monitoring stations in the Basin since 1982. The State and Federal sulfur dioxide standards were not exceeded in any of the Basin monitoring areas during either period. Exceedances of the State sulfate standard decreased from 2 percent to 0 percent at the long-term site used in this analysis, though a few sites were exceeded in 1994. The areas of the Basin recording the highest pollutant concentrations have shown a significant decrease in exceedances of the Federal standards over the past decade.~~

~~As described in the SCAQMD *December 2000 Air Quality Standards Report*, in a continuing trend of significant long-term improvement in air quality, the Basin did not experience a Stage 1 Episode for the second year in a row in the year 2000. Also, the year 2000 was the second year in the history of ambient air monitoring that the Basin was not the location recording the highest ozone concentration in the nation. Nonetheless, maximum pollutant concentrations in the region still exceed the Federal standards for ozone, carbon monoxide and particulate matter (PM$_{10}$ and PM$_{2.5}$) by a wide margin.~~

~~Maximum 1-hour average and 8-hour average ozone concentrations in 2000 (0.184 ppm and 0.159 ppm) were 147 percent and 187 percent of the Federal 1-hour and 8-hour standards, respectively. The highest 8-hour average carbon monoxide concentration of 2000 (10.0 ppm) was 105 percent of the Federal standard. Maximum 24-hour average and annual average PM$_{10}$ concentrations (139 µg/m^3 and 60.1 µg/m^3) were 92 percent and 119 percent of the Federal 24-hour and annual standards, respectively. Maximum 24-hour average and annual average PM$_{2.5}$ concentrations (119.6 µg/m^3 and 28.2 µg/m^3) were, respectively, 183 percent and 182 percent of the Federal 24-hour and annual standards.~~

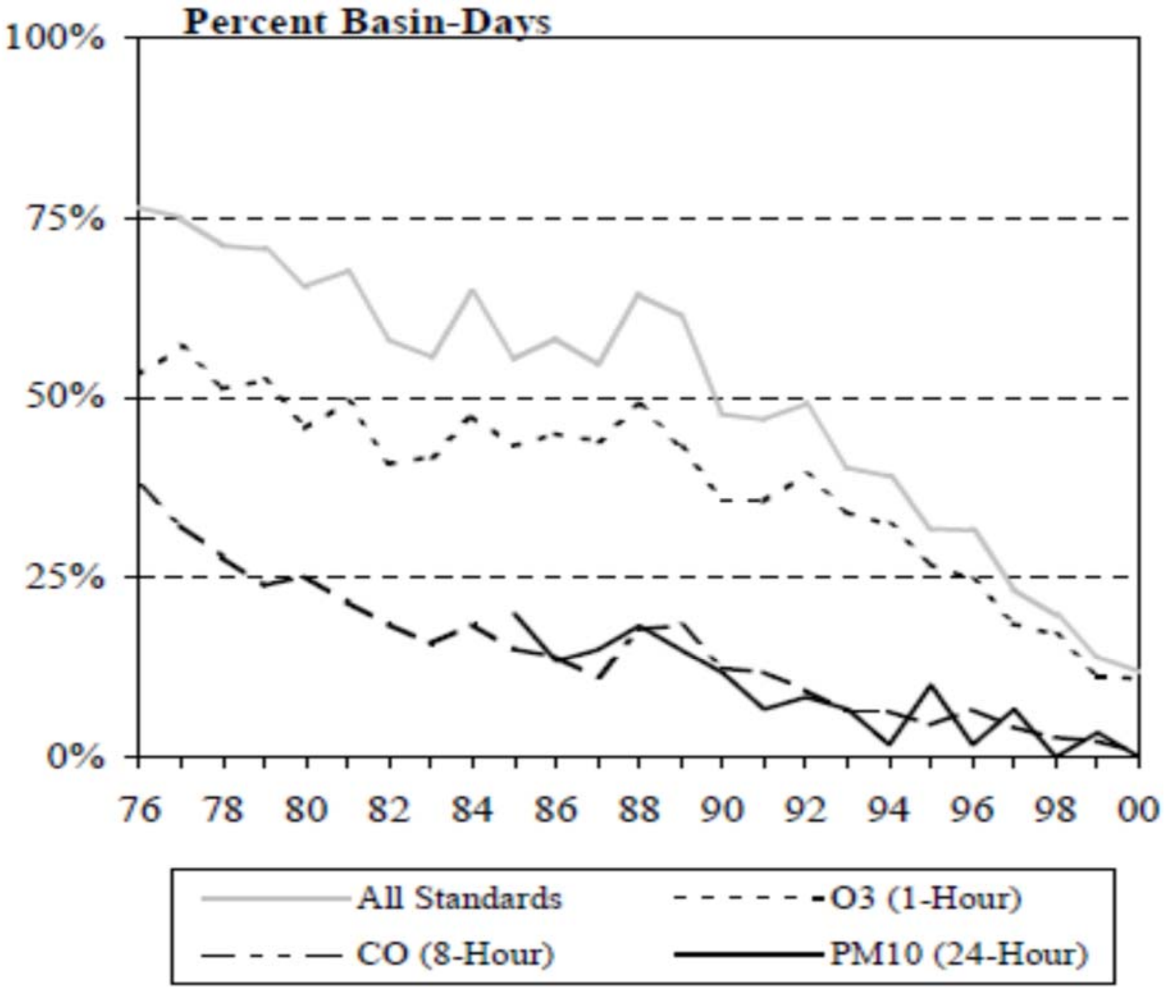
~~In 2000, the Federal nitrogen dioxide standard was not exceeded, with a maximum concentration (0.0435 ppm), which was 81 percent of the Federal standard. The maximum 1-hour average nitrogen dioxide concentration (0.21 ppm) was 81 percent of the State standard. State standard for sulfate was exceeded on one day at one location. The maximum 24-hour concentration (26.7 µg/m^3) was 107 percent of the State standard. (There is no Federal sulfate standard.) Sulfur dioxide and lead concentrations continued to remain well below the Federal and State standards in 2000.[2]~~

~~As identified in the SCAQMD *December 2000 Air Quality Standards Report*, the number of exceedances recorded in 2000 shows that air quality trends through 2000 are consistent with a continuation of the downtrends reported in previous years. Figure 4.3.8 shows the trend in the percentage exceeding the Federal standards in the Basin. In 2000, there were 43 days on which one or more Federal standards were exceeded somewhere in the Basin, most of which (40 days) were for ozone alone. Between 1976–1978 and 1998–2000, the three-year average number of days exceeding any of the Federal standards for 1-hour ozone, 8-hour carbon monoxide or 24-hour PM$_{10}$ in the Basin was reduced by 80 percent. ("All Standards" does not include PM$_{10}$ until 1985.) The~~

~~[1] Air Quality Trends Through 1994, http://aqmd.gov/smog/trends_8494.html, website accessed May 9, 2012.~~

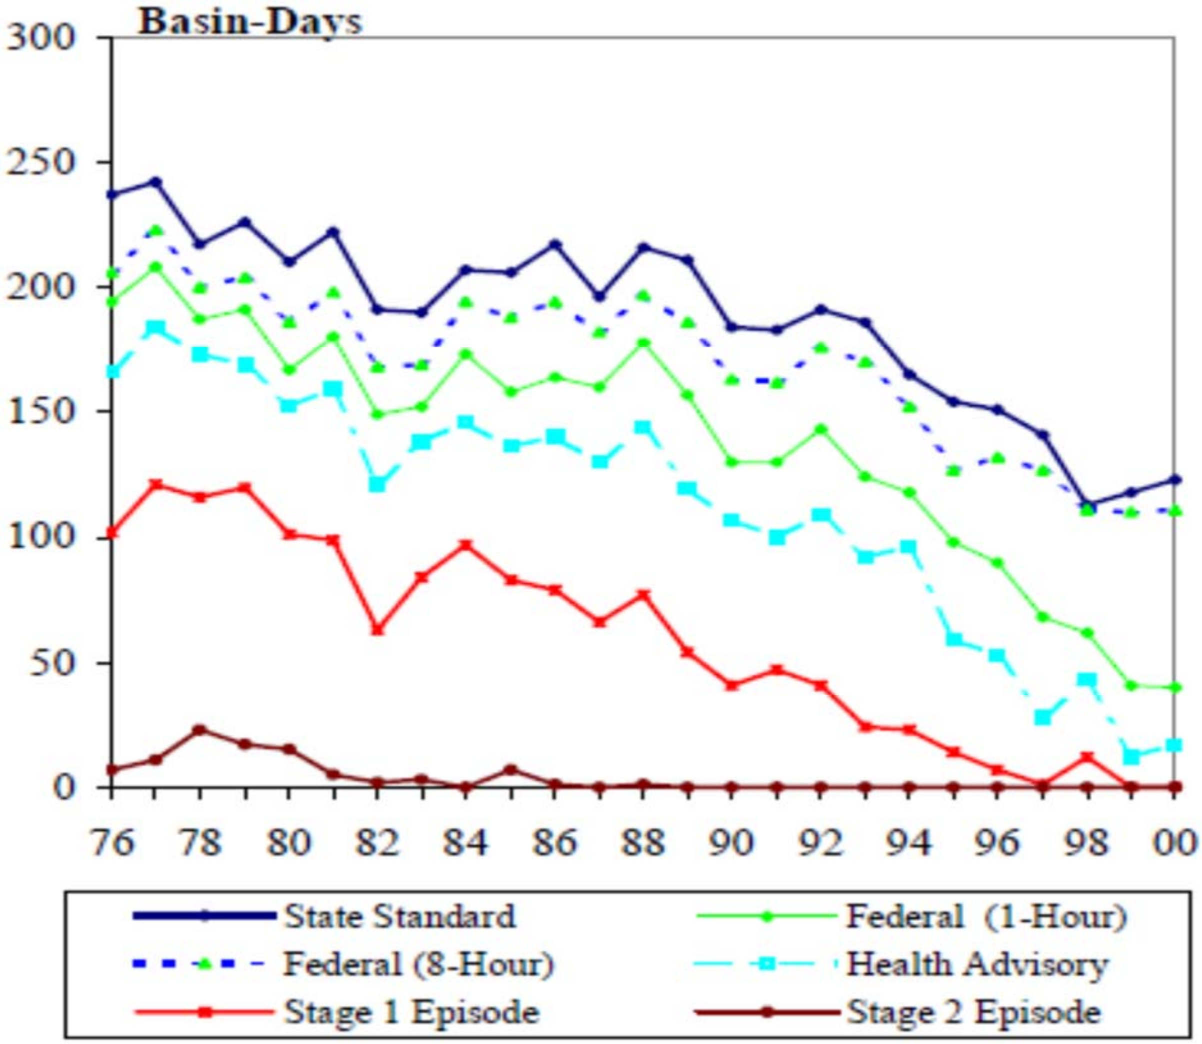
~~[2] *December 2000 Air Quality Standards Compliance Report*, SCAQMD, http://aqmd.gov/smog/AQSCR2000/aq00web.pdf, website accessed December 17, 2012.~~

~~three-year average number of days exceeding the carbon monoxide Federal standard was reduced by 94 percent for the same period. The number of sampling days exceeding the Federal 24-hour PM_{10} standard decreased 93 percent between 1985–1987 and 1998–2000. (Three-year averages were used to minimize the effect of year-to-year variations due to changes in meteorological conditions.)~~



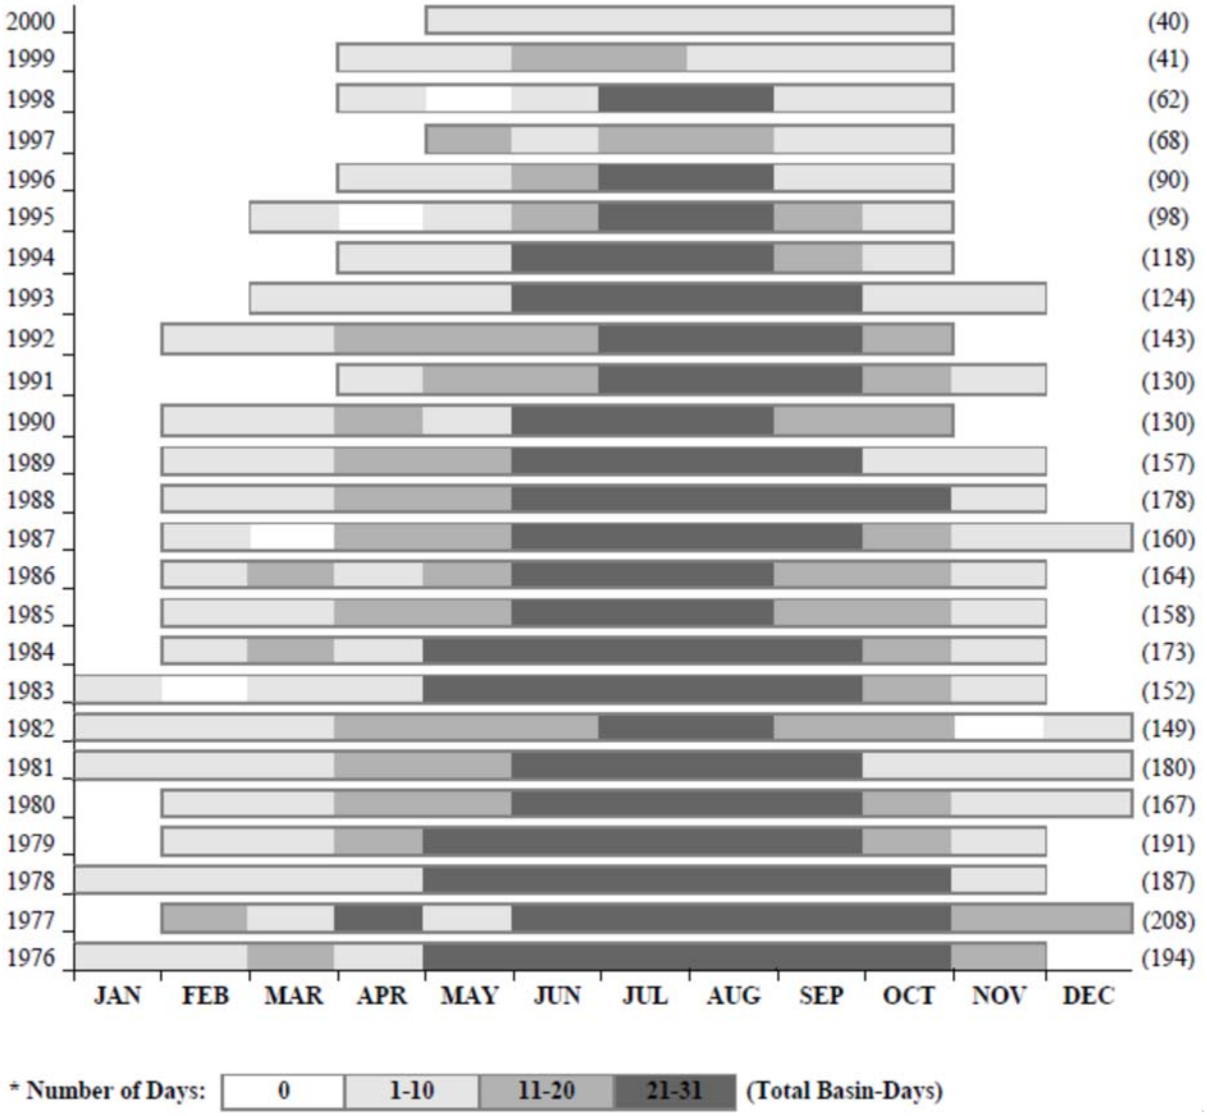
~~Figure 4.3.8: Percent of Days Basin Exceeds Federal AAQS~~

~~Between the periods 1976–1978 and 1998–2000, Stage 1 Episodes decreased 96 percent and health advisories decreased 86 percent. Exceedances of 1-hour and 8-hour Federal standards decreased 76 percent and 47 percent, and State standard exceedances decreased 49 percent as shown in Figure 4.3.9.~~



~~Figure 4.3.9: Exceedances of 1-Hour and 8-Hour Federal Standards~~

~~Figure 4.3.10 shows the number of days per month exceeding the Federal ozone standard for the period of 1976–2000. Up until the early 1990s, it was common to have days exceeding the Federal ozone standard as early as February and as late as November and December. Since the mid-1990s there have been no Federal standard exceedances recorded in the months of January–March and November–December. Also, the frequency of exceedances in fall (September and October) has been reduced significantly in recent years.~~



~~Figure 4.3.10: Number of Days per Month Federal Ozone Standard Exceeded, 1976–2000~~

~~The monthly distribution of the Federal ozone standard exceedances shows the trend toward shorter duration of the period of the year that high ozone concentrations occur (smog season). Although weather conditions contributed to the lower ozone concentrations, weather-adjusted trend studies have indicated that the significant downtrend in ozone concentration and shorter smog season in the Basin are mainly attributed to emission reduction and reduced reactivity of emitted organic compounds in the region.~~

~~As described in the SCAQMD *November/December 2006 Air Quality Standards Report*, the maximum 8-hour and 1-hour average ozone concentrations in the Basin (0.142 ppm and 0.175 ppm, recorded in the Central San Bernardino Mountains and East San Gabriel Valley areas) were 167 percent and 140 percent of the 8-hour and former 1-hour Federal standards, respectively. Maximum 24-hour average and annual average PM_{10} concentrations in the Basin (142 µg/m^3 and 64.0 µg/m^3, recorded in the Central San Bernardino Valley and Metropolitan Riverside County areas) were 94 percent of the Federal 24-hour standard and 125 percent of the former annual PM_{10} standards. Maximum 24-hour average $PM_{2.5}$ concentration (72.2 µg/m^3 recorded in the South San Gabriel Valley area) was 203 percent of the new Federal 24-hour standard (35 µg/m^3) and 110 percent of the former~~

~~standard (65 µg/m^3). Maximum annual average $PM_{2.5}$ concentration (20.6 µg/m^3 recorded in the Metropolitan Riverside County area) was 136 percent of the Federal annual $PM_{2.5}$ standard.~~

~~Nitrogen dioxide maximum annual average concentration (0.031 ppm recorded in the Northwest San Bernardino Valley area) was 58 percent of the Federal standard. (The annual average concentration was 103% of the proposed new annual State standard for NO_2.) Carbon monoxide concentrations have not exceeded the standards in the Basin since 2002. The highest 8-hour average carbon monoxide concentration in 2006 (6.4 ppm, recorded in the South Central Los Angeles County area) was 70 percent of the Federal standard. Sulfur dioxide, sulfate and lead concentrations remained well below the State and Federal standards in 2006.[1]~~

~~The American Lung Association website (lung.org) includes data collected from State air quality monitors that are used to compile an annual *State of the Air* report. These reports have been published over the last 13 years. The latest *State of the Air Report* compiled for the Basin was in 2010.[2] As noted in this report, air quality in the Basin has significantly improved in terms of both pollution levels and high pollution days over the past three decades. The area's average number of high ozone days dropped from 189.5 day per year in the initial 2000 State of the Air report (1996–1998) to 141.8 in the 2006–2008 report. The region has seen dramatic reduction in particle pollution since the initial State of the Air report (2000). While the 2010 *State of the Air Report* shows a slight uptick in the number of days of unhealthy air for ozone and annual particle pollution since the 2009 report, it is important to note that pollution levels measured in this latter report were affected by fluctuations in weather conditions in 2010 and the addition of several new particulate monitoring stations in areas in San Bernardino known to be particularly problematic for particulate matter given local conditions.~~

~~The 2012 Air Quality Management Plan states, "The remarkable historical improvement in air quality since the 1970s is the direct result of Southern California's comprehensive, multiyear strategy of reducing air pollution from all sources as outlined in its AQMPs" (South Coast Air Quality Management District 2012). As shown in Figure 4.3.11, ozone, NO_X, VOC, and CO have been decreasing in the Basin since 1975 and are projected to continue to decrease through 2020 (CARB 2009). These decreases result primarily from motor vehicle controls and reductions in evaporative emissions. Although vehicle miles traveled in the Basin continue to increase, NO_X and VOC levels are decreasing because of the mandated controls on motor vehicles and the replacement of older polluting vehicles with lower-emitting vehicles. NO_X emissions from electric utilities have also decreased due to use of cleaner fuels and renewable energy.~~

~~Figure 4.3.11 also displays ozone contour maps, which show that the number of days exceeding the national 8-hour standard has decreased between 1997 and 2007. In the 2007 period, there was an overall decrease in exceedance days compared with the 1997 period.~~

~~[1] *November/December 2006 Air Quality Compliance Report*, SCAQMD, http://aqmd.gov/smog/AQSCR2006/2006_AirQuality.pdf, website accessed December 17, 2012.~~

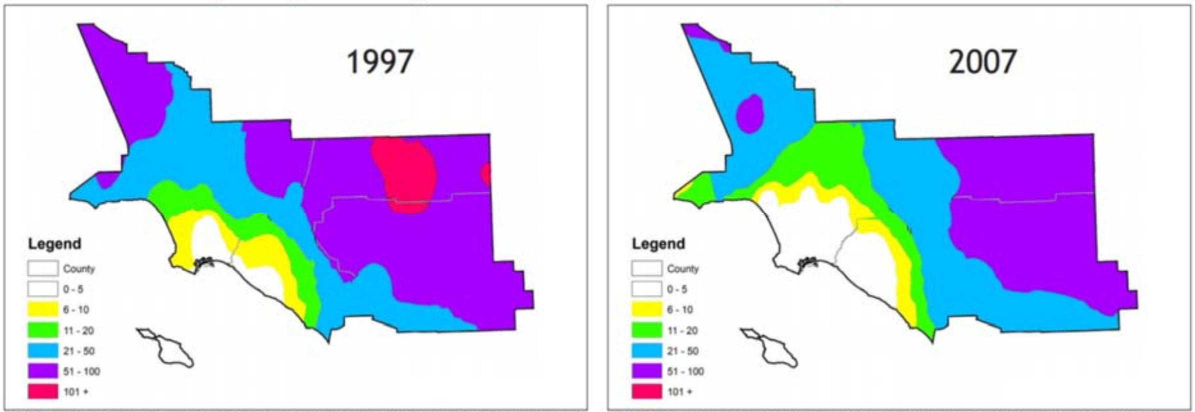
~~**Ozone Contour Maps – 3 year Average of National 8-hour Exceedance Days**~~

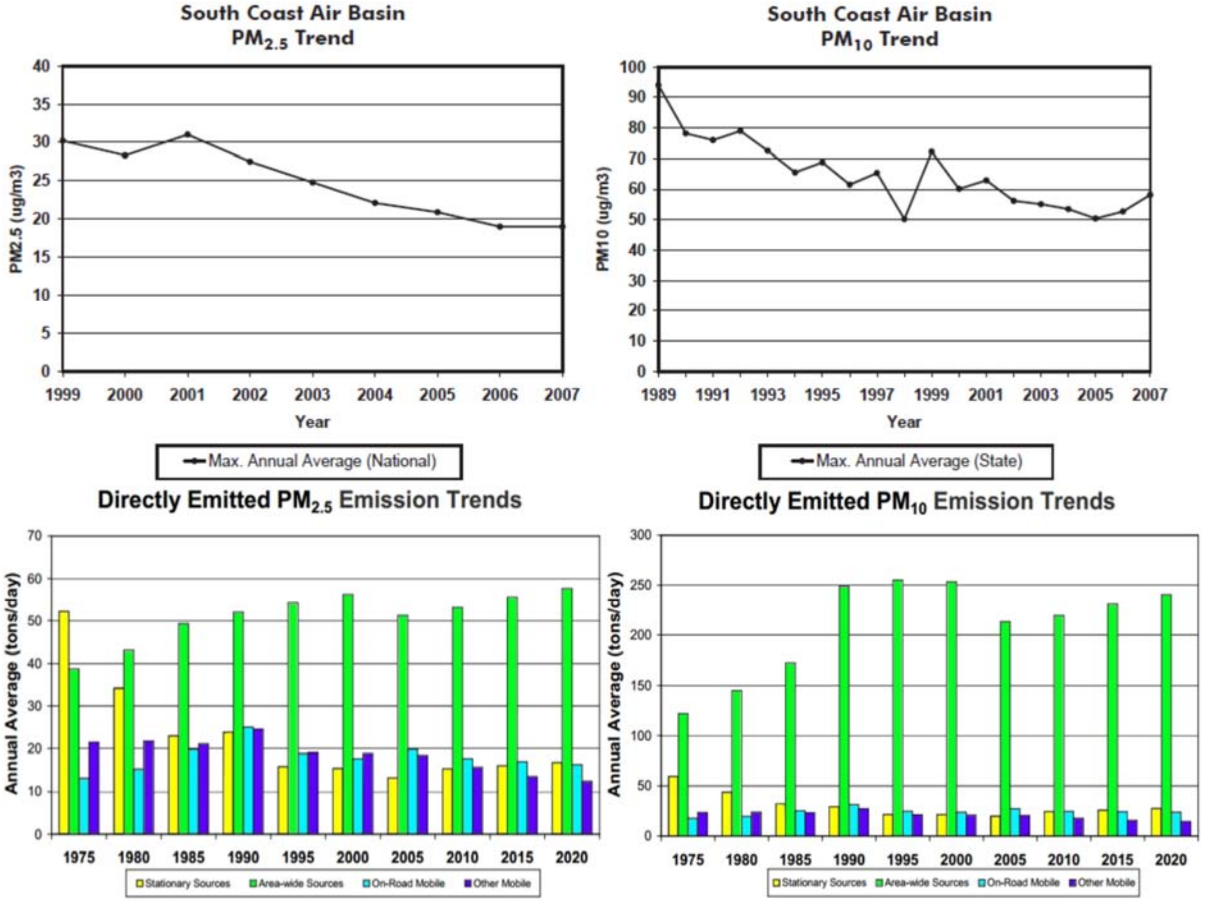


NOTE: Values used in these maps are for long-term sites only. Long-term sites are used to more accurately represent a trend over a period, by comparing the same or similar sites over a long period.

~~Note: ROG (reactive organic gases) and VOC (volatile organic compounds) are used interchangeably in this analysis.~~
~~Source: CARB, California Almanac of Emissions and Air Quality, 2009 Edition.~~

~~Figure 4.3.11: NOx, VOC, CO, and Ozone Trends in the South Coast Air Basin~~

~~As shown in the top portion of Figure 4.3.12, the overall trends of PM_{10} and $PM_{2.5}$ in the air (not emissions) show an overall improvement since 1975. As shown in the bottom portion of Figure 4.3.12, direct emissions of PM_{10} have remained somewhat constant in the Basin and direct emissions of $PM_{2.5}$ have decreased slightly since 1975. Area-wide sources (fugitive dust from roads, dust from construction and demolition, and other sources) contribute the greatest amount of direct particulate matter emissions.~~



~~Source: CARB, California Almanac of Emissions and Air Quality, 2009 Edition.~~

~~Figure 4.3.12: Particulate Matter Trends in the South Coast Air Basin~~

~~The reduction in air pollution levels experienced in the Basin is attributable to multiple factors. First, Federal and State regulatory strategies requiring the use of cleaner fuels and use of emissions control technology in the transportation and energy production industries have proven to greatly reduce the amount of tailpipe emission (vehicles) and point source (power plants) pollutants (e.g., NO_X and ROG). Second, the SCAQMD's rules and regulatory programs have proven to be instrumental in improving the air quality in the Basin. As an example, the SCAQMD has adopted multiple rules regarding fugitive dust (PM_{10} and $PM_{2.5}$) and construction emissions that have resulted in reduced emission levels. Third, the SCAQMD's creation of the 1993 CEQA review handbook has resulted in lead agencies throughout the air basin employing uniform CEQA analyses and methodologies. The use of uniform CEQA review has allowed the SCAQMD and lead agencies that rely on the 1993 SCAQMD Air Quality Handbook to perform CEQA analysis to better track progress and to employ uniform mitigation and design feature strategies. Fourth, the use of the SCAQMD thresholds of significance to determine a project's direct and cumulative impact has allowed the SCAQMD to make tremendous progress toward achieving air quality attainment. The discussion above (pertaining to the air quality improvements achieved over the past 20 years) demonstrates that~~

~~the SCAQMD's rules and procedures, including the uniform utilization of the thresholds of significance recommended in the SCAQMD *CEQA Air Quality Handbook* are contributing toward the achievement of improved air quality in the Basin.~~

~~It is for this reason that this EIR and the City have chosen to rely on the thresholds of significance established by the SCAQMD in its 1993 CEQA Handbook and subsequent additions to the Handbook. These thresholds of significance (which serve as both direct and cumulative thresholds) have been uniformly utilized by lead agencies throughout the Basin for the past 20 years and the improvement of air quality within the Basin throughout this time period has demonstrated the efficacy of these thresholds, along with the other regional and statewide regional programs discussed above, in improving air quality throughout the Basin.~~

~~4.3.1.5 Local Air Quality~~

~~The SCAQMD, together with the CARB, maintains ambient air quality monitoring stations in the Basin. The air quality monitoring station most representative of the project site are the Riverside-Magnolia and Riverside-Rubidoux stations. These stations monitor CO, SO_2, NO_2, O_3, PM_{10}, and $PM_{2.5}$. . Some monitoring data for SO_2 has been omitted as attainment is regularly met for this pollutant within the Basin. These stations characterize the air quality representative of the ambient air quality in the project area. The ambient air quality data in Table 4.3.E identify that CO and NO_2 levels are consistently below the relevant State and Federal standards in the project vicinity. O_3, PM_{10}, and $PM_{2.5}$ levels all exceed State and/or Federal standards regularly. Figure 4.3.13 identifies the locations of the monitoring stations relative to the proposed project site.~~

~~4.3.1.6 Sensitive Land Uses in the Project Vicinity~~

~~Sensitive receptors include residences, schools, medical offices, convalescent facilities, and similar uses where people sensitive to air pollutants may be located (i.e., the ill, elderly, pregnant women, and children). There are currently seven occupied single-family homes and associated ranch/farm buildings in various locations on the proposed project site. These residences are existing on-site sensitive receptors. The nearest off-site existing sensitive receptors in the vicinity of the proposed project site are the residences located along Bay Avenue, Merwin Street, west of Redlands Boulevard, and scattered residences along Gilman Springs Road north of Alessandro Boulevard. Nearby sensitive land uses are depicted in Figure 4.3.14.~~

~~4.3.1.7 Existing Project Area Emissions~~

~~The project area is largely vacant undeveloped marginal agricultural land, with seven occupied single-family homes and associated ranch/farm buildings in various locations on the property. Much of the site is currently used for dry farming. San Diego Gas & Electric (SDG&E) operates a natural gas compressor plant, known as the Moreno Compressor Station, on 19 acres in the south-central portion of the site. The Southern California Gas Company (SCGC) also operates a metering and pipe cleaning station on two separate parcels (totaling 1.5 acres) in the south-central portion of the site south of Alessandro Boulevard along existing Virginia Street. Existing air quality conditions at the proposed project site reflect ambient[1] monitored conditions as presented in Table 4.3.E.~~

~~THIS PAGE INTENTIONALLY LEFT BLANK~~

~~4.3.2 Policies and Regulations~~

~~4.3.2.1 Federal Regulations~~

~~**Clean Air Act.** Pursuant to the Federal Clean Air Act (CAA) of 1970, the EPA established national ambient air quality standards (NAAQS). The NAAQS were established for six major pollutants, termed "criteria" pollutants. Criteria pollutants are defined as those pollutants for which the Federal and State governments have established ambient air quality standards, or criteria, for outdoor concentrations in order to protect public health.~~

~~The EPA established national air quality standards for ground-level O_3 and $PM_{2.5}$ in 1997. On May 14, 1999, the Court of Appeals for the District of Columbia Circuit issued a decision ruling that the CAA, as applied in setting the new public health standards for O_3 and particulate matter, was unconstitutional as an improper delegation of legislative authority to the EPA. On February 27, 2001, the U.S. Supreme Court upheld the way that the government sets air quality standards under the CAA. The Court unanimously rejected industry arguments that the EPA must consider financial cost as well as health benefits in writing standards. The Justices also rejected arguments that the EPA took too much lawmaking power from Congress when it set tougher standards for O_3 and soot in 1997. Nevertheless, the Court threw out the EPA's policy for implementing new O_3 rules, stating that the EPA ignored a section of the law that restricts its authority to enforce such rules.~~

~~In April 2003, the EPA was cleared by the White House Office of Management and Budget (OMB) to implement the eight-hour ground-level O_3 standard. The EPA issued the proposed rule implementing the eight-hour O_3 standard in April 2003. The EPA completed final eight-hour nonattainment status on April 15, 2004. The EPA issued the final $PM_{2.5}$ implementation rule in fall 2004. The EPA issued final designations on December 14, 2004.~~

~~Effective January 22, 2010, the EPA strengthened the standard for NO_2 by setting a new 1-hour standard at the level of 100 parts per billion (ppb). This standard defines the maximum allowable concentration anywhere in an area and will protect against adverse health effects associated with short-term exposure to NO_2. To attain this standard, the 3-year average of the 98th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 100 ppb. On January 25, 2010, the EPA issued the final rule setting the one-hour maximum standard for NO_2 at 100 parts per billion (ppb). The agency retained the annual standard of 53 ppb.~~

~~Additionally, effective June 2, 2010, the EPA revised the primary standard for SO_2 by establishing a new 1-hour standard at a level of 75 ppb. The EPA revoked the two existing primary standards of 140 ppb evaluated over 24 hours and 30 ppb evaluated over an entire year as they would not provide additional public health protection given a 1-hour standard at 75 ppb. To attain this standard, the 3-year average of the 99th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 75 ppb.~~

~~4.3.2.2 State Regulations~~

~~**Mulford-Carrell Act.** The State began to set California Ambient Air Quality Standards (CAAQS) in 1969 under the mandate of the Mulford-Carrell Act. The CAAQS are generally more stringent than the NAAQS. In addition to the six criteria pollutants covered by the NAAQS, there are CAAQS for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles.~~

~~Originally, there were no attainment deadlines for CAAQS; however, the CCAA of 1988 provided a time frame and a planning structure to promote their attainment. The CCAA required nonattainment areas in the State to prepare attainment plans and proposed to classify each such area on the basis of the submitted plan, as follows: moderate, if CAAQS attainment could not occur before December 31, 1994; serious, if CAAQS attainment could not occur before December 31, 1997; and severe, if~~

~~CAAQS attainment could not be conclusively demonstrated at all. The attainment plans are required to achieve a minimum 5 percent annual reduction in the emissions of nonattainment pollutants unless all feasible measures have been implemented. The EPA has designated the Southern California Association of Governments (SCAG) as the Metropolitan Planning Organization (MPO) responsible for ensuring compliance with the requirements of the CAA for the Basin.~~

~~**California Clean Air Act (CCAA).** The CCAA was passed into law in 1988. The CCAA provides the basis for air quality planning and regulation independent of federal regulations. A major element of the CCAA is the requirement that local air districts in violation of the CAAQS must prepare attainment plans that identify air quality problems, causes, trends and actions to be taken to attain and maintain California's air quality standards by the earliest practicable date. The CCAA provides air districts with the authority to manage transportation activities at indirect sources that individually are minor but collectively emit a substantial amount of pollution such as motor vehicles at intersections, malls, and on highways. The SCAQMD also regulates stationary sources of pollution throughout its jurisdictional area. Direct emissions from motor vehicles are regulated by the CARB.~~

~~**CARB Airborne Toxic Control Measure/Asbestos.** Asbestos is listed as a toxic air contaminant by CARB and as a Hazardous Air Pollutant by the EPA. Asbestos occurs naturally in surface deposits of several types of rock formations. Asbestos most commonly occurs in ultramafic rock that has undergone partial or complete alteration to serpentine rock (serpentinite) and often contains chrysotile asbestos. In addition, another form of asbestos, tremolite, can be found associated with ultramafic rock, particularly near faults. Crushing or breaking these rocks, through construction or other means, can release asbestoform fibers into the air. Asbestos emissions can result from the sale or use of asbestos-containing materials, road surfacing with such materials, grading activities, and surface mining. The risk of disease is dependent upon the intensity and duration of exposure. When inhaled, asbestos fibers may remain in the lungs and with time may be linked to such diseases as asbestosis, lung cancer, and mesothelioma. In July 2001, the CARB approved an Air Toxic Control Measure for construction, grading, quarrying and surface mining operations to minimize emissions of naturally occurring asbestos. The regulation requires application of best management practices (BMPs) to control fugitive dust in areas known to have naturally occurring asbestos and requires notification to the local air district prior to commencement of ground-disturbing activities. The measure establishes specific testing, notification and engineering controls prior to grading, quarrying or surface mining in construction zones where naturally occurring asbestos is located on projects of any size. There are additional notification and engineering controls at work sites larger than one acre in size. These projects require the submittal of a "Dust Mitigation Plan" and approval by the air district prior to the start of a project. There is no asbestos in the project area (U.S. Geological Survey 2011).~~

~~4.3.2.3 Regional Regulations~~

~~**Lewis Air Quality Management Act.** The 1976 Lewis Air Quality Management Act established the SCAQMD and other air districts throughout the State. The Federal CAA Amendments of 1977 required that each state adopt an implementation plan outlining pollution control measures to attain the Federal standards in nonattainment areas of the State.~~

~~The CARB is responsible for incorporating air quality management plans for local air basins into an SIP for EPA approval. Significant authority for air quality control within them has been given to local air districts that regulate stationary source emissions and develop local nonattainment plans.~~

~~**Carl Moyer Memorial Air Quality Standards Attainment Program.** Since 1998, the Carl Moyer Memorial Air Quality Standards Attainment Program (Carl Moyer Program) has provided funding to encourage the voluntary purchase of cleaner engines, equipment, and emission reduction technologies. The Carl Moyer Program plays a complementary role to California's regulatory program by funding emission reductions that are surplus, i.e., early and/or in excess of what is required by~~

~~regulation. The Carl Moyer Program accelerates the turnover of old highly-polluting engines, speeds the commercialization of advanced emission controls, and reduces air pollution impacts on environmental justice communities. Emission reductions achieved through the Carl Moyer Program are an important component of the California State Implementation Plan.~~

~~**Regional Air Quality Management Plan (AQMP).** The SCAQMD and the SCAG are responsible for formulating and implementing the AQMP, which has a 20-year horizon for the Basin. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the Federal and/or California ambient air quality standards. The SCAQMD and SCAG must update the AQMP every three years. The current regional air quality plan is the Final 2012 Air Quality Management Plan (AQMP) adopted by the SCAQMD on December 7, 2012.~~

~~**2003 AQMP.** One of the purposes of the 2003 AQMP is to lead the Basin and portions of the Salton Sea Air Basin under SCAQMD jurisdiction into compliance with the 1-hour ozone and PM_{10} Federal standards (SCAQMD 2003).~~

~~The 2003 AQMP also replaced the 1997 attainment demonstration for the Federal CO standard, provided a basis for a maintenance plan for CO for the future, and updated the maintenance plan for the Federal nitrogen dioxide standard that the Basin has met since 1992 (2003 AQMP, page 1-1).~~

~~The 2003 AQMP also incorporated new scientific data in the form of updated emissions inventories, ambient measurements, new meteorological episodes, and new air quality modeling tools. The 2003 AQMP utilized complex modeling to show that with the control measures, the Basin would be in compliance with the Federal and State standards for all pollutants by 2010, except for the State ozone and PM_{10} standards and the State ozone and PM_{10} standards after 2010 or by the earliest practicable date, as mandated by the California Health and Safety Code Section 40462. The CARB approved the 2003 AQMP on August 1, 2003. The EPA's adequacy finding on the emissions budgets for conformity determination in the Basin was published in the Federal Register (69 FR 15325-15326).~~
