v/c ratio                                   1.00        1.012        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Flow rate, v                           7267    2239    620     69      pc/h

Volume ratio, VR                               0.280

_________________________Configuration Characteristics_________________________
Number of maneuver lanes, NWL              3           ln
Interchange density, ID                    1.0         int/mi
Minimum RF lane changes, LCRF              1           lc/pc
Minimum FR lane changes, LCFR              0           lc/pc
Minimum RR lane changes, LCRR                          lc/pc

Minimum weaving lane changes, LCMIN                    lc/h
Weaving lane changes, LCW                  2762        lc/h
Non-weaving vehicle index, INW             917
Non-weaving lane change, LCNW              1226        lc/h
Total lane changes, LCALL                  3988        lc/h

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W                0.564
Average weaving speed, SW                  50.2        mi/h
Average non-weaving speed, SNW             44.1        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   45.6        mi/h
Weaving segment density, D                 44.7        pc/mi/ln
Level of service, LOS                      F
Weaving segment v/c ratio                  0.925
Weaving segment flow rate, v               10195       pc/h
Weaving segment capacity, cW               10783       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           3809         1250        a,b
                                        Maximum       Analyzed
Density-based capacty,                     2400         2205         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                  1.00         0.925        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4157        1600        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2204         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.876        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           4098        2800         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2300         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.996        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            3706        1200        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2208         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        1.044        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4437        2000        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2214         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.607        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            5849        2000        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2105         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.700        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           4455         1100        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2143         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        1.148        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W                0.376
Average weaving speed, SW                  55.0        mi/h
Average non-weaving speed, SNW             56.8        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                  56.6        mi/h
Weaving segment density, D                34.2        pc/mi/ln
Level of service, LOS                     D
Weaving segment v/c ratio                 0.826
Weaving segment flow rate, v              9675        pc/h
Weaving segment capacity, cW              11417       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            2116        1400        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2345         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.826        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Average non-weaving speed, SNW             52.1        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   52.9        mi/h
Weaving segment density, D                 27.5        pc/mi/ln
Level of service, LOS                      C
Weaving segment v/c ratio                  0.659
Weaving segment flow rate, v               7277        pc/h
Weaving segment capacity, cW               10445       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4630        2400        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2230         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.659        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Weaving segment capacity, cW               8726        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4988        2050        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2175         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.907        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Density-based capacty,                      2400         2160         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00         0.719        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

v/c ratio                                   1.00        1.227        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Minimum FR lane changes, LCFR              0           lc/pc
Minimum RR lane changes, LCRR                          lc/pc

Minimum weaving lane changes, LCMIN        423         lc/h
Weaving lane changes, LCW                  880         lc/h
Non-weaving vehicle index, INW             426
Non-weaving lane change, LCNW              1034        lc/h
Total lane changes, LCALL                  1914        lc/h

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W                0.281
Average weaving speed, SW                  57.9        mi/h
Average non-weaving speed, SNW             59.7        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   59.3        mi/h
Weaving segment density, D                 25.5        pc/mi/ln
Level of service, LOS                      C
Weaving segment v/c ratio                  0.669
Weaving segment flow rate, v               7561        pc/h
Weaving segment capacity, cW               10873       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            3204        1450        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2266         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.669        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W
Average weaving speed, SW                              mi/h
Average non-weaving speed, SNW                         mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                               mi/h
Weaving segment density, D                             pc/mi/ln
Level of service, LOS                      F
Weaving segment v/c ratio                  1.133
Weaving segment flow rate, v               3352        pc/h
Weaving segment capacity, cW               2860        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           11559        2100        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        1676         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        1.133        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           2711         1250        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400         2289         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00         1.021        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           3936         1850        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400         2241         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00         0.395        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4783        1200        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2126         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.614        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            2990        1350        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2274         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.733        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Weaving segment flow rate, v               7323        pc/h
Weaving segment capacity, cW               5666        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           7264         450         a,b
                                        Maximum       Analyzed
Density-based capacty,                     2400         1879         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                  1.00         1.246        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   57.8        mi/h
Weaving segment density, D                 29.4        pc/mi/ln
Level of service, LOS                      D
Weaving segment v/c ratio                  0.738
Weaving segment flow rate, v               8494        pc/h
Weaving segment capacity, cW               11199       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            2457        1000        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2289         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.738        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Total lane changes, LCALL                  1892        lc/h

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W                0.295
Average weaving speed, SW                  57.5        mi/h
Average non-weaving speed, SNW             58.3        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   58.2        mi/h
Weaving segment density, D                 29.7        pc/mi/ln
Level of service, LOS                      D
Weaving segment v/c ratio                  0.801
Weaving segment flow rate, v               6901        pc/h
Weaving segment capacity, cW               8353        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4546        1350        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2155         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.801        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W
Average weaving speed, SW                              mi/h
Average non-weaving speed, SNW                         mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                               mi/h
Weaving segment density, D                             pc/mi/ln
Level of service, LOS                      F
Weaving segment v/c ratio                  1.026
Weaving segment flow rate, v               8564        pc/h
Weaving segment capacity, cW               8142        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            5460        1700        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2113         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        1.026        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Weaving segment flow rate, v               7148        pc/h
Weaving segment capacity, cW               8163        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4540        700         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2107         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.844        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Density-based capacty,                      2400        2231         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.915        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

v/c ratio                                   1.00        0.877        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Volume ratio, VR                               0.277

_________________________Configuration Characteristics_________________________
Number of maneuver lanes, NWL              3           ln
Interchange density, ID                    0.8         int/mi
Minimum RF lane changes, LCRF              1           lc/pc
Minimum FR lane changes, LCFR              0           lc/pc
Minimum RR lane changes, LCRR                          lc/pc

Minimum weaving lane changes, LCMIN                    lc/h
Weaving lane changes, LCW                              lc/h
Non-weaving vehicle index, INW
Non-weaving lane change, LCNW                          lc/h
Total lane changes, LCALL                              lc/h

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W
Average weaving speed, SW                              mi/h
Average non-weaving speed, SNW                         mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                                 mi/h
Weaving segment density, D                               pc/mi/ln
Level of service, LOS                     F
Weaving segment v/c ratio                 1.061
Weaving segment flow rate, v              11677       pc/h
Weaving segment capacity, cW              10673       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           3770         1200        a,b
                                        Maximum       Analyzed
Density-based capacty,                     2400         2203         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                  1.00         1.061        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            6484        2000        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2057         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.539        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            6941        2500        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2060         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.668        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            5979        2000        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2096         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.934        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            2150        1500        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2350         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        1.273        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            2006         1400        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400         2354         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00         0.694        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Weaving segment v/c ratio                  0.853
Weaving segment flow rate, v               9297        pc/h
Weaving segment capacity, cW               10538       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           4096         1150        a,b
                                        Maximum       Analyzed
Density-based capacty,                     2400         2175         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                  1.00         0.853        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Weaving intensity factor, W                0.220
Average weaving speed, SW                  60.1        mi/h
Average non-weaving speed, SNW             60.3        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   60.2        mi/h
Weaving segment density, D                 18.6        pc/mi/ln
Level of service, LOS                      B
Weaving segment v/c ratio                  0.768
Weaving segment flow rate, v               5584        pc/h
Weaving segment capacity, cW               6848        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            5965        2050        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2100         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.768        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Weaving segment speed, S                   53.5        mi/h
Weaving segment density, D                 41.9        pc/mi/ln
Level of service, LOS                      E
Weaving segment v/c ratio                  0.989
Weaving segment flow rate, v               8958        pc/h
Weaving segment capacity, cW               8818        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            3336        1700        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2275         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.989        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Weaving length (ft)          300           2460         740         a,b
                                        Maximum       Analyzed
Density-based capacty,                     2400         2269         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                  1.00         0.973        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

v/c ratio                                   1.00        0.910        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Volume ratio, VR                               0.492

_________________________Configuration Characteristics_________________________
Number of maneuver lanes, NWL             2           ln
Interchange density, ID                   0.5         int/mi
Minimum RF lane changes, LCRF             1           lc/pc
Minimum FR lane changes, LCFR             1           lc/pc
Minimum RR lane changes, LCRR                         lc/pc

Minimum weaving lane changes, LCMIN                   lc/h
Weaving lane changes, LCW                             lc/h
Non-weaving vehicle index, INW
Non-weaving lane change, LCNW                         lc/h
Total lane changes, LCALL                             lc/h

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W
Average weaving speed, SW                             mi/h
Average non-weaving speed, SNW                        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                            mi/h
Weaving segment density, D                          pc/mi/ln
Level of service, LOS                   F
Weaving segment v/c ratio               1.450
Weaving segment flow rate, v            7048        pc/h
Weaving segment capacity, cW            4685        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            7729        1100        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        1893         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        1.450        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            3028        1250        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2264         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.605        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           3142         850         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400         2224        c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00         0.825       d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4173        1200        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2173         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.741        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            2621        800         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2260         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.655        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            5495        450         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2014         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        1.071        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4240        1200        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2167         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.835        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Weaving intensity factor, W                0.348
Average weaving speed, SW                  55.8        mi/h
Average non-weaving speed, SNW             55.5        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   55.5        mi/h
Weaving segment density, D                 35.0        pc/mi/ln
Level of service, LOS                      D
Weaving segment v/c ratio                  0.890
Weaving segment flow rate, v               7775        pc/h
Weaving segment capacity, cW               8536        veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4219        1350        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2180         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.890        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4148        700         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2136         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.882        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4576         700         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400         2103         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00         0.676        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           3788        1600         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2233         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.762        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4170        1100        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2165         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.730        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           7031        1200        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        1954         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.813        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300           5080        1300         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2111         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        1.025        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            5908        1150        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2036         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.989        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            4369        2400        a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2249         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.831        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

_______________________Weaving and Non-Weaving Speeds__________________________
Weaving intensity factor, W                0.614
Average weaving speed, SW                  49.1        mi/h
Average non-weaving speed, SNW             54.8        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   53.9        mi/h
Weaving segment density, D                 34.2        pc/mi/ln
Level of service, LOS                      D
Weaving segment v/c ratio                  0.809
Weaving segment flow rate, v               11059       pc/h
Weaving segment capacity, cW               13285       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            2391        740         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2273         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.809        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Average non-weaving speed, SNW              54.3        mi/h
```

```
_________Weaving Segment Speed, Density, Level of Service and Capacity_________
Weaving segment speed, S                   53.3        mi/h
Weaving segment density, D                 30.4        pc/mi/ln
Level of service, LOS                      D
Weaving segment v/c ratio                  0.728
Weaving segment flow rate, v               8086        pc/h
Weaving segment capacity, cW               10890       veh/h

_______________________Limitations on Weaving Segments_________________________
If limit reached, see note.

                          Minimum       Maximum       Actual       Note
Weaving length (ft)          300            2877        600         a,b
                                        Maximum       Analyzed
Density-based capacty,                      2400        2226         c
cIWL (pc/h/ln)
                                        Maximum       Analyzed
v/c ratio                                   1.00        0.728        d

Notes:
a.  In weaving segments shorter than 300 ft, weaving vehicles are assumed to
    make only necessary lane changes.
b.  Weaving segments longer than the calculated maximum length should be
    treated as isolated merge and diverge areas using the procedures of
    Chapter 13, 'Freeway Merge and Diverge Segments.'
c.  The density-based capacity exceeds the capacity of a basic freeway segment,
    under equivalent ideal conditions.
d.  Volumes exceed the weaving segment capacity. The level of service is F.

Traffic Impact Analysis Report for the World Logistics Center

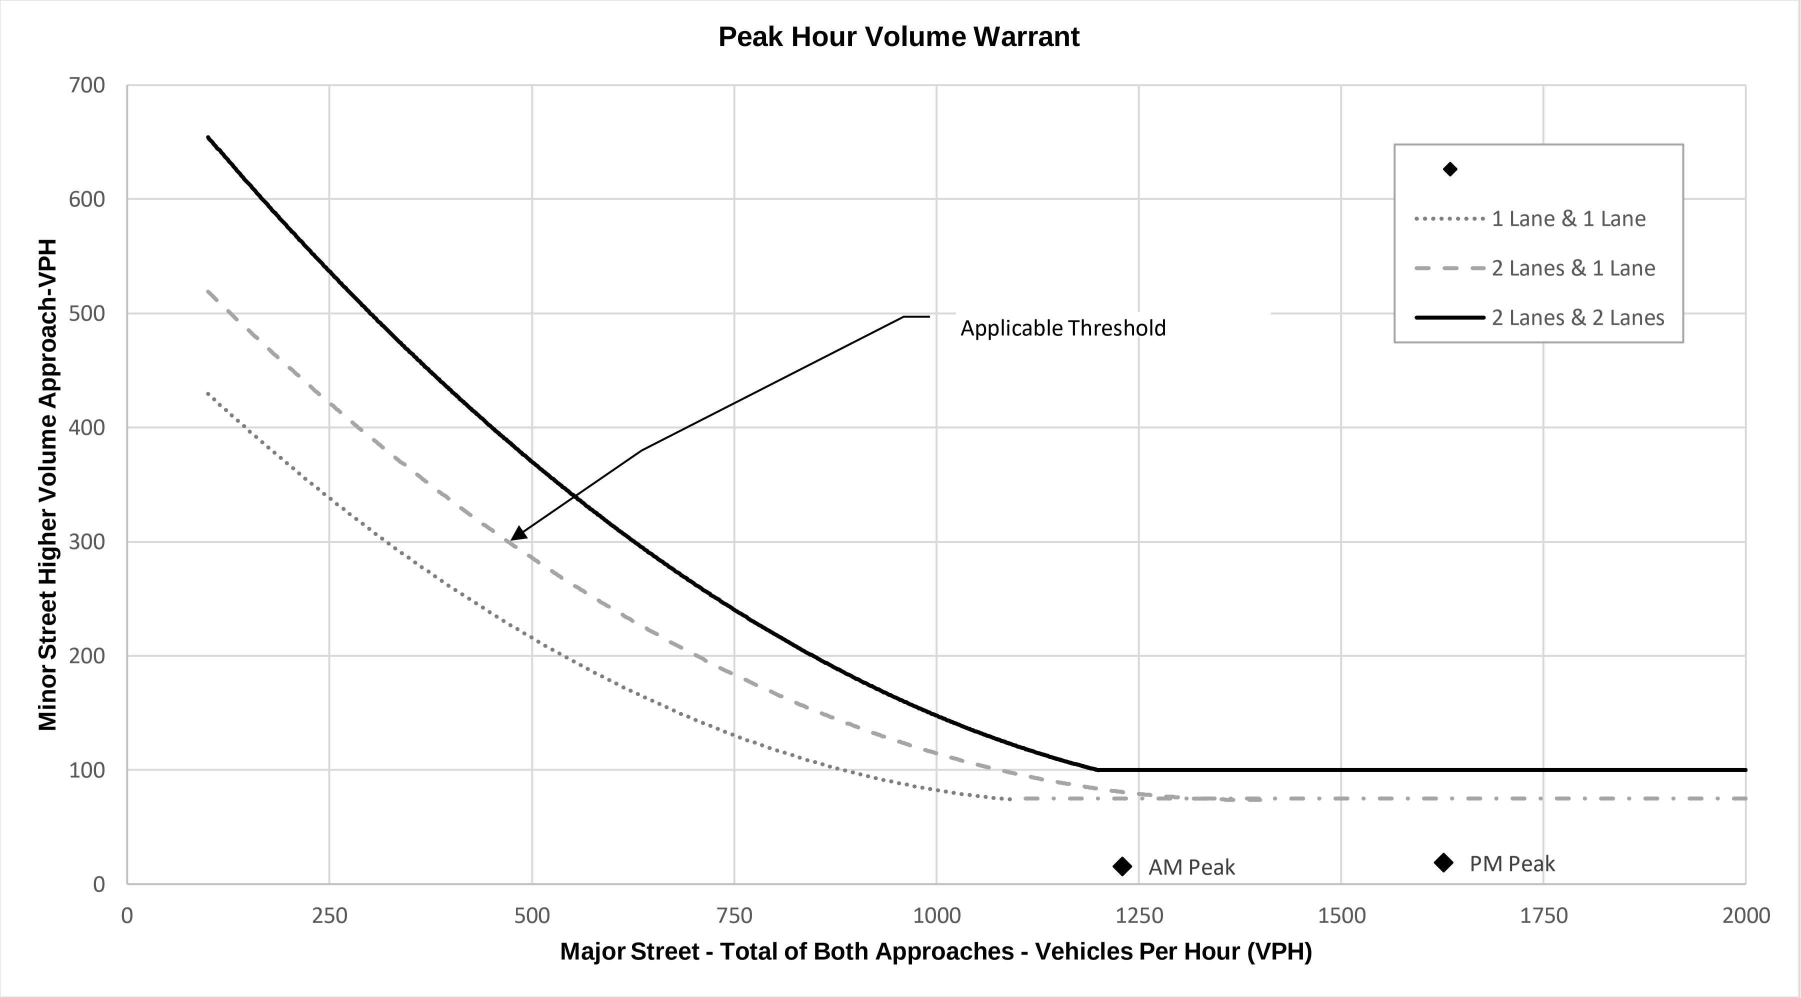
Appendix P

Signal Warrant Worksheets

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 10 – Redlands Boulevard & Locust Avenue
Type: 2 Lanes & 1 Lane
Major Street (Orientation): Redlands Blvd (NB-SB)
Minor Street (Orientation): Locust Ave (EB-WB)

	Minor Street Approach Volume (Locust Ave)			Major Street Approach Volume (Redlands Blvd)			Satisfies
Time	EB	WB	Higher Vol	NB	SB	Total	Warrant 3
AM Peak	16	2	16	634	596	1230	No
PM Peak	19	18	19	774	836	1627	No

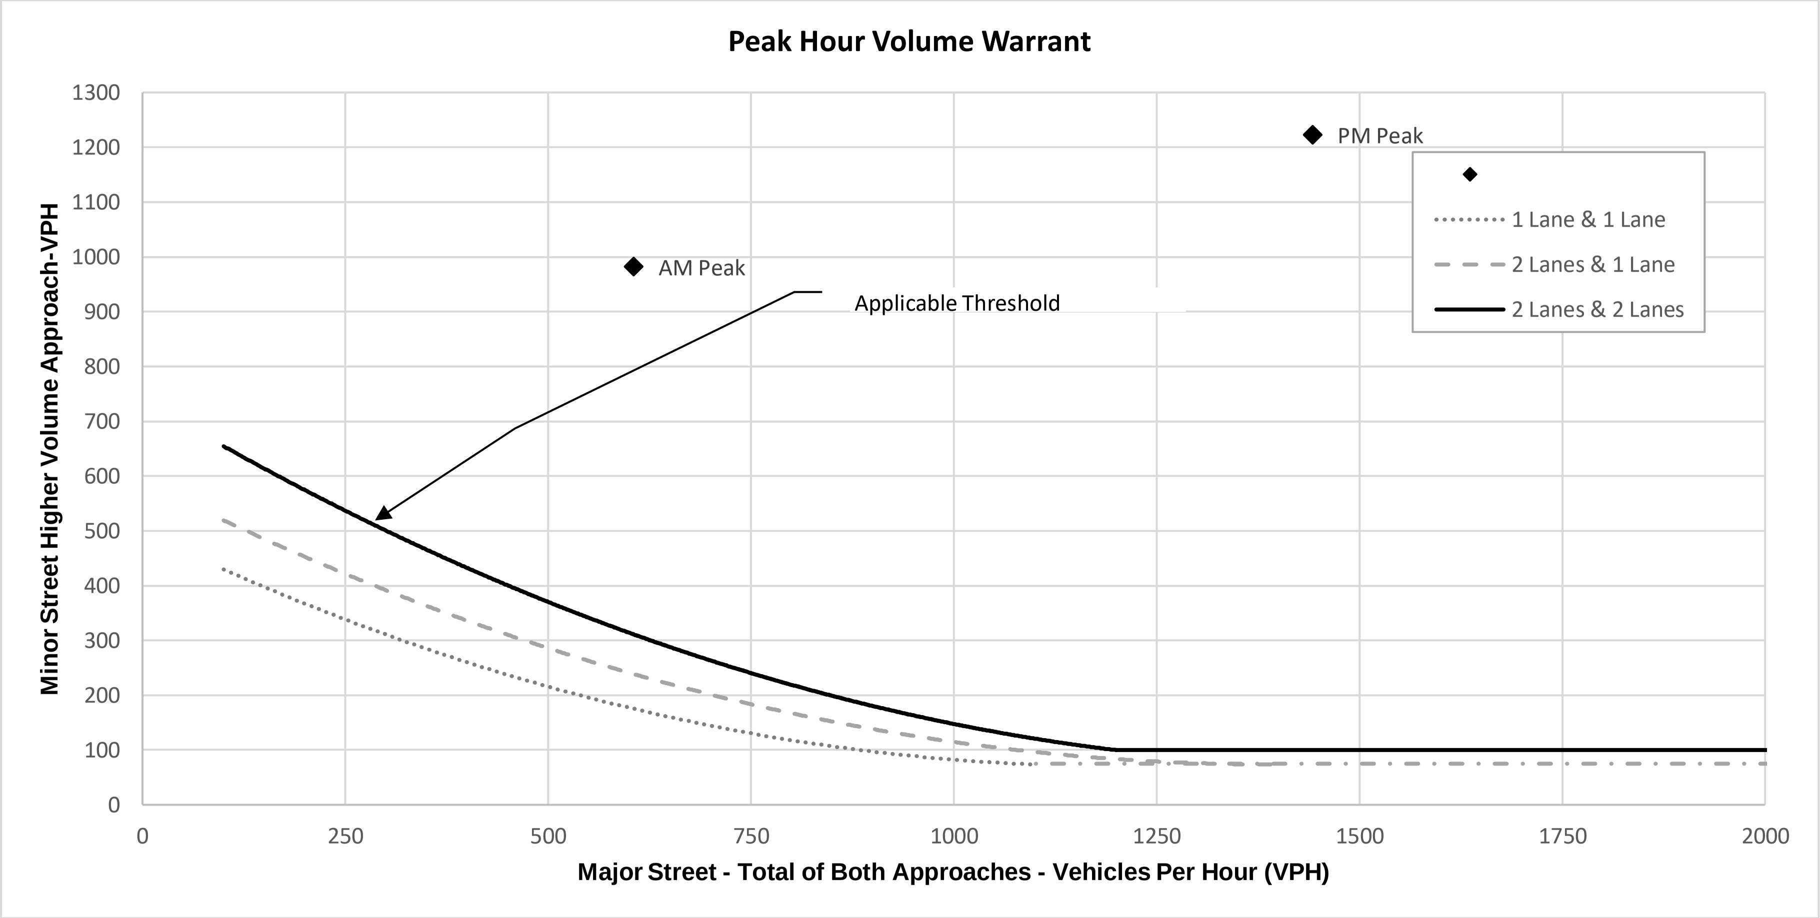


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 85 – Martin Luther King Blvd & SR-60 NB Ramp
Type: 2 Lanes & 2 Lanes
Major Street (Orientation): MLK Blvd (EB
Minor Street (Orientation):) SR-60 Ramp (NB)

	Minor Street Approach Volume (SR-60 Ramp)			Major Street Approach Volume (MLK Blvd))			Satisfies
Time	EB	n/a	Higher Vol	NB	n/a	Total	Warrant 3
AM Peak	982	n/a	982	605	n/a	605	Yes
PM Peak	1223	n/a	1223	1442	n/a	1442	Yes

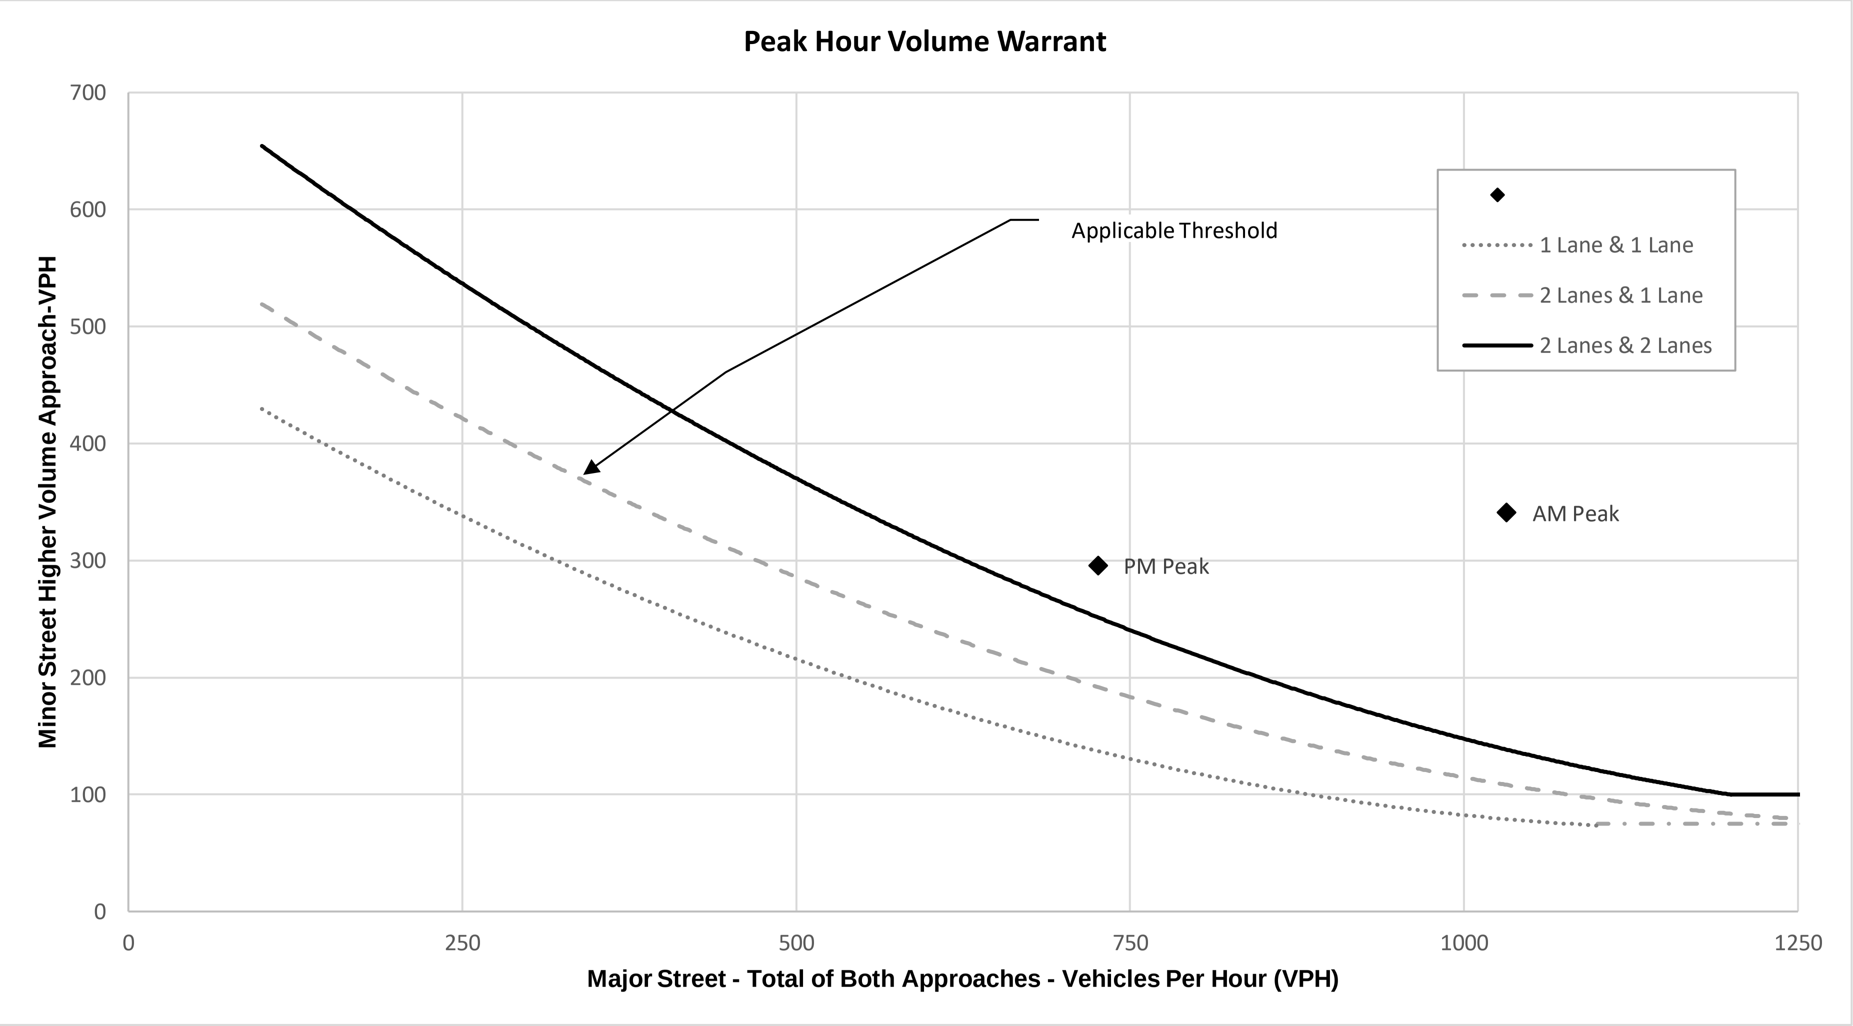


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 114 Evans Road & Orange Avenue
Type: 2 Lanes & 1 Lane
Major Street (Orientation): Evans Rd(NB-SB)
Minor Street (Orientation): Orange Ave (EB-WB)

	Minor Street Approach Volume (Orange Ave)			Major Street Approach Volume (Evans Rd)			Satisfies
Time	EB	WB	Higher Vol	NB	SB	Total	Warrant 3
AM Peak	341	264	341	581	451	1032	Yes
PM Peak	296	162	296	364	362	726	Yes

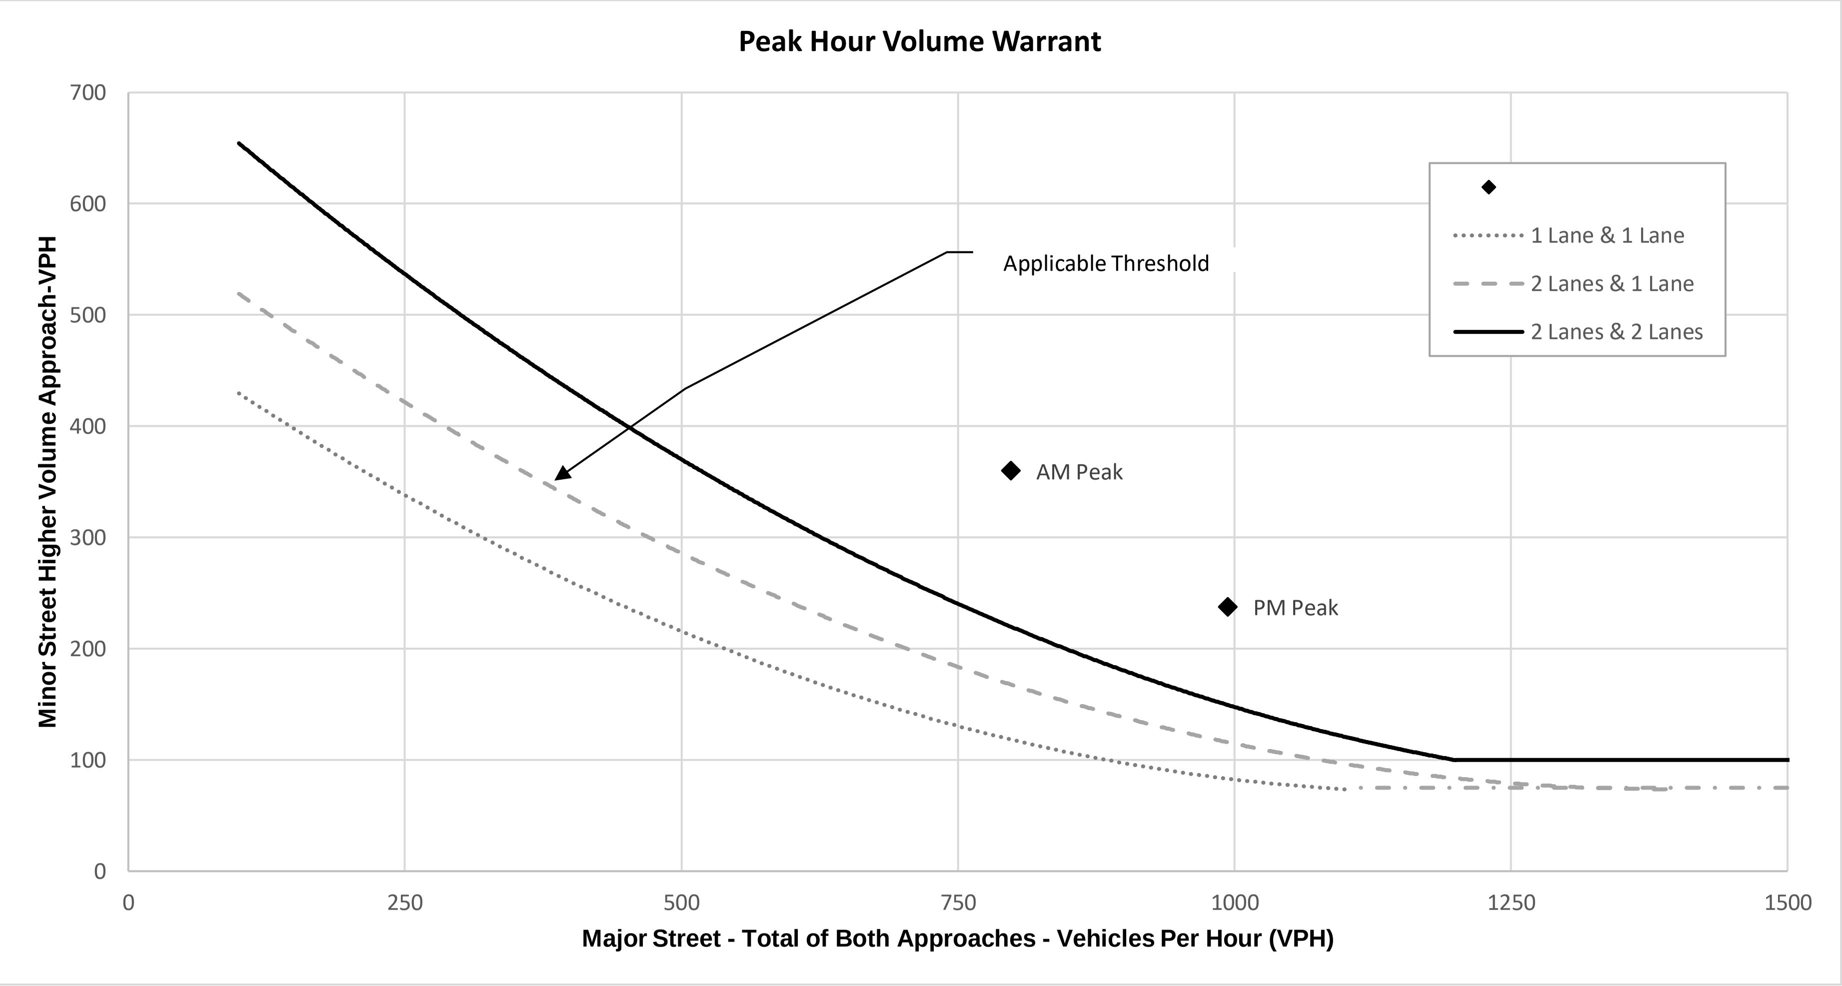


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 124 – Gilman Springs Road & SR-79 NB Ramps
Type: 2 Lanes & 1 Lane
Major Street (Orientation): Gilman Spring Rd (EB-WB)
Minor Street (Orientation): SR-79 NB Ramps

	Minor Street Approach Volume (SR-79 NB)			Major Street Approach Volume (Gilman Spring)			Satisfies
Time	NB	SB	Higher Vol	EB	WB	Total	Warrant 3
AM Peak	360	0	360	342	456	798	Yes
PM Peak	238	0	238	695	299	994	Yes



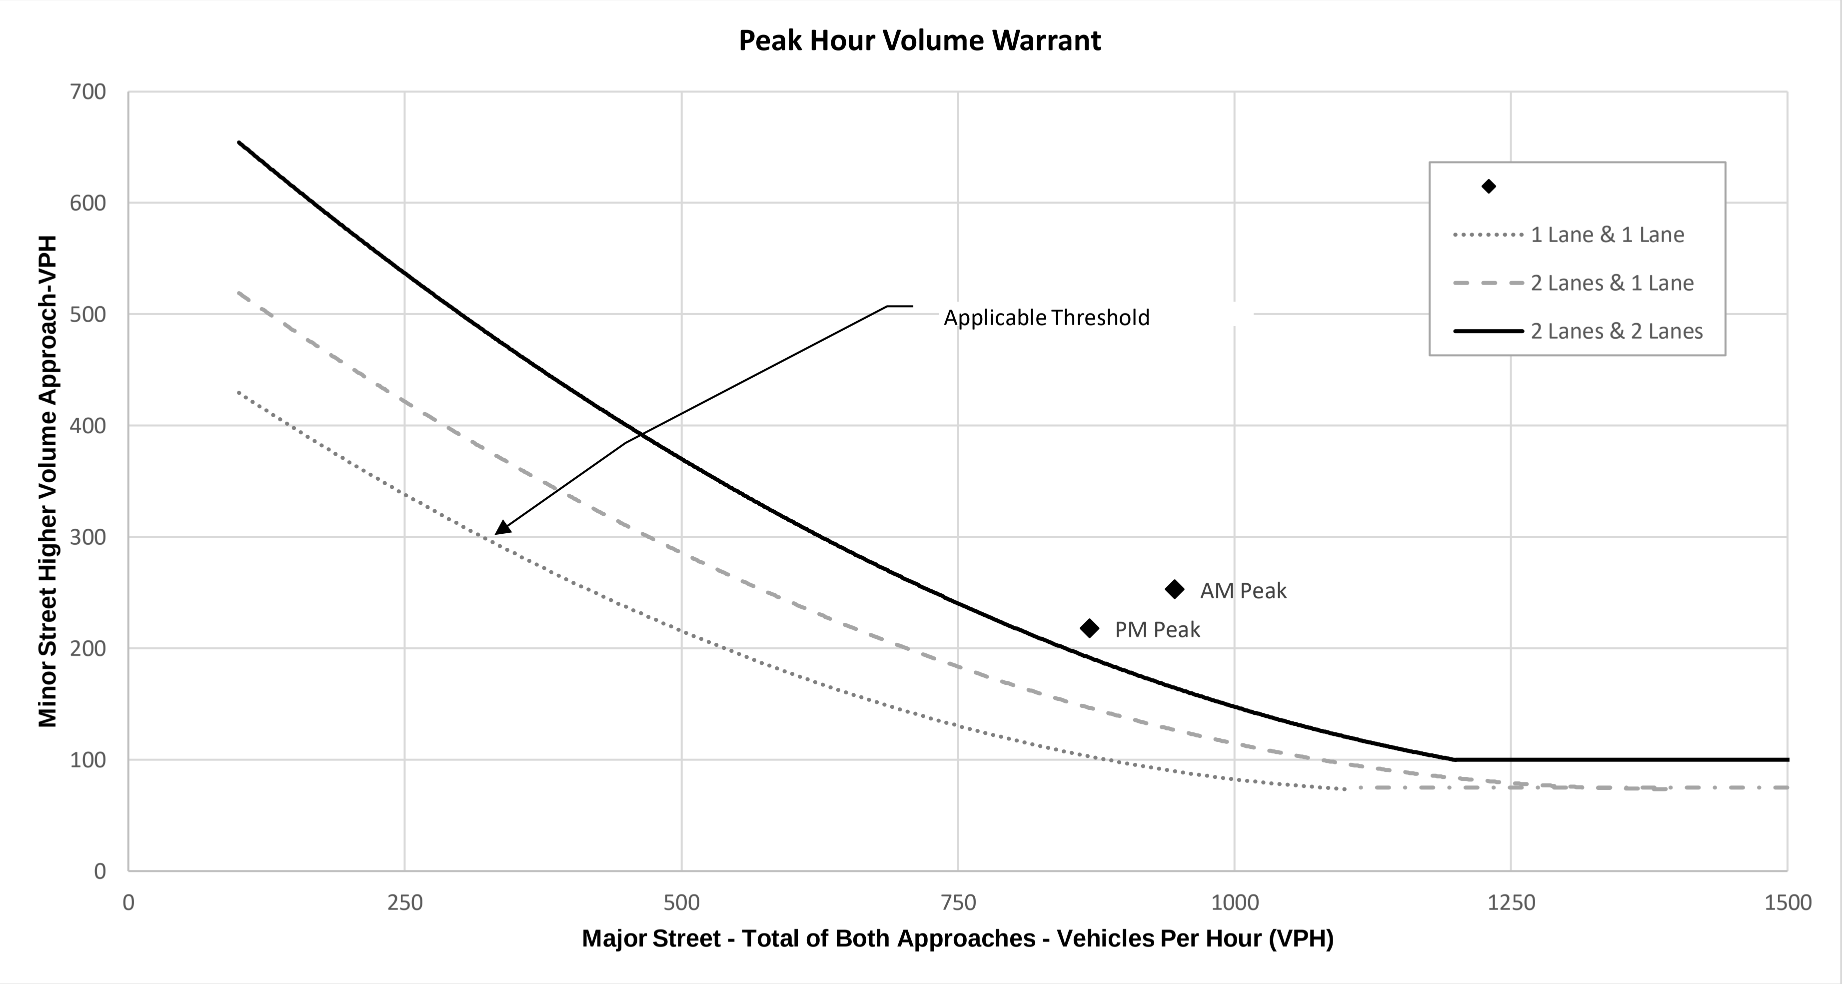
Peak Hour Volume Warrant

Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 132 – San Timoteo Canyon Road & Alessandro Road
Type: 1 Lane & 1 Lane
Major Street (Orientation): San Timoteo C. Rd (EB-WB)
Minor Street (Orientation): Alessandro Rd (SB)

	Minor Street Approach Volume (Alessandro)			Major Street Approach Volume (San Timoteo)			Satisfies
Time	NB	SB	Higher Vol	EB	WB	Total	Warrant 3
AM Peak	0	253	253	182	764	946	Yes
PM Peak	0	218	218	501	368	869	Yes

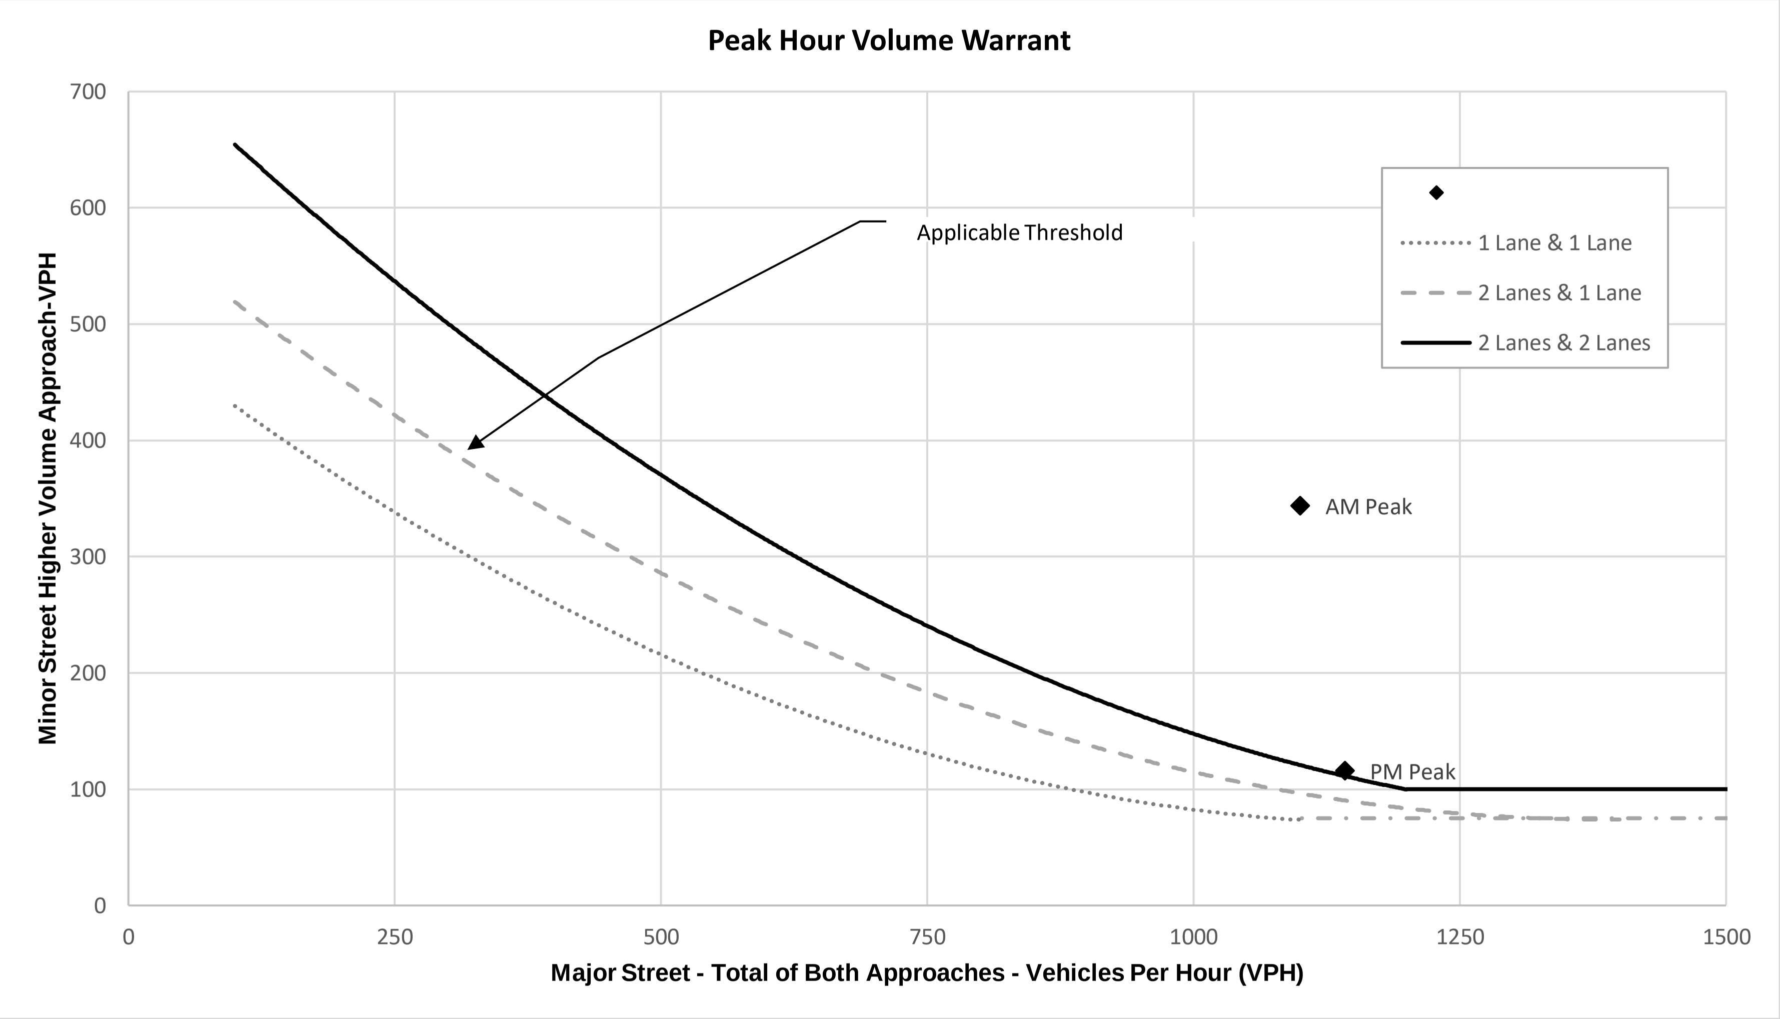


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 133 – Live Oak Canyon & San Timoteo Canyon Road
Type: 1 Lane & 2 Lanes
Major Street (Orientation): San Timoteo C. Rd (EB-WB)
Minor Street (Orientation): Live Oak Rd (NB-SB)

	Minor Street Approach Volume (Live Oak)			Major Street Approach Volume (San Timoteo)			Satisfies
Time	NB	SB	Higher Vol	EB	WB	Total	Warrant 3
AM Peak	10	344	344	367	733	1100	Yes
PM Peak	11	116	116	628	514	1142	Yes

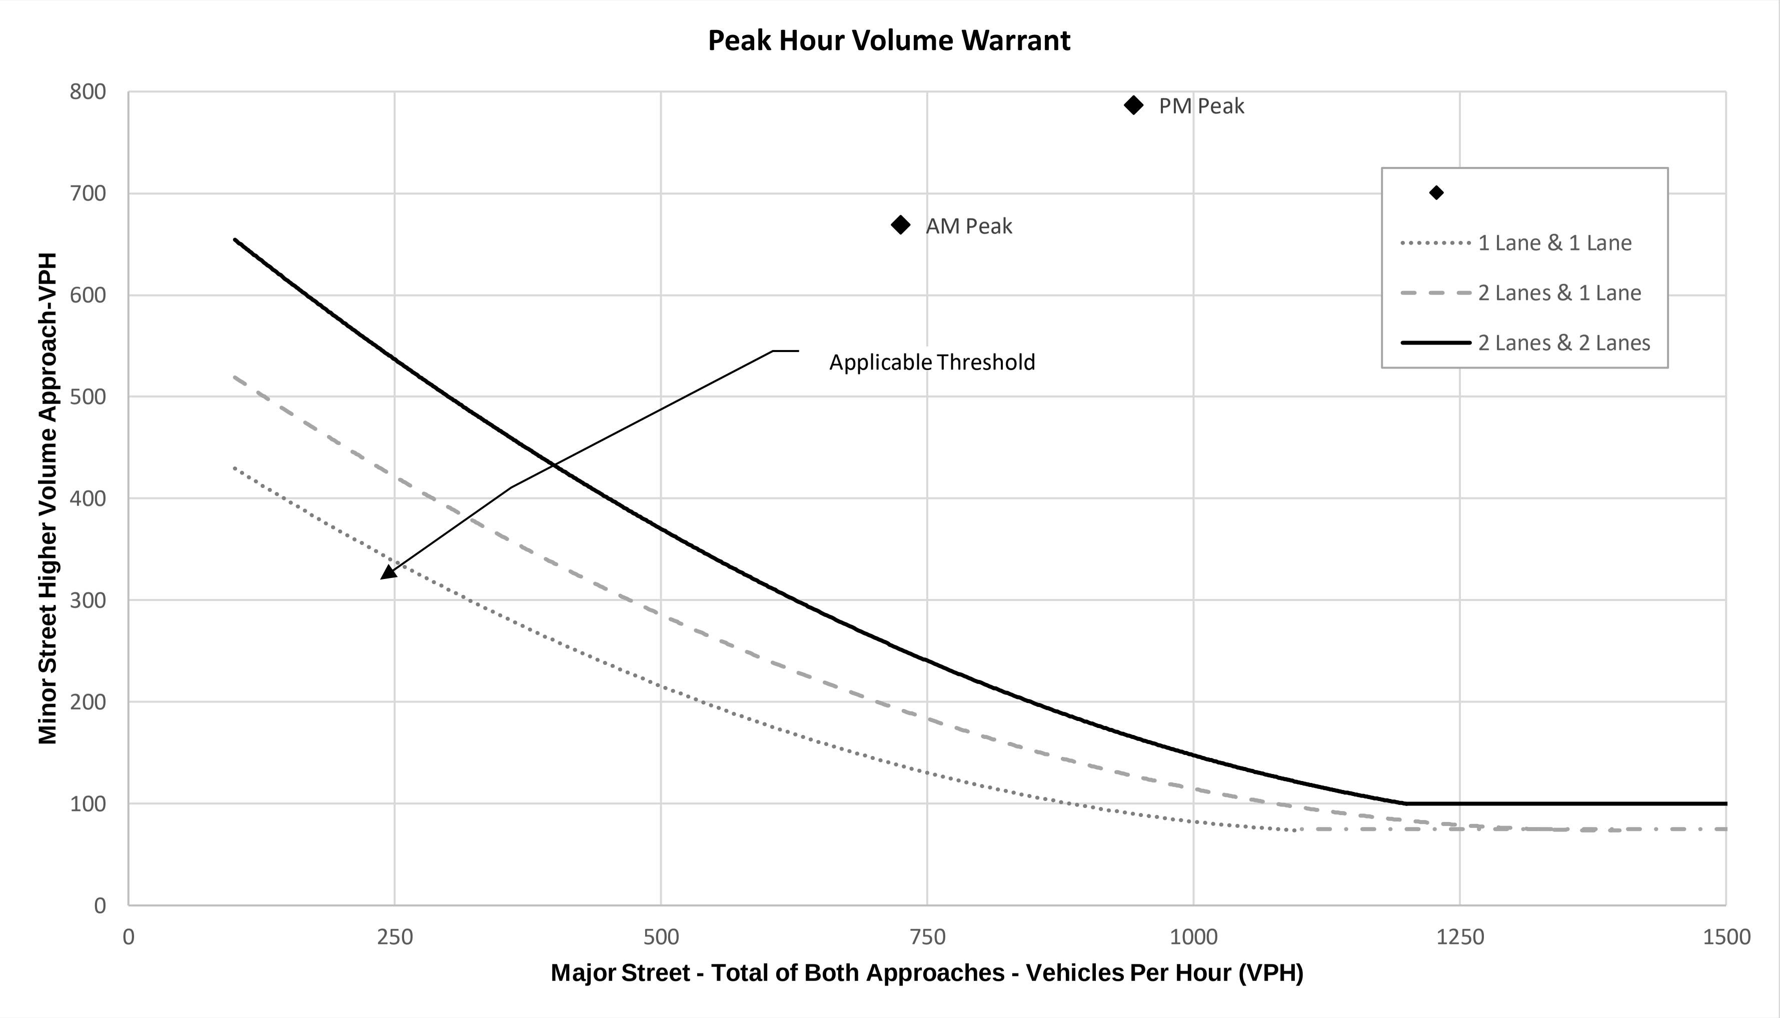


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 134 – San Timoteo Canyon Road & Redlands Boulevard
Type: 1 Lane & 1 Lane
Major Street (Orientation): San Timoteo C. Rd (EB-WB)
Minor Street (Orientation): Redlands Blvd (NB)

	Minor Street Approach Volume (Redlands)			Major Street Approach Volume (San Timoteo)			Satisfies
Time	NB	SB	Higher Vol	EB	WB	Total	Warrant 3
AM Peak	669	0	669	559	166	725	Yes
PM Peak	787	0	787	879	65	944	Yes

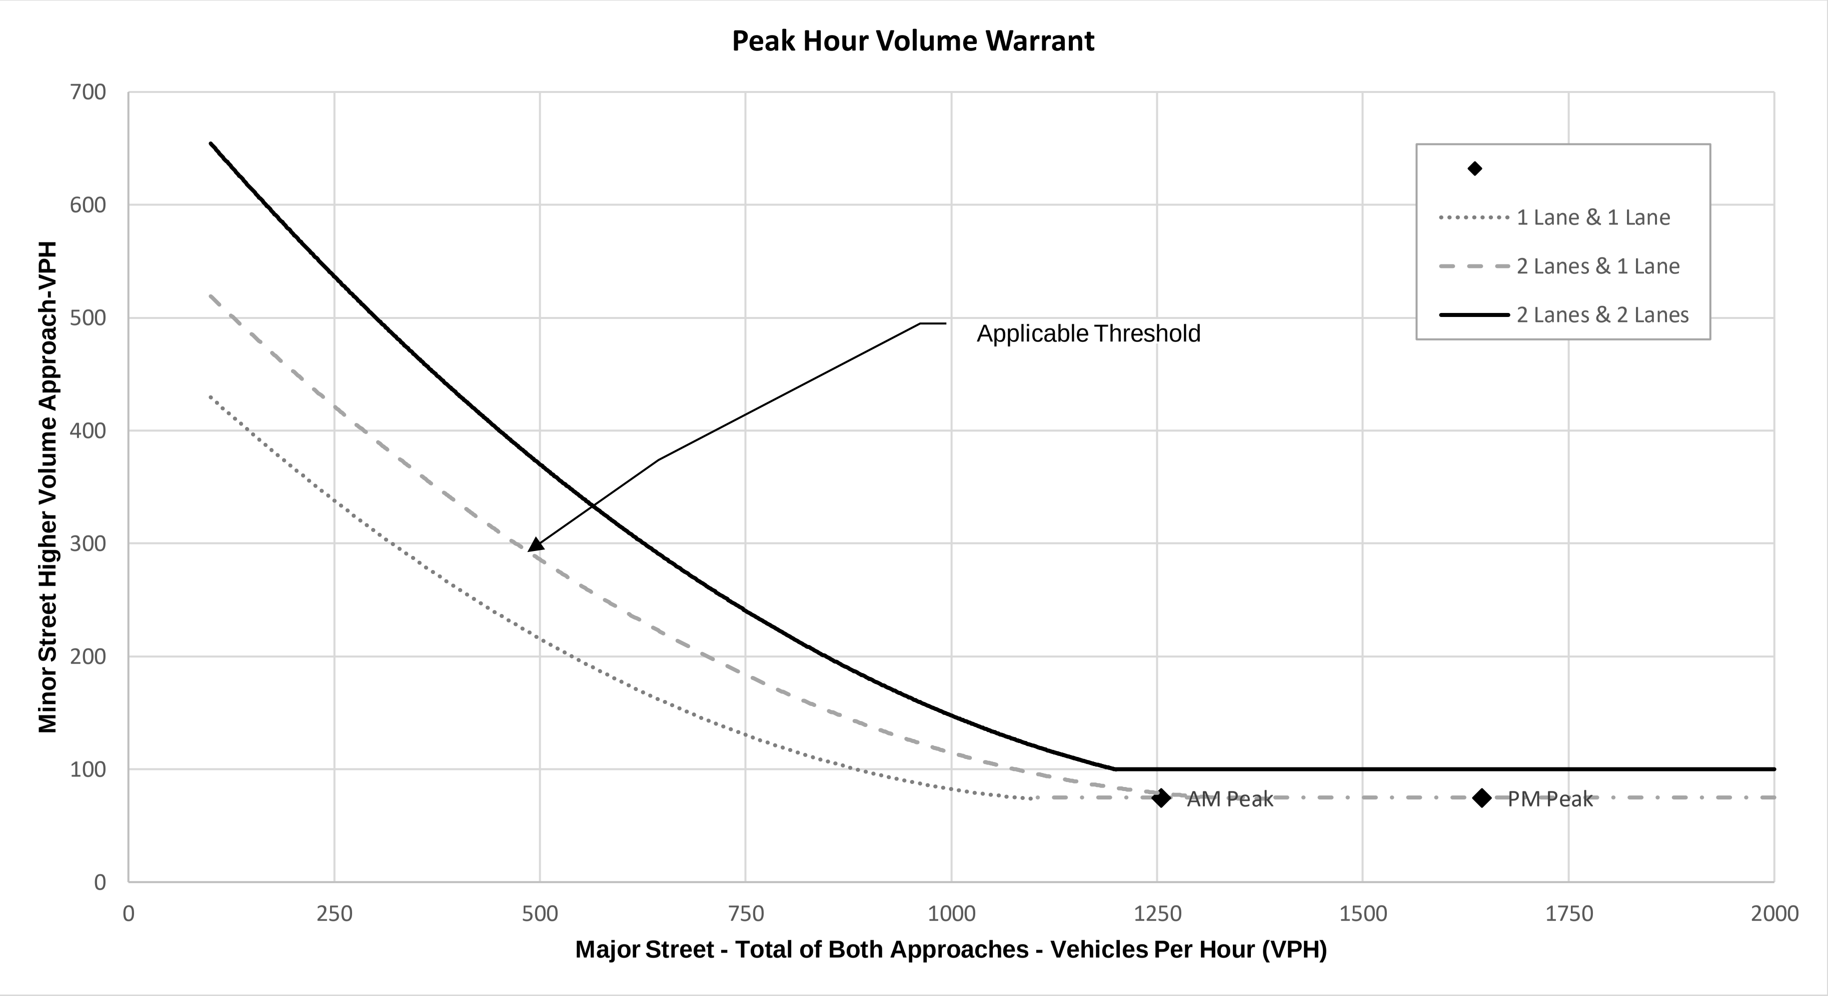


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing + Phase 1
Intersection: 10 – Redlands Boulevard & Locust Avenue
Type: 2 Lanes & 1 Lane
Major Street (Orientation): Redlands Blvd (NB-SB)
Minor Street (Orientation): Locust Ave (EB-WB)

	Minor Street Approach Volume (Locust Ave)			Major Street Approach Volume (Redlands Blvd)			Satisfies
Time	EB	WB	Higher Vol	NB	SB	Total	Warrant 3
AM Peak	75	15	75	640	615	1255	No
PM Peak	75	30	75	800	845	1645	No



Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing + Phase 1
Intersection: 85 – Martin Luther King Blvd & SR-60 NB Ramp
Type: 2 Lanes & 2 Lanes
Major Street (Orientation): MLK Blvd (EB
Minor Street (Orientation):) SR-60 Ramp (NB)

	Minor Street Approach Volume (SR-60 Ramp)			Major Street Approach Volume (MLK Blvd))			Satisfies
Time	EB	n/a	Higher Vol	NB	n/a	Total	Warrant 3
AM Peak	980	n/a	610	610	n/a	980	Yes
