1 CalEEMod Default VOC Emissios Factor for Parking Lot Paint

2 Current Standard for Traffic Coatings in SCAQMD Rule 1113

http://www.aqmd.gov/home/rules-compliance/compliance/vocs/architectural-coatings/tos

The emission factor (EF) is based on the VOC content of the surface coatings and is calculated estimated using the equation below:

$$EF_{AC} = C_{VOC} / 454(g/lb) \times 3.785(L/Gal) / 180(sqft)$$

Where:

EF = emission factor (lb/sqft)

C = VOC content (g/L). This varies by location and year

Emission Factor (lb/sqft)	**0.005**
C_{VOC} (g/L)[1]	100

1) VOC offgassing emissions from Curbing/Drive Approaches and Paving are calculated in CalEEMod Output Files, however, the offgassing emissiona are not included in the this table because VOC emissiosn are calculated outside of CalEEMod and are incorporated in the Regional Maximum and Localized worksheets.

1) VOC offgassing emissions from Curbing/Drive Approaches and Paving are calculated in CalEEMod Output Files, however, the offgassing emissiona are not included in the this table because VOC emissiosn are calculated outside of CalEEMod and are incorporated in the Regional Maximum and Localized worksheets.
